How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music and training the voice. We shall be glad if this work is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

The New Bounty Land Bill.

The following is the Bounty Land Bill passed near the close of the session of Congress, and noticed last week in our abstract of proceedings in Congress. It is estimated that this Bill disposes of some two hundred millions of acres of the public land:—

It is enacted, &c., That each of the surviving commissioned and non-commissioned officers, musicians, and privates, whether of regulars, volunteers, rangers, or militia, who were regularly mustered into the service of the United States, and every officer, commissioned and non-commissioned, seaman, ordinary seaman, marine, clerk, and landsman, in the navy, in any of the wars in which this country has been engaged since 1790, and each of the survivors of the militia, or volunteers, or State troops of any State or Territory, called into military service, and regularly mustered therein, and whose services have been paid by the United States, shall be entitled to receive a certificate or warrant from the Department of the Interior for one hundred and sixty acres of land; and where any of those who have been so mustered into service and paid, shall have received a certificate or warrant, he shall be entitled to a certificate or warrant for such quantity of land as will make, in the whole, with what he has heretofore received, one hundred and sixty acres to each person having served as aforesaid: *Provided*, the person so having been in service shall not receive said land warrant if it shall appear by the muster rolls of his regiments or corps that he deserted or was dishonorably discharged from service.

Sec. 2. *And be it further enacted*, That in case of the death of any person who, if living would be entitled to a certificate or warrant as aforesaid under this act, leaving a widow, or, if no widow, a minor child or children, such widow, or, if no widow, such minor child or children shall be entitled to receive a certificate or warrant for the same quantity of land that such deceased person would be entitled to receive under the provisions of this act, if now living: *Provided*, That a subsequent marriage shall not impair the right of any such warrant, if she be a widow at the time of making her application: *And provided further*, That those shall be considered minors who are so at the time this act shall take effect.

Sec. 3. *And be it further enacted*, That in no case shall any such certificate or warrant be issued for any service less than fourteen days, except where the person shall actually have been engaged in battle, and unless the party claiming such certificate or warrant shall establish his or her right thereto by recorded evidence of said service.

Sec. 4. *And be it further enacted*, That said certificates or warrants may be assigned, transferred, and located by the warrantees, their assignees or their heirs-at-law according to the provisions of existing laws regulating the assignment, transfer and location of bounty land warrants.

From the New York Observer.

Nursing the Sick.

Who has not been sick? who has not needed nursing, or been called to give it to others? And what a blessing is good nursing in a world where disease abounds. There is reason to suppose that many die for the want of skillful attentions. The late Dr. Rush said that to be a good nurse was to be half of a physician. Few posts of domestic or private usefulness exceed that of a faithful nurse. In this light it should be habitually regarded.

The following suggestions are drawn from considerable experience. It is hoped they may not be without profit to some, especially the young and unskillful. They are not made in a vain and presumptuous spirit, but are prompted by the kindest feelings. Ignorance in a nurse cannot aid the recovery of the sick.

The first qualification of a good nurse is mental composure. In a disease there often occur sudden and violent changes, which require the calmest attention. If the invalid discovers trepidation in attendants, the effect will probably be injurious. Presence of mind is always desirable and often indispensable. The nurse is the helmsman of the craft that is now in dangerous waters, and must not yield to alarm. Much depends on the judgment of the nurse, whose mind must be calm, or disaster must follow. Too much solicitude is the bane of good nursing.

Firmness, united with gentleness, adds much to the influence and success of the nurse. The sick have many whims and caprices. To yield to all of these would be injurious. Yet in many things their wishes may be gratified. Never forget the debility and nervous distress induced by disease, loss of sleep, and want of exercise in the open air. Under no circumstances speak a harsh word to the sick. Be firm, but be gentle even to coaxing. Many a one is made worse by a cross word or look, when a smile or some sign of love would sooner have caused submission, and not have left an unhappy impression. Other words, besides those of heretics, do sometimes eat as doth a canker. They may make the sick willful

In a reverse, patience is essential. The natural effects of constant seclusion and anxious vigils are nervousness and irritability. But let not the sick suffer from such things. If you cannot command yourself, go and walk, or sleep, or do something to recreate, until you are able in pleasantness to resume your wearisome duties. This requires great forgetfulness of one's self. Be ingenious in relieving the monotony as well as the pains of the sufferer. Sickness renders one changeable and fastidious. Let us grant all reasonable wishes. None but those who have never endured the tedium of a long sickness, can hesitate to do every harmless thing which may possibly conduce to even the fancied or momentary relief of pain or despondency. Sometimes the nurse has a magisterial air, and is reluctant to yield to the little desires and ever-changing wants of an invalid. Patience and all long-suffering are required. An obliging disposition will be the result, and will produce the happiest effects.

Be always cheerful. Let your countenance betray no symptom of gloom or depression. Strive to throw around you a bright and happy atmosphere. This itself will relieve much uncomfortable feeling in the sufferer.

Learn also to move quietly and speak gently in the sick-room. Tread lightly and let your voice be always modulated to a low but distinct tone. Even the rustling of paper, or the creak of a shoe or of a door-hinge, or the slightest noise sometimes produces great restlessness in the sick. Let everything like noise be excluded, as far as possible.

Nothing adds more to the comfort of all confined to the sick-room than cleanliness. Put out of sight all medicines, and everything that can awaken unpleasant associations. Let everything be in its proper place. By always replacing necessary articles, the greatest neatness may be preserved without inconvenience to the sick or to the attendant. There should be no confusion. A quiet effort to keep the room in a neat and orderly condition will seldom injure the most feeble or the most excitable.

Let the nurse never lose vigilance. If it can be no longer preserved, let a temporary substitute be provided. Ever be on the alert. If possible, anticipate the wants of the sick. Try to save them the trouble of asking for what they wish. To invalids, unsolicited attentions are very grateful. Often they are so listless as to care for nothing. If possible, surprise them at times by something palatable and wholesome for nourishment.

Beware of annoying by your attentions. Civilities may be excessive and oppressive. In that case they are cruel to the sick. A well balanced judgment, with some practice, will teach you when and how services are required.

Some skill in cooking is, of course, a useful attainment in a nurse. The sick are often willing to take nourishment by the hand of love, while they would have refused the same from a stranger. This is specially true when savory food is unexpectedly presented.

To many these suggestions may seem useless, for they are conscious of having neither taste nor talent for nursing. True, one endowed by nature with so excellent a gift, is able to act with less constraint and more success than others. But experience and a real desire to learn will secure very wonderful results. Cultivate a love for the sick-room. At least labor to be cheerful when duty calls you there.

By putting in practice these rules, together with the lessons of wisdom you may receive from older and wiser persons, you will find yourself at last able to discharge this otherwise sad and painful, but important duty, with pleasure to yourself and comfort to those you love.

How to Begin Business.

One of the wealthiest merchants in New York city tells us how he commenced business:—

"I entered a store and asked if a clerk was not wanted. 'No,' in a rough tone, was the answer, all being too busy to bother with me; when I reflected that if they did not want a clerk, they might want a laborer; but I was dressed to fine for that. I went to my lodgings, put on a rough garb, and the next day went into the same store and demanded if they did not want a porter, and again, 'No, sir,' was the response; when I exclaimed, in despair almost 'A laborer? sir, I will work at any wages. Wages is not my object; I must have employment, and I want to be useful in business.' These last words attracted their attention; and in the end I was hired as a laborer in the basement and sub-cellar at a very low pay, scarcely enough to keep alive with. In the basement and sub-cellar I soon attracted the attention of the counting-house and chief clerk. I saved enough for my employers in little things wasted to pay my wages ten times over, and they soon found it out. I did not let any body about commit petty larcenies, without remonstrances and threats of exposure, and real exposure if remonstrances would not do.

If I was wanted at 3 A. M., I never growled, but told every body to go home, 'and I will see every thing right.' I loaded off at daybreak packages for the morning boats, or carried them myself. In short, I soon became indispensable to my employers, and I rose, and rose, until I became head of the house, with money enough as you see to give me any luxury or any position a mercantile man may desire for himself and children in this great city."

Pine Tree Planting in Massachusetts.

To the Editor of the N. Y. Tribune:

Sir: Mr. Swift, of the *Register*, called on me for a copy of my Report, as Chairman of the Committee on Forest Trees of the Barnstable County Agricultural Society, to be forwarded to you. Not being able to furnish a copy, I promised to write this letter.

I commenced planting the Pitch Pine in 1832, as an experiment, and have since planted 200 acres. The growth is very slow at first; but, after the third year, the average annual increase in hight is about one foot. I have some lots that have averaged a foot and a half. Do you reccollect passing through a grove of pines about two miles west of the Yarmouth Station on the Cape Cod Railroad? I planted those about fifteen years ago. There are seventeen acres, and the average growth of the whole has been over a foot annually. The surface of the land is uneven, and the soil sandy, and sandy loam. It was land that had been worn out by repeated crops without manure.

Soil.—I consider a sandy, or a sandy loam soil—one that is too poor to sward over thickly with grass, as the best adapted to the growth of the Pitch Pine. The hilly land west of Albany, if I recollect rightly, is of this ch[illegible]cter, Land[illegible] [illegible]duce no vegetati[illegible] [illegible]fit. [illegible]rees at first require some protection, and will not succeed in a loose barren sand.

Time of Planting.—March I consider the best month for planting, though I have planted in every month in the year, excepted the summer.

Mode of Planting.—I have a machine with which a man and a horse can plant six acres a day. It plows a small furrow, drops and covers the seed at once, passing along.

I understand that you intend planting only a small quantity for experiment. In such case, I should first take a plow and make parallel furrows about six feet apart, on the land marked out for planting. Then I should take a common planting machine, such as you use for planting beets or onions, and run it along in the bottom of the furrows, dropping three or four seeds in a place, and about a foot apart in the rows, and covering them not more than half an inch—a quarter of an inch is deep enough. If all the seeds vegetate, there will be ten times as many trees as can grow on the land; but they will die out in the course of a dozen years. When I was short of seed, I put the rows eight or ten feet apart, and dropped the seed about three feet apart in the rows.

Profits.—I have paid from $1 to $2 per acre for the land, and the seed and planting have cost me about the same sum per acre. Adding interest, I have about doubled the money invested. It is a small business, I confess; but the world is made up of small affairs.

When I commenced planting, my neighbors laughed at me, but now they are all planting their old fields. I cannot buy an acre without paying double the price I did formerly.

I should think the white pine would be much better adapted to your soil than the Pitch. At Middleborough the farmers are planting their worn-out soils with the White Pine. The growth is very rapid, and it is a handsomer tree than the Pitch Pine.

A friend sent me some seeds of a variety of the Pine which the French have planted on the sandy beaches of their sea-coast. It is reported that they grow well in such situations, and that beeches, planted not many years since, have a handsome growth of trees on them. If such is the fact, this variety would be invaluable in this country as a protection to the beeches on our extended sea-coast.

Respectfully yours, Amos Otis.

Yarmouth, Mass., Feb. 21, 1855.

P. S.—I rub off the *wings* and clean the seed before planting with my machine. If you plant yours by hand, you should not rub off the wings.

How to Judge a Horse.

A correspondent of the *Prairie Farmer*, contrary to old maxims, undertakes to judge the character of a horse by outward appearance, and offers the following suggestions, the result of his close observations and long experience:—

If the color be light sorrel or chestnut, his feet, legs and face white, these are marks of kindness.

If he is broad and full between the eyes, he may be depended on as a horse of good sense, and capable of being trained to any thing.

As respects such horses, the more kindly you treat them the better you will be treated in return. Nor will a horse of this description stand a whip if well fed.

If you want a safe horse, avoid one that is dish-faced; he may be so far gentle as not to scare, but he will have too much go-ahead in him to be safe for every body.

If you want a fool, but a horse of great bottom, get deep bay with not a white hair about him; if his face is a little dished so much the worse. Let no man ride such a horse who is not an adept in riding—they are always tricky and unsafe.

If you want one who will never give out, never buy a large and overgrown one. A black horse cannot stand heat, nor a white one cold.

If you want a gentle horse get one with more or less white about him, the more the better. Many suppose that the particolored horses belonging to the circusses, shows, etc., are selected for their oddity. But the selections thus made are on account of great docility and gentleness.

The London Times.

This journal, "the thunderer," is *the* paper of England. The Morning Advertiser circulates 7,975, and no other British newspaper so many as 4,500, except the Times, which exceeds 50,000. It was established Jan. 1, 1785, by John Walter; in 1803, his son, John Walter 2d, succeeded to the management, and in 1837 he in turn was followed by his son John Walter, 3d, the present publisher. The Times has secured its influence by literary merit, accuracy and enterprise, and chiefly, by faithfully *following* instead of *leading*, public sentiment.

Every English newspaper must have every sheet officially stamped with its name, and be taxed two cents for each stamp; then every paper having to pay a heavy excise duty on each pound made, the impost on each copy of a newspaper is about *four cents*; the Times is sold at ten cents, of which the publishers get but six cents. This penny stamp, however, allows the paper to pass free in all the mails, so that the same copy may be sent without postage from friend to friend throughout the kingdom. Before 1836, the stamp was eight cents for each advertisement, long or short. In that year the stamps were reduced to the present rate, and the tax on advertisements to thirty-six cents; in 1853, the latter was abolished, thereby saving the Times $145,000 a year.

The Times, thus relieved, earns for its publishers a net profit of about $225,000 a year. Its editor is John Delane, whose salary is $5000 a year; he is associated with Mowbray Morris, the manager; besides a host of reporters, there are departments, with a sub-editor at the head of each.

Farmers and Mechanics.

The following passage from a late work of Miss Sedgwick, is a sample of the just and truly philosophical thinking and right feeling, with which her writings abound. The passage, it will be seen, relates to the education of children, the choice of a pursuit for life, and what constitutes true respectability; and the sentiments expressed are full of true dignity and wholly imbued with the generous spirit of our republican institutions:—

"I shall be governed by circumstances; I do not intend or wish Anthon to crowd my boys into the learned professions. If any among them have particular talent or taste for them, they may follow them. They must decide for themselves in a matter more important to them than any one else. But my boys know that I should be mortified if they selected these professions from the vulgar notion that they were more genteel—a vulgar word that ought to be banished from the American vocabulary—more genteel than agriculture or the mechanic arts. I have labored hard to convince my boys there is nothing vulgar in the mechanic's profession—no particular reason for envying the lawyer or the doctor. They as much as the farmer and mechanic, are working men. And I should like to know what there is particularly elevating in sitting over a table and writing prescribed forms, or in inquiring into the particulars of disease and doling out physic for them.

"It is certainly a false notion in a democratic republic, that a lawyer has any higher claim to respectability—gentility, if you please—than a tanner, a blacksmith, a painter, or a builder. It is the fault of the mechanic, if he takes the place not assigned to him by the government and institutions of his country. He is of the lower orders only when he is self-degraded by the ignorance and coarse manners which are associated with manual labor in countries where society is divided into castes, and have, therefore, come to be considered inseparable from it. Rely upon it, it is not so. The old barriers are down. The time has come when being mechanics, we may appear on laboring days, as well as holidays, without the sign of our profession. Talent and worth are the only eternal grounds of distinction. To these the Almighty has affixed his everlasting patent of nobility, and these it is which make bright the immortal name to which our children may aspire as well as others. It will be our own fault, Anthon, if, in our land, society as well as government, is not organized upon a new foundation. But we must secure, by our own efforts, the elevations that are now accessible to all."

Calculating the Growth of a Colt.

Mr. James R. Martin, of Kingston, Kentucky, gives the following novel rule for ascertaining the height to which a colt will grow:—

"I will tell you how any one may know, within half an inch, the height a colt will attain to when full grown. The rule may not hold good in every instance, but in nine out of ten it will. When the colt gets to be three weeks old, or as soon as it is perfectly straitened in its limbs, measure from the edge of the hair on the hoof to the middle of the first joint, and for every inch it will grow to the height of a hand, of four inches, when its growth is matured. Thus, if this distance be found sixteen inches, it will make a horse sixteen hands high. By this means, a man may know something what sort of a horse, with proper care, he is to expect from his colt. Three years ago, I bought two very shabby looking colts for twenty dollars each, and sold them recently for three hundred dollars. So much for knowledge how to guess properly of a colt."

The Traditionary History of Soap.—A writer in the *Scientific American*, gives the following interesting paragraph on soap: "The word soap, or sope, from the Greek *sapo*, first occurs in the books of Pliny and Galen, and is, according to Dr. Gregory, derived from the German work *sepe*. Pliny informs us that soap was first discovered by the Gauls, that it was composed of tallow and ashes, and that the German soap was reckoned the best. According to Sismondi, the French historian, a soap-maker was included in the retinue of Charlemagne. At Pompeii, (overwhelmed by an eruption of Vesuvius, A. D. 79,) a soap boiler's shop with soap in it, was discovered during some excavations made there not many years ago. From these statements it is evident that the manufacture of soap is of a very ancient origin; indeed, Jeremiah figuratively mentions it—"For though thou wash thee with natron and take thee much sope, yet thine iniquity is marked before me." (Jer. ii. 22.) The primary soaps are divided into hard and soft soaps; the hard soap contains soda as the base; those which are soft are prepared with potash. These are again divisible into varieties, according to the fatty matter employed in their manufacture, also according to the proportion of alkali. The most important of these to the perfumer is what is termed curd soap, as it forms the basis of all the highly scented soaps.

Origin of one of our most Popular Songs.—The "Old Oaken Bucket" was written by Samuel B. Woodworth, while yet he was a journeyman printer, working in an office at the corner of Chambers and Chatham streets. Near by, in Frankfort street, was a drinking shop kept by a man named Mallory, where Woodworth and several particular friends used to resort. One afternoon the liquor was superexcellent. Woodworth seemed inspired by it; for, after taking a draught, he set his glass upon the table, and, smacking his lips, declared that Mallory's *eau di vie* was superior to any thing he had ever tasted. "No," said Mallory, "You are mistaken; there was one which in both our estimations far surpassed this in the way of drinking." "What was that?" asked Woodworth, dubiously. "The draughts of pure, fresh spring water that we used to drink from the old oaken bucket that hung in the well, after our return from the labors of the field on a sultry day in summer." The tear-drop glistened for a moment in Woodworth's eye. "True, true," he replied, and shortly after quitted the place. He immediately returned to the office, grasped a pen, and in half an hour the "Old Oaken Bucket," one of the most delightful compositions in our language, was ready in manuscript to be embalmed in the memories of succeeding generations.

The Czar in his Sledge.—Let us stand on one side, for the Emperor's sledge is coming; he is dressed in gray military cloak and leather helmet ornamented with gold, precisely similar to that of any other officer. He has a fine face; his fair complexion and the general cast of his features show his German descent, but there is something peculiarly disagreeable about his eyes. His noble figure amply fills the sledge, which drives at a rapid rate past us. His majesty looks much older than a few months ago; his hair is grayer and his shoulders rounder, yet he is a fine man still. He acknowledges the low bows of his people by a military salute, and leaves behind him as he advances, many open mouths and wide-staring eyes among the sheepskin gentry, who perhaps have just come into St. Petersburg with the "winter-loads," and can scarcely gaze their fill at the Czar, who, in their ignorance, they imagine a kind of God upon the earth. Look! the Emperor is giving a military salute to some ladies in a blue carriage, with two Cossacks in scarlet behind; it is Her Majesty the Empress, and her daughter. The red uniform of the Cossack, is the distinctive mark between her livery and that of the wife of the heir apparent, which is blue. [The English Woman in Russia.

The sixth annual report of the Milwaukee and Mississippi Railroad Company has been made. Only sixteen miles of new road have been brought into operation since the last report, from Stoughton to Madison. The total amount expended during the year was $1,012,001. The floating debt is $113,248. The funded debt is $1,750,000, of which $302,500 are on hand. The cost of the Road has been $2,729,082. The gross receipts of 1854, were $456,864, and the net receipts $307,632. The payments for interest were $141,321. The net amount applicable to dividends was $166,281, equal to 22 per cent. This money, however, having been expended in payment of the debts of the Company, a dividend in stock was made of 15 per cent.

Lime Water in Making Bread.—In bread-making, the vineous fomentation sometimes passes into the acid, thus rendering the bread sour and disagreeable. Liebig has lately performed a series of experiments to improve the preparation of bread, from which he comes to the conclusion, that the only effective and innocuous means of improving the qualities of wheat and rye bread, is lime water. In making dough he advises one pint of clear lime water to be used for every five pounds of flour. The lime water is first added to the flour, after which a sufficient quantity of common water is added to work the whole into good common dough—the leaven being mixed with water can be prepared by stirring some quick lime in a vessel containing pure cold water, then allowing the sediment to settle. The clear is then poured off and kept in bottles for use. No care is required respecting the quantity of lime, to be stirred in the water, as it will only take up a certain quantity of lime, and no more. Those who use saleratus (bicarbonate of soda) in the raising of bread, are recommended to cease its use, and employ pure baker's yeast and a little lime water. Our bones are composed of the phosphate of lime, and those who use fine flour require for their health a little more lime than is contained in the food. Cream of tartar and carbonate of soda are inferior to common yeast for making healthy bread. [Scientific American.

Anecdote of a Dog.—The following proof of canine intelligence and temper is related in a French paper:—"Count de N——, living a short distance from Lisle, possesses a Newfoundland dog, formerly called Castor, but, within the last year, Menschikoff. A short time ago the count left his palace to proceed to Lisle, to carry to the Receiver General's office a parcel, containing notes and other securities to the amount of forty thousand francs. When starting, Menschikoff appeared resolved to accompany his master, who was at last obliged to beat him back with his cane. When the count arrived at Lisle, he found that he had lost his parcel. Much alarmed, he proceeded to search for it on the road which he had come. There, at a little distance, stood Menschikoff, gently wagging his tail, but not daring to advance, from his reminiscence of the count's cane. In his mouth was the precious parcel, which he had picked up, and was faithfully carrying to his master."

The Earliest Use of the Newspaper.—A writer in the *American Phonographic Reporter* says: "The newspaper in its original and earliest use was a bulletin of war. It is now the promoter of the arts and the recorder of the victories of peace. In modern Europe, the earliest occasional sheets of daily intelligence seem to have appeared at Venice during the war of 1563 against the Turks. Our word gazette is said to be derived from gazetta, the name of the small Venetian coin which was the price of the sheet. These papers were not allowed by the government to be printed, but were circulated in manuscript."

Origin of the Wedding Ring.—[illegible] wedding ring, according to the ancient chronicler, John Swinton, an eminent antiquarian and divine, was at first not of gold but of *iron*, adorned with *adamant*, signifying durance and strength. "Howbeit," he says, "it skilleth not at at this day what the ring be made of; the form of it being round, and without end doth import that their love should circulate and flow continually." The finger upon which the ring is worn—the fourth on the left hand next the little finger—is selected, because there was supposed a vein of blood to pass from thence to the heart.

Hanging Gardens of Babylon.—Layard says that the plains of Chaldea produce some of the finest fruits in the world. A very delicious peach has lately been introduced into England, which has created a good deal of excitement among nurserymen. The plains, in the spring of the year, are covered with gorgeous flowers. Truffles grow there in great abundance, and are quite extensively used as an article of food. The hanging gardens of Babylon, Lyard says, were no fiction. He has found pictured representations of them in his researches.

Bees and Fruit Trees.—A writer in a literary journal of Paris, states that the bees greatly improve the fructification of fruit trees. Orchards in which several hives are kept, always produce more fruit than those in which there are none. In the Provinces on the Rhine, the fruits are more abundant and finer than in any other part of Germany, and there it is the custom to keep large quantities of bees. Plants, too, which bees visit, thrive better in the neighborhood of hives.

A writer beautifully remarks, that a man's mother is the representative of his Maker. Misfortune, and even crime, set no barriers between her and her son. While his mother lives, he will have one friend on earth who will not listen when he is slandered, who will not desert him when he suffers, who will sooth him in his sorrow, and speak to him of hope when he is ready to despair. Her affection flows from a pure fountain, and ceases only at the ocean of eternity.

Sir Walter Scott's family (the founding of a family of note was the prime object of his ambition, for which he toiled to the death) is now represented only by a daughter of Lockhart's, married to a Mr. Hope, a wealthy barrister, who now inhabits Abbotsford house (Sir Walter's fantastic residence,) part of which he has converted into a Romish chapel! Mr. Hope is a pervert of the Puseyite school, and was honest enough to go over to Rome some years ago.

The art of living easily as to money, is to pitch your scale of living one degree below your means. Comfort and enjoyment are more dependant upon easiness in the detail of expenditure than upon one degree's difference in the scale.

"Never pull out a gray hair," said a gentleman to his daughter, "as two generally come to its funeral." "I don't care how many come to the funeral, if they only come dressed in black."

The amount expended for the purchase of books by the Astor Library, N. Y., since its organization is over one hundred thousand dollars.

One of the suspended banks in Cincinnati contained $500 of the savings of a newsboy aged 12 years.

The parent who would train up a child in the way he should go, must go the way he would train up his child in.

New York and Erie Railroad.

On and after Monday, Nov. 20, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Hudson River Railroad.

WINTER ARRANGEMENT.—On and after Monday, Nov. 20, 1854, the Passenger Trains will run daily (Sunday excepted) as follows: Leave New York from the station corner Chambers-st. and College Place, at

7.00 A M—Express Train for Albany and Troy, connecting with Northern and Western Trains.

9.00 A M—Mail Train. Through Way Train, 12 M.

4.45 P M—Express Train. Accommodation Train 6 P M.

For Poughkeepsie: Way Passenger Trains at 7.15 and 10.30 A M.

For Peekskill at 3, 4 and 5.30 P M.

For Tarrytown at 1 and 8 P M.

The Tarrytown, Peekskill and Poughkeepsie Trains stop at all the Way Stations.

SUNDAY MAIL TRAIN at 9 A M, from Canal-st, for Albany, stopping at all Way Stations.

OLIVER H. LEE, Vice-President.

Ayer's Cherry Pectoral.

TO CURE A COLD, WITH HEADACHE AND SORENESS OF THE BODY, take the Cherry Pectoral on going to bed, and wrap up warm, to sweat during the night.

For a Cold and Cough, take it morning, noon, and evening, according to directions on the bottle, and the difficulty will soon be removed. None will long suffer from this trouble when they find it can be so readily cured. Persons afflicted with a seated cough, which breaks them of their rest at night, will find by taking the Cherry Pectoral on going to bed, they may be sure of sound, unbroken sleep, and consequent refreshing rest. Great relief from suffering, and an ultimate cure, is afforded to thousands who are thus afflicted, by this invaluable remedy.

From its agreeable effect in these cases, many find themselves unwilling to forego its use when the necessity for it has ceased.

To Singers and Public Speakers this remedy is invaluable, as by its action on the throat and lungs, when taken in small quantities, it removes all hoarseness in a few hours, and wonderfully increases the power and flexibility of the voice.

Asthma is generally much relieved, and often wholly cured by Cherry Pectoral. But there are some cases so obstinate as to yield entirely to no medicine. Cherry Pectoral will cure them, if they can be cured.

Bronchitis, or irritation of the throat and upper portion of the lungs, may be cured by taking Cherry Pectoral in small and frequent doses. The uncomfortable oppression is soon relieved.

For Croup, give an emetic of antimony, to be followed by large and frequent doses of the Cherry Pectoral, until it subdues the disease. If taken in season, it will not fail to cure.

Whooping Cough may be broken up and soon cured by the use of Cherry Pectoral.

The Influenza is speedily removed by this remedy. Numerous instances have been noticed where whole families were protected from any serious consequences, while their neighbors without the Cherry Pectoral, were suffering from the disease.

Repeated instances are reported here of patients who have been cured from

Liver Complaints by this remedy, so many that there can be no question of its healing power on these diseases. It should be perseveringly taken until the pain in the side and other unpleasant symptoms cease.

For Consumption in its earliest stages, it should be taken under the advice of a good physician if possible, and in every case with a careful regard to the printed *directions* on the bottle. If judiciously used, and the patient is carefully nursed meantime, it will seldom fail to subdue the disease.

For settled *Consumption* in its worst form, the Cherry Pectoral should be given in doses adapted to what the patient requires and can bear. It always affords some relief, and not unfrequently cures those who are considered past all cure. There are many thousands scattered all over the country, who feel and say that they owe their lives and present health to the Cherry Pectoral.

This remedy is offered to the community with the confidence we feel in an article which seldom fails to realize the happiest effects that can be desired. So wide is the field of its usefulness, and so numerous the cases of its cures, that almost every section of the country abounds in persons, publicly known, who have been restored from alarming and even desperate diseases of the lungs, by its use. When once tried, its superiority over every other medicine of its kind, is too apparent to escape observation, and where its virtues are known, the public no longer hesitate what antidote to employ for the distressing and dangerous affections of the pulmonary organs, which are incident to our climate. And not only in formidable attacks upon the lungs, but for the milder varieties of Colds, Coughs, Hoarseness, etc., and for children, it is the pleasantest and safest medicine that can be obtained. No family should be without it, and those who have used it never will.

Prepared by J. C. AYER, Chemist, Lowell, Mass. Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

CAUSES AND EFFECTS OF DECLENSION IN RELIGION.

It is a matter of fact—plain, uncontrovertible fact—that professors of religion become cold and inactive in the service of the Lord. Young converts, starting out in the Christian race, fired with zeal and love, are often told by older ones, that they must not always expect to feel so. They are assured, that after a time they will become more sober and thoughtful, and as indisposed as others. It is to be lamented, that it is even so; and when a profession is made under circumstances of great excitement, a most awful relapse often follows, which makes their profession worse than a nullity. It may often be said, with strict propriety, "Were there not ten cleansed, but where are the nine?" Alas! the nine are lost amidst the follies and vanities of the world, and only live to cast a deadly influence around them, and retard the progress of divine truth. There is no justifiable reason for declension in religion. If there were, the censure passed upon the church at Ephesus, for forsaking her first love, was not just.

The divine Saviour we profess to love and serve is the same, ever the same, bright, lovely, and perfect character. The truth, received in all its doctrines, and promises, and regulations, is the same as when first made known by especial revelation by the favor of the *Almighty*. Nor is any inducement or encouragement held out in the word of God to the Christian to become lax and declining in the divine life. The Christian is described as renovated—as sanctified—as being a light in the world—as possessing spiritual life—as progressing in every good word and work—as bearing much fruit—as going on to perfection—as bearing fruit in old age—as being fat and flourishing—and as being at last gathered into the heavenly garner, like a shock of corn fully ripe in its season.

Yet that there is such a thing as declension, and that to an alarming extent, is demonstrated in every Christian organization. How comes it to pass, that so many lose their first love, and in fact lose their identity with the church of God? It may be that many who have professed their attachment to the Saviour have never been truly regenerated—externally converted for a time, but not having passed from death unto life, they turn again to their native aliment, and seek their supreme good where unrenewed nature always looks for it. They find a religious life too restrictive, too spiritual; and hence, when conscience has become calmed, and excitement ceases to exert its influence on the passions, the individual is lost in the crowd of the worldly, often the vile. That there is such a thing as religious declension in persons of real piety, we do not deny—yea, perhaps there are seasons of declension in every Christian's life—seasons when the mind is inactive, and dull, and inefficient, and as if death had laid its cold hand upon every faculty of the soul.

The tone of piety may be lowered by too many worldly engagements, lawful in themselves, but followed up too sedulously, until the mind becomes absorbed, and there is but little room for God and eternal things. The ardent desire for worldly promotion, and the possession of wealth, induces many to undertake such worldly enterprises as take too much of thought, and time, and management, and almost exclude the cultivation of piety, and the right attention to those means of improvement by which we are to grow in grace and in the knowledge of divine things. If the progress of religion in the soul is not going on, there must be retrogression; and it is no matter of surprise, if extreme business men slide off into the ranks of worldings.

A naturally volatile temperament, too, may be a great hindrance, as it leads to a kind of company and pursuit which will tend to impede, if not destroy, the spirit of devotion. In all probability, many a youthful professor has fallen away from the service of God and the duties of religion in this way. Companions of a kindred spirit have drawn them away from the sanctuary, from the meeting for prayer, and it may be from the sacred duties of the closet, until the relish for these things is lost, and the individuals are lost amid the follies and vanities of life. They may yet retain their position in the church, or as nominal members, but they have only a name to live while they are dead. Young people especially are deceived by false views of things. It is said that religion was not designed to lessen our pleasures. Let it be remembered, too, that it prescribes a path of self-denial, and holds out a cross to be borne—it does forbid vanity and gaiety and frivolous pursuits—it sets the possessor on a new road, and now he becomes a pilgrim on the earth—and moreover it consists in a renovated nature, and a holy life. Some think that times have altered so much that it is not needful to be so stern against the vanities of the world as Bunyan's Christians were at Vanity Fair. They may be assured, however, that if they were to make as strenuous and faithful a refusal as the Bible requires, they would miss the world's caresses, and the miseries of declension produced by them.

The connections formed between professors and worldings, must not be lost sight of. Christians, so called, enter into business transactions with individuals destitute of piety—and go into all the fashions and habits of a vain world, until they are completely lost to the church of God.

Then again a want of Christian intercourse and interchange of experience with others, at conferences and in social visits, is very likely to retard our progress and spiritual life in the soul. If it is true, (and I suppose it used to be,) that

> "Christian conversation, managed well,
> Will keep our souls alive in spite of hell."

The reverse may be expected without it.

We cannot enlarge, but much might be done on all the points adduced. The reader may ponder them well, and personally apply them. The effects of declension are too well known by every delinquent. Alas! what darkness and loss of evidence of our interest in Christ! How unable to lay hold of the divine promise as a source of consolation in the day of trial and adversity! How often left to ourselves—to choose our own path—to follow our own desires, and then bring innumerable evils on ourselves! What spiritual death within! What an aching void, which the world, with all its wealth and pleasures, can never fill! Far away from the "fountain of living waters," there is no satisfaction to be obtained. Worst of all, having commenced a wandering course, we may wander on, and wander on, until, "pierced through with many sorrows," and groaning with shattered bones, we go down to our graves in gloom, and leave our friends behind with a thousand doubts about our destiny. Let the prayer of the Psalmist be ours, "Hold thou me up, and I shall be safe."

GEORGE R. WHEELER.

SALEM, N. J.

TRACT OPERATIONS.

Continued from the Recorder of March 15th.

January the 17th, I left home, to visit New Haven and other places in Connecticut. In connection with Tract distribution at New Haven, I took occasion to examine pretty extensively the manuscript diary of Dr. Stiles, (the sixth President of Yale College,) now in the Library of that Institution. Dr. Stiles was pastor of one of the Congregational Churches in Newport, R. I., at the time of the Revolutionary War, and my examination of his diary was with the expectation that it might contain some reference to the Seventh-day Baptists of those times, which would in some degree make up the deficiencies in their early history, resulting from the scourge of war. The search did not prove altogether a fruitless one. Some valuable gleanings from that source will in due time appear in the proper place. The case which contains the diary of Dr. S., is about three feet and a half one way, and about two and a half the other, is full of volumes in his own hand writing, with the exception of a small portion, which is occupied with letters received, and some other scattering articles. Some of the volumes have an index to the principal matters contained in them, which is a great convenience, as far as it goes. But to examine a work in manuscript, written so long ago, and made up of short notices of every variety of dissimilar subjects, is no small task.

I reached New Haven in the evening. The next day being Sixth-day, and finding I could not do much towards effecting the object of my visit there till the following week, I went to New London the same afternoon. On the way to New London, and as I was arranging my tracts for distribution among the passengers, a gentleman in the seat behind asked me to let him have one of my tracts. I handed him one, and then supplied the rest of the company. On resuming my seat, the man who asked for the tract expressed his disappointment at the character of the tract I gave him. He said that he supposed I was an agent of the American Tract Society, and was in hope that he might find something in my tracts with which to meet the arguments of the Catholics on the subject of the Sabbath. I soon found that I was conversing with the converted Catholic, Michael Welch, who was then on his way to deliver a lecture on Romanism at Grafton, Ct. I told Mr. Welch that I could render him no assistance in defending himself against the Papists, so long as he attempted to maintain the sacredness of Sunday. We then had a long and friendly conversation on the subject at large, in the course of which Mr. W. admitted that we, with our views of the Sabbath and baptism, could contend with the Catholics more successfully than he could. This admission was made from the fact that we have no doctrines to support but such as we can prove from Scripture; and can not be convicted of giving countenance to tradition as authority in the things of religion, as those do, who practice infant sprinkling, and assert that the first day is the Sabbath. What an awkward predicament a man must be in, who, making war on Rome for enforcing her traditions, finds himself convicted of the same folly!

I spent the night at Bro. P. L. Berry's. Sabbath morning he took me to Waterford, where I preached once, and, by request, left an appointment to preach there the next evening. I returned with Bro. Berry to New London the same evening, to hear a lecture by Cassius M. Clay. Mr. C.'s lecture was designed to show that labor was the basis of right to property, and that slavery being the denial of a man's right to the fruits of his labor, was in the highest degree wrong, and unjustifiable. The audience at the lecture was much smaller than I expected to see, and the lecture was much shorter than I expected to hear. It was also delivered in a much more tame manner than I expected. It seemed that Mr. Clay was either so jaded out, or so nearly sick, that he could not speak effectively; or, that he was so disappointed in the audience, that he had no heart, or did not care to make any effort to interest them. I thought both speaker and hearers were decidedly disappointed; though, in my opinion, the lecture of Mr. C. was an able production; of which I queried whether he gave us more than about half.

On First-day morning, Bro. Berry and myself went to Elder Swan's church. The Elder requested me to preach for him, which I did. In the afternoon, I preached at Mr. Walker's church, having engaged to do so by Mr. W.'s request the evening before. The evening being stormy, I did not go to Waterford to fill the appointment I had left there, but went to hear Elder Swan preach. Perhaps I ought to mention, that it was communion season with Mr. Walker's church on First-day afternoon, when I preached for him. Mr. W. and myself having known each other for several years, he invited me to participate with him in the service, and partake with them of the Sacrament. I told Mr. W. that I preferred not to do so, assigning that I was a firm close communionist, and signifying to him, that I was perfectly satisfied of the soundness of that doctrine. On learning distinctly how I stood on that question, Mr. W. invited me to make any remarks on the subject that I might be disposed to. Accordingly, I made a few remarks, in which I signified to the congregation my entire satisfaction as to the correctness of the doctrine of close communion, as generally held by the Associate Baptist Churches in the community; and that, as *they* could not commune with those who refused or neglected to be immersed, for the reason that they in that *particular* disregarded divine authority, so *we* also could not commune with those who neglected to keep the seventh day, because we believed in that *they* disregarded divine authority. It was very manifest to me, that the impression made on the minds of the persons present on that occasion, by my being firm, frank, and at the same time friendly, was much more to my advantage, and in favor of the doctrine which it was my mission to advance, than it would have been, if I had waived my scruples, and gone forward with them in the communion. If I can judge rightly of the state of mind in which a congregation receives an argument, that assembly was exercised by kind feelings towards myself, and a strong sense of the consistency of the course that I took, notwithstanding it reflected seriously upon their practice respecting the Sabbath.

On Second-day, I took the earliest train back to New Haven, and commenced my work in that place. My plan was to improve the hours when the Library was open, in examining the above-mentioned diary, and the rest of the day to occupy in distributing tracts about the city. I went to the Library immediately on reaching New Haven—found that Library hours were from 10 to 1, and from 3 to 5, and on application to the Librarian, obtained permission to examine the writings of President Stiles. Having learned at Waterford that Henry H. Rogers, formerly of that place, and once a member of that church, was living at New Haven, I determined to call and see him, which I took an early opportunity to do. It will be recollected, that Mr. R., some years since, renounced his former views of the Sabbath, and joined the Associate Baptists. On my introducing myself to him, he kindly invited me to put up at his house, notwithstanding his wife was in poor health. After staying at Mr. R.'s a day or two, and feeling that it was improper for me to put them to the trouble of accommodating me, I took lodgings at the Temperance Hotel, kept by Mr. Jones. While at Mr. R.'s, I attended an evening meeting at Dr. Phelps' church, where Mr. R. belonged, and had an introduction to Dr. P. It so happened, that I had several interviews with the Doctor, and at his request preached for him twice. I proposed to present our views of the Sabbath to his people, but, as usual, (though the Doctor did not profess to have much objection to it,) some of his deacons, he said, thought if the house was opened for that purpose, a good many of their people might attend, and it would raise discussion and do harm; particularly as they thought there was some increase of religious interest just at that time in the church. On hearing from him the conclusion to which they had come, I told Dr. P. that I thought I should have to go and try the Universalists, and see if they would let me speak in their house. He signifying that they were pleased to have other denominations associate with them, remarked, that he thought they would let me have their house. I immediately called on one of the leading members of the Universalist congregation, and proposed the thing to him, which he received favorably. Before determining to use their house, however, I called on the minister of the 2d Baptist church in the city, namely, the Rev. A. M. Hopper, to hear what he would say to the proposition of letting his place of worship for a Sabbath discourse; I say, I called to hear what Mr. H. would say, for I had no expectation that my call would amount to any thing more than a little conversation on the subject between him and me. I was not disappointed. I was not a little amused, though, at the way in which he treated the proposition. He said, if I would come and preach for him, that evening, I might preach on the Sabbath, or any subject that I pleased. I reminded him of what I had before told him, that I was engaged to preach for Dr. Phelps that evening, and asked him if he would give me the same privilege on some other evening. He said, No. I asked him why not. He said he might not be there. I asked if he would do it, if he should be there. He said if I could come there and preach on that subject, without its being previously known, or notified, he had as lief I would as not; and then added, that he had just received a call to take charge of another church, and might not be there at a future time. Mr. H. also intimated, that he did not regard my mission to be very important, or that my efforts would have much effect; and suggested, that a man ought to be pretty well prepared on the subject, to come to New Haven to teach the people; and said there were a good many Doctors of Divinity there. I replied, that it was then, I supposed, a good place to come to school; and with a few such like remarks, and an undisguised laugh, as it were in the reverend's face at the exhibition of such an amount of good nature, art, and simplicity, compounded together, I closed my interview with that Pastor; leaving him to arrange the affairs of his connection with the 2d Baptist church of New Haven, and the interests involved in the call from the vicinity of Boston. I continued my negotiations with the Universalists for their house to lecture in; in the course of which, among others, I became acquainted with Mr. Hodsdon, the Pastor. In personal appearance Mr. H. is a man of unusually noble mould, and seems to be of a generous and obliging disposition. I at first proposed to hire their house for a lecture, as I did the Baptist house; but upon a suggestion of Mr. H., it was finally agreed that I should occupy the pulpit in his stead at one of their regular hours of service. Alternately occupying myself at the Library, and in scattering tracts about the city, I spent the week there.

L. CRANDALL.

CORRECTION.—The name "*Catharine Slack*," as seen in my article on Tract Operations last week, should be *Catharine Hock*. L. C.

FOOTPRINTS OF JEHOVAH IN THE AGES OF REVELATION—NO. 4.

The Second Day.

"God said, Let there be a firmament in the midst of the waters, and let it divide the waters from the waters. And God made the firmament, and divided the waters which were under the firmament from the waters which were above the firmament."

What our translators call the firmament, we usually call the atmosphere. It is a thin, fluid, elastic, transparent substance, surrounding the earth to the height of about forty-five miles—supposed to do so, at least, as it gravitates to the earth fifteen pounds to every square inch of its surface. It supports large bodies of water by expanding the water so as to float it over the surface of the globe, and then again condensing it, causes it to descend in mists and rains, so as to fructify the earth, and replenish the great reservoirs which supply the springs and rivulets, to give drink to every living thing. It likewise serves the purpose of respiration, and so keeps up a supply of natural vitality through the respiratory organs to the blood and the heart of all the living beings on the surface of the globe. It is, therefore, the medium of health or disease, according as it is pure or impure. It also serves for a medium for conveying sounds, smells, heat and cold. By its extremely subtle nature, it penetrates every aperture of nature, and thus supplies necessary vitality, and a medium for the sensorium of every living thing.

I do not remember reading of any philosophical conjecture attempting to account for the formation of the firmament on merely natural principles; it is beyond every process we are acquainted with. The production of this wonderful body of matter, and attaching it to the earth like a swadling band, is therefore a mark of that infinite wisdom with which the world was made; and the narration of its creation before any living thing existed, is one of the footprints of Jehovah in the Mosaic revelation.

"And God called the firmament heaven."

It is the region of light; it exhibits a scene of the most resplendent visible glory; and is hence the most suitable representation of the abode of Jehovah, the Creator of all. "Thus saith the Lord, Heaven is my throne." And thus, throughout the sacred Scriptures, heaven is spoken of as the scene of happiness and glory, and the abode of Jehovah. Here, then, is a provision in the formation of the world for conveying high moral sentiment, and is another of the footprints of Jehovah in the ages of revelation.

S. D.

☞ The following errata should accompany No. 2 of this series: For Milam read Milcom, god of the Ammonites; for Flats read Floetz, i. e., secondary rocks; for Bevalve read Bivalve; for Gegante read Gigantic. S. D.

WHAT IS LIFE?

PSALM XVII, 15.

The child lay down to *rest;*
His bright eye had no tear;
His glad heart felt no fear,
Not yet by grief distressed;
One little hand still clasped his toy;
His dreams were only dreams of joy.

The man lay down to *weep;*
Since he had been a child,
Stern grief and anguish wild,
Those thorns which sin doth keep
Still lurking near each earthly flower,
Had pierced his soul with with'ring power.

Old age lay down to *die;*
Life's joyous hours were flown,
Labor and sorrow known.
I heard the last faint sigh:
The child, the man, the vet'ran, all
Were shrouded 'neath the funeral pall.

Then what is life? A smile,
And then a tear; a breath
Just drawn, and lost in death.
Young for a little while,
We sport on waves which o'er us surge,
Then into age from youth we merge.

Yet *more than this* is life:
From childhood's happy cot,
From manhood's tearful lot,
From age's last death-strife,
All must arise—arise to know
Eternal joy or endless woe.

Then give us grace, O Lord,
Whether we smile or weep,
Or live, or die, or keep
Or lose our earthly gourd,
To lay us down in peace with thee,
To wake with joy thy face to see.

THE PERIL AND THE VOW.

On a pleasant summer day two young men were off the coast of Cape Cod in a small boat fishing. Interested in their pastime, they did not see the rising cloud, nor heed the white crests increasing around them, till a wild wave, dashing against their frail bark, aroused them to their danger. It was too late to gain the shore, and driven before the gale that blew off the land, they were at the mercy of the billows. It was a fearful hour for the youth, who had neglected their souls, and were unprepared to leave the stormy sea for eternity's ocean.

It was proposed by one, that they promise God, if spared to reach the coast, to serve him the remainder of his life. His companion refused to make a vow, but felt that he had too long periled his soul. The distressed young man who desired the mutual pledge, kneeled on the bottom of the boat, and promised the Lord, if he would save him from the waves he would live for his glory.

God protected that tossing skiff, till, outriding the surges and the storm, it was laid upon a beach, many miles from its pleasant moorings a few hours before.

The rescued youth hastened to the embrace of friends. But the heart upon which the vows of God rested, after a brief performance of religious duties, returned to old habits of sin with a lawless indulgence, as if to recover the time lost in the transient regard to religion.

The companion became thoughtful, attended all the means of grace, and sought earnestly the salvation of his soul. He was soon a devout, believing disciple, and continues to honor Christ.

In these two experiences we have a suggestive exhibition of the human heart, and God's saving grace. The terrified sinner, who was in haste to conciliate God with a vow of repentance, like thousands on a dying bed, who mistake the remorse and promises of the dire emergency for a work of salvation, went again to his sins. His friend was truly awakened by the Holy Spirit, and feeling his guilt, sought with his whole heart the pardoning mercy of God.

What an eventful scene was that upon the deep! What a widely different thing is a promise extorted by danger, and a sense of vileness in the sight of a holy God.

And if that reckless covenant-breaker perish, how will he, amid the howlings of an eternal storm, remember the billows of the angry sea, and amid the shoreless waves of despair, exclaim with anguish, "*Thy vows are upon me, O God.*" [American Messenger.

RETIRING FROM BUSINESS.

In such a great city as New York there are thousands who have retired from active business, and live from year to year upon the interest of their money or the income of their property. They have no occupation, no employment whatever, and their only anxiety is to *keep* what they have, and get all they can. Perhaps they will not object to a place among the upper-ten, and to fare sumptuously every day—*provided* it does not cost too much—for their great object in living is to enjoy themselves. They have gathered and safely invested the fruits of many years of hard toil, and now they mean to be independent and free. Before [illegible] they had only permitted themselves occasional relaxation and recreation, but had applied themselves steadily and closely to their business, until the happy day of release had come—a day long desired and long to be remembered. While thus accumulating their fortune, they were good neighbors and useful citizens. They would often respond to the call of the poor and needy, and, if they were Christians, would add now and then their contribution to aid in spreading light and truth abroad in a dark and sinful world. The day of their "retirement" has at length come, and what has come with it—happiness? We shall see.

Their money is, perhaps, invested in stocks, bonds, or real estate. Having nothing else to do, they must now watch the market, day by day. If "Erie" goes up one per cent, they say, "What a fool I was that I didn't buy a few shares yesterday!" If "Harlem" falls, what a fall their spirits have! Nothing goes right all day. If their "rents" are not promptly paid, as they "have nothing else to do," they will run after their unfortunate tenants, and perhaps resolve to turn them out of doors. All for a while *may* go on smoothly, and every dollar of their property bring in a splendid income. What, then, is to be done? The old house is too small or too uncomfortable, and a new one must be bought on "Fifth Avenue." Perhaps the expense of a journey to Europe would not exceed their income—if it does, "a summer at Newport would be delightful." At one time, it is all stocks, bonds, houses, and lands, here, there, and all over. At another time, it is how shall I kill time most pleasantly, what shall I eat, what shall I drink, and wherewithal shall I be clothed. Once they could think now and then of others, of their wants and their sorrows, but now, "being out of business," they have no money to give away, and therefore don't want to bother themselves very much with other people's troubles. Are such men really happy? No. They are of all men most miserable. Are they at rest and free from care? No. They have more care and anxiety than ever before. They are living for *themselves.* They are intensely *selfish;* and sooner will the heavens and earth pass away, than one jot or title of that immutable law change, which forever stands to rebuke those who, in living for themselves, and forgetting others, violate the great foundation principle of human happiness.

In view of the foregoing, which we believe is not an overdrawn picture, we unhesitatingly declare:

1st. That no man, in good health and in the enjoyment of all his faculties, has any *right* to retire from active business, however *rich* he may be.

2d. That the merchant and banker is as much bound to continue *his* business, for the sake of *doing good*, as is the minister, tract distributor, or a missionary among the heathen.

3d. That no man has the right to relinquish a large and profitable business for the sake of *ease*, unless by so doing he is sure *more good* to others will be the result.

4th. That in proportion to the increase of wealth, in that proportion must it be used to *benefit others*, or it will surely, in the very nature of things, be the source of *direct misery*.

5th. That we are so constituted by a wise Creator, that we cannot be truly happy unless we labor for the happiness of others. The life of our great Exemplar was spent in doing good, and as *servants* we should imitate our *Master*.

6th. That every human being, be he Christian or not, is solemnly bound, and will be held accountable before God, to live—not for himself, not to promote his own ease, not to isolate himself from the world, but to live, using all his resources, to relieve, elevate, refine, and Christianize his fellow-men.

7th. That any man who acts contrary to these plain Scripture teachings may expect no smiling favor from Above, and no satisfactory enjoyment in any measure of earthly riches. [Independent.

ABRIDGMENT OF HYMNS.

Allow me to narrate the circumstances of the abridgment of a hymn, which came under my own observation some years since. The facts, I believe, have been before published in your paper; but a short time since I happened to be present where the story was told, and it was added that it was supposed to be a fiction. Now, I can assure your readers that it is authentic, and that it occurred in the Bowdoin Street church, Boston, when the writer was organist and conductor of the singing there. It is not remembered who the minister was who gave out and directed the abridgment of the hymn, but *it certainly was not the pastor of the church.* The hymn was from the *Church Psalmody.* The whole hymn was first read by the minister, and then, just before the singing exercise commenced, the directon was given, "*Omit the second stanza.*" The following are the first three stanzas, and the connection between the first and third stanzas will be seen at a glance:

"When thou, my righteous Judge, shall come
To take thy ransomed people home,
Shall I among them stand?
Shall such a worthless worm as I,
Who sometimes am afraid to die,
Be found at thy right hand?

"I love to meet thy people now,
Before thy feet with them to bow,
Though vilest of them all;
But, can I bear the piercing thought,
What if my name should be left out,
When thou for them shalt call?

"O Lord, prevent it by thy grace,
Be thou my only hiding-place,
In this th' accepted day;
Thy pardoning voice, oh! let me hear,
To still my unbelieving fear,
Nor let me fall, I pray."

The organist did not perceive the fearful connection between the first and third stanzas until a moment before it was time to commence the latter, when, startled and terrified, he cried out, "Sing the second stanza!" just in time to avoid the utterance of the frightful petition.

It is unquestionably the duty of the choir to follow implicitly the directions of the minister in all that appertains to the singing in public worship, and the habit which prevails in some places of inattention to the directions given from the pulpit in relation to the abridgment of the hymn, is wholly unjustifiable. But there seem to be exceptions to almost all rules, and here was an occasion when disobedience to the oral rubric seemed to be positively required; indeed, it was a case of life or death, and it was impossible to follow it. Warm were the thanks expressed by members of the congregation after the service, for their deliverance from the terrible moral collision with which they were threatened. [Lowell Mason, in Musical Review.

A RECIPE FOR HEALING DIFFICULTIES.—"A person came to Mr. L— one day and said, 'I have something against you, and I am come to tell you of it.' 'Do walk in, sir,' he replied, 'you are my best friend. If I could engage all my friends to be faithful with me, I should be sure to prosper; but if you please, we will *both pray* in the first place, and ask the blessing of God on our interview.' After they rose from their knees, and had been much blessed together, he said, 'Now I will thank you, my brother, to tell me what it is that you have against me.' '*Oh,' said the man, 'I really don't know what it is; it is all gone, and I believe I was in the wrong.'*" [Cong. Journal.

LOTTERY GAMBLING.

To the Editors of the Sabbath Recorder:—

Will you give your views as to the propriety of church members dealing in lottery tickets?

I will give my reasons in short for asking you to do so. There are numbers of persons, among whom are a minister and deacon, who have dealt and drawn prizes from a lottery office, and these things are not done in a corner. Now there are those who have become convinced that the seventh day of the week is the Sabbath, yet are unwilling to connect themselves with the seventh-day people, if these are their principles. We are not ready to believe that the seventh-day people, as a denomination, are willing to propagate sentiments favorable to gambling, or games of chance, or sentiments which, though entertained in a few isolated cases, are not the sentiments of the denomination.

Let the ministers speak out, and we trust all will be right.

A Constant Reader of the Recorder.

If there are those who say they are "unwilling to connect themselves with the seventh-day people, *if these are their sentiments*," we do not blame them. For our own part, we would as soon connect ourselves with a brotherhood of thieves, as with a church that would give its countenance to gambling in any form. But any body who has taken the pains to inquire into our principles, knows that there is nothing in our publications, or in the sermons of our ministers, or in the discipline of our churches, which gives the least ground for such a charge against us. Those who are "convinced that the seventh day of the week is the Sabbath," and are not willing to practice accordingly, are no doubt glad to have some excuse for their inconsistency, and therefore eagerly avail themselves of any occasional instances of deviation from rectitude, like the ones alluded to by our correspondent, which, after all, may have no better foundation than rumor. We never knew a sinner yet, who had not some excuse for his wickedness; and if he could find it in the inconsistencies of those who claimed to be the friends of righteousness, it seemed to afford him more satisfaction than to find it any where else.

But to the subject presented by our correspondent, we answer: ~~That all~~ that kind of labor which attempts to acquire riches at the expense of another, or without the intervention of useful services, or without increasing in any way the general resources of the community, is not only a worthless kind of industry, but vicious and dishonest. Whether a man robs his neighbor by violence, or gets possession of his property by artifice, it matters not, so far as the principle of the thing is concerned. A wrong is done without a corresponding good; property is taken without any equivalent being given. The only difference between lottery speculation and robbery is that chance is substituted for violence. For, after the lottery is drawn, and the prizes all distributed, the general wealth is not at all increased; there is not a farthing more in the community. Some are made rich, but others are made poor, and all rise from the adventure with their moral sense blunted, and with the consciousness of having misspent their time. The whole thing is perfectly abominable, and deserves the reprobation of all honest men.

The prohibition of the eighth commandment, "*Thou shalt not steal,*" is founded upon the distinction of *mine* and *thine* as regards property. A person can acquire a right to, and ownership in, what is mine, only by giving me in place of it something which is equally valuable. In this way a mutual benefit is rendered. The blacksmith shoes the farmer's horse all round, and charges him a dollar. The farmer, in turn, sells the blacksmith a bushel of corn, and demands a dollar. Both parties are benefited, and the wealth of each increased by the transaction. The farmer has received an advance of twenty or twenty-five per cent. upon what it cost him to raise the bushel of corn, and the blacksmith has received about the same advance upon what it cost him for the materials with which to shoe the horse, while the wealth of the community is thereby augmented to the amount of the combined profits of both parties. This then is fair dealing; it is what is just between man and man, and the moral influence of it upon community is salutary.

But in a lottery enterprise, where is the equivalent rendered for money received? The person who buys a ticket for ten dollars, and draws a prize of a thousand dollars, has manifestly given no fair eqivalent for what he receives. And whose money was it before he got possession of it? Did it belong to the proprietors of the lottery—the company of whom he bought the ticket? Were they such fools as to sell a thousand dollars for ten? The fact is, they sold what did not belong to them—what they never lawfully and honestly earned—otherwise they had not sold at such a srcrifice. They had first sold to various persons ninety-nine other tickets, at ten dollars each, besides the one that drew the prize; and every one of these ninety-nine drew a blank. He who bought it received not a cent in return. It was in this way the lottery proprietors made up the thousand dollars which they sold for ten. They sold, therefore, what they had gained from others without rendering any equivalent. They sold what did not really and fairly belong to them—what they had in fact stolen. It comes, then, to this: the fortunate (he ought rather to be called *un*fortunate) holder of the thousand dollar prize, has entered into a combination with the managers of the lottery to take from a hundred other individuals, in small sums, without returning any equivalent, enough to make up the entire amount, which he puts in his pocket, conscious that while he himself is enriched, many others are made poorer by the transaction, and that the general wealth of the community is not augmented a single farthing. This, we say, is dishonesty; it is swindling; it is downright robbery; and the parties concerned as richly deserve this stigma as any convicted and doomed swindler that ever wore a ball and chain.

But we are ashamed to spend so much time in arguing a point so clear. It has been so long settled, that lottery speculation is nothing but gambling, that we are surprised that we are called on to argue the point. To whom our correspondent alludes we know not. We are more than half inclined to the opinion, that vague rumor is the only foundation for his suspicion. We cannot believe, without the strongest of proof, that any minister or deacon of our denomination is guilty. T. B. B.

"THE STATE OF THE DEAD."

As the above subject has been introduced to the readers of the *Recorder*, I would like to offer a few remarks upon it, by way of farther elucidating the theme, as well as to examine the view taken by "T. B. B," and those also whom he controverts.

In order to a correct understanding of this subject, a correct rule of biblical exegesis will be found necessary. It is assumed, by those who hold to the unconscious state of the dead, that the terms *life* and *death* refer to mere existent duration. Now, if this be true, I have no doubt but their views of the departed dead are true also; and farther, that the annihilation of the wicked is also true. I apprehend, therefore, that the whole question will turn on the true meaning of the terms life and death, as used by the inspired writers.

That these words are used to denote mere existence and non-existence, is true. Such is probably their primal import, when applied to being or not. But that this is the sense in which the New Testament writers generally use them, I do not believe. Like much of the language of the Bible, they are used representatively. The sacred writers were necessitated to use a material language to represent mental, moral, or spiritual ideas, truth, phenomena. Thus those who "wait on the Lord" are said to "run and not be weary, and walk and not faint." Now, who supposes this to refer to bodily exercise, or agility? "Labor not for the meat which perisheth, but for that which endureth to eternal life." This last meat, or bread, cannot mean flesh, or "barley cakes." "The water that I shall give shall be in him a well of water, springing up into eternal life." This does not mean that fluid called water. The language is representative, and is used to represent spiritual truths. Life and death are used in a similar manner. "Whosoever liveth and believeth in me, shall never die." And yet such do die. "This is the bread which cometh down from heaven, that a man may eat thereof, and not die." And yet such do die. "Except ye eat this flesh of the Son of man, and drink his blood, ye have no life in you." And yet such did have life in them. If life and death here mean existence and non-existence, then also must those who are to live forever eat the literal flesh and drink the literal blood of the Son of God. I therefore most assuredly believe, that the terms life and death are used representatively, and represent the moral condition or state of the soul prior, and the other after, conversion or regeneration. The soul is necessarily immortal, being thus constituted irrespective whether it sinned or not. In this respect it is like its original Creator, who made it in his own image and likeness.

If the views I have taken be correct, it follows that temporal death was not the penalty of the Adamic law, nor eternal existence the reward for Adam had he obeyed it. The second Adam came to restore or save from what was entailed or consecutive from the first Adam. But Christ, who is the second Adam, does not save any one from temporal death, for all have or will die, and it will not do to set off the resurrection as the salvation from death, because even the resurrected ones have died, and therefore were not saved from death. The penalty of the divine law is evidently consecutive in its nature, and there is no perceivable consecutive connection between moral transgression and physical suffering or death.

On this point, "T. B. B." has some cogent reasoning, the substance of which is, that God rewards and punishes men "*according to the course of nature,*" and he maintains that God has not created man without a capacity of being rewarded or punished according to the course of nature; for he says, "We know from experience, that a man has a natural capacity of being rewarded for virtue, and punished for vice, in this respect, that the performance of virtuous actions is followed by happiness to himself, and the commission of wicked ones is followed by misery;" and adds, "This is the way in which God recompenses his creatures *according to the ccurse of nature.*" The above view of the divine government, I apprehend, cannot be successfully controverted. Hence, temporal death cannot be the penalty for moral transgression; for, according to the course of nature, there is no connection between lying and dying with the small pox, nor between the depravity of Abel and his murder of Cain. Therefore "T. B. B." truly says, "Reason teaches, that if one is suddenly cut off, before it is possible for him to be recompensed in this life, in this natural way, death does not place him in a state which renders such a method of recompense utterly impossible; that is, according to the course of nature.

The whole scope of the above from "T. B. B.," is to get rid of the necessity of a *miracle* in order to secure the rewards and punishments of a future state; and with him I fully concur, that no miracle will be found necessary to insure the absolute certainty, measure, or degree of the rewards of a future state; but that both rewards and punishments in that state will be "according to the course of nature."

Now I confess I was much surprised to find that in his next paragraph "T. B. B." seems to overthrow all the above reasoning, by admitting the necessity of a *miraculous resurrection of the body,* "in order that both soul and body be rewarded together." But if the course of nature is fully adequate, as he admits it is, to reward and punish in a future, for the deeds of this, then surely any miraculous addition would be superfluous, if not unjust. For if the course of nature is fully adequate to reward and punish the soul for its transgressions, does it not follow, that the same course of nature is equally fully adequate to reward or punish the body for its transgressions? Therefore it seems to me, that his two theories are antagonistic to each other, and one or the other of them must be given up.

I have more to say, but I prefer to wait for "T. B. B.'s" explanation.

S. S. Griswold.

LETTERS FROM PALESTINE—NO. 8.

Jaffa, 1st mo. 29, 1855.

Ten years ago this morning we landed for the first time on the shores of Hayti. Our errand there was to bear the message of everlasting love to that despised and needy people. Thanks to the Lord of missions, our labor there was not in vain. Sorrow and rejoicing have marked the changes to which we have since been subjected; sometimes we have thought our cup of affliction full enough for any mortal to bear; at other times our soul has been filled with joy in the Spirit, and a lively sense of faith that has enabled us to give glory to God. The *labor*, too, of a missionary, we *think* we have proved to be arduous, self-denying, wearing and tearing to mind and body, non-paying as to this world's goods, but richly, infinitely compensating in faith and joy in God, and an increasing, unwavering attachment to the work for the work's sake. To be preserved amidst the changes and the dangers of the past, is a matter of heartfelt gratitude to the Preserver and Redeemer, to whom our prayer is made, that the future may be characterized by a pious and well-spent life, and crowned with many souls saved through the blood of the atonement. To succeed in this work, all labor should be accompanied with prayer. To insure success, prayer, urgent and unceasing prayer, must attend the preaching of the gospel. Brethren, do we realize this? How often do we enter our closets or come around the family altar and there pray for the cause in America, in Britain, in China, in Palestine? Many of you do pray for the regions beyond you, but do all? We would like to have you all pray for us and for *those* whom you have sent far away, that their labor of love may prosper—that the word of the Lord may have free course and be glorified, even as it is with you. It does seem to me that God will hear prayer, and visit us with His salvation. My weak faith tells me that God is willing beyond human conception to confer blessings upon us—such blessings as we and our fellow men need, if we only ask aright.

Six young men called at my house a few days since, and promised to attend divine service when I should be able to preach in Arabic. One of our acquaintances has through our influence read a little in the New Testament. A few words in kindness spoken to an Arab, a Jew, or an Armenian, have always been well received. O, may these broken, child-like expressions, be accompanied to their hearts by the Holy Spirit. As we advance in the knowledge of the language, our opportunities for doing good seem to increase. Our concern should be to improve them all in order that some may be saved.

Thus far the climate is cooler and more pleasant than I expected to find it. The weather, from Nov. 6th to Dec. 15th, was cool and pleasant, affording a rare chance for ploughing and seeding, which was diligently improved by the farmers. The first rain fell on the 29th, 30th, and 31st October, and the 5th November, to the depth, according to the gauge of a friend, of three and one-eighth inches. Dec. 6th, there was a little rain; also on the 14th and 15th, accompanied with thunder. The 16th and 17th it rained hard. There were slight showers on the 18th, 20th, and 31st. The thermometer for November showed the coolest mornings at 50°. The average for morning, noon, and evening was 58°, 74°, and 66°. The coldest morning in December, the thermometer stood at 48°. The average 55°, 63°, and 62°. The coldest morning of this month the thermometer descended to 42° Fahrenheit. Pretty cold in the midst of rain and west winds, without a stove or fire-place, or without glass windows. Within a few days we have received and put up a small iron furnace, sent by Mrs. T. B. Stillman. It serves as a monument to her memory at least a dozen times a day, and a very grateful one too. We now have warm feet, and are free from the damp, chilly air in which we have lived for two months. The average of the temperature for the present month is 51°, 60°, and 56°. From the 4th to the 7th inst., we had a severe storm of wind, rain, and some hail. Three vessels were broken to pieces in the harbor, and a portion of the city wall next the sea was damaged by the breakers. At the commencement of the storm, a few Arab huts without the wall, on the north-east of the city, were burned to the ground. Besides the loss of the little all of several families, seven persons perished in the flames. I was on the spot about twenty minutes after the fire broke out, but the straw and cane-leaved tenements were all level with the earth, with some of the victims—the dead—in the midst of the burning brands and embers. It was very painful to hear the cry of mourning relatives over their friends who had been snatched away as by a thief in the night. There have been thirteen rainy days this month. From the house-top snow was seen on the mountains of Judea from the 4th to the 10th instant. This forcibly reminded us of David's language: "He giveth snow like wool." Ps. 14 : 16. Bible language is frequently illustrated by what we see around us. The manner of building, Deut. 22 : 8; going upon the house-top, Acts 10 : 9; two women grinding at the mill, Matt. 24 : 41; a tree planted by the rivers—*channels*—of water, Ps. 1 : 3; the dress of the people, their salutations, &c., are things which serve to interest the Bible student, and make him feel that he is in the land of the prophets and apostles—the land to which the feet of Israel and the eyes of the nations will be turned, and from which the word and law of Jehovah will yet again go forth to subdue and bless all the inhabitants of the earth. The Lord hasten it in his time.

Wm. M. Jones.

ALBION ACADEMY AND TEACHERS' SEMINARY.

One of the prominent objects which attracts the attention of the new comer here, is this young but vigorous Institution. It was opened in October last, with sixty students, under the charge of Mr. Thomas R. Williams. It is now in its second term, and the number of students has increased to one hundred. The success of the school thus far has largely exceeded the highest hopes of its friends. The building in present use is of brick, thirty-six feet by forty-eight, and three stories high. With a view of adjusting supply to demand, the Board of Trustees are taking measures for the immediate erection of a boarding hall, with rooms for the accommodation of one hundred students. The institution is pleasantly and conveniently located. The surrounding country is rich in productiveness and beauty. Fulton station, on the Milwaukee and Mississippi railroad, is within about three miles.

It is an interesting item in the history of Albion, and one that gathers interest when considered in connection with the establishment of such a school, that the traffic in intoxicating beverages has never found here the shelter of law. T. E. B.

MORAL CONDITION OF INFANTS.

To the Editors of the Sabbath Recorder:

In answer to the question found in the *Sabbath Recorder*, under date of March 1, 1855, I would say, that according to Mr. Webster's definition of the word moral, unconscious infants cannot be said to be in a moral condition, not having moral sense, (innate or natural sense of right and wrong.) As to how, and to what extent, they are affected by the sin or transgression of Adam, I understand that temporal death was the consequence of sin—that so far it affects unconscious infants, and no farther. I understand, that when Adam was created, he, together with the rest of creation, was pronounced very good; and that he remained so until he disobeyed a known command. I understand, that all that are created are very good; and remain so until they become conscious. When the disciples asked who was greatest in the kingdom of heaven, Jesus called a little child unto him (by which I understand a child that could walk about, and yet so young as to be under the age of discretion, not knowing good from evil,) and set him in the midst of them, (among the disciples,) and said, Verily I say unto you, except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven. Matt. 18 : 1, 2, 3. The same doctrine is repeated again in Mark 10th and Luke 18th. "Suffer little children to come unto me, and forbid them not, for of such is the kingdom of God." The Israelites entertained a notion that children were affected by the sin of their forefathers; and they used the parable of the sour grapes. The Lord sent the prophet to reprove and instruct them, and taught them that the soul that sinned, and lived and died in sin, should also die a spiritual death (the second death spoken of in Revelation 20 : 14,) and that those who became righteous, and continued so, and died so, should live a spiritual life of peace and immortal glory in a future state of existence. Read Ezekiel, 18th chapter. If the above position is correct, that unconscious infants are not in a moral condition, it follows, of course, that they need no restoration, and are not affected by the atonement of Christ, but are already the subjects of salvation. Where it is said that all have sinned, and that there is none that doeth good, no, not one, I understand it has reference to conscious beings, that know good from evil. And although it may be said that unconscious infants do not do good, it may be said in truth that, they do not do evil; not being capable of doing either. I think St. Paul holds this doctrine in Rom. 3 : 19. "Now we know that what things soever the law saith, it saith to them that are under the law. But sin is not imputed where there is no law," Rom. 5 : 13. I think that unconscious infants are not under any law, because there can be no law where there is no moral sense—no sense of right and wrong. I think Job understood it so, when he asked why he died not when unconscious; for, said he, then should I have lain still and been quiet, where the wicked cease from troubling and the weary are at rest, for the small and the great are there, and the servant is free from his master. Christ said, I am not come to call the righteous, but sinners, to repentance. If unconscious infants were sinners, they could not be called to repentance; and dying so, they would of course all be lost. Then how could such be said to be of the kingdom of God?

L. Jones.

Baptist Missionary Union.—The Board of Managers of the American Baptist Missionary Union was in session in New York four days of last week, and had not finally adjourned at the time of writing this paragraph, Second-day afternoon. The meeting is a special one, called by the Executive Committee for the purpose of laying before the Board the state of the missions in Burmah, and matters thereto pertaining. This necessarily involves inquiries into—1st, The relation of the Union and its missionaries and the extent of their subjection to instructions of the Board, also the regulations in force. 2d, The missionary policy and measures pursued by the late deputation in Burmah, and adopted by the Committee. 3d, The doings of councils convened at Maulmain, and all matters thereto pertaining. 4th, Enquiry as to the proper action to be had with respect to the missions. Topics of so much importance, so complicated, it was thought, could not be properly investigated at an annual meeting under any circumstances; and, in no event, without the crowding out of anniversary subjects appropriate to the occasion, and protracting the services beyond the limits which have in any instance been assigned to them. Hence this meeting was called, of which we shall probably give a further notice in due time.

Legislative Visit.—The Legislature of New York spent three days of last week in visiting the public institutions in and around New York city, for the ostensible purpose of seeing how they are managed, and being prepared to vote understandingly in relation to appropriations for their benefit. As usual, the occasion was one of display on the part of the institutions, and praise on the part of the legislators. No doubt this mutual effort to please will meet with its appropriate reward. Some of the daily papers, we see, are down upon the visitors, and the managers of the institutions, for the large amount of liquors supplied and used on the occasion; and surely there is reason for it, if half that is told be true. It is sad to see a legislature which has been relied upon to pass the Maine Law, giving such proof of a practical disregard for the principle of that law.

A Southern Statesman on Know-Nothingism.—Gov. Smith, of Virginia, recently delivered a speech, the following extract from which is very significant:—

"I will never interfere with foreigners now in the country—but I know foreigners who approve the policy of arresting the importation of foreigners. The origin of the K. N.s is a struggle for bread—a frightful and angry question at the North. At the South it is a political question of high importance. The North has 55 more Representatives than the South already. The natural increase of the South is 1-3 greater than that of the North, because there are greater checks on population there; but the artificial element of foreignism brings 500,000 who settle annually in the free States, with instincts against Slavery, making 50 Representatives in 10 years to swell the opposition to the South! To stop this enormous disproportion, what is our policy? What is the frightful prospect before us? The effect of Know-Nothingism is to turn back the tide of immigration, and our highest duty to the South is to discourage immigration. I deprecate it as a great calamity."

Calico Party Donation.—The Trustees of the American Widow's Relief Association make a special and public acknowledgment to Mr. and Mrs. Allen Dodworth and their friends for the largest and most acceptable donation they have yet received from a most generous public. It is the proceeds of a "Calico Party," given by Mrs. Dodworth, and consists of the following articles: 331 ladies' and misses' dresses, including a portion unmade; 38 suits of boy's clothing; 15 women's and girls' sacks; 45 articles of flannel and muslin under-garments; a bundle of aprons, and a piece of cotton sheeting; 52 pairs of shoes and 52 pairs of stockings—making altogether a large cart-load, which was accompanied by *two hundred and fifty-seven dollars in cash.*

The Difficulty Settled.—On the 12th of February, the Commissioners of the two branches of the Methodist Episcopal Church met at Cincinnati, to divide the property known as the Western Book Concern between the two churches, under the decree of the Supreme Court of the United States. The subject, after an harmonious session, was settled to the entire satisfaction of all parties. The amount allowed to the Southern Church in money was $80,000, besides the debts due in the South, to the amount of $12,000 more.

Ships for Shanghae.—Two ships are advertised to sail from New York for Shanghae in a week or ten days. All parcels for our our missionary brethren, now on hand, or which reach this office in time, will be shipped by one of them. In these days vessels for Shanghae direct are rather rare; and it is well to take advantage of this opportunity.

More Land.—A delegation of Chippewa Chiefs has been at Washington for some time past, negotiating a treaty for the sale to the United States of a body of land near the head waters of the Mississippi. Having completed the business, they passed through New York last week on their way home. It is about six weeks since they left the Chippewa Agency, reaching Washington on the 10th of February. The treaty which they have completed with the Government cedes about 12,000,000 acres to the United States, for which they are to be paid $1,210,000, in thirty annual installments. The following paragraph gives an idea of the location of this land:—

The lands conveyed by the Chippewas, by the treaty just concluded, as delineated on the map in the office of the Commissioner of Indian Affairs, are bounded by a line beginning at a point at the bend of Vermillion River, situate about 40° 10' North latitude, 92° 40' West longitude, thence running southerly to 46° 18' North latitude, thence running in nearly a straight line to 95° 30', thence northwesterly to where Buffalo River intersects Red River of the north, thence down Red River to the mouth of the Wild Rice River, thence in a north-easterly direction to the north end of the Otter Tail Lake, thence due north to the source of Black River, thence down said river to Rainy River, thence down Rainy River to the mouth of Big Fork River, thence up Big Fork River to the mouth of the second principal branch of said Big Fork River, entering from the west side; thence in a straight line south-easterly to the point of beginning—said tract containing 12,000,000 acres, more or less. This land is in addition to 7,000,000 or 8,000,000 acres conveyed to the United States last September.

The Winnebagoes have also conveyed to the United States nearly 900,000 acres of land at Long Prairie, on the Mississippi River, in Minnesota Territory, in exchange for money, and about 230,000 acres on Blue Earth River in the same Territory.

RELIGIOUS INTELLIGENCE.

Dr. Sweet, the original bone-setter, whose skill is known from Maine to Florida, told the writer of this, a few days since, that the Maine Law in Connecticut would make his receipts three hundred dollars less this year, on account of the diminution of accidents caused by Rum. A large share of his practice was derived from the effects of liquor drinking. Accidents were constantly occurring, such as sprained and broken limbs, bruised heads, swollen faces, and dislocated joints.

The Berlin journals announce the speedy return to that capital of the Lutheran missionary, Dr. Bettelsheim, who for more than eight years has resided in the archipelago of Lieou-Khieou, in the Chinese empire. Among the different works which he brings with him, is a complete translation of the holy Scriptures in the Japanese language, and a dictionary and a grammar of the idioms spoken in the islands of Lieou-Khieou.

Died on the 8th inst., in Poundridge, Westchester County, N. Y., Mr. Samuel Dan, at the great age of 101 years, 8 months, and 18 days. Mr. Dan was earnestly engaged in the War of the Revolution, and personally assisted in the building of Fort Washington on the Hudson; was 47 years cotemporary with Washington, and 65 years a member of the Methodist Episcopal Church.

Rev. Dr. Oncken, the Baptist missionary in Germany, writes to the American and Foreign Bible Society, that he and his associates have circulated 81,000 copies of the Bible during the past year. Dr. O. also sent the journals of twenty-five colporteurs who are in his employ.

The *Christian Secretary* chronicles revivals at Willimantic, Brookfield, and Danbury, Ct. In Danbury, the number baptized recently is sixty-eight, in Brookfield, twenty-two. In the churches in Hartford, a deeper religious interest than usual is manifest, and several conversions have occurred. The same is true of the church in Middletown.

Mr. Henry M. Haskell was ordained at the Winster Street Church, in Boston, on Monday evening, the 5th inst., with a view of his proceeding shortly to St. Petersburg, in Russia, to take charge of the British and American Congregational Society. Sermon by Rev. E. N. Kirk.

The Charleston (South Carolina) *Mercury* says, the Rev. Dr. Wightman, President of Wofford College, acknowledges, in the *Christian Advocate,* a donation of five thousand dollars from a gentleman in Charleston, as the nucleus of a fund to be raised for the liberal education of young men for the ministry.

It will not be extravagant to estimate the public charities of New York and suburbs at a million of dollars for the present cold season, and the number of persons who will have here tasted the bread of charity, at two hundred thousand—of whom 50,000, if not probably 100,000, never succumbed to that degradation.

The New York *Recorder and Register* has intelligence of revivals at Newburg, Horse Heads, Lansingburg, Troy, Ulysses Centre, Pa., and Rahway, New Jersey. In all these places there are many conversions, and many inquirers for the way of life.

A powerful revival of religion is in progress in the Academy at Wilbraham, Mass. Rev. Minor Raymond, D. D., is Principal of this school, which has three hundred students.

The Lutheran Church Extension Fund of $50,000 is still urged upon the churches of that denomination. The Maryland, and East and West Pennsylvania Synods have pledged their proportion of its whole amount.

The Green Mountain State may justly be put down on the side of Temperance. County Commissioners were recently chosen in that State, and the Temperance candidates elected in every county, *nem. dis.*

At Rahway, N. J., according to a letter of Dr. Babcock to the New York *Chronicle,* twenty-six have been baptized within a month past, fifteen on the first Sunday in March.

The *Journal and Messenger* has intelligence of revivals in Xenia, North Fairfield, and Troy, Ohio, and also in Springville, and Owensboro, Ia.

During the last month there have been very general revivals of religion in progress in the various Baptist churches of Baltimore.

General Intelligence.

European News.

Fourteen days later news from Europe has been received since our last—some items of which are important.

The Emperor of Russia is dead. On the evening of March 2d, in the House of Lords, the Earl of Clarendon rose and said, "I think it my duty to communicate to your lordships the contents of a telegraphic dispatch which I received half an hour since, from her Majesty's Minister at the Hague, that the Emperor Nicholas died this morning at 1 o'clock, of pulmonic apoplexy, after an attack of influenza. I have also received a dispatch from her Majesty's Minister at Berlin, stating that the Emperor of Russia died at 12 o'clock this morning. An hour before this dispatch arrived, I received accounts from Lord John Russell, at Berlin, stating that the Emperor was on the point of death, and had already taken leave of his family. Although this event occurred so short a time ago as between 12 and 1 o'clock this morning, there can be no doubt under these circumstances of its authenticity."

Lord John Russell had arrived at Berlin, and immediately had an audience of the King and Baron Manteuffel. Russia seems at length to be making attempts to come to an understanding with the Western Powers. General Wedell, the Minister at Paris, has personally gone to Berlin to explain the points at issue, and Lord John Russell's mission is expected to conclude the desired arrangements. An official editorial article in the *Correspondenz* of Vienna says that the draft of a general treaty is prepared, securing the integrity of Turkey, preventing the future encroachments of individual powers, and guaranteeing the rights of Christians. This document will be considered at the Conference. All the Plenipotentiaries, with the exception of Lord John Russell, have arrived at Vienna. The Conference meets on the 5th of March, and hopes of peace are strongly entertained. Notwithstanding the Russian professions of peace, accounts state that warlike preparations were never more active in Russia.

The Palmerston ministry, within ten days from its formation, had fallen to pieces—the Chancellor of the Exchequer, the Home Secretary, and the chief Lord of the Admiralty having resigned. The ostensible cause of their resignation was the success of Mr. Roebuck's motion for a Committee to inquire into the mismanagement of the war. It was well understood that, besides the cause specified, there were points of private disagreement which rendered it impossible for the members of the Cabinet to act together.

The Emperor of the French seems determined to proceed to the Crimea, to see, in person, what is going on; and no doubt would, if he could, time his visit so as to be present at the fall of Sevastopol. England and Austria have advised him to stay at home. His absence, it is said, would not, in any case, exceed thirty days.

Affairs before Sevastopol are unchanged. A battle has been fought at Eupatoria. On the 17th Gen. Liprandi, with a force about equal to, or perhaps a few thousands superior to the Turks, attacked them, and after four hours' firing, retired beyond the range of the shells from the English ships, the Turks not pursuing. Omer Pasha commanded. The Russians were vigorously repulsed. Their loss is estimated at 500 killed, and the wounded in proportion. The Turks had 88 killed, 258 wounded, and lost 70 horses, Selim Pasha, General of the Egyptian division, and Col. Rustem Bey, were killed. Eighteen French were killed or wounded on shipboard.

Continual skirmishes took place between the French and Russians. The Russians, in sinking a countermine, had come into the gallery of a French mine and blown it up, killing the French officer of engineers and some of his men. Next day the French took their revenge by opening a masked battery of grape upon a Russian sortie party, killing and wounding 200 to 300.

Advices from St. Petersburg of the 17th, announce that war is formally declared against Sardinia. Notice is given to Sardinian ships to leave the Russian ports. The *exequatur* has been withdrawn from the Sardinian Consuls, and the Russian agents at Genoa and Nice have been recalled. The property of Sardinian citizens is "placed under the protection of the laws."

A battle has been fought at Bunder Abbas, between the Arabs and the Persians, in which the latter were successful. A Persian force of 12,000 horsemen, with six guns and two mortars, appeared before Bunder Abbas in the beginning of December, and shelled the place for two days and nights; on the third day the garrison, consisting of 1,700 men, met the Persians at the gates, and an engagement took place which lasted for several hours. The Arab force, overpowered by numbers, took to their boats, and fled to the man-of-war belonging to the Imaum of Muscat. The Arabs lost, in killed and wounded, about 1,400, while the Persians lost about 4,000.

The railway between Alexandria and Cairo, a distance of 130 miles, is now complete, with the exception of the three bridges on the two branches of the Nile and the Delta Canal. The communication between the two towns may be kept up by the line of railroad by crossing the river in boats, but it will not be available for traffic and passengers until after the bridges are completed—five or six months hence.

Very inclement weather had caused suffering among the poor in England, and riots had occurred at Liverpool and London.

Wednesday, March 21st, has been appointed as a national fast in England for the success of the war.

The Paris *Moniteur* announces the loss of a French frigate with troops, in the Straits of Bonifacio. All perished—600 or upwards.

The Sardinian Chambers have voted the suppression of Monasteries.

The intelligence from China is important. Dates are had from Hong Kong up to January 15. The insurgents hold Canton in a state of siege, and have the commerce of the whole river—their fleet having gained several victories over the Imperial fleet. Consequently the supplies are being cut off. Provisions, especially rice, are rising rapidly.

A fight took place at Whampoa Anchorage, in the presence of the American and English ships of war, and the foreign shipping was considerably damaged by the guns of the billigerents. The English and American Commissioners have drawn a line around the factories, and notified that no hostilities will be permitted to take place within it.

Shanghae dates of the 1st are important. A difficulty occurred between the Insurgent authorities in Shanghae and the French, whereupon Admiral Laquerre, with the ships Jean D'Arc and Colbert, bombarded the city—which, ere this, has probably surrendered or been stormed.

The Insurgents have met with reverses to the East of Pekin.

California News.

San Francisco dates to Feb. 16th have been received.

There is no election for Senator in California; and the fiftieth ballot gives no sign of promise.

We find rather less than the usual number of murders, lynchings, and ferocious fights.

The reported discovery of gold on Kern River has produced some excitement at San Francisco, and the steamers for San Pedro, the nearest port of disembarkation, are crowded with passengers.

The workmen have broken ground on the Sacramento Valley Railroad. One hundred laborers are now at work, and four hundred more are to be put on the line soon.

A terrible affray at Sand Hill, on the Yuba River, is recorded. It grew out of a dispute about a mining claim. Three men were killed—Mr. Anderson, from Paducah, Ky.; Mr. Rice, from Washington, Me., and Mr. Webster, from Concord, N. H.

The Indian disturbances in the North still continue. In a recent fight with the Indians in Klamath County, the following named white men were killed: Charles K. Proctor, Proctorville, Vermont; Chandler H. Dunham, of Plymouth, Massachusetts; William Wheeler, Walworth County, Wis.; Thomas O'Neill, of New Orleans; and John Smith, of St. Domingo; William Lamb, of Oregon, and Mr. Johnson, of Mississippi, were mortally wounded.

The latest opinions at Honolulu are, that the project of annexation is hopeless, owing to the decided opposition of the King.

The schooner C. E. Foote has been chartered at the Sandwich Islands to convey Mr. Read and family, and Mr. Dougherty, to Japan, where they design to take up their residence and engage in business. They expect to sail about the 10th of February, and will arrive in time to take advantage of the late treaty by which the ports were to be opened in one year. The treaty was concluded on the 28th of March, 1853. Mrs. Read, so far as we are informed, will be the first foreign lady to take up her residence at Japan, and she will, no doubt, be an object of much scrutiny and interest to that inquisitive and amiable people.

The New Russian Emperor.

There is a good deal of speculation in relation to the effect upon the War in the East of the death of the Emperor Nicholas. The *Tribune* has the following upon the subject:—

The most interesting question which presents itself is how Nicholas' successor, now Alexander II, will act. Long ago European newspapers intimated that a grave misunderstanding prevailed in the Imperial family, having its source in the complications into which Russia was precipitated by the war. It was severally represented, that the present Emperor was opposed to the policy of his father, and to that of a party said to be headed by the Grand Duke Constantine, his younger brother, a young man of eminent capacities. Still, no positive facts ever confirmed these reports. On the contrary, as Commander-in-Chief of the Guards, the hereditary Grand Duke, now Emperor, marched into Lithuania and Poland, and was thus to command, offensively or defensively, the great army comprising the flower of the Russian forces. His head quarters have been at Wilna. This and many other reasons lead us to suppose that there will not be at once any departure from the policy pursued by his father.

The new Czar was born on the 29th of April, 1818, and accordingly is nearly thirty-seven. If not of extraordinary abilities, he possesses fair capacity and intellect. If not gifted with the iron will of his father, and if marked by a certain mildness of temper, he has exhibited more than once considerable energy. He has a poetical and chivalrous turn of mind, and is Russian to the core. Years ago, he urged the use of the Russian language at Court, instead of French. As Grand Duke, he was always kindly to any pure, genuine Russian development in literature and policy. Some ten years ago, he insisted strongly on the propagation of the Russo-Greek creed among the Protestant Finns, Esthonians, and other tribes forming the peasantry in the Baltic provinces.

It is scarcely to be supposed that he will make any changes among the highest dignitaries of the empire. Such things will come by-and-by, as for some time past he has had a small court and a knot of favorites around him. Prominent among these is Prince Baryatynsky, who last year distinguished himself in Asia against the Turks and the Circassian Shamyl. This prince is a proud, haughty, ambitious Russian. He spent a great deal of his youth in Vienna, and it is possible he may be sent thither under some pretext, to control the action of the Russian Legation at the approaching conferences.

Could it be admitted that the war, at the start, had not the approval of the new Emperor, he will feel it necessary to prosecute it vigorously, unless a peace, acceptable to Russia, can be obtained. In honor of the memory of his father, whom he loved devotedly, and to whom he looked with deep deference, he will so act. He was always treated by the deceased Czar with the utmost fondness—always as the most confidential friend, as as his successor. For about eighteen years the Grand Duke has been habitually present at Cabinet meetings, giving his opinion and sharing with his father the thorny and heavy burdens of absolute power. It was the aim of the late Emperor to fit his son to sway the Imperial scepter, and not allow him to be taken unawares in his new position. Alexander II, therefore, ascends the throne not as a mere novice, but wholly aware of the great task before him. If so disposed, he could not at once change the policy of the Empire. The late Czar, idolized as he was by the Russian people, will now be looked upon as a kind of martyr to the strong and wide coalition against him, and his sudden death will, in our view, lend fresh fuel to the warlike flame. In this point of view, the death of Nicholas creates no new probability of peace, nor renders it possible to count on any concession to the Allies which he would not have made.

THE MURDERER AND HIS ACCESSORIES.—The Coroner's Jury in the case of William Poole, who died from wounds received in an affray in a Broadway drinking saloon, rendered the following verdict:—

We find that the death of Wm. Poole was caused by a gunshot wound from a pistol in the hands of Lewis Baker, at Stanwix Hall, in Broadway, on the morning of the 25th of February, 1856.

We find that James Turner and Patrick McLaughlin, alias Paugene, were guilty of aiding and abetting in the murder of William Poole.

We find John Hyler, Cornelius Linn, and Charles Van Pelt, guilty as accessories before the fact.

We likewise find John Morrissey guilty of an assault with intent to take the life of Wm. Poole, and that he was accessory to the murder of said Wm. Poole by association on the evening preceding the murder.

We likewise find James Irving accessory before the fact.

Commitments were made out against the parties found guilty by the Jury, and all, except Baker, were locked up on the same evening.

IMPORTANT LAWSUIT AMONG SHOWMEN.—We understand that Barnum has commenced suit against Dr. Spalding for several thousand dollars damage, in consequence of the death of a Giraffe on board the "Floating Palace" at New Orleans, some time since. Spalding, it seems, had hired the animal, with the privilege of buying; but in transferring it to the "Palace," notwithstanding every precaution was used to guard against all accidents or injury, he was accidentally drowned. Barnum claims the accident occurred in consequence of the negligence of Spalding, and claims damages for the value, about $10,000. On the other hand, Spalding claims that every possible precaution and diligence were used, and as the animal was under the charge of a keeper appointed by Barnum, if there was any carelessness or negligence, it was through the carelessness of such keeper that the death of the animal occurred, and that Barnum is liable for the damage and loss, estimated at $20,000, suffered by Spalding. Both parties have the reputation of being rather shrewd in their way, and as both are well able to pay the lawyers, we hope they will both obtain justice, and get the worth of the money they pay them.

THE BOUNTY GRANTS.—The Washington correspondent of the Baltimore *Sun* says that the land bounty bill turns out to be a mere bagatelle—a trifling grant of twenty-four millions of acres instead of two hundred millions, as had been estimated. The warrants did not average more than eighty acres, and the number cannot exceed three hundred thousand. The warrants, being assignable, will command about seventy-five dollars for a hundred and sixty acres. The speculators, who are the real beneficiaries of the bill, will engross them at that price, and sell them at a small discount from the government price. The old soldiers will receive under the bill the sum of twelve millions of dollars—less the twelve per cent. paid to agents, attorneys, &c., and the speculators about eighteen millions. It would have been much better, in a financial point of view, for Congress to pay the old soldiers and agents, in cash, out of the treasury.

MURDER OF A MINISTER.—The Indianapolis *Journal* publishes a letter from Dublin, Ia., dated March 8th, stating that a Mr. Benjamin Hickman, a near neighbor to the Rev. Mr. Scott, a Presbyterian preacher, approached him, (Scott,) apparently in a friendly way, and stabbed him with a butcherknife, inflicting such a wound as caused his death in about three hours. Hickman immediately fled to a small stream near by, and drowned himself. The reason assigned for this act is, that Scott had purchased land from Hickman, and had paid him in stock money, which Hickman laid up until it depreciated on his hands, when he wished Scott to take it back, which he refused to do, upon which Hickman became so enraged that he committed the act. Hickman was an old bachelor of intemperate habits; Scott was a popular minister in his society, and respected by those without.

UNDER THE SNOW.—At the time of the snow-storm of the 3d of February last, two sheep on the farm of Nathaniel B. Williams, Esq., of Lamesboro, Mass., strayed away and were given up by their owner for dead, being covered up in a snow drift which filled a ditch behind a fence to the depth of about twelve feet. But on the 27th—three weeks and three days after their disappearance—there being a thaw, it occurred to Mr. W. to look after their bodies, when he discovered a small hole in the snow, and upon enlarging it, the sheep were discovered in a little cavern in the snow, worn to the size of some six feet or less by the heat of their bodies. Nothing disturbed by their hermit fast of three weeks, on being released they scampered off briskly to the barn, with doubtless a comfortable appetite. [Berkshire Co. Eagle.

A dispatch dated Concord, N. H., Tuesday, March 13, 1855, says: In Meredith village, this forenoon, while citizens were balloting for Moderator in the new Town Hall, the floor fell in, precipitating about 300 people 18 feet upon stones and rubbish beneath. George Clark, John O. M. Mead, John Leavitt, Hiram Plummer, R. C. Tuttle, and Thomas Eastman were so badly injured that slight hopes are entertained of their recovery. Forty-six others were taken from the ruins—many of them with broken limbs, and other severe injuries. A dispatch one day later says that five persons had died, several others were not expected to survive, and over one hundred had limbs broken.

The Panama *Star* says that during the month of February there has been no less than two-and-a-half millions of British treasure transported across the Isthmus on mule-back and by Chagres River-boats, instead of being conveyed by the railroad; and there is shortly expected to arrive three millions more from Mazatlan, which will, in all probability, be transported in a similar way. The reason assigned for this is, that the rate of freight by the railroad is about one hundred per cent. greater than that by the mules, and considerably more than sufficient to cover the risk of loss.

SUMMARY.

The schooner Emperor, of Guilford, Ct., Chapman, master, loaded with hay and hoop-poles, anchored near Branford, about 10 o'clock P. M., the 9th inst., and on the morning of the 10th found they were dragging. When nearly in the middle of the Sound, they hove in their chain, but the gale was so severe, that she continued to drift toward the Long Island shore. She was headed east, hoping to get in to Gardiner's Bay, but failed, and, after losing boat and deck load, went on shore at 7½ in the evening, during the height of the gale, near Petty's Bight, off Orient, and immediately went to pieces. The Captain, Mr. Smith, the owner of the vessel, Mr. Furguson, and a colored boy, perished.

Three out of a family of five persons, living in Johnson Co., Mo., were frozen to death on the 29th ult. They were living in a very open cabin in the prairie; the snow drifted through the cracks of the cabin to such an extent, that they determined to go to a neighbor's, some two miles off; they started on, but lost their way, and wandering about until the woman and three children became exhausted, the man finally succeeded in getting to the house, and got help, and returned for the others; when they came to them, the children were already dead, and the woman so badly frozen, that if she gets well, she will lose both hands and feet.

We learn from the *Tampa Peninsular* of the 3d inst. that the Government steamer Texes Ranger has been expected at that port for more than two weeks past, transporting munitions of war for Fort Myers, in Florida. Her non-arrival has created much uneasiness and conjecture that she has met with serious accident somewhere between Tampa and New Orleans. The painful apprehension intrudes itself upon the minds of some, that her inflammable cargo of powder, &c., has ignited, and that the shock experienced on the 27th ult., and generally accredited to an earthquake, was none other than the report of the explosion of the supposed ill-fated steamer.

At a Concert of a band of Ethiopian Serenaders at the Brooklyn Institute, a lady named Anna Mermier was taken suddenly ill, and was carried to an adjoining apartment. A physician was soon in attendance and rendered every possible aid, but without avail, and the woman suddenly died, as is supposed from an affection of the heart. The deceased was the mother of nine children, two of whom (sons) were attached to the Minstrels, and were engaged in the performance at the time.

A party of Sioux Indians, who recently went on a hunt on the east side of the Mississippi river, near Rice Lake, Minnesota Territory, killed in one month five hundred deer and a very large number of small game. This was not on the proper hunting ground of the Sioux, but they had permission to hunt there from Governor Gorman. During the hunt they met the Chippewas, and had a fight, in which several Sioux were wounded and scalped.

A gentleman much respected in Bristol, and a partner in one of the principal banks in that city, has two nephews in Sevastopol serving in the Russian army, and two nephews outside Sevastopol serving in the French army. They are sons of two sisters, married, one to a Russian and the other to a French gentleman. Both Russians and French have also cousins in the English army.

A bill is before the New York Legislature for altering the Police System. It proposes that the entire control of the police-department should be given to four commissioners of police, who, with the mayor, should constitute a board, to sit daily in a room provided by the Common Council, with a president chosen by themselves from their own number. Mayor Wood has written a letter to the Lieutenant-Governor, protesting against the bill.

The Superintendent of the Banking Department has given notice that the notes of the Central Bank of New York must be presented at his office for redemption within two years from the 8th inst. Also, that the notes issued by D. Webb, an individual banker, (Dunkirk Bank, of Chautauque County,) must be presented within two years from the 9th inst.

The Charleston *Standard* says that while Capt. Ingraham is receiving from the people of foreign countries flattering testimonials of admiration for his heroic conduct in the Kozsta business, his entire property at home is passing under the auctioneer's hammer to satisfy an execution for a security debt. Twenty thousand dollars would preserve the gallant officer's homestead.

The publisher of a counterfeit detector, at St. Louis, announces that he was offered $10,000, a few days ago, if he would quote as genuine, $1 bills on "The Delaware City Bank." Several of these fraudulent bills have been put in circulation in St. Louis. One of them is dated "Delaware, December 20, 1854, letter B, No. 4,972."

It seems from a letter in the Ithaca *Chronicle*, that Gen. Halsey, whom we, in common with most of our cotemporaries, credited with paying the taxes of the indigent portion of the population of Ithaca, did not do a very extensive business in that line. The *Chronicle* says the whole amount paid did not exceed the sum of *two dollars and twenty-six cents.*

We are called upon (says the *Boston Transcript*) to report the death of our esteemed fellow-citizen, Mr. James Brown, of the well known publishing firm of Little, Brown & Co. The deceased had been indisposed about a week, but his illness was not regarded as dangerous until a short time before his death.

By the new postage act, after the 1st of July next, all letters must be prepaid excepting those sent to public offices on official business, and foreign letters. By paying five cents additional, valuable letters can be registered, but the Post Office Department will not hold itself responsible for their safe delivery.

James Montgomery, the poet, who died last year, left an estate, which has just been sworn under £9,000. Times have changed since Johnson exclaimed on hearing that Goldsmith died £3,000 in debt, "Was ever poet so trusted before?" Southey died worth about £7,000, and Wordsworth as much, while Rogers is a millionaire.

Persons who purchased the Texas claims, which have just been passed by Congress and approved by President Pierce, have made a great speculation. Large sums have been sold as low as 15 cents upon a dollar. Ten millions will be required to pay these doubtful claims.

J. Jones, Esq., P. M., of Allegan, Mich., communicates to the *Tribune*, under date of Monday, March 12, the recent death of Mrs. Bond, (whose husband is in California) from the effects of spiritualism, which made her insane. She had exposed herself in bad weather, and died, after a few days' sickness, in a dreadful state of mental misery, wanting some one to cut her throat a short time before her death.

A dispatch dated Hornellsville, N. Y., March 18, 1855, says: A collision occurred last night between the Dunkirk Express, East, on the New York and Erie Railroad, near Alfred Station. No persons were seriously injured. The collision was occasioned by a gross violation of the instructions on the part of the Conductor of the Dunkirk Express.

The Washington correspondent of the *Baltimore Sun* states that the Land Bounty Bill of the last session gives but about twenty-four millions of acres, instead of two hundred millions, as estimated. The warrants will not average more than eighty acres, and the number cannot exceed three hundred thousand.

Mr. Thompson, of Kansas Territory, living near Westport, Mo., has determined to make a visit to the Rocky Mountains in a wagon propelled by wind. He intends taking thirty persons, seventeen seats being already engaged. He will start about the 1st of June, and feels confident that he can find a ridge route the entire distance, and that the experiment will prove successful. He has succeeded so far as he has tried his plan.

The steamship City of Boston (of the Boston and Philadelphia line) has been sold to the Government, to proceed on the expedition in search of Dr. Kane. She is 558 tuns, 2½ years old, is a double decked vessel, and her frames are diagonally braced with heavy plates of iron.

Charles Frederick Gauss, one of the first astronomers of the time, and by many persons believed to be the greatest mathematician of any age, died at Gottingen, on the 23d of February.

The London *Medical Journal* says, that people ought to accustom themselves to sleep with the head on a level with the body, as it is a dangerous habit to bolster up the head at night, especially in all diseases attended with fever.

Very large and dangerous fires are raging in the pine woods between Savannah and Macon, Geo., and near Columbia, S. C. The Southern telegraph wires are destroyed for a considerable distance.

The Rev. Mr. Graves, editor of the Nashville *Baptist*, who was upon a collecting tour in Missouri, nearly opposite Hickman, Kentucky, was found a few days ago, murdered, on the road side.

The *Trenton State Gazette* announces that the Bank of Cape May has failed—some one connected with it having absconded with the funds.

The storm along the coast of Massachusetts, a few days since, appears to have been very destructive. A large number of wrecked and stranded vessels have already been reported.

Laysel, a French chemist, asserts that if tea is ground like coffee, before hot water is poured upon it, it will yield nearly double the amount of its exhilarating qualities.

New York Markets—March 19, 1855.

Ashes—$6 25 for Pots and Pearls.

Flour and Meal—Flour 8 87 a 9 62 for common to choice State, 9 37 a 9 75 for Michigan, Indiana, and Ohio, 11 50 a 13 00 for extra Genesee. Rye Flour 6 37 a 7 50. Corn Meal 4 25 for Jersey. Buckwheat Flour 3 75 a 4 00 per 100 lbs.

Grain—Wheat 2 10 a 2 32 for Western mixed 2 65 a 2 70 for White Genesee. Rye 1 37 a 1 40 for Northern. Barley 1 15 a 1 27. Oats 53 a 58c. for Jersey, 67 a 68c. for Western. White Beans 1 62 a 2 18.

Provisions—Pork 14 37 for new prime, 15 00 for Western prime mess. Beef 6 25 a 7 50 for country prime, 11 50 for country mess. Dressed Hogs 6 a 7c. Lard 10½c. Butter 15 a 20c. for Ohio, 23 a 30c. for State. Cheese 11½ a 12½c.

Hay—80 a 85c. per 100 lbs.

Lumber—16 00 a 17 00 for Eastern Spruce and Pine.

Potatoes—2 50 a 2 75 per bbl. for Western reds and Pinkeyes, 3 00 a 3 75 for Mercers and Carters.

Seeds—Clover 10 a 11c. Timothy 3 25 per bushel. Rough Flaxseed 1 85 a 1 88 for 56 lbs.

Wool—24 a 27c. for native, 38 a 42c. for American Saxony Fleece.

MARRIED,

In Christiana, Dane Co., Wis., Feb. 8th, Mr. JOHN WHITFORD, of Albion, to Miss ADAH JANE BURDICK, the daughter of Willet S. Burdick, formerly of Chenango Co., N. Y.

At the same time and place, Mr. LEMONT S. CRANDALL to Miss EUNICE A. CAMPBELL, all of the above place.

DIED,

At Temperance Valley, R. I., March 10th, 1855, of an affection of the lungs, CLARK A. POTTER, aged 42 years. Brother Potter professed religion about twenty years since, and united with the 1st Seventh-day Baptist Church of Hopkinton, where he has ever since remained a much-beloved and faithful member. He was confined to his room only about one week. His sufferings were extreme, but borne with patience. He wished prayer offered that he might have a mind entirely resigned to the will of God. His request was granted in this respect, for joyful hope in Christ attended him till the very last; and he expressed the fullest confidence that his hope would do to rely on in death. In his last hours he was enabled to adopt the language of the Apostle, "We know that if our earthly house of this tabernacle were dissolved, we have a building of God, an house not made with hands, eternal in the heavens." C. M. L.

LETTERS.

C M Lewis, R L Davis, J M Allen, J C Maxson, O Snowberger, M Johnson, Ethan Lanphear (will write,) Erastus Harris, Abel Burdick, L R Babcock, W B Gillett, Wm F Randolph, E F Wilson, T E Babcock, O Davis, S S Griswold, Z Campbell.

RECEIPTS.

FOR THE SABBATH RECORDER:

Geo S Greenman, Westerly, R I	$1 50	to vol. 11	No. 52
Joseph W Bliven "	2 00	11	52
Oliver Babcock, Potter Hill, R I	2 00	11	52
Obediah Davis, N Fairhaven, Ms	2 00	12	26
Jesse Saunders, Albion, Wis	2 00	12	52
Thos R Williams "	3 00	12	52
Davis Rogers, Sycamore, Ill	2 00	11	52
Thos Sprague, Knoxville, Pa	2 00	12	26
Daniel Maxson, Petersburg	2 00	11	52
Abel Burdick, Allegany	2 00	11	52
Edwin Daniels, Richburg	2 75	11	52
R T Green, Utica, Wis	2 00	11	52

FOR THE SABBATH-SCHOOL VISITOR:

Hamilton Clarke, Petersburg	$2 50
P L Berry, New London, Ct	2 50
W B Gillett, Shiloh, N J	1 50
H A Hull, South Brookfield	1 25

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Samuel Dunham, New Market, N J	$1 00
Morgan E Davis, Shiloh, N J	1 00
Wm R Wells, Ashaway, R I	1 00
Wm B Maxson, Leonardsville	1 00
J B Clarke, exchange of volume	1 62

WILLIAM M. ROGERS, Treasurer.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Board Meetings.

THE next Quarterly Meetings of the Executive Boards of the Seventh-day Baptist Missionary, Tract, and Publishing Societies, will be held in the meeting-house at Plainfield, N. J., on the second First day in April, 1855, commencing at 9 o'clock A. M.

Western Association—Executive Committee.

THE Executive Committee of the Western Association will hold its next session at Alfred Center the first Fourth-day in April next.

E. R. CLARKE, Secretary.

Eastern Association.

AT a meeting of the Executive Committee of the Eastern Association, held at Westerly, R. I., Feb. 25th, the following resolutions were passed, and their publication in the *Recorder* was voted:—

1. That the ministers of the several churches be requested to visit the church in Newport, if practicable, and perform such missionary labors there as they may judge best; and that the Association defray their traveling expenses.

2. That the churches be requested to raise the sum of one hundred dollars to meet the expenses of the current year, and forward the same to the Treasurer, A. M. Babcock, Westerly, R. I., on or before the first of April.

P. L. BERRY, Pres.
S. S. GRISWOLD, Sec.

In addition to the above, I would say, that it is very desirable that all demands be canceled prior to the ensuing session of the Association. Eld. H. Clarke's salary is already due for his labors at Green Hill. Will the pastors see that the several contributions are attended to. S. S. G.

39—3t.

3d Brookfield Church.

NOTICE is hereby given, that at an adjourned meeting of the Seventh-day Baptist Beaver Creek Society, held on the 5th of February, 1855, it was resolved, by unanimous agreement, to sell the meeting-house and its appendages at auction, and give the avails to the American Seventh-day Baptist Missionary Society, except such portion as may be called for by the original contributors, who shall receive their shares, according to the sum they respectively paid, if called for in three months from this date. The amount of the sale was $88. Also resolved, that the above notice be published in the *Sabbath Recorder*.

BENJ. BURDICK, Society Clerk.

SOUTH BROOKFIELD, Feb. 13th, 1855. 37—6t.

Rare Chance—For Sale,

A DENTIST, (wishing to retire on account of ill health,) having a good practice in a large, thriving, and beautiful town, where there is a community of Sabbatarians, will sell advantageously for the cash. Any person wishing to buy, can receive the most thorough instructions in every department.

Letters addressed to "Dentist," care of Rev. Geo. B. Utter, this office, will be answered, giving further particulars. 37—3t.

MAYOR'S OFFICE, Jan. 2, 1855.

COMPLAINT BOOK.—There is opened at this office a Complaint Book under the charge of a competent person, for the purpose of receiving and entering all complaints of matters coming within the urisdiction of the Municipal Authorities. The Mayor will entertain, and so far as the laws give him power, take cognizance of charges preferred by responsible parties for violation of ordinances and dereliction of duty upon the part of any person holding office under the City Government. By Order of the Mayor,

WM. H. STEPHENS, First Marshal.

All the papers in this City will please copy and send their bills to this office

Alfred Academy,
At Alfred Center, Allegany Co., N. Y.

THE attention of the public is respectfully invited to the educational facilities of this Seminary.

1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.

2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes.* The health, morals, and manners of students are all looked after with parental solicitude.

3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry*, will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women.* In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.

4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.

The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. HULL, or W. C. KENYON.

Feb. 24th, 1855.

The Carol:

A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.

"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.

The following extracts from the Preface will give an idea of the scope and design of the work:—

This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.

About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.

A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.

How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music, and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

Curious History of an Old Building.

The old structure on the north-west corner of Wall and Water-sts., known as the "Tontine Building," erected about sixty years ago, is to be demolished in the spring, and a more modern edifice erected on its site. David T. Valentine, Esq., furnishes the *Tribune* with the following interesting facts concerning the venerable edifice :—

The Tontine Building was commenced in 1792 by an association of merchants, and completed in or about 1794, for the purpose of providing suitable accommodation for the common convenience, and as a center for the daily intercourse of the mercantile community. By the constitution under which such Association was formed, 203 shares were subscribed for at $200 per share, severally depending upon a life selected by each subscriber, who stated, in the memorandum accompanying such subscription, the age, sex, and parentage of the nominee, during whose natural existence he was to receive his equal proportion of the net income of the establishment.

Upon the death of the nominee, the subscriber's interest ceased, and his interest thereby merged in the owners of the surviving nominees. The original shares were assignable and held as personal estate, and the whole property was vested in five trustees, who were to be continued in the manner pointed out in the constitution, and who were to hold the same until the number of such nominees was reduced to seven, when the holders of the shares contingent upon these surviving nominees became entitled to a conveyance in fee by trustees of the entire prmises, to be equally divided between them.

The nominee himself did not necessarily have an interest in the Association; for each subscriber, in naming some person—generally a child—looked to such as had the promise of "length of days."

The plan of this Association originated from the scheme of Lorenzi Tonti, a Neapolitan, who introduced it into France in 1653, under Louis XIV, and hence the word Tontine came to designate "a loan advanced by a number of associated capitalists for life annuities, with benefit to survivorship."

In the erection of this edifice the plan was altered from the scheme of Tonti. His intent was the establishment of a company who should each contribute a like amount of capital, to be loaned to a responsible party at a certain rate of interest, which was to be divided equally between the members of the same age; but where there was a diversity of age, according to a fixed ratio, the elder received more and the younger less. As the members died off, the survivors absorbed their respective interests; and when the last survivor died, the *borrower* took the whole capital.

The above constitution bears date June 4, 1794; but the nominations by the subscribers were not completed until March, 1795. The Association, in their preamble, named the building the "Tontine Coffee-House," and it was thereby directed to be kept and used as a coffee-house.

Upon the opening of the "Merchant's Exchange," the interests of the shareholders demanding a change in this special appropriation, they applied to the Court of Chancery for permission to let the premises for general purposes, and by its decree, in 1834, the above restrictions were removed.

Subsequently doubts having arisen as to the validity of the trusts under which the trustees took and held the property, in consequence of the Revised Statutes on the subject, the Legislature, in 1843, passed an act confirming the same, and altered the name to the "Tontine Building," and directed that the management of the affairs of the concern be by the Committee of the Tontine Building, who received, beside their other duties, the income from the establishment, and divided the net proceeds on the second Tuesday in each month of May, among the owners of the shares, depending on the nominees alive on the previous past day of the same month.

This Association, on the 4th of June, 1855, will have existed sixty-one years. In reference to the successive diminution of shares by death, the interesting fact is disclosed, that the lapse of shares from year to year is in proportion, with slight variation, to the relative number of both males and females. The existence of so many of the nominees, after such a lapse of time, is admitted by the compilers of annuity tables, here and abroad, to be very unusual, if not unprecedented. The nominees selected, however, were children of parents in easy circumstances, who were not in general subjected to the exposure and privations incident to the masses, the average of whose lives forms the basis of the usual calculations on this subject.

The following is an extract from an article on the subject of this Association, published in one of the Wall-st. papers in 1851 :

"There are few, however, whose age links them to the olden time, when it was the chief center of the commercial interests, who cannot recall scenes within its walls, 'the like whereof we ne'er shall see again.' A public meeting convened within its roof sent forth a decision which was almost universally respected. As a single instance of this, let us turn back for forty years, when the habit of distributing expensive scarfs to bearers and others at ordinary funerals was so prevalent that many poor families were sorely pinched to provide this necessary mark of respect for a departed relative. Some benevolent individuals, seeing the evil influence of such a fashion, called a meeting at the Coffee-House, where nearly two hundred of those whose weight of character gave force to their decisions, signed a pledge to abstain from the custom of distributing scarfs, except to the attendant ministers and physicians. This was the death-knell of the oppressive fashion. In matters of more vital moment, when great public interests were at stake, a voice has gone out from the said Coffee-House, which, like a recent echo from Castle Garden, has been heard throughout the length and breadth of the land. Some of the noblest charities, too, which the world has ever witnessed, received their first contributions beneath this time-honored roof.

"But the history of this organization is highly instructive in another point of view. The longevity of the nominees has been remarkable, we believe, beyond any similar experiment of the kind ever witnessed. It is true that the circumstances under which their names were selected would naturally lead us to expect for them a longer average period of existence; but this average has been so far extended as to be quite extraordinary. Of the two hundred and three, handed in about fifty-seven years ago, sixty still survive! Of these, the youngest is about fifty-eight, and the oldest seventy-nine. This is about one-third greater longevity than the average of European estimates."

The "Tontine Building" is the only one left standing in Wall-st., which was erected during the last century. In this building died the renowned George Frederick Cook, that eminent tragedian who, in his delineations of the tragic muse, in his day, was without competition; surrounded by many of his cotemporaries, patrons of the house, who continued with him in that last act in the drama of his eventful life. Hither men from every section of the country were attracted by its reputation; and they regarded a visit to the Tontine in those days as essential to the comfort and agreeability of their temporary sojourn in this City.

For many years past the building has been occupied as printing and other offices, and has paid a handsome sum per annum to the respective owners.

Burning of a College Building.

Old Nassau Hall, at Princeton, N. J., was destroyed by fire on the night of March 10th—the fire originating from a pile of wood which a student had placed near a hot stove to dry. Of the building the Newark *Daily Advertiser* says :—

"The old North College was the original structure, built in 1756—nearly a century ago—and formed the nucleus round which gathered the numerous other buildings which have sprung up with the continued growth of the Institution. Human enterprise will replace the sacred old pile with a more modern, more spacious, and perhaps more beautiful structure, but what energy, what money, can restore those hard old timbers, carved all over with names now illustrious in our country's history, and walls covered with charcoal shetches—the first efforts of their graphic skill. These were the results of mischief then, but now the records of their youthful impulse, round which the best affections of riper years cluster, as round the sacred relics of the family altar. It was 176 feet long by 50 wide, and four stories high, surmounted by a belfry, and containing students' rooms and the old chapel, which had recently been converted into a picture-gallery—the contents of which, we are glad to learn, were saved through the energy of the Faculty, though the students who occupied the apartments lost all except the clothing upon their backs. Previous to the battle of Princeton it was occupied by the British troops as their barracks, and the basement they used for stables; it was afterward regained by the American soldiery, and during the struggle a cannon-ball from the American ranks passed through the walls and destroyed a portrait of King George II, which adorned the chapel, but the frame, which was uninjured, was subsequently filled with a full-length portrait of Washington, painted by the elder Peale. It is stated that Washington, after the battle, made the trustees a present of 50 guineas to repair the damage sustained by the fire of his troops, and this sum they expended in procuring his portrait, which, among the relics of the chapel, was saved. The paintings in the picture gallery were preserved. The East and West Colleges, the literary halls, chapel, library, lecture-rooms, professors' residences, &c., are entirely uninjured, so that the exercises of the College will not be interrupted by the serious loss which it has experienced, and immediate measures will be taken to repair the disaster."

Charitable Fairs.

A writer who signs himself Z. K. Philander Doesticks, P. B., is giving through the N. Y. *Tribune* some out-of-the-way aspects of life. His account of what he saw at a charitable fair has in it so much truth, (mixed up, indeed, with a good deal of exaggeration,) that we copy a few paragraphs. It seems that a country friend had requested him to purchase and forward a dressing-gown, a pair of slippers, and a worsted comforter; and thinking that he would not have a better opportunity to procure them, he went to the Fair. But hear him :—

Got to the Hall, paid my twenty-five cents at the door, went in—saw plenty of long tables, with ladies behind them playing "keep store"—tables covered with mysterious articles of baby-linen, and complicated pieces of female harness, designed for uses to me unknown, and also all sorts of impracticable unnecessaries intended for gentlemen—slippers that you could n't get on—smoking-caps that could never, by any possibility, fit any body (shaped like a Chinese pagoda, and full of tinsel and spangles to make them prickly,) cigar-cases that you could n't get a cigar into without breaking both ends off (perhaps they expect us to smoke "stubs," like the newsboys,) pin-cushions stuffed so hard they would turn the point of a marlin-spike—watch-cases just big enough to hold a three-cent piece, pen-wipes that fill the point of a pen full of wool—and diverse other nonsensical inconveniences fabricated by speculating females, the patterns being always very short, and the stitches very long (I supposed they think we don't know the difference) to palm off upon victimized gentlemen; and they resignedly submit to a price so exorbitant that if a Chatham-st. Israelite had the impudence to ask it, they'd straighten out his fish-hook nose like a darning needle. The prettiest-looking girls are always placed where the least attractive looking merchandize is displayed, and they ask the biggest kind of prices, trusting to the gallantry of the gentlemen "not to beat them down," flattering themselves, I suppose, that their pretty looks are "value received" for the exchange. One consequence of this arrangement is, that every buyer spends all the money he has in his purse, taking in exchange therefor a lot of stuff so utterly useless, and so ridiculously absurd, that after having it on his table for a week or so to laugh at, he is fain to get rid of the rubbish by giving the whole to his chambermaid. Sometimes your purchases will hold together till you leave the room, and sometimes not; you must show yourself a man, and "equal to either fortune."

There was a Post Office—pretty girl called me, had a letter for me—bought it—paid ten cents—nothing in it—blank. Solicitous young lady very anxious to have me give her twenty-five cents to tell me how much I weighed—paid her the money, and she told me within fifty-one pounds and a half—young woman wanted me to invest in the "grab-bag"—gave half a dollar and fished in—got in three times trying, a tin whistle, half a stick of candy, and a peanut done up in tissue paper. Went on to the auction-table, where, after much competition with a ringleted miss, (who was put there to make Peter-Funk bids against probable purchasers) succeeded in bidding in a China vase, which I soon discovered had a hole in the bottom, and would n't hold water any more than it would bake pork. If I had bought it any where else, should have thought I had been swindled, and have demanded my money back, but here I suppose it was an exemplification of some newly discovered principle of fair dealing, with which I was not yet acquainted. Was much amused with the way they disposed of the unsold goods—certain number of articles, (things left at the tables tended by the homely girls,) and for each article twenty tickets were put into a hat, whence they were drawn out singly, and the last tickets drawn were to have the prizes—should have thought it was just the same as a lottory, if I had not been acquainted with the ladies, and known they would n't do any thing so naughty. Come to a place where an old lady, with steel spectacles, was cutting up a loaf of cake into particularly small pieces—asked what it meant—was told there was a gold ring somewhere in the cake, and they proposed to sell each piece for a quarter of a dollar, and give the ring to the lucky buyer—wondered if it was n't another lottery on a small scale, but supposed it could n't be.

Having procured the articles required for my friend, I left—got home, and proceeded to examine my purchases—found that the slippers, having been pasted together without the slightest regard to permanency, had come apart in my pocket—my comforter had raveled out, so that I had about six inches comforter, and a wad of yarn big enough to make a horse blanket—my dressing-gown had been made of a moth-eaten remnant, and where there was any sewing, every stitch was long as a railroad, but the sleeves had, I verily believe, been put in with court-plaster, and the long seams closed with carpenter's glue.

Made up my mind that the objects of that feminine institution, a Ladies' Fair, are somewhat as follows: Firstly, to give the ladies an opportunity to show their new clothes, and to talk with a multitude of unknown gentlemen, without any preliminary introduction. Secondly, to beg as much money as possible from the gentleman aforesaid, under the transparent formality of bargain and sale—which sale includes the buyer, who is really the only article fairly "sold" in the whole collection. Thirdly, to give some money to the ostentatiously poor, if there is any left after paying expenses, and the Committee don't spend it in carriage hire.

In New York, by a refinement in benevolence, engendered by the hardness of the times, and the necessity of making the money go as far as it will, charity money answers a double purpose; procuring pleasure for the rich, and soup for the poor. Thus, if you pay three dollars for a ticket to the Opera, or Ball, you can enjoy your Aria, or Schottisch, with a duple relish; and can eat oysters and turkey, and gulp down cream and ices, till your stomach "strikes," in the labor of love, with the happy consciousness, that it is all for "sweet charity"—and if the three dollars, before it reach the needy, in whose behalf you gave it, dwindles to three dimes and a fip, you can, knowing you have done your duty, poetically exclaim, with the noble Thane, "Thou canst not say *I* did it."

Iron for Building.

The Railroad and Iron interests of the country are intimately connected, consequently the present check to railroad improvements has been severely felt by that large portion of the community engaged in the manufacture of iron. The manufacture, in itself the most essential branch of industry, its producers furnishing an article of universal consumption from the inexhaustible stores of it that are at hand, has only from time to time, and that for a short time, owing to some unusual emergency, been highly remunerative to those engaged in it, and that in spite of the generous protection that has been at different times accorded to it.

A new demand is being now, however, created for iron, which, if it increases as rapidly in other sections as it has done in those in which it has been introduced, will be likely to dissipate the gloom that hangs over this branch of business. Iron is coming daily more and more into use for architectural purposes, and may, if the proper efforts be made to point out its advantages, in a great measure supplant the materials which have heretofore been used in construction. The Government at Washington, following the example of Great Britain in this respect, has just completed the erection of a public building entirely of iron except the exterior walls; these would have been of the same material, but it was doubted at the time when the plans and specifications were made, whether walls of this kind could be made fire proof; it has since been demonstrated that they can, and that in this respect iron houses may be made to vie with any fire proof safes.

Throughout France and England iron has for some time been gaining ground, as a material for building; the facility with which it is transported has led to its being sent for this purpose to the British colonies in very large quantities. In our own large Eastern cities, and especially in New York, the last year has witnessed the erection of many buildings wholly of iron. These signs and its own intrinsic merits render it probable that iron will be found in a short time supplanting all other materials for purposes of modern architecture.

The age of building for posterity has passed. In our age everything moves fast, everything changes; there never was such a building age as ours, nor such a building people as our own. The whole face of cities is changed with us in a space of time that to our ancestors would appear incredibly short. What we must look at, then, in selecting a material for building, is saving of material, labor and time. Iron does all this. We have it in abundance, at a moderate price, and it is by its nature easy of transportation. It occupies less space than brick or stone; is capable of a greater degree of ornament at a less expense, and combines more than any other substance for building purposes, the essential elements for strength and cheapness.

Another very important advantage which iron has, is the fact that its intrinsic value in not destroyed by fire. An iron house when burnt would not be by any means destroyed; the material would remain diminished in value only by the loss of the labor bestowed in bringing it into shape. This, in consideration of the tremendous conflagrations which visit our great business communities from time to time, is by no means to be overlooked.

These facts, for they are indisputable facts, are urged with great earnestness by the journals in Pennsylvania attached to the iron interests, and it is suggested that the General Government, taking them seriously into consideration, adopt iron as the substance for the construction of public buildings from this time forth. Such a step would be of great importance; the introduction of iron into the public architecture of the country, could not fail to contribute to hasten its general adoption, and thus economy to the Government would be joined to an accidental encouragement to an interest which the legislation of Congress has so often been invoked to protect. These considerations are certainly eminently worthy of attention in future appropriations for public buildings, and should they receive it, an immense and increasing demand for iron must at once be created, which would raise the iron interest from its present depressed and embarrassed condition, and be of incalculable benefit to our State, rich as it is in this precious ore. [St. Louis Intelligencer.

Much Honey from a Little.

Those who wish to increase the quantity of their honey, and also to increase its flavor, can do so by following Longstreth's directions, as follows :

"Dissolve two pounds of the purest white sugar in as much hot water as will be just necessary to reduce it to a syrup; take one pound of the nicest white clover honey—any other light-colored honey, of good flavor, will answer—and after warming it, add it to the sugar syrup and stir the contents. When cool, this compound will be pronounced, by the best judges of honey, to be one of the most luscious articles which they ever tasted; and it will be, by almost every one, preferred to the unmixed honey. Refined loaf sugar is a perfectly pure and inodorous sweet, and one pound of honey will communicate the honey flavor to twice that quantity of sugar; while the new article will be destitute of that smarting taste which honey alone so often has, and will be found perfectly to agree with those who cannot eat the clear honey with impunity. If those engaged in the artificial manufacture of honey never brought any thing worse than this to market, the purchaser would have no reason to complain. As, however, the compound can be furnished much cheaper than the pure honey, many may prefer to purchase the materials and to mix them themselves. If desired, any kind of flavor may be given to the manufactured article; thus it may be made to resemble in fragrance the classic honey of Mount Hymettus, by adding to it the aroma of the lemon balm, or wild thyme; or it may have the flavor of the orange groves, or the delicate fragrance of beds of roses, washed with dew."

Plea for the Birds.

The Norwich *Examiner*, in a notice of Hovey's *Magazine* for February, says: Wilson Flagg continues his plea for the birds, and certainly makes out a very plausible argument for the crows and black-birds, which have so long been put under ban by the sapient legislators of New England. It is among our earliest recollections, living in the family of a Justice of the Peace, that the farmers' boys brought young crows by the basket-full, to receive the bounty upon them. The cry of these poor birdlings, just taken from their nests in the deep forests, and with the down of infancy upon their half-covered skins, haunted our boyish imagination for months after the sacrifice. It seemed a most inhuman butchery. The bounties so thinned out the crows, and insects increased to so great an extent, that some of the States were obliged to offer counter rewards for the protection of the crows.

The red-wing crow and blackbirds live to a great extent upon grub-worms, caterpillars, and other larvæ—the silent, but deadly enemy of all vegetation; and whose secret and insidious attacks are more to be dreaded than the combined mischief of all the feathered tribes put together. It is reported that when the locusts had been accidentally introduced into the isle of Bourbon, and had spread so as to destroy vegetation, a few grackles introduced from India soon multiplied so as to exterminate them. The woodpeckers and the night-hawks are also shown to be very useful birds.

Who would grudge the common robin his feast of cherries, or the blackbird his grains of corn, if he were at once convinced that the services of these birds, and others, are all that can save our crops from destruction, and the world from famine. They are profitable servants, who glean a tribute from our orchards and cornfields, as the wages of their labor; and if we could make an exact estimate of the amount of service they perform, we should find them abundantly worthy of their hire. If the poor bird who is outlawed for a little mischief he is supposed to do, should present his *bill*, containing an enumeration in figures of the amount of grubs and insects he had destroyed, we should probably be startled at our own indebtedness, and be willing to pay him more liberally than he pays himself, for the continuance of his services.

Draining.

There are several beneficial effects resulting from a judicious system of drainage, the principal of which I shall enumerate :—

1. It prevents an accumulation of water in the soil, whether rising from below, or falling from the clouds.

2. The surface-soil of drained lands acts as a filter, and retains any nutritious matter that may be contained in the surface water, when passing to the drains.

3. Drains carry off any noxious matter, such as oxyd of Iron, etc., which water, rising from below, may hold in solution.

4. It induces a regular circulation of air through the soil, which acts upon the sulphates, carbonates, siliciates and phosphates of lime, potash and magnesia, and thereby renders them fit to becomes the food of plants.

5. Excess of water in the soil prevents the decomposition of the organic matter contained in it, which produces carbonic acid, ammonia, and other nutritious substances.

6. Draining renders a soil more easily worked, and enables the farmer to pursue his avocations immediately after the rain ceases to fall; the crops can be put in earlier, and will, consequently ripen earlier.

7. It has the effect of warming the soil, by removing the water, and thereby lessening the amount of evaporation.

8. The removal of an excess of water is equal to an actual deepening of the soil, as the absence of superfluous water from the subsoil enables the roots of plants to penetrate deeper in search of food, when some of the fertilizing matters may have been deposited by the rains.

9. Wetness prevents the action of manure, by excluding air and heat; without which those changes, so essentially necessary to produce food for plants, cannot take place.

10. On moorland districts, the subsoil is rendered hard by the deposition of ferruginous matter, which is easily broken up by draining and sub-soiling.

11. The general health of the country is benefited by lessening the amount of evaporation, which produces fogs, mildews, and malaria of different kinds. [Evening Post.

The best Soil for Fruit Trees.

After almost a half century of experience in raising fruit, we are decidedly of opinion, as a general rule, that the best soil on which to raise fruit, is that just cleared of a forest. The surface should be rolling or descending, and moderately dry and rich. Such ground needs little or no preparation; the roots of the forest trees, as they decay, keep it loose and mellow, and afford the exact food necessary for a rapid and healthy growth of the fruit trees; and the soil abounds plentifully in those elements which are requisite to form the most perfect fruit. Another consideration, and a very important one, is, that fruit trees grown on recently cleared forest land, are much less diseased than those grown on old land, and the fruit is not near so liable to be attacked by insects.

Any one going from an old settled country to a new one, will not fail to observe the remarkable difference between the trees and fruit of the one and the other. How much thriftier they are in the latter than in the former, and how much larger, fairer and more perfect the fruit.

We would advise those contemplating setting out new orchards, if they have no woodland to clear for this purpose, to set apart as much as they desire for fruit, and let it grow up with young forest or other trees as rapidly as possible. Even a few years' growth will answer a good purpose, provided they are cut down and allowed to lie on the land; and when dry, burnt off where they are, and the ashes permitted to remain. This is undoubtedly one of the best preparations and manures—if we may so use the term—that can be obtained.

In growing peaches, &c., we have found—other things being equal—that new orchards usually did best planted on old orchard ground, the trees set as near as possible to the decaying stumps. Previous to planting, however, the soil should be broken up at least two feet deep, if possible, and ashes and such other fertilizers added as are necessary to insure a good growth.

Granite soils are among the best for fruit, as this rock abounds in feldspar and mica, both of which contain potash—feldspar more than mica. As these rocks disintegrate and enter into the composition of the soil, they supply one of the most necessary elements for the formation of good trees and fruit. We will also add, that some of the best orchards which we have seen, were on alluvian (loamy) soils, lying upon limestone rocks which came up near the surface. [Am. Agriculturist.

Grapes ripening in December.

In a late number of *Hovey's Magazine*, Mr. Simpson gives his process of growing grapes, so as to have them ripen in December. The vines are pruned and started in August—say the first. There is no delay in the starting of the buds after pruning; in a week they will give you assurance of a good crop. To retain the heat in the border as the cold weather came on, he covered it with meadow hay about a foot in depth, and about six inches of wool-waste and manure on top of this, to absorb the rain, which freezing, made a still more perfect protection. This answered the purpose, the heat passing away from the border only about three degrees in a week; after the first of December, at which time it was 60°, the fruit ripened perfectly. It was generally supposed that he would fail in the flavor and color of his grapes, as well as in size, from the want of sun in December, but the experiment does not show it. Though he has got two crops from his vines in one year, he does not recommend this, as it would be likely to overwork the vines. His present judgement is, that one crop in two years would be better than two in one. He regards the advance made in horticulture by his experiment, as chiefly this, that we shall be able to supply ourselves with delicious grapes in mid winter, which has heretofore been considered impracticable by our best grape-growers.

A MISSOURI ADVERTISEMENT.—Under the head of *Negro Dogs*, the following advertisement appeared in a recent number of the Lexington (Missouri) *Democratic Advocate* :

"I would inform the citizens of Holmes County, that I still have my NEGRO DOGS, and that they are in good training, and ready to attend to all calls of hunting and catching RUNAWAY NEGROES, at the following rates. For hunting per day, five dollars, or if I have to travel any distance, every day will be charged for, in going and returning, as for hunting, and at the same rates. Not less than five dollars will be charged in any case, where the Negroes come in before I reach the place. From fifteen to twenty-five dollars will be charged for catching, according to the trouble; if the Negro has weapons, the charge will be made according to the difficulty had in taking him, or in case he kills some of the dogs, the charge will not be governed by the above rates. I am explicit to prevent any misunderstanding. The owner of the slave to pay all expenses in all cases. I venture to suggest to any person having a slave runaway, that the better plan is to send for the dogs forthwith when the negro goes off, if they intend sending at all, and let no other person go in the direction, if they know which way the runaway went; as many persons having other negroes to hunt over the track, and failing of success, send for the dogs, and then perhaps fail in consequence to catch their negro, and thus causelessly fault the dogs. Terms cash. If the money is not paid at the time the negro hunted for is caught, he will be held bound for the money. I can be found at home at all times, five and a half miles east of Lexington, except when hunting with the dogs.

JOHN LONG."

FEB. 14, 1855.

The Senate of Indiana have passed a bill to punish railroad operators in case of negligence, and persons leaving gates and fences open on the line of railroads.

New York and Erie Railroad.

ON and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.,) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. SANDS, retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere.

EDITED BY GEO. B. UTTER AND THOS. B. BROWN. "THE SEVENTH DAY IS THE SABBATH OF THE LORD THY GOD." TERMS—$2 00 PER ANNUM, IN ADVANCE.

VOL. XI.—NO. 42. NEW YORK, FIFTH-DAY, MARCH 29, 1855. WHOLE NO. 562.

The Sabbath Recorder.

TRACT OPERATIONS.

Continued from the Recorder of March 22d.

On Sabbath, January 27th, I went to the synagogue, introduced myself to some of the Jews, and gave them some Tracts. I also proposed to them the subject of lecturing in their place of worship, and made some pleasant acquaintances among them. But as their synagogue was not a very eligible place for my purpose, and finding that some might not incline to let it, I did not press the matter. The evening after Sabbath was the time advertised for C. M. Clay to lecture in New Haven upon the Tyranny of Slavery. I went to hear him. At his lecture given in New London, one week before, the admittance was twenty-five cents per head; the lecture at New Haven was free, and very numerously attended, the large Hall where it was given being filled to its utmost capacity. The lecturer used no notes, but spoke for about an hour in a manly, argumentative, and forcible manner. I heard the lecture afterwards spoken of as the best they had ever heard in New Haven. On First day morning I attended Dr. Phelps' church, and heard him preach. In the afternoon I went to Dr. Croswell's (Episcopal) church, and heard a good sermon by the very venerable looking doctor. I judged him to be aged about seventy; and his hair, which was thick, long, and naturally curled, was as white as his surplice.

Wishing to visit Hartford and some other places in that vicinity, I concluded my arrangements with the Universalists to discourse on the subject of the Sabbath in their house on the next First-day, or the evening following.

While at New Haven, I went one day into the railroad depot, and distributed some Tracts to the persons present, as I was in the practice of doing. At the time I speak of, I had considerable conversation with several individuals, and among the rest was a Congregational minister. When we had talked some time, and he had about exhausted his means of defense of the practice of Sunday-keeping, he gave me the history of his first acquaintance with the Seventh-day Baptists. It was substantially as follows: When he was a boy, he said, he lived in Vermont, and there being some person sick in his neighborhood, who had a relative in Rensselaer County, N. Y., whom they wished to see, he was sent down to bring the person up to Vermont. And as it was a case of *necessity*, it was so arranged that a part, at least, of the journey down to Rensselaer was performed on Sunday, as he called it. His way led him through the Seventh-day Baptist settlement in the town of Berlin, and not being accustomed to see people at work on that day, he was surprised to find them busily engaged in their usual employments. Among others he chanced to see, was a man digging post-holes near the road-side, whom he accosted, and inquired, "What do you do with the Sabbath down here?" to which the man at work coolly replied, "We let it out to travelers." My friend said, though he was but a boy at the time, yet the answer of the man at work was perfectly intelligible to him, and he rode along without asking any more questions. And thus our conversation ended.

Towards the last of the week, I left New Haven and went to Suffield, a New England village some sixteen miles above Hartford, and called at Mr. Thaddeus Spencer's, whose wife is a member of the Seventh-day Baptist church at Pawcatuck, R. I. Mr. and Mrs. S. received and entertained me in a very kind manner. I met two other members of the Pawcatuck church at Mr. Spencer's, one a sister and the other a cousin of Mrs. S., who were attending the flourishing seminary of learning located in that village. The afternoon of the day I arrived at Suffield was the time of the covenant or preparatory meeting of the Baptist church in that place. Accompanied by Mrs. S. and one of the young ladies, I attended the meeting, and was introduced to the pastor of the church, Rev. Mr. Ives, a very interesting man, and I think an able minister. The meeting that afternoon was quite interesting. One thing that enhanced the interest of the occasion was, that a young man, a student in the Academy, gave in his experience, and made an offering of himself to the church, asking baptism and membership with them. Mr. Ives asked me to preach for him the next morning, to which I consented, and attended through the services of the day and evening. The Baptist church at Suffield is very large. I think they told me it had some eight or nine hundred members. Having writing to do, I remained at Suffield till Third-day. Before I left, I called on Mr. Ives, and presented him an assortment of our Sabbath tracts, and had quite a long conversation with him on the points of difference between us. Among other things, Mr. Ives expressed his views on communion, (in substance, that of communing with all immersed believers,) and suggested the propriety of their people and ours communing together, and also a wish that we should take the subject up in our public meetings, that is, Associations or Conference, and seemed to think we might see the propriety of the measure. I told him we had had the question up, but that I was of the opinion, that the Seventh-day Baptists, as a people, would never adopt that view of the matter. At that juncture, one of Mr. Ives' deacons came in (with whom on the evening previous I had an interesting conversation, and gave him a tract,) and he having business with the Elder, I bade them good-day.

I reached Hartford that afternoon, and put up at the Eagle Hotel. Having ordered a package of Sabbath publications for that place, I found them at the Express office, and commenced distributing them, and by the next day at night I had disposed of as many of them as I thought best to leave there, as I wished some for other places on the route back to New Haven. I then took the cars and went as far as Meriden, and stopped for the night. The weather, which had been exceedingly cold ever since I left New Haven, had by this time so moderated that there was a severe snow storm during the night, which interrupted the trains on the road the next morning. During the fore part of the day, I made my way about town through the snow, and disposed of what tracts I could spare, and reserve a few for those who might attend my lecture at New Haven, where I arrived the same evening.

The next thing to be attended to, was to give notice of my lecture, which I did in two of the daily papers. One of them, the *Palladium*, inserted the notice free of charge, under the head of "Religious Intelligence." Sixth-day, I did some writing and ordered a package of tracts to be sent me at Bridgeport. Sabbath, attended the Synagogue in the morning, and spent the rest of the day at my Hotel. In the afternoon Dr. Phelps called on me, and asked me to preach for him the next morning, which I engaged to do. When I went into the pulpit to fulfill my engagement at Dr. P.'s the next morning, I saw that Mr. Hodsdon, the Universalist minister, at whose church I was to speak in the evening, was in the congregation. I did not think it very strange that he should be there, considering the novel circumstances of the case, especially as I knew that they used their house for their Sunday School in the forenoon, and only had preaching in the afternoon and evening. I rather suspected, however, that Mr. H. was not in the habit of attending Dr. P.'s church very often. At two o'clock I went to Mr. H.'s church to hear him preach. I found that he had quite a fine house, and a rather fine appearing congregation, and quite respectable in numbers. The sermon was good. For closeness of application, and spirituality of bearing, it was more than an average with the preaching I am accustomed to hear. Perhaps I ought to mention, that Mr. H. invited me to a seat in the desk with him, which I accepted, and at his request made the opening prayer. Whether he felt honored, or not, by the intimacy practically carried on between us, I did not apprehend any danger; though it was somewhat closer than is sometimes permitted me, even among those whose theological and ecclesiastical relationship to myself is understood to be much nearer than his. At the close of the service, Mr. H. gave notice that I should give a discourse at that place in the evening—he also explained the nature of my subject, and object of my agency, and expressed a readiness to hear and consider what I might have to offer. The congregation in the evening was, I thought, quite as large as it was in the afternoon, and they gave very close attention. They *seemed* to be interested. The full choir and fine organ gave us some good music. The closing piece was rich. It was a fine anthem; and was performed with a freeness of style, and a copiousness and amplitude of voice, which produced a good effect. Mr. H. at the close thanked me for my sermon, and introduced me to a gentleman that I judged to be one of his leading members, who said he had been very much interested in my discourse. I will not estimate the value of these compliments, as my readers know what it is as well as I. Mr. H. also invited me to call on him again if I came to the city, and I, after thanking him for his liberality extended to me, bade him good night, and went to my lodgings.

The following morning I noticed in one of the New Haven papers, that one of the Hartford papers had noticed the receipt of some tracts on the Sabbath, and signified that it was much more important to have a Sabbath than to contend merely for the name of the thing. Thought I to myself, "Those are my sentiments." I tried to get hold of the Hartford paper containing the notice alluded to, but did not find it. I had a few days before left some tracts in several of the printing offices in Hartford, and of course I understood the remark of the editor to refer to them.

Leaving New Haven, I went to Bridgeport, hoping to find some Sabbath publications to distribute there; but finding none, I went to New York that evening, and the next day returned home, having had a pretty laborious tour of about a month, and not a little exposure during the severe weather of the season.

The following remarks seem to me appropriate in this place:—

First—I fear that many of our people do not fully appreciate the labors, privations, and undesirable concomitants of an agency for the propagation of their views of the Sabbath—that is, to go from home to preach what almost every body dislikes to hear, and hates still worse to practice.

Second—I am of the opinion, that they are not aware of the cost of getting suitable places to preach in on that subject. In the country, and most country villages, no places can be had for that purpose, as the churches will not let their places of worship for that object, and suitable Halls are not there met with. In the cities, where Halls can be had which are suitable, they rent at prices from ten to fifty dollars per evening—ten and fifteen dollars being the usual price of such as would be thought fit for the purpose. And yet it is no more reasonable to expect to advance the cause of the Sabbath by tracts *merely*, without the living preacher, than it is any other element or law of God's kingdom.

Third—I fear our people lack a comprehension of, or faith in, the utility of their expenditures in the Sabbath cause, because they habituate themselves to judge of the matter by the consideration, whether there are conversions to the Sabbath or not. They should remember, that to convince people that there is no plea for the civil injustice done to us by the Sunday laws, and that our views are consistent with the strictest Christian integrity, is doing something. Our people should remember, that when we go beyond the immediate vicinity of our Societies, our sentiments are looked upon as idle vagaries, and our practice of keeping the seventh day is regarded as a stupid, unfortunate, and mischievous infringement upon good order. They should remember, that the mass of society has had no opportunity to gain any correct views on the subject, if indeed they have any views of it whatever. Therefore it is certain, that to render a correct general opinion, (so far as our agency is involved in the work,) even *possible*, we have got a vast work to do. It will, it *must*, cost *money*. It must cost *time*. It must cost *labor*. It must cost *patience*. No *great* result *can* be *immediately* produced. It is *impossible*, *except* by the power of God, which, though I think we have no *reason* or *right* to expect he will employ, out of his usual order, in this cause, yet I trust he will exert as fully as may consist with his glory and our duty.

But it is as certain that the arguments or facts in the case, (when made known,) will correct the public mind, and cause it to decide in our favor, as it is that it will require the money, the time, the labor, and the patience, to get the truth before that mind. It is certain, beyond a doubt, that the whole scheme of Sabbath doctrine, among Protestants, generally, will be shortly overthrown. I do not mean in a few days, or months, but comparatively in a few years; for the seeds of destruction are in that scheme of falsehood, and truth is against it. But in the progress of these affairs, the departments of revealed truth, and historic facts, must be traversed, and their converging beams of light brought to illuminate the point in hand, which the dominant and interested portions of an insane church have for ages been trying to veil in impenetrable darkness.

While it is our duty to economize, and employ such means and agencies as will do the most execution at the least cost, I think it will be found indispensable to use the whole diversity and variety of that talent in the Sabbath cause, which has been ordained for holding up the church of God in the world. And yet, as there is next to nothing being contributed to carry on the work, one would be led to think the object had been forgotten.

L. CRANDALL.

FOOTPRINTS OF JEHOVAH IN THE AGES OF REVELATION—NO. 5.

The Third day.

The third day is distinguished by the separation of the water from the land, and the formation of seas and dry land, and the production of vegetation from the new-made land. From what is said of the condition of the earth in its incipient stage, and what is said of the third day's creation, it is obvious, that at first the earth was a soft, unshaped, permeable mass. When, therefore, "God said, Let the waters under the heavens be gathered together into one place, and let the dry land appear," it is easy to imagine the process. At first no ocean rolled, no mountain rose, no river flowed, no vale was formed, nor hill, nor plain, was seen; but earth, having received her alkalies, salts, and acids, cohesive, crystaline, and attractive properties; its metalic bases, and igneous or irruptive powers; Jehovah speaks, and earth's foundations instantly were fixed. As the mountains rise, the ocean's bed is formed; the waters rush from the rising lands and groove the yet soft and permeable surface into valleys and ravines; and the concentrating rivulets channel out the plain with the enduring river courses. Such was the antediluvian earth, and such is the appearance of earth now, and such is the process which often occurs in the local changes taking place at this day. Whether such were the process or not, it is the plain testimony of Jehovah, that the formation of seas and dry land took place within the period of one day. "The sea is his, and he made it; his hands formed the dry land." It was not the production of ages of debris and convulsion. "He commanded, and it stood fast." The order of occurrence is natural and striking; it precedes vegetation and animated being. It is a fixed fact, that all animated beings have a specific element necessary to their natures, water or air; and most of them localities suited to their instincts and habits. As they cannot live when removed from these localities, so it is equally manifest they could not have been formed before such localities were provided for them. To a great extent, this is likewise true of vegetation—grasses, herbs, trees, in all their vast variety, but each in its maturity, yielding seeds and fruits each after its own peculiar kind. From what is said Gen. 2: 4, 5, we are assured that each was made before it grew. Was not this done, and the statement made, to disprove the sceptical theories of such vaunting theorists as assume that nothing can be produced but by the same laws that now govern natural productions?

It is obvious from the narrative, that no seasons had yet performed a natural circuit, as now they do, producing the bud, the leaf, the blossom, the embryo, the matured, ripened fruit; yet each species was complete for food, ere yet a creature was made to eat of it. It was all done without the solar rays; no sun had yet shone upon the earth! Of course it was not done philosophically. The heathen early worshiped the sun as the great impregnator and fructifier of nature; but Moses relates the production of every species of vegetation ere the sun was made to shine upon the earth! It is manifest, therefore, that he did not attempt to write as a philosopher, but as a narrator of the footprints of Jehovah.

S. D.

☞ The recent decision of Judge Roosevelt—that the proprietors of Sunday papers cannot collect by law their bills for advertising, because a contract to advertise on Sunday is a contract to do an illegal act—has called forth several well-written articles on the subject of Sunday laws in general, and their relation to the Constitution of the United States. The following, from the *New York Dispatch*, is worthy of being placed on record.

CONSTITUTION AND SUNDAY LAWS.

The first article of the Amendments to the United States Constitution commences as follows:

> "Congress shall make no law *respecting* an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, *or of the press*," etc.

Yet, in the face of this, there is a law on the statute books of the State of New York "*respecting* an establishment of religion," and "abridging the freedom of the press," by making the publication of a paper on a certain day of the week an indictable offense. The law assumes the "establishment" of the Christian religion to the exclusion of all other religions, and compels the citizens of other religions and of no religion to a mock compliance with that which their consciences disapprove, inflicting punishment for disobedience as near to burning at the stake as the utmost stretch of the spirit of the age will allow.

Will it be held, that in prohibiting Congress from making inquisitorial laws, the right to unite Church and State, and force citizens of the United States into certain religious observances, was especially reserved to the individual States? If so, how shall we interpret the clause in Article IV, Section 10, which says, "the United States shall guarantee to every State in the Union a *republican form of government*?" Is that *republican* in a single State which is *anti*-republican in the United States? Is it republican for the individual to do what would be anti-republican for the whole collective body to do? One of the vital elements of republicanism is a separation of Church and State, and when the Constitution says that "the United States shall guarantee to every State in this Union a republican form of government," we understand it to mean that there shall be no combination of Church and State in any of the States of the Union, and that there shall be no law in any State "*respecting* an establishment of religion"—no law *compelling* any individual to do any thing on religious grounds, nor *allowing* him to do any thing on religious grounds, which he would not be allowed to do on civil and political grounds. In short, neither the individual State nor the United States can constitutionally grant any religious privileges, nor make any religious exactions, nor do any thing more than *tolerate and protect* all religions which do not in any way conflict with our form of government, or with the Constitution. Nor has any State the right to pass any law abridging the "freedom of the press," on any day whatever. There is no provision made for any day, which any religious sect may deem sacred, on which the "freedom of speech or of the press," or of amusement, or of business of any kind, shall be in any way restricted by law, either State or National—the whole being left to popular consent, giving the individual all the freedom that can be claimed for any body of individuals—giving each citizen the right to work, worship, or play, on any or all days of the seven.

Further, there is nothing in the Constitution of the United States which disqualifies a member of any religious denomination from filling the Chair of the Chief Magistracy; nor is there any thing which excludes the man of no religion. The fact of administering the oath of office on the Bible cannot be construed into giving either the Jewish or Christian religion any preference—it is simply an acknowledgment of the prevalence of those religions, and of the supposed necessity of swearing men on that which they deem most sacred. It implies that the Protestant shall be sworn on the Protestant Bible, the Catholic on the Cross or the Catholic Bible, the Jew on the Old Testament, the Persian on the Zenda Vesta, the Hindoo on the Sastra, and the Infidel on his Honor. The Constitution cannot be legitimately interpreted to exclude any of these religions, nor to give any of them preference over the others; nor can it be construed to admit any religious emblem or authority to be more sacred than another. All are alike, so far as the Constitution of the United States is concerned. It is based on the broad principle of religious toleration, considers all religions equal, and guarantees all equal rights. The individual is responsible to no human power for his religious notions, and cannot be privileged nor restrained for them under the Constitution of the United States.

But if it should still be contended that it is a State right to enforce religious observances by law, we would refer to Article I, Section 10, of the United States Constitution, which reads as follows:

> "No State shall pass any bill of attainder, expost facto law, *or law impairing the obligation of contracts*," &c.

Now, the Sunday laws in the statute books of the State of New York, not only abridge "the freedom of the press," but they "impair the obligation of contracts," by declaring any agreement entered into on a certain day of the week, or any agreement made for a work to be performed on that day, to be null and void. (Are marriage contracts exceptions, and shall materials used, and labor performed, on that particular day, at funerals, not be embraced in the operation of those laws?) When the Constitution says that "no State shall pass *any* law impairing the obligation of contracts," it does not except those made on a particular day—it covers the entire ground, and positively prohibits the passage of any such law whatever; nor can the most astute quibbler make out a case by asserting that the use of the conjunction *or* instead of *nor* makes the phrase, "law impairing the obligation of contracts," a mere repetition of the preceding one, "expost facto law," so that it shall cover only such contracts as were considered binding by the laws of the State at the time they were made. To thus render the clause would be to entirely pervert and destroy the meaning of the whole Constitution, in which *or* is invariably used for *nor*. Besides, the punctuation is against such a construction; and no where in the Constitution is the power given to the States to pass laws "impairing the obligation" of any particular class of contracts; and *much* less of contracts entered into on any particular day, or having reference to that day; and *far* less still of such contracts as are considered binding if made on any other day.

If it should still be insisted, that the States have the right to pass laws "respecting an establishment of religion" and "abridging the freedom of the press," we reply, that the State of New York has no such right. Section 3, of Article I., of the State Constitution, reads thus:

> "The free exercise and enjoyment of religious profession and worship, *without discrimination or preference*, shall *forever* be allowed in this State to *all mankind*; and no person shall be rendered incompetent to be a witness on account of his opinions in matters of religious belief, but the liberty of conscience hereby secured shall not be so construed as to excuse acts of licentiousness, or justify practices inconsistent with the peace or safety of the State."

Here the exceptions are confined to such practices only as would be injurious on *all* days, and contrary to the spirit of republicanism or political freedom. No one day is singled out as being of such a character that the virtues of other days are vices on that.

So much for religious freedom in the State of New York. Now for the freedom of speech and of the press. The first sentence of Section 8, of Article I., of the State Constitution, reads as follows:

> "Every citizen may freely speak, write, and publish his sentiments on all subjects, being responsible for the abuse of that right; *and no law shall be passed to restrain or abridge the liberty of speech or of the press*."

Here no day is singled out as an exception, and therefore the right hereby guaranteed extends to all days alike. Under the Constitution of the State of New York, each and every citizen may do that on Sunday which he or she may do on Monday, the apple and peanut laws of New York and Brooklyn cities to the contrary notwithstanding. Neither the State Legislature nor City Councils have any power to pass laws abridging the freedom of the individual or of the press on any day of the week whatever. If any such laws existed in our statute books prior to the adoption of the present State Constitution, they were annulled by that adoption—by the labors of the wisest men of the State, chosen by the people from among themselves to embody the popular sentiment in a State Constitution, which met with almost unanimous approval through the ballot box. The seal of the highest authority in the State is set upon that instrument, which must remain in full force until the same authority shall see fit to annul it and put something else in its place.

We hold that the Constitution of the State of New York but reiterates and reconfirms the principles contained in the Federal Constitution in reference to religious and civil freedom; and that the recent decision by Judge Roosevelt is in direct violation, in letter and spirit, of both Constitutions. He, by his decision, not only enforces a dead law—repealed by the State Constitution, which went into effect so recently as the first day of January 1847—but totally ignores the second clause of the sixth article of the Constitution of the United States, which says:—

> "The Constitution and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, *shall be the supreme law of the land; and the Judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstandin*."

WAKING UP CROSS.

An excited state of religious feeling is no certain sign of a revival in a church. It depends very much upon the character of the feelings brought into activity. Are they those which arise from an inward assurance of our gracious acceptance of God through Christ? or are they the mere chafings of conscience under a sense of guilt and backsliding? Does our spirit sweetly repose in the Divine promises? or is it lashed into a foam by frequent meetings, and other external means of excitement? Do we breathe the atmosphere of love and holy joy? or merely of a heated zeal, without knowledge or truth as fuel to the flame? Are we profoundly humble before the Lord, and anxious chiefly that our Master may be glorified? or is it in our heart to say, "Come, behold my zeal for the Lord of hosts?"

We once knew a church member, who, as soon as he was revived, quarreled so with his brethren, because they did not feel as he did, as to produce around him anything rather than a revival state. After brow-beating them for a time to no purpose, except to disgust and offend them, he would give up in despair, and relapse again into his former coldness, and you would hear and see no more of him till a new excitement came over him, and he would go through the same process with the same result. His excited religious feelings were not those of joy in God, the fellowship of the Spirit, and the consolation of a good hope through grace, but merely of awakened guilt at a sense of his own backslidings, for which he hoped to atone by abusing others for living as he had done. This is "waking up cross," in the quaint language of one, and is related to the genuine revival spirit somewhat as the contortions of a galvanized corpse are to the pulsations of real life. [Chronicle.

WEEP NOT FOR HER.

Weep not for her! Her span was like the sky,
Whose thousand stars shine beautiful and bright,
Like flowers that know not what it is to die,
Like long-linked shadows months of polar light,
Like music floating o'er a waveless lake,
While echo answers from the flowery brake,
Weep not for her!

Weep not for her! She died in early youth,
Ere hope had lost its rich romantic hues,
When human bosoms seemed the homes of truth,
And earth still gleam'd with beauty's radiant dews.
Her summer prime waned not to days that freeze,
Her wine of life was not run to the lees:
Weep not for her!

Weep not for her! By fleet or slow decay,
It never grieved her bosom's core to mark
The playmates of her childhood wane away,
Her prospects wither, and her hopes grow dark.
Translated by her God, with spirit shriven,
She pass'd as 't were on smiles, from earth to heaven:
Weep not for her!

Weep not for her! It was not hers to feel
The miseries that corrode amassing years,
'Gainst dreams of baffled bliss the heart to steel,
To wander sad down age's vale of tears,
As whirl the wither'd leaves from friendship's tree
And on earth's wintry wold alone to be:
Weep not for her!

Weep not for her! She is an angel now,
And treads the sapphire floors of Paradise,
All darkness wiped from her refulgent brow,
Sin, sorrow, suffering, banished from her eyes;
Victorious over death, to her appears
The vista'd joys of heaven's eternal years;
Weep not for her!

Weep not for her! Her memory is the shrine
Of pleasant thoughts, soft as the scent of flowers,
Calm as on windless eve the sun's decline,
Sweet as the song of birds among the bowers,
Rich as a rainbow with its hues of light,
Pure as the moonshine of an autumn night:
Weep not for her!

Weep not for her! There is no cause of wo;
But rather nerve the spirit that it walk
Unshrinking o'er the thorny path below,
And from earth's low defilements keep thee back.
So, when a few fleet swerving years have flown,
She'll meet thee at heaven's gate—and lead thee on:
Weep not for her! [Moir.

HOUSEHOLD BAPTISMS.

The advocates of Infant Baptism parade with great ostentation the shade of a shadow of argument furnished by the "household baptisms" recorded in the New Testament. They say that there must have been infants in these households, and that therefore infant baptism is Scriptural. Now the immediate contexts in which these statements occur utterly demolish this sophism—for the household of Lydia are called subsequently "the brethren"—Acts 16: 40; the household of the jailor were all *believers*, for "he rejoiced, *believing* in God, *with all his house*"—Acts 16: 34; and of the "household of Stephanas," it is said that "they addicted themselves to the ministry of saints," 1 Cor. 16: 15. But as if still more effectually to silence such an absurd argument, God often grants his servants now the privilege of baptizing whole "households" in which not an infant is found. In our revival record last week, we noticed two of these "household baptisms," one by brother Williams in Baltimore, the other by brother Cole in Washington. Look at this fact. In the whole history of the Acts of the Apostles, extending over many years, embracing the triumphs of the gospel in many countries, and the baptism of thousands of believers, only *three* "household baptisms" are recorded, while here in *one week*, in two cities within forty miles of each other, two such baptisms occurred. Had it been the custom of the apostles to baptize the household of every believer upon his conversion, whether it contained infants or not, believers or not, would not the record of such baptisms have been almost innumerable? How is it that we have only three mentioned? Plainly because they were rare instances, occurring as they do now in Baptist churches, only occasionally. The records of the Acts of the Apostles thus accord exactly with the practice of the Baptists, and of no *other* denomination. [True Union.

THE CONVERSION OF SINNERS.

"I would think it a greater happiness," said Matthew Henry, "to gain one soul to Christ, than mountains of silver and gold to myself. If I do not gain souls, I shall enjoy all other gains with very little satisfaction, and I would rather beg my bread from door to door, than undertake this great work."

Doddridge, writing to a friend, remarked, "I long for the conversion of souls more sensibly than for any thing besides. Methinks I could not only labor, but die for it, with pleasure."

Similar is the death-bed testimony of the sainted Brown, of Haddington; "Now, after near forty years preaching of Christ, I think I would rather beg my bread all the laboring days of the week, for an opportunity of publishing the gospel on the Sabbath, than without such a privilege, to enjoy the richest possessions on earth." "O labor, labor," said he to his sons, "to win souls to Christ."

Rutherford "could assure his flock that they were the object of his tears, cares, fears, and daily prayers; that he labored among them early and late. And my witness," said he, "is above, that your heaven would be two heavens to me, and the salvation of you all as two salvations to me."

Fleming, in his "Fulfillment of Scriptures," mentions one John Welch, "often in the coldest winter nights rising for prayer, found weeping on the ground, and wrestling with the Lord on account of his people, and saying to his wife, when she pressed him for an explanation of his distress, "I have the souls of three thousand to answer for, while I know not how it is with many of them."

Brainerd could say of himself, on more than one occasion, "I cared not where or how I lived, or what hardships I went through, so that I could but gain souls to Christ. While I was asleep, I dreamed of these things, and when I waked, the first thing I thought of was this great work. All my desire was for the conversion of the heathen, and all my hope was in God." THE IMMACULATE CONCEPTION.

By a late decision of the Infallible Church, it is set forth that the soul of Mary, the mother of our Saviour, when created and united to the body, was exempted and preserved from all original sin common to the rest of the children of Adam and Eve. This is now a dogma of the Church, to deny which, even mentally, is heresy.

It is somewhat surprising, that a Church arrogating to itself infallibility has allowed more than eighteen centures and a half to pass without having discovered the truth of this dogma before. But we are told, in reply, that it "has always been believed as a part of the Word of God by the immense majority of the Church." It has never before been embodied in dogmatic form, and such portions of the Church as chose to repudiate the sentiment, did so without rendering themselves liable to excommunication, the Inquisition, and the pains of hell. But after this, whoever opposes the dogma incurs the anathema of a heathen man and a publican.

Still the question recurs, Why has not this uniform belief of the immense majority been embodied in the form of a dogma before? If such surprising results are to follow its promulgation, one would think that the world should have had the benefit of it sooner. "What is the meaning of that definition, which overjoys the whole Church, and devastates hell?" says the Bishop of Toronto. And truly, if hell is to be rendered desolate by the promulgation of this "definition," the *infallible* Church has been very remiss in its duty, that it has not set such a cause in operation long ago.

Perhaps it will be said, that the world was not able to bear the doctrine any sooner. But if the accounts which reach us are true, the world is not quite ready for it yet. The Roman Catholics of Germany, it is said, refuse to receive it; also the Dominican friars in Tuscany openly repudiate it; from which it would appear, that this order of monks maintains the same ground that it did when the controversy was agitated in the thirteenth century. For even in the Roman Church, there are some who cannot swallow every monstrosity which is begotten within its walls.

But as this dogma is said to have "always been believed as a *part of the Word of God,*" it would, no doubt, gratify the curiosity of the uninitiated to be informed by what process of investigation or by what rule of interpretation, God's Word has been made to give utterance to such a piece of folly and wickedness. It would be somewhat amusing, we think, to read the speeches, and be thoroughly initiated into the deliberations, of that Council which, in its wonderful wisdom and infallibility, has at length given substance and form to an opinion which has always been believed as revealed in the Scriptures of Truth, but never before been set forth as essential to salvation.

As we read the Scriptures, Mary rejoiced in God her Saviour. Luke 1: 47. But according to this dogma, Mary never had any sin to be saved from. In what sense God was her Saviour, we are therefore at a loss to understand.

We read that "that which is born of the flesh is flesh." John 3: 6. And as we have not yet heard it denied that Mary was "born of the flesh," we are constrained to believe that she, like the rest of the human race, was a sinner, and as much stood in need of the atonement made by Him whom she brought forth as any other sinner.

We read that "in Adam all die"—"that death has passed upon all men, for that all have sinned"—that "all have sinned and come short of the glory of God"—and that "there is none that doeth good, no not one." And as Mary was one of Adam's daughters, a regular descendant from the great progenitor of the human race; and as the sentence has passed upon all Adam's posterity without exception, for there is not even one that doeth good—not even one righteous—but all are gone out of the way, (see Rom. 2: 10–12;) the irresistible conclusion, to our mind, is, that Mary, though a "highly favored" sinner, was nevertheless a sinner.

We have understood that the Virgin had these United States of America under her special protection, and that the conversion of our country to the faith was confidently predicted as one of the grand results to follow the late decision of the Council that asserted her immaculate conception. Also that England's conversion was now looked for as certain. Alas! when will the reign of infatuation cease? T. B. B.

REFRESHINGS.—In Williams College the religious interest is deepening and increasing. To Rev. Mr. Van Dyke's church, Presbyterian, in Brooklyn, twelve have been recently added on profession of faith; and to Rev. H. W. Beecher's, Congregational, have been added fifteen, mostly on profession; and to Dr. Murray's church, Elizabethtown, thirteen on profession. Several of the Baptist churches in Baltimore are increased by large additions to their lists of membership. God is reviving his work at Berea, Ohio, and quite a number of students in the Baldwin Institute are subjects of the work. Several Baptist churches in Texas are reported as blessed by the presence of the Holy Spirit. A remarkable religious interest exists among the Lithuanians in Germany, in connection with the labors of the Baptist missionaries—pleasant indications these that the Holy Spirit is still hovering over all our churches, ready to descend whenever there is preparation made to receive him. So says the Congregationalist.

THE CHURCH AND THE SCHOOL.

European Colleges and Universities.

The present Universities of Europe, and its great collegiate systems, are the gradual out-growth of the cathedral and monastic schools, of which we have given a hasty sketch. The University of Paris may be reckoned among the first that thus sprung into existence. In its earlier years, it was styled the "First school of the church." In the fifteenth century, it had, at times, as high as twenty-five or thirty thousand students—so many that they were greatly troubled to procure suitable lodgings in Paris.

When Alfred the Great ascended the throne of England, in 871, the nation was fast sinking into deep ignorance, and returning to barbarism. The Danes had ravaged the country, destroying the schools, burning the libraries, and killing or scattering the teachers. Alfred made great efforts to restore learning, and was formerly supposed to be the founder of Oxford University. By others its origin is supposed to be traceable to a monastery founded in the eighth century. Cambridge is supposed to have had its origin about the beginning of the twelfth century, in the efforts of certain monks, who commenced their instruction in a barn, drawing together there a great number of scholars. Oxford is said to have had in the thirteenth century thirty thousand students, which is, doubtless, somewhat exaggerated.

From these institutions, in the language of an English historian, "there came forth those enlightened Christian men, who, studying the Scriptures by the help of the writers of the primitive church, were, at length, enabled to see how the false and corrupt doctrines had from time to time crept in; and from their sound learning, firm faith, and high self-devotion, we have gained all that was done well in the Reformation."

Universities made their appearance in Germany in the fourteenth century. "The professors and students were regarded as ecclesiastics, and all that related to the subject of education appeared to have a special connection with the clergy From these and similar beginnings, in various parts of Europe, the university system has extended and increased, until, at present, there are not far from a hundred and thirty in all Europe, with a very great number of colleges.

These institutions have ever been the allies of the church. Religious influence has called them into being and sustained them. Their corruptions have generally sprung from the corruptions of the church, while reform and light have generally sprung up in connection with these great seats of learning. In the language of Dr. Bacon, "Those corruptions of Christianity, by which the simple apostolic ministry* of Christian truth became a sacrificing and mediating priesthood, and then that priesthood was built up into a mighty hierarchy—those corruptions by which repentance was converted into penance, and God's free pardon was confounded with a priestly absolution, and sold for money, and the touching because simple memorial of Christ's death, was changed into an idolatrous mummery—those corruptions under which the spirituality and glory of the gospel were gradually obscured, till they were almost entirely lost—those corruptions which are so commonly called Popery, but to which neither the power nor the being of a Roman Pope is essential—were not in any wise the product of learning. They originated, one by one, in the enthusiasm of ignorant and well-meaning men. They grew and slowly compacted themselves together, in those ages in which an *unreading laity was guided by an unlearned clergy*. Though learning of a certain kind has often been strangely employed, in modern times, for the defense of that great system of perversions, learning had nothing to do in its origin; nor is true learning in any sense its natural ally. On the contrary, as soon as learning began to flourish in the church of the middle ages—as soon as universities came into existence, and began to be, in their several countries, the great marts of intellectual commerce, the metropolitan centers of discussion and inquiry, it began to appear—any sagacious mind might have seen—that there was a new power in Christendom, a power that might one day shake the fabric of the hierarchy, and scatter its lying traditions and its gainful dogmas to the winds."

Among the means used to create the "unreading laity" and "unlearned clergy," was that of direst persecution and prohibition. "Julian the apostate," says Prof. Stowe, "had been educated in the Christian schools, and he knew well what was the strongest bulwark of the Christian faith against an opposing world, after the miraculous gifts had ceased. Accordingly, when he came to the imperial throne, and had determined to root out Christianity, he prohibited all Christian schools of a high order; he made it a penal offense for a Christian to learn or teach the classics, or philosophy, or any of the higher branches of literature or science. Thus he struck a more fatal blow at the permanency and efficiency of the Christian church than all the bloody persecutions of his predecessors. Immense mischief followed his policy, brief as was his reign; and had he lived in power as long as Constantine, the whole Christian church, unless some special Providence had interposed, would have been very much what the native churches of Egypt and Ethiopia now are."

Then for long ages followed the sluggish and mechanical movements of the church, its endurance of sensual and unlettered priests, and its unquestioning reception of authoritative dogmas. But when Protestantism began to appear, then thought awoke. Schools and learning received a new impulse. "The doctrine of justification by faith did not end with its application to the conscience. It drew after it the inference, that if every man must stand or fall by his personal faith in the gospel, then the intellect and the heart must understand and consent to this gospel." Reform and learning went hand in hand.

When, from time to time, God raised up mighty champions of his own truth, whose voices reverberated like thunder through the darkness, and whose electric thoughts shot athwart the gloom, like bolts of lightning—who were they?—what were they?—and where were they found? Who was it that, in the fourteenth century, roused the heart of England with his manly English eloquence, and vindicated the simple scriptural truth in tones that were heard all over Europe? It was Wycliffe, trained in Oxford, and rich in academic honors; and it was in the halls of Oxford, that he found a fit position and fit enginery for his attack upon the citadel of superstition.

And early in the succeeding century, who were those witnesses for Christ, before whose testimony the Pontiff and the Emperor trembled, and whom the apostate hierarchy, in the council of Constance, condemned to the flames? Go into the cells of their long imprisonment—stand by their pyres of torture in the broad meadow by the bright river—listen to their testimony in the prison and the flame—see their sacred ashes blown by the winds and mingled with the waters. Who are these? Where were they trained? Whence came they to this death of glory? They are scholars—learned men. In the University of Prague, they have lifted up their voices for the simple verities of Christ's own Gospel, and from the University, John Huss and his companion Jerome have come to seal their testimony in the fire.

Pass on into another century, and you see the Reformation. And how was that great change accomplished? Luther—"Doctor Martin Luther," as the Germans still call him—is inseparable from the University of Wittenburg. The first gun in the long battle of the reformation was the nailing up of Luther's theses for disputation in the University, according to the scholastic forms of challenge and debate. The reformers were above all other men the learned men of their day. The age of the Reformation was the age of quickened and awakening thought—the age of the revival of learning. . Look at the part which the Universities played in that great revolution, and you will be ready to say, that the Reformation even *proceeded* from the Universities, and was the revolt of Christian learning against superstition and priestly oppression.

But perhaps the relations of the church and school will appear in a stronger light, and the power which the former possesses in the latter, as a means of good, more forcibly illustrated, by examples where a corrupt church has used the school as an engine of evil. For this purpose let us turn for a moment to the church of Rome, and the colleges of the Jesuits. "The question is often asked," says Prof. Porter, in his valuable essay on "Puritans and Jesuits," "what arrested the Reformation in its onward and apparently triumphant advances? How happened it, that all these advances were on a sudden arrested, and as by the mysterious fiat of Fate, the dividing line was fixed between the Catholic and Protestant sections of Europe, to remain till now almost precisely where it was drawn thirty years after Luther had broken with Rome. The Catholic wonders, as he looks back upon the tide of destructive lava which rushed down upon the church and threatened to desolate its fair domains, when, in a moment, its liquid waves are hardened into rock. No one who reflects upon the resources of the Jesuits can hesitate to pronounce them to be the cause, or wonder at the greatness of the effects. Upon this point Catholic and Protestant historians have been singularly agreed."

This society was formally constituted by the Pope, in 1540, although its founder, Loyola, had spent years in maturing its principles and perfecting its plans. It was organized for a crisis in the history of the Romish church. The reformers were making a fearful onset upon her corruptions and abuses. These reformers were learned and pious and earnest. "Their intellectual activity had been quickened into surprising energy by their new religious life." In the heat of the earliest conflicts, Protestant schools had rapidly sprung into being, and the youth there educated despised even to loathing an ignorant and corrupt priesthood. The strong supports of Rome—political power, ancient custom, and priestly domination, were giving way before influences stronger than all—the convinced reason and the believing faith of the individual man. In Germany, the tide of victory had turned for the reformers. England had broken with the Pontiff. In France, in Switzerland, and the Low Countries, powerful influences were working with amazing energy beneath the surface of society. Even in Italy and Spain, able and conscientious ecclesiastics saw and confessed the corruption of the church. The whole of the vast and mighty fabric, imposing from its gigantic structure, venerable for its age, and consecrated by the associations of centuries, seemed to be weakened in every part, and trembling in every wall and pillar, ere it should fall in upon itself, a mighty ruin. At this crisis the plan of this wonderful society was presented to the Pope. His Holiness, as the Jesuits solemnly assert, saw in it the only, and perhaps the sufficient means to stay and turn back the impending evil, and exclaimed, "The finger of God is in it." In this society was developed a power which was to educate the youth of Europe, and then to make kings and pontiffs to tremble upon uneasy thrones, or disappear from the seat of power, as at the whisper of an enchanter. The council of Trent gave the church into its hands, for rescue and defense.

It accomplished its object principally by education. The directors of the society had but to speak, and there sprung up, as by magic, colleges in any or every part of the land—colleges well endowed, officered, and filled with students. At one time they numbered 699 colleges, with a great number of inferior institutions. The institutions were both religious and literary. They were continually training teachers and preachers. They prepared the school-books—edited and illustrated the classics—stimulated the scholars to thorough and varied discipline, by rewards, prizes, and commemorations. The teachers were mild and patient, artful and eloquent, learned, self-possessed, and rarely at fault. Students of various religious faiths were not only permitted to attend, but every inducement held out to secure their attendance. Young men were received, protestant or infidel, and sent back believing and earnest Catholics and Jesuits. The pupils thus educated became in after years the men of commanding influence—electors, and nobles, and heirs to thrones, who of course carried the masses of their dependents and retainers with them.

And what were the results? The decaying church in Spain and Portugal was revived in the faith, and secured against the heresy of Protestantism. In France, they encountered a vigorous opposition from the University and Parliament of Paris. The Gallican church made an earnest and continued opposition, but Jesuit institutions slowly gained a footing, and in that fiery struggle in which the Huguenots were overthrown, the Jesuits gained the ascendant. In Germany, they first appeared in what are now the Catholic States, but which then were trembling in the balance between Rome and Luther. The reformers had already introduced their men into the faculties of several of the higher institutions of learning. These are gradually supplanted by the Jesuits, and the lines then drawn between the Protestants and Catholics remain nearly the same to the present day. They gained possession of the colleges already existing in Belgium, as well as established their own, and their agency transformed this country, which had been half Protestant, into one of the strongest of Catholic countries. By the same means they wrested from Protestantism, "Poland, Hungary, Bohemia, Moravia, Silesia, Bavaria, Austria, a portion of the Swiss cantons and the Rhenish provinces, and Italy." They obtained, after several unsuccessful attempts, a latent power in England, which is now expanding with such vigor, and where they are increasing with astonishing rapidity. They have likewise commenced to exert an important and powerful influence on the destinies of America. They have accomplished all of these great and important results principally through their educational institutions. What Catholicism has achieved for itself through the schools of the Jesuits, Protestantism may achieve for itself through the Protestant schools.

But let us return to the Protestant school, and the great religious lights and reformers that have sprung from them. In the next century after the reformation of Luther, "the imperfections of the unfinished English reformation occasioned in England the great conflict of Puritanism with Hierarchy. Whence came Puritanism? Where was it nurtured into strength and armed for the great intellectual conflict? Puritanism rooted itself deep by the Cam and the Isis, (Cambridge and Oxford;) and there it gathered strength to battle with the storms; and there it yielded fruit which remains even yet for the healing of the nations. So far as human sagacity can trace the chain of causes and effects in the long sequence of events, Puritanism, and all that is involved in Puritanism as an element of the world's history, would never have been, but for those Universities."

"Advancing towards the middle of another century, we see that great religious movement in England, which commenced a hundred years ago, and which, so far from having spent itself, is still in full progress, and is filling the world with its results. I refer to what may be properly enough denominated the great Methodist awakening. Where was the birth of Methodism? In one of the colleges of Oxford, where a little company of scholars, who believed that religion is a matter, not of ceremonies, not of dry dogmatic formulas, but of the soul's experience, were wont to meet together. Whitefield and the Wesleys were there. There was the kindling enthusiasm that was to set all England in a glow, and was to spread beyond the ocean. There was the beginning of the most notable movement in Protestant Christendom since the days of Puritanism."

Such are some of the many examples in European history going to prove, and impress upon us, the intimacy and importance of the mutual relations existing between true learning and seats of learning, and true religion—the religion of the Bible. *

SOUTH AFRICA.—The Cape Town Mail hazards the prediction, that before twenty-five years shall elapse, the whole interior of Africa, to the equator, will be occupied by civilized communities of the European race, and probably under the dominion of Great Britain. This is a great idea. The British have colonies at Sierra Leone, at Cape Town, and Port Natal—an empire and more in South Africa, while the Boers are pressing on to the equator, and are followed by British colonists, civilization and Christianity.

LETTER FROM ELD. ROWSE BABCOCK.

CLARENCE, March 19, 1855.

To the Editors of the Sabbath Recorder:

Some two weeks since, as I was visiting the branch of the Pendleton Church located in Wilson, Niagara County, N. Y., on Sixth-day evening some few individuals, say twenty, gathered at a dwelling house in the neighborhood, and deputed one of their number to go some half a mile from there and invite me to repair thither and preach a sermon. I complied, and before the meeting closed I found that there were indications of the outpouring of God's Holy Spirit. Meetings were held in the school house in that section, evenings, for about two weeks, in which time many backsliders were reclaimed, and from twenty-five to thirty individuals were hopefully converted to God; six of whom have already gone forward in the ordinance of baptism, and seven have become members of that branch of the church. I believe some twelve have been converted to the observance of God's holy Sabbath. It is expected that numbers of others will soon follow their example in yielding to the claims of the Bible, in baptism, Sabbath observance, and church membership. There was a strong opposition manifested by a few, as the Episcopal Methodist class-leader would not, or did not, attend one of the meetings while I was present, for the reason, as I was informed, that I had on a former occasion set forth the claims of God's Sabbath in that place; but I was credibly informed, that after much persuasion, he obtained the consent of one of their ministers (though loth to do so) to preach two or three evenings in setting up an opposition meeting about one mile distant; but they soon found that the Lord would not bless such an effort, and hence they were obliged to discontinue their meetings. The other meetings, however, seemed to increase in interest up to the last, as on the last evening the house was literally jammed, and some fifteen or twenty rose for prayers. But the said class-leader, as I was informed, was so intent upon opposition, that there was another appointment already out to revive the former attempted meeting; hence we thought it best to discontinue the meeting, rather than have two meetings so near together, when all could attend one. I therefore left for home, commending them to God and his grace. ROWSE BABCOCK.

LETTER FROM ELDER MAXSON.

To the Editors of the Sabbath Recorder:—

It has been my design to make no reply to those articles which appeared in the *Sabbath Recorder* of Nov. 23d and Nov. 30th, severely implicating Elders Bailey, Clarke, and myself, for an article we jointly published in the *Recorder* of Nov. 9th, relative to the appointment of a Committee by the Central Association, and its reception by the churches for whose benefit it was appointed. The character of those articles rendered them unworthy of any public notice by me.

I sincerely regret that the church in Hounsfield should feel itself called upon to lend its influence, in its ecclesiastical character, in disseminating the unkind feelings of *a mind* never at rest. It seems to me a pity that *a church of Christ* should so far demean itself as to reiterate what brothers Whitford and Summerbell had seen fit to publish.

As the article in question is published by the sanction of the church, and makes many serious charges against Elders Bailey, Clarke, and myself, it has been my intention to treat it with respectful courtesy. Circumstances of a domestic nature have hitherto prevented, but I will now make some reply, if I may be allowed to do so, with the intention of publishing nothing more in reply to whatever others may publish on the subject. In the church's article, they charge Bailey, Clarke, and myself, with many grave and serious wrongs—with making false statements—of saying in our article what we have not said, or intended to say. So far as M. and B. (whom they seem to look upon as the most culpable in the matter) are mutually charged with wrong, brother Bailey, in the *Recorder* of Feb. 22d, has sufficiently vindicated our course, and I have no wish to go over the same ground again; otherwise, than as he has left me to answer for myself, I wish to say, that I have not, to my recollection, counseled the minority of their church to protest against their discipline; nor have I, to my knowledge, interfered with their internal affairs; nor does our article of Nov. 9th make any charge against them for corruption, as they have charged us, as any one can see who will take the trouble to read it. I am surprised that we should be charged with saying that the corruptions of the church caused their aggrieved brethren to suspend their travel with them. We said, '*which they* (the aggrieved) *believed inconsistent with the purity of the Gospel.*' Again, we are charged with saying that the nature of the Committee to which the complaint of the aggrieved was referred, was the same as that of a Grand Jury, when we stated that this was said by one of the Committee as a reason for refusing to hear the testimony of the complainants. Thus far in relation to our article.

But I am separately charged with being counsel for the complainants—that I used my utmost effort to criminate the church of Hounsfield—that I talked against time, and ceased only when the Association would hear me no longer. In regard to this, the church has been misled, at least in the main points; I was neither requested, nor did I offer myself as their counsel; nor did I act as their counsel on the occasion, and, if my recollection be correct, I said nothing tending to justify the complainants, or to criminate the church. I am charged with talking against time. I certainly did not talk against many minutes of time, and there was ample time to have given the report of the Committee a just consideration. Again, the idea is conveyed, that the Association would hear me no longer—that I was literally put down. Those who were present, know this was not the case. I cannot say how long they would have heard me, had I continued to speak. Probably some did not wish to hear me at all; for I was several times interrupted; but I had the permission of the Moderator to proceed, and I did not know, until I read their article, that the patience of the Association was exhausted when I closed my remarks.

I pass by many objectionable remarks in their article, which, could they be sustained by credible witnesses, should subject me to the censure of the church, and expulsion from the ministry. And I will say for the church in Hounsfield, that I invite them to embody all the wrongs of which they suppose me guilty, and to present them to the 1st church in Brookfield, whose prerogative it is to investigate and decide upon any charge of unchristianlike conduct brought against me; or to present it to the ministers of the Association; or if they choose to the Association itself. And I will assure the Hounsfield church, that I will, Providence permitting, meet whatever complaint they may choose to present. If they decline this offer, I shall claim of them, as a matter of justice, that they retract those charges as publicly as they have made them.

Yours affectionately, W. B. MAXSON.

LEONARDSVILLE, March 20th, 1855.

GOVERNMENT OF OUR PASSIONS.

To overcome our passions and subdue our tempers by those rules given us by heavenly Wisdom, is the utmost perfection that we are capable of in this world, and the acme of human existence. Our passions are truly our greatest infirmities, and he who can govern them, although he may not fully understand the laws of science, or the rules of self-government, yet he must be considered a wise man.

Our passions, like the wind, are of every possible gradation, from the gentle zephyr to the furious tornado. When the passions become unbridled, and loose reins are given; when reason leaves her throne, and no longer sits as umpire; when religion, with her gentle sway, comes in to calm the troubled spirit, and smooth its ruffled surface, and fails to accomplish her mission; it is then we are prepared for acts of desperation, and deeds of darkest hue. Who has beheld the outburst of violent passion, and witnessed its effect, without seeing that, like a raging fever, it always leaves its victim weaker than before?

It is remarkable how easy one may be aroused to anger and bitter invective, who does not strive to overcome the baneful effects of a heated passion. A look, a word, a jest, or a seeming neglect, is as efficient as the open rebuke or the private repartee. Well did a wise man understand his subject, when he said, "Behold, how great a matter a little fire kindleth." Plato, when speaking of passionate persons, says, "They are like men standing on their heads—they see all things the wrong way."

No man is master of himself, so long as he is a slave to his appetites and passions. It certainly must be easier, when we find its poison working within, at once to seek moderation, and if we find that we cannot control our feelings and maintain our equilibrium, then to seek retirement, than to undertake to keep those turbulent passions within bounds when once we have given them liberty.

"Let your moderation be known unto all men," is a timely instruction for the government of our evil and corrupt natures, and when well observed, will render us mild, cheerful, and pleasant, and will assuage many a turbulent billow on the rough sea of life. The first step towards moderation, is the discovery that we are becoming passionate and fretful. Says a wise preacher, "Be not hasty in thy spirit to be angry; for anger resteth in the bosom of fools." What consummate folly to allow our passions to get the control of our reason! We thereby show the brutality of our natures, descending from the high position we were created to occupy, to even below the savage of the forest, desiring not only to tantalize and rob our fellow of every comfort, but to injure and destroy his person, although he may have been on former occasions our sincere friend.

By what philosophy the soldier of the allied army, during the stay of death by a flag of truce, can mount his embankment before Sevastopol, and the Russian his parapet, and exchange congratulations, and drink to each other's health, I am at a loss to conjecture, when no sooner is the white flag hauled down, than the work of death goes on. How can a nation's honor, when only affecting a few political partizans, fire with savage revenge the hearts of men entirely removed from e[illegible] the knowledge of the cause for which [illegible] they are at variance? It is true, that [illegible] we often hate, we know not why, without [illegible] even stopping to examine the cause, b[illegible] t there can be no excuse for our passions [illegible] to be allowed to dictate a mode of cruel [illegible] treatment to one of our race, however [illegible] much those passions may have been influenced or inflated by other men.

To govern our tempers, and restrain our wrath and revenge, requires that "wisdom that is from above," which "is first pure, then peaceable, gentle, and easy to be entreated, full of mercy and good fruits." Without it we can do but little with certainty in the way of becoming masters of ourselves. "He that is slow to anger is better than the mighty, and he that ruleth his spirit than he that taketh a city."

What, in life, is more to be desired than a mind and will that is brought into complete and perfect subjection; one that, when we are reviled, will not feel at liberty to revile again; one that will ever sorrow over the turmoils of earth, and weep over the fallen nature of man; one that will step between battling spirits, and say, "Stay thine hands, for thou art brethren;" one that will ever yield to the dictates of reason and religion, and be governed by their counsels. To secure a boon so desirable, we must avoid the first angry word; no dark frown upon our brow should ever be seen; our lip should never curl; and better that our hand should fall powerless by our side, than be the agent of an unsubdued passion in seeking revenge of one of our fellow beings.

May we by the blessing of God be enabled to subjugate all our unholy passions, and thereby enjoy a peaceful life, a tranquil death, and a blissful eternity. H. H. B.

March, 1855.

PARCELS, &C., FOR OUR MISSIONARIES.

We last week sent to our missionaries in Palestine all letters and papers on hand. In a week or ten days we expect to send by ship to Shanghae all letters, papers, parcels, &c., on hand for our missionaries in China. The occasion seems a proper one to give some information in answer to questions which we are frequently asked:

1st. To Palestine, via England, the postage on letters is 42 cents; on newspapers, 4 cents each. To China, via England and the overland mail, the postage on letters varies from 42 to 65 cents; on newspapers, 4 cents each. Files of the *Recorder*, and the official letters *of the Board all go in this way.* Miscellaneous letters and newspapers to our missionaries, particularly to those in China, are sent by ships—all that accumulate between the sailing of different ships being put into one parcel, on which there is little or no charge for postage.

2d. By nearly every ship which sails for Shanghae direct, we send whatever parcels may be on hand, usually putting them into a box, wrapped and marked as they reach this office. The freight is generally, but not uniformly, paid in New York, and is not higher than the express companies in this country charge for carrying similar articles one thousand miles.

3d. Bills on the banks of this country are not salable in Shanghae, and have to be returned. In one or two instances where persons have wished to send small amounts, we have purchased for them five-pound notes of the Bank of England, which were sold without difficulty to the English merchants. The only money current in this country which will pass in China is silver dollars. Mexican dollars are at a premium of about 6 per cent. in New York, and at a slight discount in Shanghae. Carolus dollars are at a premium of about 20 per cent. here, and bring a small premium there. It is better to buy Carolus than Mexican dollars when they can be found, although the difference in their favor is not great.

4th. No charges are made for trouble in connection with parcels or boxes for our missionaries. When money to pay expenses is sent, a strict account is kept, and balances are paid over to the Treasurer of the Missionary Society, or returned to the senders, as they direct. The minutes kept of these matters show the dates and general character of all shipments since our foreign mission was started, and what disposition was made of all moneys. Persons who forward money or goods, the receipt of which they do not see properly acknowledged, should in all cases make inquiry, and learn the facts.

VISIT TO THE HOLY LAND.

The Jewish papers in England and this country notice with great satisfaction a contemplated visit to the Holy Land by Sir Moses Montefiore, for the purpose of inquiring again and more thoroughly into the social and temporal condition of the Jews, with a view of making some permanent and practicable arrangement to benefit them. Perhaps no man living has more entirely the confidence of the Jews in all parts of the world than Sir Moses; and it is reasonable to hope that his mission will prove of great advantage to them. The *Asmonean*, the Jewish paper of this city, speaks of the matter in the following strain:

The intended visit of Sir Moses Montefiore to Palestine, and his seeking, in advance, suggestions for future action there, is strictly in keeping with the whole self-sacrificing course of his life. Gifted by Providence with an exterior highly prepossessing, his intellectual organization has been equally favored, and no person has communication with him without becoming impressed with the sterling nobility of the man. It is of such men that the Israelites may justly speak with pride, and point to their unbroken career of beneficence as a proof that the Jews need but free circumstances and an untrammeled field to develop those high qualities which they inherit as a pure branch of the high Caucasian race.

Such men as the Rothschilds, the Montefiores, and the Solomons, labor in their generation to benefit their kind; they do not draw themselves from the people; they are founders of hospitals, directors of charities, trustees of schools, and presidents of synagogues. They serve the cause by their presence, and they uphold its institutions by their means; more wise, more just, and, therefore, more in accordance with the faith they profess, is such conduct, than that of the millionaires who, after a long life of seclusion and coldness, bequeath large sums to buy the thoughtless praises of the wondering crowd, and to obtain a posthumous fame as a benefactor of posterity's unfortunates.

Sir Moses went to Syria to strike off the chains which galled his Damascus co-religionists; he now proceeds to Palestine to visit the penury-stricken district, to walk abroad amidst a people desolated by famine, scourged by disease, enfeebled by rapacious misgovernment, and wallowing in the slough of despair, because all incentives to industry are denied them.

We regard the self-imposed task of this noble philanthropist as one of much difficulty—even, were we the possessors of Sir Moses' wealth thrice told, we should have shrunk from encountering its perplexities. The poor of Palestine have been too long fed by public charity to become, in a lifetime, producers or self-supporting. Political economists would seek a way out of the difficulty by closing the purse strings against all appeals for relief from the able bodied. The sick, the maimed, and the aged, would have food and shelter dispensed to them, but the balance of the population would be forced to exert the energies with which nature has gifted them. It takes but little to support life in that once blessed region, and that little the people would readily obtain when once thrown upon their own resources.

Amidst so much that has been said and written respecting the position of the Israelites in the Holy Land, we have never met with any project which, grappling with the real evil, has promised a better future. All the travelers agree in the desolation of the land; they are of one voice upon the misery there endured; yet not the shadow of a scheme has met the public eye for its amendment. The only glimmer of hope left is in an abiding faith in the verification of the prophecies; for strive, as pitying philanthropists may, throwing thousands upon thousands of dollars into relief funds, building hospitals and endowing infirmaries, not one moment before the appointed time will the land bloom again or the cedar flourish in Lebanon.

California News.

Ten days later news from California has been received since our last.

The principal item of interest relates to the great financial crisis which appears to have been impending over the City of San Francisco for some time past, but which was precipitated by the announcement of the suspension of Page & Bacon in St. Louis. The news of that event reached San Francisco on Saturday, Feb. 17, and occasioned an immediate run on the banking-house of Page, Bacon & Co., which continued until Thursday, Feb. 22, on the morning of which day they closed their doors. The next day, Friday, the 23d, the suspension of Adams & Co. was declared, which was followed at once by that of Wells, Fargo & Co., Robinson & Co., and the Miners' Bank.

The news from the Kern River is of an exciting character. The accounts from the newly-discovered diggings represent the miners as doing remarkably well, some say averaging $10 to $20 per day. The steamers for San Pedro—the nearest point of disembarkation for the mines—go down crowded with passengers.

On the morning of the 18th, the St. Charles Hotel and Hillman's Hotel, in San Francisco, were destroyed by fire; loss about $50,000. In Nevada, sixteen houses were burned on the 16th; and in Stockton, twenty-five houses were destroyed by fire on the 21st.

The Indian troubles in the vicinity appear to be increasing. Some ten white men and about seventy Indians have been killed.

Advices to Dec. 20 from Australia have been received at San Francisco, confirming the intelligence already announced of a serious insurrection at the mining districts, and giving some further particulars of the progress of the outbreak. A battle was fought on the 4th of Dec. between the insurgents and some eight or nine hundred soldiers, in which some twelve of the former were killed, and several wounded. Several of the soldiers likewise lost their lives. The miners, it is stated, are firm in their determination to pay no more licenses, and every thing looked toward a decided state of revolution.

EXPLOSION IN A COAL PIT.—A dispatch from Richmond gives the full details of the explosion at the Midlothian Coal Pits in Chesterfield, Virginia. Thirty-four persons were instantly killed, including twenty-eight negroes and six white men; and twelve negroes and five white persons were so badly burned that but three or four of them can possibly recover. The pits were considered perfectly safe and free from foul air, but in making a blast an old shaft sinking accidentally crashed, from which poured forth a volume of gas that became ignited. The explosion caused the earth for miles around to wave and rock like a twig in the wind. Over one hundred white miners were fortunately out of the pit at the time. Every effort was made to rescue those that were alive. Dead men were found with the flesh charred to the bones, holding shovels, pick and drills in their hands. The flesh on those still alive is burned to the bones, as if it had been wasted. The pits are seven hundred and seventy feet deep.

From the Richmond *Post* we gather the following particulars:—

The scene in the vicinity of the pit was most heart-rending. Long rows of coffins were strewed along the ground, and the carpenter's hammer was busily engaged in closing them up for interment. The cries of the families of the unfortunate men who lost their lives, filled the air, and struck the most profound grief to the heart of every beholder. The hands of the pit were busily employed in hunting for the dead, and as each basket would arrive at the top of the shaft containing a mutilated body, the acquaintances who recognized it would give vent to their grief in loud lamentation. More horrible mutilation of the human body we never saw. Some of the corpses were drawn up without a rag of clothing, and the skin literally flayed off. One body was taken out with the legs burned off close to the body, which had occurred from the deceased having been blown into a pile of burning timber.

The cause of the explosion, as we learn from Major Woolbridge, the President of the Midlothian Company, was an accident which no skill could have averted, and no caution prevented. The Company had worked a shaft, and from the rising of the water in it, had been forced to discontinue operations there. The shaft being abandoned, the foul air accumulated there, and needed only the application of fire to explode. The workmen in another pit belonging to the same company had worked back to the old pit without being aware of it, and upon setting off a blast, the wall between the two pits was blown through, the gas from the old one rushing into where the workmen were employed, and exploding. The fatal effects of the explosion were as sudden as if caused by lightning, and the floor of the pit was instantly strewed with the dead and the dying. The accident occurred at 5 1-2 o'clock Monday afternoon, and directly the smoke had cleared away sufficiently from the mouths of the shafts to allow those outside to render aid to the victims, it was done. During the entire night the buckets were at work and the larger portion of the bodies were lifted out.

The scene at the Company's Hospital was appalling. The rooms were crowded with stalwart men, so burned that their most intimate acquaintances could not have recognized them. The negroes were so flayed that, but for their hair, they could not have been distinguished from white men. In many instances the hair was entirely burned from their heads. As fast as the patients would die, they were removed from the building and coffined.

The case of Joseph Howe, one of the white miners killed, presented an instance of mournful fatality. Up to the day of the explosion, he had been in the habit of working at night in the mines, and on the day the accident occurred, had commenced working in the pits in the day time.

A PASTOR'S FRIEND.—Rev. Dr. Murray, in one of the sketches in his recent interesting publication, gives the following incident, beautifully illustrating the apostolic injunction in reference to ministers, to "esteem them very highly in love for their work's sake:"—

Her former pastor was afflicted with a natural hesitancy in speaking, which was considerably increased by an attack of paralysis; and his enemies plead this as one among the many reasons for which they urged his removal. But, with a remarkable dexterity, she converted it into an argument for his remaining. "We hear the Gospel," she would say, "with too little thoughtfulness and application. One truth is uttered after another, and before we can weigh one, another is on the top of it, and another on the top of that; and thus the Gospel runs through our minds like water through a glass tube—none of it sticks; and when we come home, we remember nothing we have heard. Now, I like these long pauses of Mr. G——, because they give me time to pack away what he says." On first hearing this sentiment from her own lips, I immediately formed my estimate of her, which I had never reason to change, save on the side of a higher admiration of her character.

NEW STEAMER FOR LONG ISLAND SOUND.—The new steamboat Commonwealth, built to run from New York to Norwich, Ct., made a trial trip last week, and is to be put on the line in about a fortnight. She is 330 feet long, 77 feet eight inches wide, 13 feet hold, and 1,900 tuns register. The lower saloon contains 215 berths; the ladies' cabin is fitted up with 54 berths, and 20 state rooms. And on the promenade deck there are state-room berths for 200 persons. The dining-table will be set in the lower saloon, to which access may be had by continuous flights of stairs. The cost of this boat is estimated at $240,000. She will commence running between this port and Norwich, in connection with the Connecticut, with passengers for Worcester and Boston, in a fortnight hence, under the former officers of the steamboat Connecticut. The Commonwealth is the third mammoth steamboat finished this season for Long Island Sound, and although not quite so large as the Plymouth Rock, or the Metropolis, she is still much larger than any of the other Eastern steamboats, and is in every way as comfortable and commodious as could be desired.

TERRIBLE EXPLOSION.—On Fifth-day afternoon, March 21st, a pyrotechnic establishment which is situated at Greenville, on Bergen Point, N. J., about four miles south of Jersey City, near the Morris Canal, was blown up. One person was killed, and seven men so severely burned that some of them will probably die. The building was about 15 feet by 30 in size, and two stories high. It blew up with a loud report, and a column of smoke and dust, in which the fragments of the buildings mingled. The ruins instantly took fire; and it was with great difficulty that those who came to the rescue could extricate the injured from the ruins alive. It is not positively known how the explosion was caused, but it is stated that two boys, Kleiber and Gassman, and two other workmen, were striving at their work to see which would fill the most rockets, and it is supposed that friction was caused by their work, which was the means of blowing up the building.

Mrs. Roxanna Wood, boarding in Beach-st., N. Y., was arrested last week on complaint of the Managers of the Home of the Friendless, who charge her with having, during the last six months, collected from various charitable persons sums of money, amounting in the aggregate to a considerable sum, under pretense that it was for their Institution, but which she appropriated to her own use. In her apartment a book, showing the names of those who had subscribed, and the amount of their subscriptions, was found. The sum total was about $200. She was taken before Justice Pearcy, and committed to prison for examination.

The evening of March 15th was made gloomy in St. Louis by the rapid succession of three melancholy accidents, each of which resulted in the death of a citizen of that ill-starred city. Justice Peter Cruess, an old and well-known inhabitant, fell down the stairs leading to a lawyer's office on Chesnut-st., and was killed; a man riding on an omnibus, on Third-st., fell from its top, and was so badly injured as to make his death certain; and an Englishman, named John Stead, fell from a furniture-wagon on which he was riding, bringing a bureau down with him, which, falling on his head, killed him instantly.

The Superintendent of the Bank Department gives notice that the circulating notes issued to the Valley Bank, Boonsville, (E. N. Merrian, individual banker,) must be presented at his office, Albany, within two years, or the funds deposited for their redemption will be surrendered.

SUMMARY.

The First Presbyterian church in Boston, some time since entered a suit in Supreme court, against the Federal street Congregational Society, (Unitarian,) under the pastoral charge of Rev. Dr. Gannett, for the land, and property belonging to the said Congregational Society. The amount of property involved in this suit was about 13,000 feet of land, with the church, dwelling house, and vestry buildings thereon. The whole estate is valued at from $85,000 to $95 000. The suit has been decided in favor of the Unitarians.

A bill has been introduced in the Senate of New York State, prohibiting the vesting of church property in the persons of church functionaries and their successors in office, and providing that it be vested in the societies themselves. Several Catholic church societies are now under ban for refusing to surrender the church property to the control of their bishops, and this bill is designed to uphold the cause of these societies, and in a measure to crush the temporal power and influence of the Church of Rome throughout the State.

We notice by the proceedings of the Circuit Court held at Batavia, that Thomas M. Donaldson, of Rochester, obtained a verdict of $2,300 against of N. Y. Central Railroad Company, for injuries received in April last, while a passenger in the cars of the defendants. The train ran over a cow in the town of Bergen, and was thrown off the track. Geo. Basche, of Burlington, Iowa, was a passenger in the same train. He obtained a verdict of $2,500 at the same Court.

A sad accident occurred at Yonkers on Tuesday of last week, by which three men were drowned. It appears that the sloop Jonas Smith, from New York to Upper Colster, when near Yonkers, suddenly capsized and sunk. Of the crew only one was saved, (William Parr,) who climbed up the mainmast. The names of the drowned were Nicholas Cary, Thomas Shortly, and Patrick ——.

Mango, and his sister, Milvaine, were hung in the parish of St. Charles, La., on the 26th ult. Milvaine was the favorite servant of a Miss Friloax, and having been a sort of ruler about the premises, she feared her authority would cease if her mistress married Mr. Wesley Latham, and accordingly she induced her brother Mango to shoot him, which he did. The N. O. *Delta* says "they met their fate calmly and firmly."

John Lamberton, Esq., died in Batavia, recently, at the ripe age of 87. Mr. Lamberton came to Batavia in 1801, and was one of the men who chopped down the trees to make the road through that village. He was for many years subsequently employed as a surveyor, by the Holland Land Company, and was widely known and esteemed as an intelligent, upright citizen.

The Rome *Sentinel* states that there are at present in the Post-Office of that village, twenty-one bags of documents and books, sent by mail, under frank of the Hon. Caleb Lyon, M. C, from Lewis and Jefferson District, waiting to go north, and that each bag will weigh not far from one hundred and fifty pounds, making the whole weight over one ton and a half.

Mr. Marsh, our late Minister to Turkey, has recently publicly stated, that he finds the Mahommedan faith possessed of many more points of resemblance to the Christian, than it has credit for, and thinks that the Bible must supersede the Koran with the aid of the Koran, rather than in spite of it.

Gerard Hallock, Esq., the wealthy editor and proprietor of the New York *Journal of Commerce*, resides in New Haven, Conn., where he supports a church and minister himself. Every Monday morning the minister is expected to breakfast with him, and on lifting his plate, finds his weekly salary of $42 beneath it.

A company in New York is endeavoring to introduce machines for sweeping the streets. Similar ones are used in some European cities, with great success, but they have never been tried here. The mayor has directed that the Second Ward shall be given up to the contractor, for experiments, before any arrangement is made for their permanent use.

We learn, from the Charleston *Mercury*, that Capt. Ingraham, a son of South Carolina, "was security for a friend who failed, and his whole property is now advertised for sale to make good his engagement for another. He is the father of a large family, and the result of this obligation is readily understood."

At the Westchester Court, last week, William Hubby, of Fishkill, sued the Hudson River Railroad Co. for injuries received by spraining his ankle, and otherwise injuring his leg, by the cars running off the track, from the carelessness of the switchman, while he was a passenger on the train. Verdict for plaintiff, $2,700

Is is now pretty well settled that Baker, the murderer of Poole, is not in New Jersey, as was supposed, but has sailed for the Canary Islands. The clipper Grape-shot, well-manned, has gone in pursuit. Mr. George Law generously tendered the use of this vessel, for the interests of Justice.

A recruiting office for the British Government is in operation at No. 91 Chatham-street, New York. It is intenced especially for the enrollment of German recruits; the denunciations of Germans in Parliament having had the effect of preventing enlistments in Germany.

It is said that $70,000 has been raised for the establishment of a Universalist College, to be located at Salisbury, Ill. Thirty thousand dollars more is required before the charter will take effect, and this it is believed will be procured before June next.

An Express, connecting Chicago and Detroit with Mackinac, Saut Ste. Marie, Marquette, Copper Harbor, Ontonagan, La Pointe, and Superior City, has been established. The Company is a branch of the American Express Company.

A dispatch dated Cincinnati, Saturday, March 17, 1855, says: The trial of two negroes, brought before the Supreme Court on a writ of habeas corpus, excited great interest. The negroes were brought here by the owner, on his way from Virginia to Mississippi, and their freedom was claimed on this ground.

Col. Benton, near the close of the last session of Congress, succeeded in getting inserted in the General Postroad bill, a clause establishing a direct mail-route between St. Louis and San Francisco.

A disposition is evinced by the people in many sections of the country to destroy the telegraphic wires. In a recent instance in Mississippi, the populace assembled and carried off four miles of the wires! It appears that some learned Theban had demonstrated, on scientific principles, to the satisfaction of the people, that the cause of the long drouth, which has so much retarded vegetation, was solely owing to the telegraphic wires, and that, in a few years, when every section of the country will be belted by a lightning wire, rain will cease altogether.

The Paris Imperial Library has just received a work which possesses a certain historical interest from having been taken at the capture of Bomarsund—namely, a collection of the Services for Saints' Days in the Greek Church. It consists of 12 volumes, one for each month in the year. The volumes, which are of folio size, are clumsily printed and bound.

The *Christian Advocate* urges upon the friends of Kansas the propriety of taking immediate steps for the founding of an institution with the title of Kansas University at an early day, somewhere within the limits of Kansas Territory. It suggests that Rev. Wm. H. Goode proceed immediately to the organization of a board of trustees.

On the 20th January last, a new Baptist paper was to be published in Leeds, England. This is the first attempt to publish a newspaper devoted to the interests of the Baptist denomination in England, and we sincerely hope that the undertaking may prove successful.

According to Rev. Mr. Riggs, a Missionary of the American Board in Turkey, the mode of baptism practiced by the Oriental Churches is a partial, not a total immersion, three times repeated, and accompanied with a thrice-performed affusion.

It is stated that the Rev. L. L. Hamline, Bishop of the Methodist Episcopal Church, has donated $25,000 towards the establishment of a university at Red Wing, Minnesota, to be called the "Hamline University."

The Presbyterian body is diminishing in Ireland. The number of chapels has increased somewhat; but, on a comparison of 1847 with 1853, it appears the decrease of families was nearly 1,300 a year.

A bill has been introduced into the Assembly of the New Jersey Legislature, proposing to appropriate $10,000 to the College of New Jersey, at Princeton, to assist it in the repairing of the damages caused by the recent disastrous conflagration.

At a fancy ball lately given in New Bedford, one of the characters represented was an Editor! Irishmen, Swiss peasant girls, and Yankee schoolmasters, have been overdone on such occasions; we rejoice that the rage is for something new.

The *Christian Secretary* says the Baptist churches in Danbury and Stonington, Ct., are blessed with powerful revivals of religion. One of these churches is situated in the south-eastern extremity of the State; the other is in the south-western border.

The Pittsburg *Gazette* states that there is a regularly organized association of blacks in that city, bound together by the most solemn oaths, and meeting in secret, whose object is the abduction of colored servants, travelling with their masters, who are suspected to be slaves.

The cotton factory at Lisbon, Conn., was burned to the ground on Saturday morning, 10th inst. The loss is about $30,000, of which $23,000 was covered by insurance.

The Hudson River is again open, and steamboats are plying regularly between New York and Albany.

The Emma Moore mystery at Rochester is ended, the body of the missing girl having been found under the ice in the river.

Rev. Mr. Williams, pastor of the First Baptist Church in Baltimore, baptized a whole house-hold on the 21st of January.

At Livingston, N. J., 15 were baptized at the same time, among whom were a Methodist preacher and his wife.

New York Markets—March 26, 1855.

Ashes—$6 25 for Pots and Pearls.

Flour and Meal—Flour 8 81 a 9 37 for common to good State, 9 37 a 9 75 for Michigan, Indiana, and Ohio, 11 37 a 12 75 for extra Genesee. Rye Flour 6 25 a 7 50 for fine and superfine. Corn Meal 4 25 for Jersey.

Grain—Wheat, 2 10 for red Western, 2 30 for white Canadian, 2 70 for prime white Genesee. Rye 1 30. Barley 1 30 for fair two-rowed. Corn 99c. a 1 02. Oats 51 a 57c. for Jersey, 62 a 68c. for State and Western.

Provisions—Pork 14 25 for prime, 16 00 for new mess. Beef 6 50 a 7 50 for prime, 9 25 a 11 00 for country mess. Lard 10¼ a 10¾c. Butter 12 a 20c. for Ohio, 22 a 30c. for State. Cheese 11 a 12½c.

Fruit—Western apples have advanced, the stock being small; Russets, Gilliflowers, Spitzenbergs, Baldwins, and Greenings, are 4 00 a 4 50 per bbl. Dried Apples 6c. Peaches 13c. Plums 13 a 14c. Cherries 20 a 22c.

Hay—80 a 85c. per 100 lbs.

Seeds—Clover 10 a 11c. Timothy 3 25 per bushel for reaped. Rough Flaxseed 1 85 a 1 90.

DIED,

At Plainfield, N. J, on Fifth-day afternoon, March 22d, Mrs. CATHARINE STILLMAN, wife of Abel Stillman, of Poland, Herkimer Co., N. Y., in the 56th year of her age. She had been feeble in health for a number of years, and spent the last winter in New Jersey in the vain hope of being benefited thereby.

At West Union, Fayette Co, Iowa, February 19, 1855, of consumption, MATILDA DAVIS, wife of Cornelius Davis, aged about 38 years—leaving a husband and eight children, with a numerous connection, to mourn her loss.

In Amity, N. Y., March 14, of croup, CLARENCE M., infant son of Ethan and Eliza Mix, aged two years, eleven months, and two days.

At Morrisania, Westchester Co., N. Y., March 17th, 1855, of marasmus, Mrs. MARY ANN, wife of William Gager, in the 49th year of her age. Her remains were taken to Speonk, L. I., for interment.

LETTERS.

Rowse Babcock, Wm B Maxson, J M Allen, Remembrance Lippincott, D S Manroe, Ephraim Maxson, L R Babcock, N V Hull, Albert Babcock, Z Campbell, J C Green (all square,) Eli Forsythe, A Taber, James L Green, G S Crandall, Sylvester Greenman, Josiah Langworthy.

RECEIPTS.

FOR THE SABBATH RECORDER:

S Greenman, Hebron, Pa	$2 00 to vol.	11	No. 52
James L Green, Berlin	2 00	12	41
Wm Oagwin, New London	2 00	11	39
Daniel P Stillman, Almond	1 50	11	52
R A Thomas, Alfred Center	2 00	12	39

FOR THE SABBATH-SCHOOL VISITOR:

J C Green, Independence	$3 00
Geo S Crandall, Ceres	1 00

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Joseph A Green, Berlin, for vol. 2	$1 00

WILLIAM M. ROGERS, Treasurer.

Savery's Temperance Hotel

AND

TELEGRAPH DINING SALOON,

No. 14 Beekman Street, N. Y.

KEPT ON THE EUROPEAN PLAN.

MEALS AT ALL HOURS OF THE DAY.

LODGING ROOMS,

From $2 to $3 per Week, or 50 Cts. per Night.

BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Board Meetings.

THE next Quarterly Meetings of the Executive Boards of the Seventh-day Baptist Missionary, Tract, and Publishing Societies, will be held in the meeting-house at Plainfield, N. J., on the second First day in April, 1855, commencing at 9 o'clock A. M.

Western Association—Executive Committee.

THE Executive Committee of the Western Association will hold its next session at Alfred Center the first Fourth-day in April next.

E. R. CLARKE, Secretary.

3d Brookfield Church.

NOTICE is hereby given, that at an adjourned meeting of the Seventh-day Baptist Beaver Creek Society, held on the 5th of February, 1855, it was resolved, by unanimous agreement, to sell the meeting-house and its appendages at auction, and give the avails to the American Seventh-day Baptist Missionary Society, except such portion as may be called for by the original contributors, who shall receive their shares, according to the sum they respectively paid, if called for in three months from this date. The amount of the sale was $88. Also resolved, that the above notice be published in the *Sabbath Recorder*.

BENJ. BURDICK, Society Clerk.

SOUTH BROOKFIELD, Feb. 13th, 1855. 37—6t.

Rare Chance—For Sale.

A DENTIST, (wishing to retire on account of ill health,) having a good practice in a large, thriving, and beautiful town, where there is a community of Sabbatarians, will sell advantageously for the cash. Any person wishing to buy, can receive the most thorough instructions in every department.

Letters addressed to "Dentist," care of Rev. Geo. B. Utter, this office, will be answered, giving further particulars. 37—3t.

MAYOR'S OFFICE, Jan. 2, 1855.

COMPLAINT BOOK.—There is opened at this office a Complaint Book under the charge of a competent person, for the purpose of receiving and entering all complaints of matters coming within the jurisdiction of the Municipal Authorities. The Mayor will entertain, and so far as the laws give him power, take cognizance of charges preferred by responsible parties for violation of ordinances and dereliction of duty upon the part of any person holding office under the City Government. By Order of the Mayor,

WM. H. STEPHENS, First Marshal.

All the papers in this City will please copy and send their bills to this office

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.

Alfred Academy,

At Alfred Center, Allegany Co., N. Y.

THE attention of the public is respectfully invited to the educational facilities of this Seminary.

1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.

2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes.* The health, morals, and manners of students are all looked after with parental solicitude.

3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry*, will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women.* In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.

4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.

The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. HULL, or W. C. KENYON.

Feb. 24th, 1855.

The Carol:

A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.

"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.

The following extracts from the Preface will give an idea of the scope and design of the work:—

This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.

About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.

A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.

How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music, and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

A Freak of the Law.

A curious case was last week argued before the Supreme Court in New York, in which it is for the interest of all the defendants that the plaintiff should succeed. Mr. Barthrop, an English gentleman, died at his residence in Kinderhook, on the 20th of October, 1838, leaving real and personal estate valued at $200,000; leaving also a widow, who was a widow when he married her, and had two children, John P. Beekman, the plaintiff in this case, and Thomas, one of the defendants on this side of the water, and, in old England, a sister, Mary Bonsor, with six sons and daughters, more or less, married. This fine old English gentleman left, in addition to his Kinderhook widow, his Nottingham sister, and his $200,000, a rather crotchety will, with a rich variety of crotchety codicils; as, for instance, five Trustees, whose names are Bain, Van Schaick, Harder, Van Alstyne, and Pruyn, and who are also appointed Executors, are directed to buy a farm, or as much of a farm as $6,000 may buy, where the six nieces and nephews—Eleanor, wife of Wm. Potts, of Nottingham; Almira, the wife of William Gibson, of Manchester; Samuel Bonsor, of Tamworth; Alexander Bonsor, of Sheffield; Henry Bonsor, of Manchester, and William Barthrop Bonsor, of the British military service, are expected to keep promiscuous house, with their husbands, wives, and families, all under the supervision of the five Trustees afore named, and all in the most perfect harmony. For if "any of the nephews or nieces cavil or dispute with the arrangements of the executors, such disputant is to receive no part thereof." Only fifteen years, however, were they to be doomed to this general life; at the expiration of that time, the Trustees might sell the farm, and divide the proceeds among the nephews and nieces, not equally or according to any fixed rule, but "as they think just." This provision is claimed by the plaintiff to be invalid, with two others—one providing for a public dispensary, the other for the payment of $1,000 a year for five years to the "Society for the benefit of Tailoresses and Seamstresses" in New York; the same sum to a similar society in Philadelphia; and $600 a year for six years to the Female Assistant Society, and also to the Female Benevolent Society of this city. Charitable institutions are made his residuary legatees, at the discretion of his executors. The will was proved in 1839, and the executors, in whom such implicit confidence had been placed, renouncing their appointments, the widow and her son John were appointed administrators, with the will annexed. She has since died intestate, and upon her estate her son Thomas administers. As to the legacy to the Tailoresesses Societies, the plaintiff alledges that at the death of the old gentleman there were no such institutions. The family farm he has not put in operation, the dispensary he has not built, the charitable residuary clause he has not carried out; he thinks these provisions are illegal, and he prays a judicial construction of the will; and as he has sold the real estate not specifically devised, and paid the legacies, he prays also an account of the estate in his hands. The defendants are the people of the State of New York, Mary Brandor, the sister and her children, and Thomas Beekman, as administrator of Anna, the widow. If the trusts fail—his blood relatives being all aliens—the real estate escheats to the State, and the personal estate will be divided, one-half to his sister and the other to the sons of his widow. It is therefore the interest alike of the plaintiff and all the defendants that these charitable provisions should be pronounced invalid. The Charitable Societies, although they have vital interests at stake, are not made parties to the suit.

For the plaintiff, Underhill, John Van Buren and Judge Kent; defendants, Reynolds, of Albany, and Jos. Blunt. [Tribune.

Hungary.

An incident of travel on the Puszta last November, illustrates some part of the feeling of the people. Miss Birkbeck, we should explain, usually gives animation to her sketches by giving her narrative in the first person—adopting, in fact, the place of her informant:

"I hear you are from the South, my good man," said I to the trader, whom the waiter had pointed out to me in the tap-room. "Will you give me a lift in your wagon as far as your village?"

The man, a stalwart, elderly Hungarian, dressed in a bunda, his swarthy countenance shaded by a broad brimmed hat, on hearing himself addressed in a foreign accent, cast an inquiring glance at me, and while twisting his long moustaches, he asked me abruptly who I was?

"An Englishman."

At this announcement a change instantly came over the Magyar's face. The suspicious expression vanished before a warm ray of genuine cordiality and pleasure. The man rose from his seat, and taking off his hat, said, with much deference in his manner, "God bless you, sir; you belong to that noble nation who so hospitably received, and still entertain my unhappy exiled brothers. I will gladly take you with me as far as you like to go."

"And what is your charge?"

"What is my charge?" rejoined the trader with a proud and half offended air. "Now tell me, sir, would it be fair of me to take money from an Englishman for such a trifle? No, no; it would be downright ingratitude. Travel in my cart where you will, and moreover be my guest, if it pleases you to tarry under my humble roof, but never ask me again what is my charge!"

Thus matters being arranged, with a dispatch outstripping all my expectations, I found myself on the following morning already on the road to the Puszta, seated on a heap of fragrant hay, and borne rapidly onwards by four fleet horses. By the side of my worthy conductor was a young man, who, I observed, had but one arm. Imagining that he might have lost it in battle, I inquired whether he had taken part in the late war.

"Yes, Gaszi was a Honved!" replied Lazar, the trader, with a proud glance at his son. "His arm was shot off at the storming of yon fortress," he added, turning round and pointing with his whip in the direction of Buda; which, with the surrounding chain of mountains, ending in the steep and rugged rock called the "Blocksberg," form an extremely picturesque background to the flatly situated metropolis.

"But you do not fret at the loss of your arm, Gaszi?"

"No, father," was the ready reply. "I lost it in my country's service, and here is still another," stretching out his right arm, "with which, God willing, I will yet pay back the Austrians for the loss of the other!"

Then followed a rude search of the cart by Austrian gendarmes, after which Lazar drove his horses onward viciously.

During this race I lighted a cigar, and offered one to old Lazar. He, however, declined taking it. As I had seen him smoking a pipe just before, I was anxious to know the cause of his refusal. "It was not from any wish to offend you, that I declined, sir," he rejoined, a cloud suddenly overcasting his honest features; "but since the Austrians have even forbidden us the free use of our own tobacco, unless we sell it at a very low price to them, and buy it back for six times that amount, we have given up both the growth and use of it in our community."

"I understand; but what have you just been smoking?"

"Nothing but vine leaves steeped in a decoction of plums; a poor substitute indeed for tobacco, but still they give out smoke, and—this dreadful state of things cannot last much longer!"

"Do you think so?"

"Yes, I am sure of it. The best proof is, that the Austrians, in spite of their pretended sway over the land, are afraid of us. Even in broad daylight their people always go out in troops armed with guns and swords. Yet, not a week passes that one or other of them does not suddenly disappear. Their fear is carried to such a pitch, he added, with a contemptuous wave of the hand, "that about a year ago, they even took our saddles away, lest we should change over night into hussars—into avengers of our fatherland. But how can that avail them? They cannot tear out our hearts, and in them lie their bitterest foes."

A New Building Material.

For many years past the inhabitants of Wisconsin have been in the habit of building their houses, wherever lime and sand are plentiful, of a substance known as GROUT, which is a mixture of lime and sand. In all parts of that State houses of this description are to be met with, many of which, though they have been erected from sixteen to twenty years, do not show the least signs of decay. This fact, we understand, suggested to Mr. Ambrose Foster, of Portland, Dodge County, Wisconsin, the idea that it might be possible so to compound and manipulate these two articles, lime and sand, as to form a building material which should not only be as durable as the best stone itself, but should also be adapted to the many requirements of builders throughout the United States. After devoting considerable time and ingenuity, he has at length succeeded in producing an article that bids fair eventually to drive clay-made bricks entirely out of the market, and to supersede in many instances the use of stone. Taking for the basis of his operations the established fact that hydrated lime, when exposed to the action of the atmosphere, again takes up the carbonic acid which it lost in the process of burning and slacking, and so becomes indurated, he set himself to work to find out the proper proportions of sand and lime to form a species of sandstone. These he found were one part lime to twelve of sand. In Wisconsin, little attention had been paid to these proportions in the making of Grout, which is there always used in a wet state, like mortar, the walls being built up by layers of this mixture being laid on between two parellel boards. Hitherto, then, Mr. Foster had but very slightly varied his process from that adopted in his native State. Eventually, however, he found out that, in order to effect a more perfect combination, the lime and sand should be mixed together in a nearly dry state—in fact, the sand, as it was dug out of the earth, and the lime in the powdery state it acquires after being slacked. The mixture is then run into molds, passed into a machine constructed for the purpose, and subjected to great pressure—as much, indeed, as one hundred and twenty tuns upon a single brick of the ordinary size. On being removed from the machine, the brick presents a white appearance, showing on its surface that it is simply, as yet, a mixture of lime and sand compressed into shape. These bricks are now piled up in regular heaps, so that the air may circulate freely around them. At this point commences a chemical change. The moisture of the atmosphere enables the lime to again take up the carbonic acid, and the whole is transformed in the course of a few days into bricks of remarkable hardness, ready at once for all ordinary building purposes. The surfaces now present the appearance of a whitish sandstone, while month after month and year after year the same chemical change is going on, and the bricks become harder and harder, until at length they are as indestructible as granite itself. In their manufacture they neither shrink nor warp; hence they can be laid so evenly that very little mortar is needed in putting them together. Indeed, the amount of lime required to make the bricks and put them together in a building does not exceed the quantity necessary in ordinary brick-building operations. The internal surface, too, of the walls presents so much smoother a result that in many instances no plastering will be required. The bricks are also, from their nature, impervious to damp. Owing to their great strength and hardness, these bricks can be manufacture with perforations, so that every wall may be built with a dead-air chamber in it. This will be found of considerable use in all large buildings; while in making fences for farms, &c., the perforations of the bricks may be so arranged as to present many pleasing devices. For buildings requiring the application of architectural design, ornamental bricks can be made as readily as those of the ordinary shape. Lime and sand are far more plentifully scattered than is the clay from which the common brick is formed, consequently Mr. Foster's invention will materially decrease the cost of building, since they may be made in almost all localities more cheaply than the most common brick. The farmer, indeed, may draw his own sand and lime, prepare and mix them as directed, and then with one of the machines manufacture, in the course of a day or two, as many of the building-blocks as he requires for his fences, barns, stables, &c. Although the beauty of these bricks depends in some measure upon the purity of the sand, that is of its being free from any admixture with clay or other earths, still very little deviation from the ordinary processes produces a good substantial block. Metallic oxides may, where necessary, be incorporated with the materials so as to give any shade of color required, or produce an almost indestructible imitation of any kind of marble or stone. We have seen specimens of this new building material which have been subjected to every possible test in order to prove the strength and durability of material, capability of withstanding the effects of alternating frost and heat, and we were not able to discover that the experiments in question had in any way affected the blocks operated upon. [N. Y. Tribune.

Spent Tan.

The importance of tan as a manure and an ameliorator of clay soils, has not had so much attention paid to it as the subject deserves. To illustrate the value of it, I will give you the result of an experiment made with it by Mr. Plaisted, of Gardiner. He had a piece of heavy, stiff clay ground, which he had frequently plowed and manured, and laid down to grass, which would in one or two years be thrown out by the frosts, or killed out by the drouth, leaving the ground quite bare; being a tanner, and having a large lot of tan on hand, he commenced hauling it upon the lot, which was covered to the depth of from two to four inches; he then gave it a good dressing of manure, and turned the whole under, then gave it a thorough harrowing and sowed with grass seed.

The next year he cut two tons of hay to the acre, and for the last twelve years it has averaged him that quantity. There is now no heaving out of the roots of the grass by the frosts, and with an occasional top dressing it may continue to produce as much for years to come. I would suggest the liming of the land at the same time, for the purpose of neutralizing the tannic acid. The action of the tan is no doubt partially mechanical, and a good substitute for it may be had in the large quantities of saw dust now wasted in our streams and rivers, without infringing upon the quantity necessary to the supply of editors and printers.

If some of our farmers who have these materials in plenty at their door would try the experiment of their use, and give the public the results, they might be the means of converting what is now considered worthless material to a valuable use. [Cor. Maine Farm.

The Great India Rubber Case.

This case has taken so much time in the United States Courts, and become of so much general interest, that we give below, (says the N. Y. *Tribune*,) a short account of the circumstances producing the litigation, and a synopsis of the trial.

Prior to 1835, the manufacture of India Rubber in this country, though quite extensive, was entirely impracticable, because the original article of commerce could not by any known way be spread upon cloth, or reduced to a paste for that purpose, without first dissolving the same in spirits of turpentine, or some other known solvent, and as it took more than one gallon of spirits of turpentine (the best article known) to dissolve one pound of rubber, which cost about 62 cents, the rubber was made very expensive, and as the solvent must necessarily be evaporated after the goods were made, much time and labor were required; at the same time the goods were injured by the use of a solvent. Many inventions had been made by which to spread the dissolved gum upon the cloth, but no one supposed that the solvent could be dispensed with. In 1835 a poor laborer in the rubber-factory of the Roxbury Company in Massachusetts, after a year's experiment, discovered a mode or process by which, by the use of certain machinery, he could make the rubber into a paste and spread it on cloth without the use of a solvent, and with much less labor; and for this he received a patent. This was the first great step in the Rubber business of the country, as it greatly reduced the cost of manufacture, and made much better goods. Soon after this, Nathaniel Hayward, of Massachusetts, discovered that sulphur compounded with rubber made a better article of goods than the rubber alone, as it operated as a dryer, and for this he received a patent which was issued in the name of Charles Goodyear, which was also a valuable invention, though we understand Mr. Hayward claimed the invention to be the result of a dream, and not of experiment. In 1844, Charles Goodyear being the owner of the Hayward Patent, and still finding that there was a difficulty with the goods, inasmuch as they were affected by cold, patented a process of heating the goods after they were manufactured by the Chaffee and Hayward process, in a hot, dry oven, and that heat, so applied, would render the goods more durable, and, to some extent, proof against heat and cold. He soon after came in possession of the Chaffee patent, so called, for a mere nominal sum—Chaffee continuing poor; and up to 1850, the time of the expiration of the Chaffee patent, the licenses of Goodyear, whose agent was Wm. Judson, a New York lawyer, manufactured nearly all the goods made of India-rubber in the country, under the three patents; and there was invested in the business an immense capital, and almost the entire rubber business of the country was in the hands of this body of licenses. Up to 1850 Chaffee had received not substantial equivalent for his invention, and still continued a day-laborer. At that time he was induced to agree with Mr. Goodyear to convey to him his extended patent, should it be extended, for the sum of $3,000 and a business connection with Goodyear. Under this agreement Chaffee proceeded, with the aid of Judson, to obtain the extension—Judson advancing the necessary fees for the extension. As soon as it was extended, Judson claimed that Chaffee should make some conveyance of a right to use the patent to him for his benefit and the benefit of the licenses of Goodyear, whose agent Judson was. Chaffee did make a contract with Judson in writing, which was amended and altered in 1851, and in which Judson agreed to pay Chaffee $1,500 per year, for the seven years, for the use of the patent for the licenses of Goodyear, and the licenses to pay the expenses of the extension to Judson—Judson then claiming to have paid them out of his own pocket. It was shown, at the time of the extension, that the extended term was worth $200,000 or $250,000; yet Judson obtained it at the sum of $1,500 per year for the licenses of Goodyear, and bound Chaffee to license no other one without Judson's consent.

Judson, as Chaffee claims, after a time refused to pay even the annuity of $1,500, and though Judson and all the licenses continued to use the patent, Chaffee, failing to get his pay on his annuity, revoked the contracts with Judson, and sold his patent to Mr. Day, for which he received a large compensation.

Mr. Day brought his suit against various persons and companies, who were using the patent. The defendant Hartshorn set up in defense these contracts between Chaffee and Judson, to protect him, and also denied the validity of the patent. Defendant pleaded five special pleas, setting up these papers and also the general issue. The plaintiff demurred to the pleas, and, after argument, the Court sustained the demurrers, and then the case came up for trial on the general issue, before a Jury.

The plaintiff claimed—

1. That a seal had been improperly put upon one of the papers, between Chaffee and Judson, after it was delivered to Judson.

2. That Judson obtain the contracts by fraudulent representations, which rendered them void.

3. That Judson and the licensees had neglected and refused to pay the annuity of $1,500 per year to Chaffee.

The case occupied seven weeks in its trial before the Jury, and was conducted with great ability by Messrs. N. Richardson, of New York, and T. A Jencks of Rhode Island, for the plaintiff, (Mr. Day,) and by James T. Brady, of New York, and Mr. Bradley, of Rhode Island, for defendants, with whom were associated Mr. Ames, and several other distinguished Rhode Island lawyers.

The closing arguments in the case, by Mr. Richardson on one side, and Mr. Brady on the other, were efforts of great ability, and occupied about one week.

The Jury returned a general verdict for the plaintiff on all points submitted to them.

The importance of this case is undoubtedly above that of any other patent case ever tried in the United States.

Hoof-Bound Horses.

In all cases we must endeavor to give the frog a bearing on the ground; and in order to do this the shoe ought to be removed. A dry, brittle, and contracted hoof may be improved by repeated poulticing with soft soap and rye meal, applied cold. So soon as the hoof softens, let it be dressed, night and morning, with turpentine, linseed oil, and powdered charcoal, equal parts. Yet, after all, a run of grass in a soft pasture, the animal having nothing more than tips on his feet, is the best treatment. A very popular notion exists, that cow manure has a wonderful effect on a contracted hoof; but it is the candid opinion of the author, and no doubt the reader will coincide, that filth and dirt of every kind are unfavorable to healthy action. Such remedy, aside from its objection on the score of decency, savors too much of by-gone days, when live eels were sent on an errand down horse's throats to unravel their intestines. If any benefit belongs to such an objectional application, it is due to the property it possesses of retaining moisture; therefore cold poultices and water are far superior. Clay and moist earth, placed in the stall for the horse to stand on, are far inferior to a stuffing of wet oakum, which can be removed at pleasure. In order to keep it in contact with the sole, we have only to insinuate two strips of wood between the sole and shoe; one running lengthwise and the other crosswise of the foot. It affords considerable pressure to the foot, is cooling and cleanly, and is far superior to the above articles. [Dr. Dadd.

Six Months in the Dark.

The officers and crew of the North Star—Arctic ship now at Sheerness—have suffered the privations of two winters of three months each total darkness, with the thermometer 56 degrees below zero, or 88 degrees below the freezing point. They have been without a single human being to associate with, except their own little company, for a period of two years and a half. During the whole period the officers and crew have ceased to use the razor, merely scissor cutting and trimming their faces and heads, and there has not been one solitary case of ulcerated or sore throat among them. Until within a week, the razor was only known by name in the ship, and, strange to say, immediately their faces lost their warm clothing, several found that the cold took effect on their throats. Not a single man or officer has been lost from sickness. The duties of the clerk in charge of this ship have been most onerous, he having had to be up at all hours, supplying traveling parties with provisions, who have on many occasions, with their sledges and their dogs, traveled sixty miles a day. A few rare specimens of birds and eggs have been preserved and brought home. She brought home the crews of the Investigator and the Phœnix, and the crews of the Resolute and Enterprise.

A Calculating Machine.

Late foreign publications make mention of a "calculating machine," just completed under the direction of Mr. Scheutz, of Stockholm. It is reported to be a very wonderful and important instrument. The inventor and his son have brought it to perfection after twenty years continuous labor. These men first conceived the idea of the instrument from reading an article on Mr. Babbage's invention in the Edinburgh *Review*. The "calculating machine" now exciting the attention of the learned and the curious in Europe, occupies rather more space than a cabinet piano forte, and can be made for about $1,000. Mr. Babbage spent more than $80,000 upon his invention, years ago, and it was never finished. The Swedish machine will calculate the powers of bi quadratic equations, the logarithms for falling bodies from different hights, for projectile forces, tables of sines, &c., and all by the slow motion of a winch turned by hand. And what is more, it stereotypes the columns of figures after having calculated them. In all previous machines, the carryings have proved a hitch; but in this of Mr. Scheutz, the movements experience no check, so beautifully are the several parts combined. [Boston Transcript.

Grounds around Houses.

There is nothing in a knowledge of which our countrymen are more deficient, than in laying out and properly planting and cultivating the grounds around their dwellings. Very often they are not laid out nor planted at all, but are left in a state of primitive bleakness, or only ornamented by objects of confusion and disorder. Where improvement is actually attempted, the result is not unfrequently a combination of inconvenience and stiffness; and very few neatly, economically and tastefully laid out grounds are to be met with. Why should not this art, which every living man in the country ought to practice, be taught in our higher schools? Latin and Greek are excellent studies for those who have plenty of time and means for these as well as other departments of knowledge; but for such as cannot master all, would not the months consumed on Tacitus and Thucydides, be more profitably spent on those fascinating and eminently useful studies, drawing and architecture, in connection with landscape gardening? When will the time come that the latter will have only an equal chance with the former? Time once lost never returns; and it is of the highest consequence that those who direct the mode that young people shall spend it at the most critical of all periods in their lives, should study carefully the best modes for accomplishing so all-important an object. [Country Gen.

NEW WAR IMPLEMENT.—A Mr. Ward, of Canada West, has invented a destructive shell of great simplicity. He uses the common round shell, which is adapted to the present gun or cannon now in use, not requiring a gun made for it or a shell of any peculiar shape. The fuse hole is stopped by an iron screw-plug, (or any metalic substance,) which being well fitted, is made air-tight, and also is fire and water-proof. The shell being filled with combustible matter (known only to the inventor) is ready for use, which is said to be perfectly safe to handle, or transport for any distance. The shell is so constructed that it will stand the heaviest charges of powder from the gun from which it is fired, and, on hitting any hard substance that will offer a good resistance, it explodes, doing serious damage It will ricochet on land and water. During its trials from an eight-inch Columbian gun, some of the shells took a ricochet on the sand in front of the target, and after the ricochet, hit the target and exploded, doing serious damage, cutting several 12 inch timbers in pieces, and destroying the target. Should this invention be brought to perfection, it will probably work quite a revolution in fort and naval warfare; for instance, take a gun of 10 or 12 inch caliber, working upon a pivot on a deck of a naval steamer; one shot of this caliber, taking effect, at wind and water, would sink the largest ship of the line.

TO POSTMASTERS AND TO THE PUBLIC.—We are requested to called especial attention to the law just passed by Congress, modifying the rates of postage, etc., particularly to those provisions requiring that all letters between places in the United States shall be prepaid from and after the 1st of April, 1855, by stamps or otherwise, and that from and after the 1st of January next postmasters must place postage stamps upon all prepaid letters upon which such stamps may not have been placed by the writers, or which may not be inclosed in stamped envelops.

From and after the 1st of April, 1855, the postage to be charged on each single letter for any distance in the United States not exceeding 3,000 miles, is three cents, and over 3,000 miles 10 cents.

The law does not change the existing rates or regulations in regard to letters to and from Canada or other foreign countries, nor does it affect the franking privilege.

The provisions in regard to the registration of valuable letters will be carried into effect, and special instructions issued to postmasters on the subject, as soon as the necessary blanks can be prepared and distributed.

[Washington Union.

"WHAT'S IN A NAME?"—The following are the names of a jury-list in the County of Sussex, (England) about the year 1610:—

Approved Frewen of Northam,
Be-thankful Maynard of Brightling,
Be-courteous Cole of Pevensey,
Safety-on-High Snat of Wickfield,
Search-the-Scriptures Moreton of Salahurst,
More-Fruit Fowler of East Hadley,
Free-gift Mables of Chiddingly,
Increase Weeks of Cuckfield,
Rest-on Weeks of the same,
Kill-sin Pemble of Westham,
Elected Mitchell of Heathfield,
Faint-not Hurst of the same,
Renewed Wisbury of Hailsham,
Return Milward of Hellingly,
Fly-debate Smart of Waldron,
Seek-wisdom Wood of the same,
Fight-the-good-fight-of-faith White of Ewhurst,
Small-hope Biggs of Rye,
Earth Adams of Warbleton,
Repentance Avis of Shoreham,
The-peace-of-God Knight of Burwash.

[Lower's English Surnames.

TIME'S CHANGES.—The Hon. Wm. Jackson, who deceased recently, stated in a lecture upon railroads, delivered before the Massachusetts Charitable Mechanic Association, at their rooms in Pearl street, on the evening of the 12th of January, 1829, that "the commissioners upon the survey of a route from Boston to Albany had come to the conclusion that the number of passengers annually passing over the road would be 23,000; and the amount of goods passing between the two points would be but little short of 30,000 tons; and the net earnings of the road would amount to a sum exceeding $60,000 a year." Yet the lecturer lived to see the number of passengers annually transported upon the Worcester and Western roads to be 2,206,161; and the number of tons of merchandize transported upon the Western road alone to be 355,053 tons; and the net income of both roads to be $1,077,069. The building in which the commissioner's conclusion was announced has been demolished, and given place to a splendid block of stores.

HOW LONG IT TAKES TO GET APPLES.—Mr. Buckminister, editor of the *Ploughman*, in a recent editorial, says:

"We had three hundred trees set, two years ago, in our orchard in Framingham. Some of these, the Baldwins, bear fruit this year. One has borne thirty-seven good apples. People may preach about waiting 20 or 30 years for a young orchard to come to bearing—and they must wait if they procure good-for-nothing soil. But why not give young trees a chance to grow?"

The trees spoken of above are very handsome, and promising, and we think an examination of them would satisfy a person about to plant an orchard, that trees of three or four years of age, handsomely headed in the raising, would prove the most profitable, although costing something more than younger and smaller ones at first. [N. E. Farmer.

The following modest advertisement is published in the Cleveland *Ledger*: "A Young Man wishes to obtain board in a respectable private family, where his moral deportment and example will be considered equivalent. Reference required."

The Children's Aid Society acknowledges a very rich gift of clothing, to the value of $250, being the fruits of a second "Calico Party," at a lady's house in Fourth-st.

New-York and Erie Railroad.

ON and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required; and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove, as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.
Price 25 Cents per Box. Five Boxes for $1 00.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it. If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

FOOTPRINTS OF JEHOVAH IN THE AGES OF REVELATION—NO. 6.

The Fourth Day.

The creation of the great lights, their place in the firmament of the heavens, and their office in the formation of the seasons and periods of time, are plainly marked with the footprints of Jehovah. No philosopher ever proceeded as Moses in giving an account of the objects of nature. He takes no notice of the ancient or modern theories of sages in accounting for their existence or order. The very designation he gives them, great lights, instead of saying Sun and Moon, shows that he intended to give them a different character and origin from that assigned them in the cosmogony of the nations. All that Moses says of them is as true now as it was in the first year of Adam's life. No discovery of philosophy or astronomy has invalidated the truth of his narrative. The peasant and the philosopher, the unlettered and the learned, are all witnesses, that these lights are in the firmament of heaven; that they divide the day from the night; that the greater light rules the day, and the lesser light rules the night, with the stars; that their various phases through the atmosphere are signs of approaching changes in the weather, and before the loadstone was discovered were signs to the mariner and the traveler; and by their risings and settings, aspects and nodes, apogee and perogee, they make our days long or short, seasons, and years, with their various influences.

These things strike my mind as plain footprints of Jehovah in this Mosaic narrative, that they should be described, and their order in creation given, as here recorded, rather than after the manner of ancient pagans or modern philosophers. Moses, learned in all the wisdom of Egypt, could not have been ignorant of the early sentiments of mankind respecting them; he knew that the Sun was the object of adoration to the greatest part of the people of the East. The Phenicians worshiped it under the name of Baal, the Moabites by the name of Cheniosh, and the Ammonites under the names Milcom or Molech; and hence, in Deut. 4 : 15, he warns the people of Israel against falling into that popular idolatry. But when giving his valedictory prophecy, respecting Joseph, he said, (Deut. 33: 13, 14,) "Blessed of the Lord, for the precious fruits brought forth by the Sun, and for the precious things thrust forth by the Moon." All these together show, that Moses, and that Divine Being who framed them all, and gave to man this narrative of the order of his work, designed that the believer in revelation should have a sufficient antidote against the influence of popular idolatries; hence saith another holy writer, "By faith we understand that the *worlds* were framed by the word of God."

I do not suppose that the early pious patriarchs had a knowledge of the astronomical facts developed by modern astronomy; neither do I think that they held the absurd notions cherished by the idolatrous nations by whom they were surrounded. Job says, (chap. 26:7,) "He stretcheth out the north over the empty place, and hangeth the earth upon nothing." Such was the theory of believers in revelation in Moses' day; and modern astronomers have *proved* nothing further. Revelation stands impregnable amidst all the discoveries of modern science; and it would be far better for piety, and the cause of truth in our families, if we walked more in these footsteps of ancient worthies, admiring and praising the works of God as far as we can understand them, and adoring where it is too high and too wonderful for us to discover, instead of swallowing wholesale theories put forth by learned men, knowing them to be contrary to the plain statements of the book of God! To admit that the facts stated by the sacred writers are disproved, and made impossible, by the discoveries of natural science, is to give up the claims of that holy book to our veneration and faith as a revelation of God. So far as my acquaintance with society extends, it appears to me that this species of scepticism is now more prevalent than ever the infidelity of the eighteenth century was; and is even now making fearful progress, through the medium of anti-scriptural philosophy, and a jaundiced theology. It is time Christian men, and believers in divine revelation, looked these facts in the face, and met them with the word of God in hand. I do not know of a single demonstrated fact of modern science that disproves a single fact of revelation, taken in the plainest import of the holy scriptures; and it is unworthy the faith of Christian men to admit theories that contradict the plain revelation of Jehovah. For my part, I reject such *theories* of astronomers as heartily as I do such of geologists! I admit that they have made discoveries, and demonstrated them to be facts; but they have built *theories* upon them limiting the Holy One of heaven, and I reject them with the loathing with which I reject the pantheism of early infidels.

Newton and his successors demonstrated the motions and orbits of the heavenly bodies, and projected theories of the laws by which they were governed; and hence, says the modern sceptic, the Bible is not true; the sun must have been created before this world, and the sun and moon could not have stood still when Joshua bade them do so, nor the shadow have gone ten degrees backward on the sundial of Ahaz, as the Bible says it did. The pulpit and the commentary have tried for ages to reconcile these things, and sceptical youth are laughing at their unsuccessful efforts! Shall Christian men always consent to this? Let us see what are the facts. In God's Book the facts stand naked and unadorned; they have no garnishing, and they need no twisting from man to make them a plausible part of God's Book. I take them as they are. In science, how is it? The law of gravitation is known—it cannot be disputed. The motion of the heavenly bodies is demonstrated. But is the law of the solar system demonstrated? It is argued from analogy, that the universe is kept in order by centripetal and centrifugal forces—that the heavenly bodies, by their converging and repelling motions, keep the equilibrium of the universe—and that to stop one of them in this mighty orrery, would disturb the whole solar system, and dash worlds on worlds to atoms! Hence Moses was no astronomer, and the Creator did not give him the revelation he pretended. The Seers of Israel were bigoted, superstitious liars to pretend that the God of the universe stopped all the machinery of nature to gratify their national pride! But, reader, do you believe it? Astronomers are not agreed within ten thousand miles of the real diameter of the Sun? We know nothing of the internal structure of the earth we inhabit; of course nothing of its real density, nothing of the amount of its gravitating power in the universal estimate! It is not one thousandth part of the earth's interior structure that is known; *for ought we know*, the Hebrew theory, that it is built on great granite arches, may be the true one. For all that is known of this matter, the address of Jehovah to Job, (chap. 33d, verses 4 to 8,) is as applicable to modern philosophers as it was to that ancient sage. We know nothing of the law of gravitation in the ether beyond the atmosphere in which we live, nor far beyond the boundary of vital atmosphere. What is four miles of experiment to forty-five? Nay, what is that to the ninety-five millions of miles between the earth and the sun? Amidst these centripetal and centrifugal forces, converging or repelling, by what force are the rays of the sun darted ninety-five millions of miles? Newton thought that the sun was many millions of degrees hotter than red-hot iron. I believe the common opinion now is, that in itself the sun is an opaque, cold body, like earth, but surrounded by a luminous atmosphere. He thought Saturn had luminous rings. The English papers of last year tell us that Mr. Craig has demonstrated the rings to be no rings at all, but arches of the most perfect geometrical formation.

Some philosophers believe earth to be a hollow sphere; one Symmes thought it might be open at the poles, and that a vessel might sail through it! Others contend that it is filled with a vast fire, surrounded with a crust that is gradually cooling down! It is not difficult to hazard another conjecture, and say, it is probably filled with a gas lighter than ether, and hence it, and its atmosphere, is made buoyant, like the balloon carrying the car and the æronauts in the air. Like every other question unsolved by demonstration, or determined by absolute knowledge, inventive, independent genius may multiply theories without end. It is on such uncertain, undemonstrated theory, that sceptics mock at Bible truth! But as long as the Sun and the Moon and the Stars endure, divide time into periods, and nature into seasons, they not only

> "Publish to every land,
> The work of an Almighty hand,"

but mark the cosmogony of Moses with the foot-prints of Jehovah.

To me it is as easy to believe that God hangeth the earth upon nothing, as it is to believe that the centripetal and centrifugal forces have no limits! Or, if they are limited, to assign a reason why they do not rush into the vacuum beyond! I can as easily believe that God stopped the earth in her diurnal motion, or turned it ten degrees backward, as I can say how the electric fluid turns gravitation backward. S. D.

THE DESIGN OF AFFLICTION.

Many years ago a pious and devoted clergyman entered the shop of a prosperous London book-seller, with whom he was on terms of intimate and Christian friendship. He inquired for his friend, and when told that he was at home, but particularly engaged, sent a messenger to him to the effect that he wanted an interview with him, if but for a few minutes. This message being delivered, the clergyman was invited to walk up stairs into the book-seller's sitting room, and found his friend sitting by his child's cot. The child was dying, but with affection strong in death, it had clasped its father's hand, and was holding it with a convulsive grasp.

"You are a father," said the afflicted parent, "or I should not have allowed you to witness such a scene."

"Thank God, thank God," fervently exclaimed the minister, as he instinctively comprehended at a glance the situation of his friend; "thank God. He has not forgotten you! I have been much troubled on your account, my dear sir. I have thought much about you lately. I have been much afraid for you. Things have gone so well with you for so long a time, you have been so prosperous, that I have been almost afraid that God had forgotten you. But I said to myself, surely God will not forsake such a man as this; will not suffer him to go so long in prosperity without some check, some reverse! And I see he has not. No, God has not forgotten you."

These were the sentiments of Richard Cecil on the design of affliction; and his friend Thomas Williams thankfully and joyfully responded to them. Within three weeks of his death he related the incident as it is related here, and the feeling of his heart was, "he hath done all things well." "For whom the Lord loveth he chasteneth, and scourgeth every son whom he receiveth. If ye endure chastening, God dealeth with you as [illegible]h sons; for what son is he whom the [illegible]r chasteneth not? But if ye be wit[illegible]s tisement, whereof all are partakers, then are ye bastards, and not sons."—Heb. 12 : 6, 8.

[London Baptist Magazine.

MAKE YOUR MARK.

BY MRS. L. ELVIRA COON.

Read before the Ladies' Literary Circle, New Market, N. J., at their Public Session, Feb. 28 1855, and published by their request.

The fact of our living involves responsibility to the Creator of our being. That we live, think, and reason, implies the obligation to act also, and to bring to the highest degree of perfection every faculty bestowed upon us by the Author of all. The world is the stage upon which we must perform our part in the drama of life, and when our labor is done, we pass away to our reward, and make room for those who follow in our footsteps to fulfill their mission. And as we cast a cursory glance at the motley group of individual characters which go to make up the sum of human existence, how forcibly does our subject impress itself upon the mind—*Make your mark.*

That our life is given us for some purpose, and our action required to carry on and fulfill the plans and designs of God, is evident from the circumstances under which we are placed. We find no spontaneous growth of goodness, innocence, and truth, but every virtue requires the fostering care of mind and action to bring it to perfection. Every good which we obtain comes only by hard and well-timed toil, and if we would make a mark which shall tell to future generations of the good we have done, then let us labor earnestly "to do whatsoever our hands find to do" with a willing and energetic power.

Are you in youth's first glow of life, with a long, brilliant journey before you, striving to lay the foundation of a character which is to distinguish you from every other individual, and seeking the station in which you are to spend the energy and ability bestowed upon you? Then make your mark. Imprint upon it, in golden characters, the principles of truth and justice, while yet your mind is in its plastic state to receive an imperishable impress, and before sin shall have stamped the marks of guilt upon your primitive purity, and ere the cares of life have robbed you of the buoyancy of hope's bright visions, and implanted in your bosom the thorn of distrust.

Are you a student climbing the steep ascent of the hill of science, toiling to lay up treasures of the mind, and prepare for some active scene on the stage of time? If so, make your mark. A large and wide-extended field is spread out before you, from which you may gather into the garner house of the mind the wealth of intellect stored by all past ages. You may explore with untiring zeal the labyrinths of thought, and bring forth priceless jewels to sparkle in the coronet of wisdom. Think not with careless eyes to scan those pages with profit, or with thoughtless heart to give up to memory's keeping the gems which more earnest ones have dug up from the deep mines of reason. No, you cannot bask in the sunshine of pleasure and ease, and at the same time receive the blessing which vigorous study bestows; for if any condition in life requires active and long-continued labor for success, it is that of the student. Nor do your labors cease when you leave the halls of learning. You are then but just prepared to enter upon the life-work laid out for you in the work-house of the Lord.

Are you a husbandman, with sun-browned hands, delving in the soil to bring up from the bosom of the earth her riches to feed and bless mankind? Then make your mark. Yours is truly a noble calling. Although your labors have not been appreciated in former ages, yet a dormant world is now awakening to perceive and confess your worth. And as you go forth in spring-time to sow in hope, in summer to destroy the foul intruder and nourish the growing fruit, in autumn to gather in the matured harvest, and in winter to enjoy the labor of your hands, you are not only forcibly reminded of the similarity of the changing seasons with the changes of life, and the importance of sowing morally such seed as you would wish to reap in after years; but, as dying winter is buried in the green mantle of spring, and decayed nature revives to newness of life, so shall all human existences be resurrected in immortality to a new and spiritual being. You have, too, the blessing of Him who has created all these, if you but improve the seasons as they pass; for He has said, "While the earth remaineth, seed-time and harvest, and cold and heat, and summer and winter, and day and night, shall not cease." Dig deep, and sow plentifully, and the luxuriantly waving grain shall be a living witness of your faithfulness.

Are you an artisan in the various channels of trade and mechanism, fabricating and importing the necessaries, comforts and luxuries of life, to improve the condition of man? It is your hand which has stamped the marks of progress and civilization on the present age. It is your skill which has exchanged the wigwam of the red man for the neat, commodious dwelling; ornamented its walls with the beautiful copyings of nature and art, sent the noble breathing ship across the seas to bring back to us the wealth of far-off climes, and opened with a greater facility the sources of knowledge to the whole world. At your touch the rough, misshapen iron comes forth in almost every form of beauty, convenience and power, from the great iron steed that gallops snorting and foaming to almost every nook and corner of the land, to the minutest needle used in tracing the most elaborate embroidery. And as you toil on still, let your mark be progress and improvement.

Are you in poverty's vale, struggling for "the bread that perisheth," tied as it were hand and foot to the clayey tenement of the soul? You too may make your mark. Let honesty, in kingly dignity, sit on your brow. Bear with manly heart the cares and vexations incident to such a life. And though slander may sully your fair name, and you feel powerless (for poverty, as the world goes, is weak) to throw it back in her teeth, yet rest assured, that if undeserved, time will ere long, with noiseless finger, rub away the tarnishing mold, and bring out your bright mark as gold tried in the fire.

Are you the wardens of the bounty of Heaven, and is wealth bestowed upon you with lavish hand? How essential that you should make your mark, not on gold and silver, and the gaudy bubbles of this life, but on the hearts of the creatures of God who need your blessing. A fearful responsibility rests upon you. How much good or how much evil you have it in your power to do? It has been said, with a great deal of truth, that "wealth now rules the world," and remember, that of you to whom much is given, much will be required. Many are the cares, vexations, and temptations, which follow in the train of riches, and often, too often, do they prove a curse rather than a blessing to him to whose care they are entrusted. In the word of God it is said, that the love of money is the root of all evil. This has been very prettily expressed by Tupper in the following lines:

> In the plain of Benares is there found a root that fathereth a forest,
> Where round the parent banian tree drop its living scions;
> Thirstily they strain to the earth, like stalactites in a grotto,
> And strike broad roots, and branch again, length'ning their cool arcades;
> And the dervish madly danceth there, and the faquir is torturing his flesh,
> At the base lean jackalls coil, while from above depending,
> With dull, malignant stare, watcheth the branch-like boa.
> Even so, in man's heart is a sin that is the root of all evil;
> Whose fibres strangle the affections, whose branches overgrow the mind:
> And oftenest beneath its shadow thou shalt meet distorted piety,
> The clinched and rigid fist, with the eyes upturned to heaven,
> Fanatic zeal with miserly severity, a mixture of gain with godliness,
> And him, against whom passion hath no power, kneeling to a golden calf;
> And the hungry hounds of extortion are there, the bond, the mortgage, and the writ,
> While the appetite for gold, unslumbering, watcheth to glut its maw;
> And the heart so tenanted, and shaded, is cold to all things else;
> It seeth not the sunshine of heaven, nor is warmed by the light of charity."

See to it, then, ye who are thus favored, that you set not your heart more upon the gift than the giver.

Are you a teacher, guiding the inquisitive mind in its researches after truth and knowledge? Let your mark be the beacon light to illumine the regions of ignorance with the effulgent beams of science. Next to the parent, your task is one of the greatest accountability. The cares and anxieties which are peculiarly the teachers, are extremely onerous and perplexing; and though fears may almost overwhelm you, lest you err in the way, and prove unequal to the task before you, or though you may feel that your labors are unappreciated, and that yours is a thankless toil, yet as you behold the seeds of knowledge and wisdom germinating and thriving under your hand, and can each day discern the budding and blossoming of some expanding virtue, you are cheered and encouraged to persevere in the way you have chosen. Your path lies in a rugged uphill road, but by the wayside are growing flowers of the sweetest fragrance, noble trees with far-spreading branches offer their ever grateful shade, and birds of liveliest song are beckoning onward to wisdom's topmost summit.

Are you Parents, on whom God has bestowed young immortals, to rear and train for eternity? You cannot too deeply feel the importance of having your mark made. Yours is a high and sacred trust. It is yours to mold the mind and character almost at your will. Who can fathom the depths, or balance the weight, of responsibility which is yours? Who may know how much of the future welfare and happiness of those priceless pearls is dependent upon you? Who can tell if he rightly understand the different instruments he is required to tune? One act of impatience, in you, may string and set to vibrating the chords of contention and strife. A single sentence, expressed by you, may change and modify their whole after life. On one careless word may hang all their future destiny. Example is a more ready teacher than precept, and if you with stern integrity have made your mark, you can point triumphantly to it to enforce your teachings. If, on the other hand, your precepts are not supported by the acts of your life, how futile will be all your efforts, and how, O ye parents, will you answer it to the Father of All, if with "rough unskillful touch you mar" the young spirit entrusted to you, or efface its inborn beauty.

In whatever condition in life you are placed, or whatever position you may occupy, you must make a mark of some kind. The circumstances of our being are such, that it cannot be avoided. If we exist, we must necessarily come more or less in contact with other existences, and it is impossible for us to thus mingle in the society of others, without leaving, in a measure, a mark of our own character impressed thereon, and being ourselves influenced by it; and if we do not place it before us as the guiding star in the pathway of life, we shall find it following after as a result of our action. And though we may feel that our influence is of so little account in the world, that it is a matter of no importance how we improve it, yet if we regard with reflective mind their effects, and trace them out through all their bearings, we shall find that we are making a mark corresponding to those deeds, and in proportion to the ability we possess. The impressions we make in life are often compared to footprints in the sand, which the first rolling tide shall wash away, and leave no trace behind. This is not true, for though we may not write our names on the pages of history, or embalm them in the memory of the world, yet are we carving deeply and engraving indelibly our mark on the rock of eternity, which no wave of time can ever erase. This is forcibly illustrated by the story of the widow, whose only son was in the habit of using profane language. She required him to drive a nail into a board every time he permitted an oath to escape his lips. He immediately commenced to do so, and each time as he let fall the profane word he visited the board with his hammer and nails, and they were soon stretched out in a long black line before him. This attracted his attention one day as he had just added one more to the witnessing array, and upon counting them he was overwhelmed with astonishment at the number they revealed. After reflecting some time, he firmly resolved to abandon a practice which was fast becoming a fixed habit; and now, as he overcame a temptation, he withdrew one from the long list. He struggled earnestly for some time, and at last had the satisfaction to withdraw the last nail, when he hastened to his mother to rejoice over it. She then called his attention to the fact, that though he had removed the nails, yet the *marks* they had made were still there, and no human agency could ever restore the fibres and pores so as to present a smooth unbroken surface. Thus it is in life. If we pursue a pernicious course for any considerable length of time, all our future actions will be swayed by its influence, and no labor, however arduous or well planned, can make us what we might have been had we persevered in the way of rectitude from the beginning. Then make your mark *right.* You have the experience of past ages to guide you in choosing and forming its character.

The light of reason is shed around you to illumine the dark pathway of life. Conscience, too, lends a powerful aid in advising of wrong and encouraging right; and if with honest motive you seek and follow the teachings of these three able counsellors, you can scarcely err in defining the outline and position of the mark you will follow, or fail to trace it out in decision of purpose, energy of action, and stern principle. If we mark out any plan ever so nicely, and then chisel first on one side and then on the other, without reference to the design traced out, the most beautiful sketch will present but a mass of confusion and disorder. But if, following out the plan laid down, every stroke is made to tell with precision and to advantage, soon will the original design stand out in the beauty of perfection. Even so, having determined what your mark shall be, let every act be such as shall bear with force directly on the point, and carve it the more deeply.

Make your mark *high.* In looking back through the dim vista of ages gone, we behold the mark of many a one whose mortal part has long since moldered back and mingled with its mother earth, and yet we behold their names boldly written high up on the temple of fame, and become as well acquainted with their characters as if they were our cotemporaries. And though we find many who have failed to make their marks right, yet have they placed them high, where they are land-marks to direct others to shun the sand-bars upon which they have themselves been wrecked. But when one appears which is both correct and exalted, how clear is the light it sheds on all around! The dust and cobwebs of time will never intercept a single ray of its glory. Such we find a Washington's, which floats triumphantly over the temple of liberty and truth; also a Milton's, a Melancthon's, a Luther's, and many more. Others have inscribed theirs on the jutting rocks which overhang the rugged sides of the hill of science, and others still have traced them in the various forms of tyranny, blood, carnage, ambition, or victory. Be content with nothing short of the highest point you can possibly attain. Be not governed by ambition's far reaching aims, but let your purpose be to place on high a star which shall be truly worthy to enlighten the wanderings of the wayfaring traveler whose own light burns dim and cheerless. Strive to make it point to the true light, and lead to the gates of the city of the Living God.

LUTHER AND MELANCTHON.

"Luther was one of those frank, full men, whom one loves to meet. Not the delicate couches of luxury had made him such; but a childhood which severity and loneliness had rendered painful and sad—in which the voice of mirth was never heard—to whose ear the air was full of wailings, and to whose eye the heavens were full of clouds, such a childhood gave his life its frankness and fullness. But darker grew his sky, and a fierce inner struggle shook his weary soul. Who can tell his bitter agony as "in the twilight of an eclipsing faith" he wrestled with sin? Appollyon, breathing fire and death, was fighting his old fight with Christian, and more than once came near to make an end of him. Long and frequent fasts, continual prayers and tears, all penances and tortures availed him nothing. Still,

> "The curse of God gloomed o'er him."

But a charm broke the bonds of the prisoner. He stood

> "Full in the sunshine of belief."

"Not such was Melancthon's youth. No storms swept the blooming flowers and singing birds from his childhood's path. Comfort smiled upon him, and culture expanded his mind with health and beauty. Learning was his first playmate; and the two, as it were, grew up together. True friends and tried were they during the whole of Melancthon's life. Thus we see how early training was fitting each for his future labors.

"The one, *hardened* to *endure*; the other, educated to *know* and *teach*. The one filled with living energy, which bore him triumphantly through his swarming foes to vigorous manhood. The other kindly and humbly reared into the sacredest love of order and peace. The one fitted to sound the notes of war until all ears should tingle; the other, to pass quietly after, sowing, planting, watering, and making all the desolation to bloom anew under his loving care.

"Luther and Melancthon had each a mission to fulfill. His own labor claimed the particular care of each; yet their paths often cross—often run side by side. Luther came to destroy; Melancthon to restore. The mission of the first was destructive—of the second, constructive. For such opposite labors, different equipments were, of course, necessary. Ability to 'toil terribly.' Courage to attempt, confidence to sustain. An eye quick to distinguish the seeming from the true. Sharp weapons of wit and sarcasm—such were the needs of the first. Luther met these conditions—was the most complete man of his times. Quick-witted logic, calm reasoning, mild and modest wisdom—a love rather of the beautiful with the useful, than of stern and joyous right—such must be the gifts of the last. And such were Melancthon's. The first may be heroic, but the second is the holier.

"Their labors are but stages of the same great reform. The second implies the first—the first, if lasting, necessitates the other. The part of each was lofty and difficult; and each was well completed. Pope and Emperor struck hard for their ruin, but a greater than earthly potentate was pledged to their triumph. The word had gone forth, and the days of Papal despotism were numbered."

DEATH AND SLEEP.

A Parable.

Death and Sleep, the Angels of Sleep and Death, in brotherly embrace wandered over the earth. It was evening. They laid themselves down upon a hill, not far from the dwellings of men. A sad stillness reigned all around, and the sound of the curfew-bell ceased in the distant village. Calm and still, as their custom is, sat these two good angels in close embrace, and already the night approached,

Then rose the Angel of Sleep from his moss covered couch, and strewed with light hand the invisible seeds of slumber. The west wind carried them to the quiet dwellings of the tired husbandmen. Now sweet Sleep held in close embrace the inmates of the rural cottages, from the old man who leans on his staff, to the infant in its cradle. The sick forgot their pains, the mourner his griefs, and the poor his anxieties. All eyes were closed. Now, after finishing his task, this beneficent Angel laid himself down beside his sterner brother. "When the morning breaks," said he with innocent joy, "the world will praise me as its friend and benefactor! Oh what joy to do good unseen. How happy are the invisible messengers of good spirits! How beautiful our quiet vocation!"

So spake the friendly Angel of Sleep. The Angel of Death looked at him with calm sadness, and a tear, such as immortals weep, stood in his large, dark eye.

"Alas," said he, "that I cannot, with you, rejoice in cheerful thanks; the world calls me its enemy, and the disturber of its peace." "Oh, my brother," replied the Angel of Sleep, "will not, in the Great Awakening, the good recognize thee as their friend, and bless thee gratefully? Are we not brothers, and messengers of one Father?"

So spake he; then shone the eyes of the Death angel, and the brotherly genii embraced each other tenderly. [Krummacher.

THE BEST SIGN OF A CALL TO THE MINISTRY.—William Jay mentions the case of a young man who thought he was called to the ministry. The thought originated with himself; neither his pastor nor the church knew anything about it. The young man, however, must needs consult somebody, and calling upon Mr. Jay he was directed to an "older authority." This was a man of blunt, straightforward manner. The young man sought an interview with him; told him that he had been for some time satisfied of his call to the ministry, and asked his aged adviser what he deemed the best sign or evidence of a divine call to the work. "Sir," said the sage, "what I should deem the best sign or evidence would be a man's not thinking of it, but considering himself the last person in the world God would select for this purpose; and who, if God came for him, would be found, like Saul, 'hid among the stuff,' and requiring an effort to draw him out." We commend this incident to the attention of those who imagine themselves called to the ministry, while no corresponding conviction seems to be wrought in the church.

THE WOOF OF SCANDAL.—Mr. Wilberforce relates, that at one time he found himself chronicled as "St. Wilberforce" in an opposing journal, and the following given as "an instance of his Pharisaism." "He was lately seen," says the journal, "walking up and down in the Bath Pump Room, reading his prayers, like his predecessors of old, who prayed in the corners of the streets to be seen of men." "As there is generally," says Mr. Wilberforce, "some slight circumstance which perverseness turns into a charge or reproach, I began to reflect, and I soon found the occasion of the calumny. It was this: I was walking in the Pump Room in conversation with a friend; a passage was quoted from Horace, the accuracy of which was questioned, and as I had a Horace in my pocket I took it out and read the words. This was the plain '*bit of wire*' which factious malignity sharpened into a pin to pierce my reputation." How many ugly *pins* have been manufactured out of even smaller *bits of wire* than even that!

THE RESURRECTION AND THE AWARDS OF THE FUTURE.

An article of S. S. Griswold, which appeared in the *Recorder* of the 22d ult., takes exception to our admission of the necessity of a miraculous resurrection in order that both soul and body may be rewarded together. The writer thinks such an admission destroys the force of the reasoning we had previously advanced to show that God had not created man with a capacity of being rewarded or punished according to the course of nature. He thinks one or the other of these theories must be given up; and he inquires whether, "if the course of nature is fully adequate to reward and punish the soul for its transgressions, it does not follow, that the same course of nature is equally fully adequate to reward or punish the body for its transgressions?"

And how, Bro. G., could the body be punished for its transgressions, in the future world, *if it should never reach that world?* In other words, how can the body be punished *hereafter*, if it should never be raised from the dead? For if you read our remarks with care, you will discover, that they are based on the supposition, that the conduct of a wicked man is of such a nature, that his being recompensed according to the course of nature, *in this life*, is impossible. We showed that, even on such a supposition, God does not lose the power of punishing *accerding to the course of nature*, provided the soul continues to live in a state of consciousness after the death of the body. But the punishment which we supposed to be inflicted in this way, we supposed to fall on the soul, not on the body. If the body is ever brought to share in the punishment which the soul suffers, in the future state, a *miracle* must raise it from the grave; for we know of no *law of nature*, by which the body will rise from the dead.

But Bro. G. will observe, (if he look carefully,) that we never said any thing about the body being "punished for *its* transgressions." The body, of itself, neither transgresses a law nor obeys it. It is not the subject of sin, nor of holiness. It is a mass of matter merely, and though, in its organized form, endowed with certain instincts and propensities, yet, in the absence of a rational soul to guide and direct it, it is no more accountable than the brutes that perish. If the indwelling soul leads it to violate the laws of its own organization, all the punishment that falls upon it *according to the course of nature*, falls upon it in this life, not in the future.

We admitted the necessity of a miraculous resurrection, in order that soul and body *together*—not the body *by itself*—might be recompensed. And if we are not mistaken, this is in accordance with the Scripture. "For we must all appear before the judgment seat of Christ, that every one may receive the things done in his body, according to that he hath done, whether it be good or bad." 2 Cor. 5: 10. This is the common rendering, but the word "done" is not in the original text; and by leaving it out, the passage teaches that the solemnities of the final judgment are ordered, that every one may receive *in his body*, or *through his body*, a recompense according to his deeds. So that, notwithstanding the soul is capable of being recompensed according to the course of nature, in its state of separation from the body, yet in order that all God's ways may be justified, not only as they are revealed in nature, but as they are set forth in the gospel of his Son, it is necessary that a general Judgment Day be appointed, and that the recompenses which are then meted out to mankind shall reach the soul through the medium of the body. All God's blessings, in this life, reach the soul through the medium of the body; the sinner's abuse of them is practiced through and by means of the body; and it seems fit that the final recompense should be received through the same medium.

Besides, it has always been God's way, in order to testify in the most emphatic manner his abhorrence of sin, not only to punish the transgressor himself, but even to take vengeance on the instruments by which the transgressor carried his wickedness into effect, and in some instances upon his innocent children and cattle. The serpent, because it was the mere instrument of deceiving the first human pair, was cursed—made to go upon its belly, and to eat dust all its life. (Gen. 3.) Not only were idolaters to be punished in their own persons, but their cities were to be burnt, their cattle destroyed, and every thing belonging to them made a heap of ruins. (See Lev. 13: 12-17, and 1 Sam. 15: 3.) It is in accordance with this same method, that in the final award made to the transgressor, not only is the soul punished, but vengeance is taken upon the body which has been the instrument of the soul's sin. Yet in order to this, the body must be raised from the dead.

Whether "any miraculous addition" to the punishment meted out in the future life, according to the course of nature, "would be superfluous, if not unjust," we shall not, at present, inquire; it shall be considered more particularly hereafter. But the averment that it would, taken in connection with the declaration "that no miracle will be found necessary to insure the absolute certainty, measure, or degree of the rewards of a future state; but that both rewards and punishments in that state will be 'according to the course of nature,'" occasions us not a little perplexity as to what Bro. G.'s theory of the future life is. Does he repudiate the resurrection of the body, and hold that the soul continues always in a disembodied state?—that the body has no concern, or interest, or share, in the "resurrection of damnation?"—that nothing but the soul is concerned in the joys of heaven, or in the pains of hell? Or does he hold, that the resurrection is accomplished by the operation of some natural law, so that, (no miracle intervening to bring it about,) the awards of the final judgment—the recompense of soul and body together—will still be strictly according to the course of nature? Or does he hold that the resurrection, though a miracle and a reality, has nevertheless no bearing upon the soul's final happiness or misery? But perhaps he will make himself understood, before he dismisses the subject. T. B. B.

"SWEAR NOT AT ALL."

To think, reason, compare, make deductions, and arrive at conclusions, I have ever held as the inalienable right of every man, regardless of the stereotyped notions of any individual or sect; and therefore I do not deem it ridicule, or irreverent, to disagree with Mr. L. Jones, although, from his article in the *Sabbath Recorder* of Feb. 15th, it is evident that he is disappointed to find that his opinions upon oath-taking are not received as umpire, by the honest, self-thinking readers of the *Recorder;* and doubtless deems it very impertinent in "Mr. B." to dissent from his decisions upon that point. One would certainly suppose, from the spirit and tone of that article, that he had climbed to the top round in the ladder of human wisdom and perfection, and there, being surrounded by a bright halo, "the sunlight of reason," he looks down upon his opposers, as they plod their doubtful way, enveloped in "the cloud of ignorance." And surely, as we behold him perched on his lofty seat, how can we but exclaim, in the language of Job, "No doubt but ye are the people, and wisdom shall die with you." Now I have no round-about way, no quotations, insinuations, or desire, to call Mr. J. a fool, although such means are freely employed to apply that term to me; neither is it the object of this article to reply to the article of Mr. Jones, although it may be pardonable briefly to review some portions of it, regardless of ostentatious assumptions.

It is taken for granted, that I mean the "State of New York" when I say, "our land;" which is far from the case; for, in my ignorance, I do know, that a majority of the States of our Union, (of which Mr. J. and myself are representatives, and which virtually renders it our land,) would fine us both for laboring on the first day of the week, were the enactments of such States put in force against us. And I do know, further, that the enactments of the State of New York protect and recognize no day as Sabbath but Sunday, although they grant certain privileges to those who observe the seventh day of the week as Sabbath. That this is no fiction, will appear from an article in the *Sabbath Recorder* of Feb. 15th, under the caption of "*Sunday in New York,*" and also of Feb. 22d, an article entitled "*Important Decision,*" showing that any man who opens his shop and exposes his goods for sale on Sunday in New York City, subjects himself to a fine, and that all contracts and bargains made on Sunday are illegal and void. No such provisions are made for the seventh or any other day of the week save the first. Does this look like the recognition of any day but Sunday as the Sabbath?

Mr. J. "concludes by my article that I think the ten commandments are the whole and all the law that remains in force of the laws delivered to the Israelites through Moses," and so bases his assumption on that hypothesis; which is equivalent to my concluding from Mr. J.'s article, that he observes the first day of the week as the Sabbath, and so assume that the seventh day is the real Sabbath, and deem it very inconsistent in Mr. J. not to receive it because I say so. But perhaps Mr. J., in his wisdom, can satisfy the many who are not fully satisfied, as to the orthodoxy of his position, by showing, that what he calls the judicial law, was not peculiar to the children of Israel, inasmuch as that portion of the Scripture to which we are referred to find the judicial law, contains much that is ceremonial, and therefore peculiar; and how it is that the judicial law regulating the traffic in Hebrew slaves or servants, was binding upon any other people but the Hebrews—inasmuch as it was a judicial institution peculiar to the laws of the Hebrew nation—and how it is that these laws, the penalties of which are summed up, and the spirit of which is expressed, in "an eye for an eye, and a tooth for a tooth," are binding and in force, when they have been abrogated by the plain and direct precept of Christ? Matt. 5: 38, 39. And again, it may be necessary to explain how it is that penalties differ and the laws remain the same; for many have been taught to believe, that where there is no penalty, there is no law, and consequently that to change the penalty is virtually to change the law.

Again, it is assumed by Mr. Jones, that I suppose, and have tried to establish, that the judicial laws of the Jews forbade the preaching of the Gospel. Now this is not, nor has it been, the point at issue. Those passages from Daniel and Acts were introduced to show that we are under no obligations of obedience to the "powers that be" when they interfere with our duties as Christians, and the positive precepts of the gospel, whether they be the decrees of kings or the commands of rulers of the people. To this point it may be in place, at a future time, to show the obligations of law.

The question is asked, "Suppose it was the law that Christians were not required to take an oath; how could courts of justice determine who should and who should not?" I will answer this question by a quotation from Mr. J.'s first article: "The form was made to accommodate a sect called Quakers; as they hold that the calling over the name of the Supreme Being, except in the offering of prayer, is a sin, (and I think they are not much mistaken.) The form is this: The officer says, 'You do solemnly and sincerely promise and affirm, that the evidence you shall give in this matter of difference between A. B. and C. D. shall be the truth, the whole truth, and nothing but the truth; thus you affirm.'" The word affirm is of Latin origin, *(affirmo,)* and is defined to be "to assert positively, to tell with confidence, to aver, to maintain as true." Now this differs materially from Mr. J.'s definition of oath-taking, and is in reality no more than a simple promise, or yea, which answers the question offered; for no one objects to a Christian's saying yea, when asked to tell the truth; so that, the supposed Christian impeachment is an unnecessary appendage to his article; neither are temperance pledges, marriage contracts, notes of hand, or acknowldgments of deeds, any more than a simple promise, or assent.

And now I deem it but just to the Seventh-day Baptists to say, that they are, so far as my knowledge extends, a peaceable, law-loving people, and that the laws they love best are the "higher laws," the laws of God, founded in reason, truth, mercy, and justice; and they believe all enactments that do not come up to this standard, are "lower," and therefore not binding. And I am proud to say, that I am not personally acquainted with one Sabbatarian who would not sooner aid the panting fugitive in his escape from the land of whips and chains, than become the hound of the slave power, to bay on the track, and hunt down the fleeing bondsman, even though the laws of the land (the powers that be) require it. But there is one individual of whom I can say no such thing, if his sentiments expressed are any index to what he might do.

So far as a controversy with Mr. Jones is concerned, I shall have none, and shall hereafter reply to no article from his pen, unless they present more reason and argument, and manifest less of the spirit of pettifoggery.

That oath-taking, or swearing by an appeal to God in attestation of the truth of what we say or promise, is sin, there can be but little doubt, from certain cogent reasons: 1st. All swearing is positively forbidden by a direct and universal precept of Christ, to which there are no exceptions made, and for which the reasons are given. "Swear not at all," says Christ, "neither by heaven, for it is God's throne; nor by the earth, for it is his footstool; neither by Jerusalem, for it is the city of the great king; neither shalt thou swear by thy head, because thou canst not make one hair black or white." The reasons given here are such as clearly show that it is inconsistent for the mere creature to substantiate his word by the implication of objects over which he has not the least possible control, or effective power to change or turn from that purpose which he who created designed them to fulfill, and on which he is essentially dependent. And that Christ did refer to judicial and business oaths, is evident from the circumstances under which the precept was given. The multitudes to whom Christ addressed himself were in the habit of confirming their judicial and business transactions by oaths, not only by the ever-living God, but by heaven, earth, Jerusalem, and their heads, all of which he strictly forbade. Again, that Christ did not speak with direct reference to what is called profane swearing, as a breach of the command, "Thou shalt not take the name of the Lord thy God in vain," is evident, for none of that class of oaths enumerated by him call in question the name of God.

2d. Oaths are unnecessary, and transgressions of the third commandment. In their stead have been substituted mere affirmations, for the benefit of a certain sect of religionists, and none of the ends of law or government are perverted by it, but, on the contrary, it is a fact generally acknowledged, that among those who refuse to go beyond what James prescribes (a simple affirmation, as yea,) in attestation to the truth, there is far less false swearing, than among those who at random, and inadvertently, associate the name of God with every petty contest that is settled in our courts of law, and with which God can have no pleasure in participating. Now, if these provisions of law do subserve the ends of government, and lessen crime, (which is the legitimate end of law,) it follows of necessity, that oath-taking is a forced appendage to judicial transactions, and a sin against God, and that its abolition is not only practicable, but right and obligatory.

3. The tendency of oath-taking is to diminish reverence for the Deity, and lead to that very evil it is designed to prevent, by rendering frequent and irreverent the use of the name of the Supreme Being, for objects and on occasions the most trifling, associating it with the most frivolous quarrels, and by it qualifying petty officers, from the blackguard constable to the unprincipled chief magistrate. Not a pound of tea or spice can regularly travel from the ship to the consumer, without requiring perhaps a half dozen oaths. All of which can but combine to deteriorate the reverence of Deity, and render such sanctions of little importance in the minds of the people. It mitigates the solemn obligations of truth, morality, and religion, because it virtually impeaches the integrity of every individual, by taking it for granted that there are certain occasions when truth is spoken and justice done, and that no such obligations exist for all other occasions, which is essentially founded in false views of religion and moral obligation, for God, who sees and knows all things, holds every act of our lives alike amenable to his bar for reward and punishment. It is therefore radically absurd to suppose that there are any special obligations from oaths, the tendency of which is to degrade the standard of truth and rectitude, and weaken the moral sensibility of man. Again, to justify the present usages of oath-taking, is to rob the scripture of its certainty, by substituting that which is merely inferential for the plain and explicit precepts of both Christ and James, and thus lay open the flood-gates for the inrushing tide of infidelity and unbelief. S. B.

REVIVAL IN SCOTT.

SCOTT, N. Y., March 29th, 1855.

To the Editors of the Sabbath Recorder:—

It may be proper to correct a mistake which found its way into the *Recorder* of March 15, in relation to a revival in the Scott Seventh-day Baptist Church, and it may also be gratifying to the readers of the *Recorder* to know, that there is quite an interesting state of religious feeling with us. Between twenty and thirty had professed faith in Christ and united with the Methodist church in this place previous to the publishing of the notice referred to, but none in the Seventh day Baptist church. Since that time, in the two Sabbaths past, fourteen have been added to the Seventh-day Baptist church by baptism, and we hope more may follow soon. For several months past there have been from time to time encouraging indications, and hopes and fears have alternately arisen, when several weeks ago a series of religious meetings was commenced under the united administration of brother James L. Scott and our beloved pastor, A. W. Coon, and God has visited us in mercy. We have great reason to be thankful for the mercy drops we have enjoyed, and we feel that there is great need of faithfulness on the part of Christians to insure the blessing God has in store for his people. H.

The Seventh-day Baptist Church of Scott, N. Y., to Elder J. L. Scott:—

DEAR BROTHER,—Feeling desirous to express our kind regards and friendly feeling towards you, for your sympathy and labors of love with us as a *gospel minister*, for a season past, do resolve, that we are thankful for your visit, and highly appreciate your labors as a gospel minister, and as such, would *cheerfully* commend you to all with whom your lot may be cast, and will devoutly pray our Heavenly Father to guide and sustain you in your *responsible* mission to the world, and that, when your conflict ends, having fulfilled your mission, and finished your course, you may receive from the Saviour's hand a *crown* of rejoicing in the kingdom of peace.

Adopted by the Seventh-day Baptist church in Scott, this 25th day of March, 1855, and ordered forwarded for publication in the *Sabbath Recorder*.

LUKE P. BABCOCK, } Clerks.

PAY OF THE CLERGY.

The Legislature of Massachusetts have voted to pay their chaplains $200 per year. The speech made in the Senate by Hon. D. K. Hitchcock, of Middlesex, on the question of the Pay of Chaplains, is reported in the *Puritan Recorder*. The following extract sets forth the facts in regard to the pay of the clergy in a convincing manner:—

> Mr. President, in speaking of the compensation which should be accorded to our chaplains, I cannot refrain from referring to the stinted and inadequate salaries which are given to our clergymen generally. In the State of Massachusetts there are about 1600 ministers, and if we exclude the cities, their annual stipends average about $500! From my long and intimate acquaintance with our clergy, I have found that many, very many, who are settled over societies, which are able to provide liberally for their religious teachers, do not receive an adequate compensation; but are obliged to engage in teaching, writing, or even some mechanical occupation, in order to obtain the necessaries of life for themselves and families.
>
> I am glad that this subject is attracting the attention of our people, and that, in some few instances, a movement has been made to provide liberally for their pastors. In a town in the county I have the honor to represent, about nine years since, a religious society was started, principally through the influence of two or three individuals, and foremost among that number was the late Hon. William Jackson. The minister's salary was fixed at $600 per annum. From year to year the compensation has been increased, and at the present moment their religious teacher was cordially paid the sum of $1,500.
>
> Mr. Pesident, this matter of half supporting our clergymen is becoming better understood. Why, sir, I can hardly take up a religious paper without reading an account of a donation visit. This fact alone implies, that there is not only some sympathy for the minister, but a tacit acknowledgment, *that he does not* receive an adequate compensation. However good the intentions are of those who originate and contribute to these charity visits, I cannot but think that it would be much more agreeable to the recipients to have a *living salary*, than such donation visits; for they are too much akin to our almshouse custom of allowing the inmates once a year to partake of roast turkey and plum pudding. I hope the day is not far distant when ministers of the gospel will be promptly allowed a sufficient support, and that those who sit under the droppings of the sanctuary will remember 'the laborer is worthy of his hire.' A minister should be liberally and promptly paid, and not be allowed to be, as many are, in distress; not because they are in debt, but because they are, year by year, becoming, as old age advances, more and more involved. In many cases, this matter of 'donation visits' is resorted to as a safety valve to the conscience, because the preacher is but half paid.

RELIGIOUS TOLERATION.

One of our secular exchanges has a long article on the policy of making opposition to Romanism an element of political organization—some suggestions in which are worthy of general consideration. Speaking of the inconsistency between such a policy and the universally-approved doctrine of religious toleration, the writer says:—

> To all intolerance every genuine and consistent American should stand forever inflexibly opposed, not only on principle, but, above all, Protestants should oppose it as a matter of policy. If one desired infallibly to confirm the children of Catholics in the faith of their parents, he could best gain that purpose by constantly setting himself to oppose and persecute all Catholics. "The blood of the martyrs is the seed of the church," is an aphorism the truth of which has been very long established. The history of the world, and our own history particularly, shows that religious persecution never yet accomplished its object. If the deluge of orthodox hostility has been poured upon the flames of heretical zeal in one quarter, it has but deadened them to insure their bursting forth with increased fervor in another. Intolerance never yet made a convert, while toleration and perfect freedom to believe or disbelieve have wrought innumerable changes.
>
> If Protestant Americans would but be true to the principles they profess, and patiently await the full development of the great idea of religious freedom, they would soon see how absurd it is to relapse, even for a moment, into the narrow and prejudiced notions of the past on this subject. Already, indeed, if the facts could be fully disclosed, enough would appear to show how unfounded is the dread of any coming triumph of the great hierarchy of Europe over this continent. Indeed, the facts, so far as they have transpired, would seem to prove that Catholicism does not increase its numbers to any extent which could make in any way dangerous to our institutions, even if those who direct its influence should desire to make it so. And what do our ultra Protestants expect to gain by driving the Catholic children out of the public schools, and utterly secluding them from the mass of other denominations? Is it possible to conceive of anything more likely to render the Catholics in the country a mere sect among the population, with neither acquaintance nor interests in common with people of other sects? If there be any anti-republican design among the Catholic priesthood, which we do not believe, this is certainly the best way to confirm and foster it.
>
> We have the emphatic testimony of very high authority to show what has been the effect of religious toleration and a general mingling of sects, thus far in our history, on such terms of equality. In 1836, in a communication to the Central Council for the Propagation of the Faith, at Lyons, Bishop England wrote:—
>
> "If I say, upon the foregoing data, that we ought, if there were no loss, to have five millions of Catholics, (in the United States,) and that we have less than one million and a quarter, there must have been a loss of three millions and three-quarters at least; and the persons so lost are found among the various sects to the amount of thrice the number of the Catholic population of the whole country."
>
> Such are the results of that system of religious freedom, free discussion, and public education, which our fathers established, and which has existed unquestioned among us for three-quarters of a century. It has prevented any sect from gaining the predominance, and has maintained that equilibrium of ecclesiastical power which is so essential to the preservation of democratic institutions. If there is any man who supposes that a system of intolerance and proscription can produce such a result, we can only say, that he ignores the eloquent lessons which history teaches on this subject—and there is no other which she enforces so often or so powerfully.

MR. GREELEY'S CONFESSION OF FAITH.—Mr. Greeley, editor of the *Tribune*, recently communicated his confession of faith to the Ambassador, the Universalist paper in this city. As Mr. G. occupies a prominent position in the community, and presides over a journal whose opinions, in morals as well as politics, orthodox readers feel the daily force of, it may be a matter of some interest to understand the central and controlling religious principles in which those opinions take their origin. He says:—

> I have for thirty years earnestly hoped and believed that our Heavenly Father will, in his own good time, bring the whole human race into a state of willing and perfect reconciliation to himself and obedience to his laws—consequently one of complete and unending happiness. But as to the time when and the means whereby this consummation is to be attained, I have no immovable conviction; though my views have generally accorded nearly with those held by the Unitarian Restorationists. In other words, I believe that the moral character, formed in this life, will be that in which we shall awake in the life to come, and that many die so deeply stained and tainted by lives of transgression and depravity, that a tedious and painful discipline must precede and prepare for their admission to the realms of eternal purity and bliss. * * * And, believing the ordinance of the Lord's Supper, as now celebrated among us, a fearful impediment to the progress and triumph of the principle of total abstinence from all that can intoxicate, I have for some time past felt it my duty to abstain from it—awaiting and hoping for the day when Christians of every name shall realize that the blood of our Saviour is not truly represented by the compounds of vile and poisonous drugs commonly sold here as wine, nor yet by any liquid essentially alcoholic, therefore intoxicating.

THE ORIGINAL HUTCHINSON FAMILY, (Judson, John, and Asa,) gave a concert at the Tabernacle in New York, on Monday evening, April 2d, singing a choice selection from their compositions adapted to the times and the age, such as "Little Topsey," "The good time coming," "My Mother's Bible," &c.

CARRYING THE WAR INTO AFRICA.—This has been literally done by the temperance men. The Maine Law, or something very like it, has been promulgated among the native tribes near the Cape of Good Hope by the following manifesto:—

> Whereas, spirituous liquors of the white people were unknown to the ancestors of our tribes, Matic and Matlomi, up to the time of Boomanagong, and our Father Mokachane, now very old, has never drank any thing else but water and milk; and whilst we are of opinion that a good chief and judge cannot properly think, so as to do his duty, should he take any thing which can intoxicate him; and whilst spirituous liquors cause dispute and eomity and destruction of society, (the spirituous liquors of the whites are nothing else but fire.)
>
> It is hereby notified, that the importation and sale of said beverage in the Basuto country, is from henceforth forbidden; and that should any person, whether white or colored, act in contravention of this prohibition, the beverage shall be taken from him, and poured out upon the ground, without excuse or damages.
>
> Given with the advice and consent of the principal men of our tribe, by the chief of the Basutos, at Thaba Bogigo, 8th Nov., 1854.
>
> MOSHESH, Chief.

SUNDAY IN CUBA.—Mr. C. Neave, writing to the Cincinnati *Gazette*, from Havana, Cuba, under date of Feb. 14th, has the following:—

"Talk of the suspicions of Rome and the espionage of Austria. This is the only country I was ever in where I was afraid of being tripped up. They do not keep all the commandments in Havana. For instance, let me narrate how I spent last Sunday. In the morning I went to high mass; at ten o'clock to the cock-pit; at four to the bull-fight—Sunday being the only day they are exhibited—and in the evening to the opera-house; and, if I had been so inclined, I might have wound up the day at the masked ball, and other houses and places 'too tedious to mention.' The holy Roman Church keeps an open track to the regions above, on the broad gauge principle, and takes good care to put her children 'through by daylight'—by ready absolution, an occasional confession, a small modicum of holy water. The capacity of swallowing a few hard and rather angular dogmas, and the proper payment of the priestly dues being complied with, no sooner does one of the faithful shut his eyes on the fleeting scenes of this sublunary world, than, presto! he opens them in the place we all desire to be at."

MODIFICATION OF THE SLAVE LAWS.—A memorial is said to be in circulation in North Carolina, which proposes a practical and important modification of the Slave Laws of that State, as will be seen from the following extract:—

"The attention of the legislature is directed to the following propositions: First, That it becomes a Christian people to introduce the institution of marriage among its slaves, with all its legal obligations and guaranties for perpetuity among those by whom it is contracted. Second, That slaveholders should not be allowed, under any circumstances, to undervalue this natural and holy bond of relationship, either among their own slaves or among the slaves of different masters. Third, That the tie of parent and child should be recognized and protected by the law, and the separation of parent and child before the latter had attained its thirteenth year, should be forbidden by law under the severest penalties. And Fourth, That those laws which interfere with the instruction of slaves in the art of reading and writing, should be repealed."

BAPTIST DOCTORS OF DIVINITY.—According to the American Baptist Almanac, for the current year, there are in the United States 6475 ordained Baptist ministers. Among these, I believe the exact number of Doctors of Divinity is 87, or one and a third per cent. Six of these have received the degree twice, i. e., from two different colleges. The whole number of doctorates conferred on Baptist clergymen now living in the United States, is, therefore 93. Concerning one of these, I am not informed when, or by whom, it was conferred. Of the remainder, 60 were derived from colleges under Baptist control, and 32 from other colleges.

THE DUTCH REMONSTRANTS.—It is a matter of some interest (says the *Puritan Recorder*,) to learn what has become of that part of the churches in Holland, which made so much noise in the days of the Synod of Dort, under the name of Remonstrants, or Arminians; those, in other words, with whom Arminianism was born and cradled. The New Brunswick *Review* informs us that the sect still exists, but is gradually dwindling to nothing. In 1809, they had 34 churches and 40 ministers; now, they have 27 churches and 54 ministers. The membership of the body is now reduced to 4,835. They have a theological seminary with three students. In regard to doctrinal belief, they are very low.

THE GRACE OF GOD.—A writer in the Glasgow *Record* gives the following:—

"The conversion of Miss —— is very strange, as it is related to me. She, being much homaged and favored in gay circles, was waiting one evening for a pair of silk shoes for a soiree and ball to which she had been invited. When the shoes came, they were wrapped in a fragment of a missionary magazine; and as the time to go was not yet at hand, it came into her mind, for diversion's sake, to look into the curious paper, and see its silly meditations. And the gracious God was near, and so blessed that glance and reading, that from that hour she felt no rest till she knew by heart the kind Saviour of men, and by faith had won an interest in him."

THE BIBLE AT EVERY SERVICE.—The article on the public reading of the Holy Scriptures, in the "Directory for the Worship of God in the Presbyterian Church in the United States of America," says: "How large a portion shall be read at once, is left to the discretion of every minister; however, in each service he ought to read at least one chapter; and more, when the chapters are short or the connection requires it."

RELIGIOUS INTELLIGENCE.

The Hawaiian Government has pledged the most eligible site in Honolulu to the purpose of a Seaman's Home, on condition, that no intoxicating liquors be drunk on the premises—no women of lewd character be admitted—no gambling allowed, nor any other disorder tolerated; these rules are to be established and strictly enforced; in addition to this, $5,000 must be raised by subscription for the purpose aforesaid within twelve months, and the "House" must be equally available to sailors of all nations. The site is worth $6,000, and will revert to the Government if it ever ceases to be used as a Sailor's Home.

Mr. Jacoby, the Methodist missionary in Germany, some time since called for $250 a quarter, from the Tract Society in this country, with which to support a tract press in Bremen. On February 15th, Dr. Peck, the Tract Agent, received a letter from a gentleman in New York city, stating that he would meet the drafts of $250 each for one year as they came due—making $1,000 for the year from himself alone. This is a sign, in these hard times, full of encouragement to the Christian heart.

The Corresponding Secretary and General Agent of the Board of National Popular Education is sorry to say, that his protracted illness will prevent the gathering of the 17th class of teachers, which was to have assembled at Hartford, on the 23d of the present month, to go through the usual preparatory course. The present prospect is that the class would be large; but it cannot be sent out. It will be merged in the next class, which will be gathered in August and sent out in September.

A correspondent of the New York *Observer* writes from Academia, Juniata county, Pa., stating that a very interesting revival of religion is in progress in the male and female Literary Institution in that place. Several hopeful conversions have occurred, and a very large number of the youth are under serious impressions. It is gratifying to hear such accounts from different parts of the country.

Mr. George Fletcher, the oldest Methodist in the world, is no longer among men. He attained his 108th year on the 2d of February, and the *next morning (February 3d,)* peacefully breathed his last. This extraordinary man was born in Nottinghamshire, February 2d, 1747. From six years of age he had been brought up in the tenets of Methodism, and amid all the vicissitudes of his life he continued a consistent and useful member of that body.

We have a horrid story from Port Gibson, (Miss.) It seems that a member of the church who had been suspended had made application to be reinstated, and all the members consented except Dr. Woodward, the pastor. The excommunicated member became indignant, and while the trial was in progress he rushed upon the Rev. Dr. Woodward and stabbed him to the heart, in front of the pulpit of the Methodist church. The reverend martyr expired instantly.

The Freewill Baptists in the United States have 1,155 churches, 49,800 communicants, 891 ordained ministers, and 149 licentiates. They have two Mission Stations in Orissa, India; several missionaries at the West; a Theological School in New Hampshire, which has educated more than 150 men, most of whom are now in the ministry, and two Literary Institutions, with about 200 students in each. Another College is in progress at Hinsdale, Michigan.

The *Western Recorder* of February 21st, contains a letter from William T. Green, of Campbellsville, Ky., stating that the Rev. G. W. Robertson, of that place, had baptized "the jailor and his household." The name of the jailor is John Spurling—the name of his wife is Lydia. There were no children—no unbelievers—in the jailor's household baptized in Kentucky—all believed and were baptized.

Cortland Academy, at Homer, N. Y., has been blessed with an interesting revival the past winter. It is stated that most of the students have been impressed with divine truth, and that seventy or more have made profession of faith in Christ. Many of the citizens of Homer, connected with the Baptist and the Congregational societies, have also given their hearts to God, and many a family altar has been recently reared.

At a recent baptism in Providence, Rev. Dr. Jackson, the pastor of the Central Baptist Church, held and exhibited a cane which formerly belonged to the Rev. Dr. Gano, and was by him presented to Dr. Judson, who used it on all baptismal occasions in Burmah during his missionary life. It had accompanied the venerable missionary many times into the Irawaddy.

The Western Seaman's Friend Society has completed two beautiful churches, the past year, one at Cleveland and the other at Sandusky, besides a fine commodious hall at Pittsburgh, costing in the aggregate $37,000; and what is infinitely better, a greater number of seamen have been hopefully converted and gathered into the Church from the field of the Society's labors, than in any previous year.

The Carmine-street church, New York, have very generously offered to their pastor, the Rev. T. H. Skinner, Jr., leave of absence for a voyage to Europe of six months or more, engaging to supply the pulpit meanwhile, and to defray the expenses of the tour.

A religious interest exists in Bowdoin College. The College Fast was observed with very marked solemnity, and has been followed up with extra services of prayer, conference and preaching. Several students are thoughtful, and a few are indulging hope.

The Cincinnati Herald reports a blessed work of grace at Plymouth, Ind., under the preaching of the Rev. J. W. Cunningham, of Laporte. The meeting continued two weeks; forty-eight persons were added to the church.

Rev. J. L. Merrick, of the South Congregational church in Amherst, Mass., asks a dismission on account of "inadequate salary and an inveterate difficulty in the parish about the singing in the sanctuary."

The Macedonian announces the death of Jotham Meeker, a missionary of the American Baptist Missionary Union among the Ottawas.

The net increase of the clergy of the Church of England has, for some years, been at the rate of 300 a year.

European News.

By the steamers Atlantic and Asia, we have two weeks later news from Europe.

By these arrivals we learn of the peaceable accession of the Czar Alexander II, and of his declaration to follow the policy of his father Nicholas. Constantine and the other princes of the Imperial house have signified their allegiance to the new Emperor. The hopes that were entertained throughout Europe of a peace policy in accordance with the supposed personal character of Alexander, were becoming more faint. The influence of the powerful party at the head of whom is the Grand Duke Constantine, it was feared, would urge the Czar forward in a course opposed to his better judgment. His first appointments of the Ministers were, however, regarded favorably for peace. Meanwhile the Allies determined to seize the opportunity of uncertainty which the news of the death of Nicholas must occasion, to prosecute the war with vigor. There has been more fighting in the Crimea, and more threatened. The Conferences have commenced at Vienna, Gorchakoff having received from the Czar Alexander a confirmation of his previous instructions.

In relation to the death of the Emperor Nicholas, it is said that he took a severe cold, reviewing some new regiments. His physician did not, at first, deem the case grave; but soon a violent grippe manifested itself, followed instantly by an inflammation of the lungs. The disease was first discovered to be really dangerous on the 1st of March; and the Emperor, aware of its character, told his doctor that he felt his time was come. His wife and son Alexander were constantly with him. When one of his physicians, Dr. Mandt, told him that there would, probably, be a paralysis of the lungs, he asked quickly: "When shall I be paralyzed?" He demanded, in Russian, of his other physician: "When shall I be suffocated?" This occurred early on the morning of the 2d March. He then went through religious duties—taking the sacrament—and bade his wife, children and grandchildren farewell, giving to each of them the benediction, with a clear voice, and with full and quiet consciousness. In the evening, he took farewell of all the persons belonging to his Court. The Empress, his son, (now Emperor,) the Grand Duke Constantine, the Counts Adlerburg, Orloff, the Prince Dolgorouski, and a few others, remained around him to the last moment. He died on the 2d of March, at ten minutes past noon.

Immediately on the death of Nicholas being known in Paris, orders were telegraphed to Gen. Canrobert to press on the seige of Sevastopol with the utmost vigor. Of the departure of the Emperor Napoleon for the Crimea, nothing additional is known. Preparations continue to be made.

We have the usual rumors that the allied Generals intend to attack Gen. Liprandi, and then fully invest Sevastopol. Also, a rumor that Liprandi had attacked Balaklava. Travelers from the Caucasus report that Schamyl, in conjunction with the famous Naib Mahomed, will invade the Crimea, by way of Anapa and the Sea of Azoff.

The London *Daily News* states, on the authority of its special correspondent at Balaklava, Feb. 23, that it was rumored Gen. Canrobert had ordered a court-martial to try an officer of high command in the French army, who was accused of having held treasonable correspondence with the enemy, and had supplied exact plans of the seige works. The correspondent expresses his disbelief in the criminality of the officer accused.

Mr. Roebuck's Committee of Inquiry into the management of the war had held several meetings. The Duke of Cambridge, Lords Cardigan, Lucan and Hardings were cited to give evidence. Mr. Layard, Gen. De Lacy Evans, Mr. Dundas, M. P., and others, had been examined. Their evidence elicited little new information, but confirmed what is already known to the world—that the grossest incompetency and stupidity were exhibited in the organization—or rather want of organization—of the supplies, and that much of the misfortune that has since occurred was due to that mismanagement. The Committee proceeds in its investigations.

The ratifications of the Treaty of Alliance between France, England, and Sardinia, were exchanged at Paris on Sunday, the 4th March.

A dispatch dated Constantinople, March 1, says: A shock of an earthquake has been felt here. Broussa has been almost destroyed by earthquakes, and 2,000 lives were lost.

A telegraphic statement mentions that the British Consul at Aleppo had been murdered during an insurrection; but private accounts state that he died from natural causes.

The Earl of Stenhope was dead, aged 74. He was nephew of the great William Pitt. His son, Lord Mahon, succeeds him.

Madame Jenny Lind Goldsmidt has been giving concerts at Amsterdam and the Hague, and will revisit England.

Advices from the Cape of Good Hope, to Dec. 30, mention that considerable alarm was felt in the colony by a report that the Kaffirs had again taken posssession of the Amatola fastnesses, whence they might attack the settlements. Many farmers had abandoned their homes, and the military were under arms. Their fears were, perhaps, exaggerated. The explanation given by the Kaffirs was that the parties in the Amatolas were merely hunting parties. Affairs are, however, considered by the home Government so serious that orders are given to fit out one or two ships-of-war to proceed to the Cape.

THE WAY OF THE TRANSGRESSOR HARD.—At the Court of General Sessions in New York, on the 23d of March, Wm. Kissane, convicted of forgery on the American Exchange Bank to the amount of $12,800, was brought into Court for sentence. When asked by the Clerk what he had to say why judgment should not be pronounced against him, he replied, that as the present was probably the last opportunity he would have to make any remarks before the Court, he would therefore embrace it. He said that he did not mean to sue for mercy, which he supposed he did not, in the eyes of the world, deserve, and wished clearly to be understood, that the remarks he was about to make should not be construed into any petition for leniency at the hands of the Court. Kissane then, in a clear and manly voice, but rendered at times indistinct from emotion and tears, stated that he was once happy and respected at his place of business and residence in Ohio, and had a large circle of friends; but in an evil hour he became acquainted with some who had allured him from the path of rectitude and honesty. By the promptings of these men he was induced to perform acts that led to the disgrace both of himself and family, and had cast a blot upon a name never before tarnished. In two short years he lost position, wealth, and good name, and had all the time been haunted by a guilty conscience, from which there was no escape. He had hoped, if he were acquitted on the present occasion, to go into some distant land, among strangers, where, by honest industry, he could, in a measure, retrieve his lost character and happiness; but now he was about to be consigned to a living tomb.

The Recorder, in passing sentence, spoke very feelingly in regard to the painful duty that devolved upon him, and expressed great satisfaction at the repentance exhibited by the prisoner, and advised him to treasure the feeling, and on the expiration of his term of imprisonment, to lead an upright life. He had intended to make the sentence severe, but had altered his mind, and would therefore decrease the punishment to that extent which he now thought just and proper. The Judge then sentenced him to the State prison for two years and six months.

Obituary of a Venerable Man.

William Holiday died in Colchester, Delaware County, on the 23d of February, aged 104 years. Mr. Holiday was born in the town of Rye, Westchester County, in the year 1750. In early life he learned the blacksmith's trade, and worked one year at Tarrytown for the Continental Congress, by direction of Washington, in making bayonets and repairing muskets. He served three months in a scouting party, as a volunteer, under Capt. Brown, and afterwards enlisted under Capt. Dutcher, in a regiment commanded by Col. John Haniman. He served during two campaigns under Capt. Haight; was in the skirmish at King's Bridge; also, in the battle on Long Island, where he was taken prisoner, but made his escape from the British on the way to the prison-ships, and again joined the army. He was in the storming party at the taking of Stoney-Point, where he received a severe sword wound. He was one of the Guard when Major Andre was executed, and was well acquainted with his captors. He was in several skirmishes with the British on the Hudson River, in one of which he was wounded by a spent ball; was once surprised, with several others, by a company of British light-horse, but succeeded in making his escape to a swamp, making a row of apple-trees his defense from the swords and bullets of his pursuers.

In 1791 he removed into Harpersfield, Delaware County, and in 1795 to Colchester, where he lived 60 years, and where, at a good old age, he was gathered to his fathers. In his last effort at reaping, he remarked that he had used the sickle in the field every year for 96 years in succession. His bodily strength continued remarkably good up to the last year of his life, and his mind was clear to the last hour—uttering as his last expression, but a few minutes before he expired, "that the land of promise seemed more bright and beautiful than ever before." He was a member of the Baptist Church 76 years, and a Deacon in the same 56 years—leaving to surviving friends the pleasing testimony of faithful service as a soldier of his country, and of the cross. Mr. H. had been thrice married—had 13 children, 80 grandchildren, 151 great-grandchildren, and 17 great-great-grandchildren; making the sum total of his posterity 261. [N. Y. Tribune.

ACCIDENT AT UNADILLA FORKS, N. Y.—One of the most heart-rending accidents that ever occurred in this place, happened on Friday, March 23d, in the turning and grinding room of Messrs. Brown and Babcock's hoe shop. John M. Hayes, employed in turning hoe-handles, after grinding his turning chisels, was in the act of hanging up the belt, when it caught another belt, drawing him by the right arm on to a three-and-a-half inch square shaft, which was revolving 150 times per minute. It seemed to be providential, that the foreman of the shop had just gone for a pail that was carelessly left by one of the workmen, and as he reached the foot of the stairs he heard a noise, and looking up he saw Hayes being drawn to the shaft, and begin to revolve. He sprang some twelve feet and shut the gate, and the workmen, rushing down on hearing the noise, assisted in taking him from the shaft, which was a most difficult task. He lay with his back across the shaft just below the shoulder blades, with his head and feet hanging down. His arm was wound round the shaft by the belt, which was also drawn across his stomach so tight as to almost force the blood through the skin all over his body. His arm at the pit was half cut off, and jammed seemingly to a jelly to his elbow, while his collar bone and three ribs were broken, and he was otherwise horribly bruised. After disengaging him by cutting the belts and running back the machinery to loosen his frock, which had also caught the shaft, he was carried to his house, and, strange to say, he revived, has his senses, and can talk. It is now the third day after the accident, and his friends have some faint hopes of his recovery.
J. C.

CONVENTION TO HASTEN THE EXTINCTION OF SLAVERY.—A meeting, numerously attended, was held in Cincinnati on the 13th ult., to consult on the propriety of calling a Convention of Christians of all denominations, to be held in that city in May next, for the purpose of considering what measures ought to be adopted to hasten the extinction of Slavery in the United States. After a full discussion, it was resolved:—

1. That it is expedient to call a Convention, as above suggested, on the first Wednesday in May next.

2. That the Chairman appoint a Committee of seven from different denominations of Christians, to prepare and publish a call for said Convention.

The following gentlemen were appointed: The Rev. Professor Day, the Rev. Dr. Wilson, the Rev. C. B. Boynton, the Rev. Wm. G. W. Lewis, Levi Coffin, the Rev. J. French, and Mr. Joliffe.

The names of the Hon. Bellamy Storer, and the Rev. N. West, Jr., were added by the Convention.

It is estimated that twenty-five millions of passages are made annually across the Brooklyn ferries.

THE EMIGRATION TO KANSAS.—The St. Louis *News*, March 22, 1855, says:—At this moment not less than 2,000 or 3,000 emigrants are wending their way westward, toward the new Territories. Every boat from the Ohio River brings them to our Levee; every train from the East has one, or a company of them, on board, while our public-houses are daily thronged by them. They come in companies or individually. Those from the East are helped on by Aid Societies, and come in car loads together, while those from the West or South, in real emigrant style, drive through to the promised land, with ox-teams and wagons, and generally "go it alone." It may be safely calculated that 15,000 or 20,000 hardy squatters will find a home on the fresh soil of the new Territories this spring. Were it not for the fact that provisions, even of the commonest and cheapest kind, are so exorbitantly high, this number would stand a good chance to be increased to twice its size. But settlers, especially those who travel far to reach their homes, are not generally persons of flowing means, and therefore not able to spend much for food for their stock and themselves. The majority of the emigrants passing through our city are destined for Kansas—that being considered the most available place for settlement, on account of its superior lands, and its contiguity to the thickly-settled Missouri frontier. A few, however, will go to Nebraska, and cluster together on the best bottom lands of the Missouri and its tributaries.

PRICE OF LAND IN FRANCE.—The Paris *Siecle* has been investigating this subject of late, and has arrived at the following conclusions:—

1. The value of land is highest where the farms are smallest—lowest where the farms are largest.

2. The smaller the farms the greater the number of inhabitants to the square mile.

3. The average longevity increases in almost precisely the same ratio with the minuteness of the sub-division of the land, being only thirty-two years where the farms are largest, but rising to fifty-two where the farms are smallest!

PREPAY YOUR LETTERS.—The new Postage Law, which took effect on the first of April, provides that letter postage must be pre-paid. The public should bear this fact in mind, as letters on which the postage is not paid will not be forwarded.

SUMMARY.

An investigation into the accounts of the Merchants' Bank, Boston, caused by the suicide of Mr. Hooper, its Paying Teller, discloses no deficiency in his relations to that Bank. He had used, however, about $50,000 of the Merchants' Bank money, which he made good at the expense of the Atlantic and Grocers' Banks, by certifying two checks drawn by A. S. Peabody, which, on the authority of his certificate, were cashed, and the money drawn from those two Banks was used to make his own account good. It is supposed that Hooper lost money in some speculations in which he was engaged.

Americans having friends resident in England or on the continent of Europe, are always amused at the strange orders they receive from their European acquaintances. One of the last orders received in Boston, by the friends of a wealthy American family residing in England, was for a few pounds of American salæratus. A Yankee family, living in London, recently sent to Boston for a few Shaker brooms and three Hingham buckets. The father of the family sent for one of Emerson's razor strops.

A bill has just been introduced into the Legislature to secure the incorporation of a Consumption Hospital in the city of New York. For this purpose, the trustees are allowed to hold real-estate whose value does not exceed $250,000. They are required to receive under their charge all who are suffering from pulmonary consumption, and who are consigned to them by the authorities of counties or towns. The expense of the medical treatment which they will receive, is to be charged to the proper town or county.

A dispatch dated New Orleans, March 27, says that the steamer Bulletin was burnt on Saturday, below Lake Providence, with 3,500 bales of cotton. Twenty-three of the passengers and crew are missing. Among the former are J. B. Williams, of N. Y., and Mr. McCauslie, of N. C. The lady passengers and the officers were all saved. The steamer Huntsville has also been destroyed by fire, with 4,000 bales of cotton on board. We have not yet learned the particulars.

The Legislature of Massachusetts has passed an act, which has been approved by the Governor, and is now a law, providing that either party to any libel for divorce now pending, or to be hereafter commenced, may, at any time before the trial thereof is actually commenced, demand in writing a trial by jury. Heretofore, divorce cases in that State have been tried by the Judges alone.

The Louisville *Courier*, speaking of the celebration of St. Patrick's day in that city, says that nine Irishmen were committed to jail, and on Sunday morning the dead bodies of three others were found. One had frozen to death, another had fallen down stairs and broken his neck, and another was murdered by some one unknown.

On Sunday night, March 25, some rascals broke into the Roman Catholic Church edifice in Eighty-fourth-st., near Fourth-av., N. Y., and robbed it of silver plate to the value of $300, besides which they demolished some images, cut and disfigured the pulpit and its appendages, and besmeared the walls and seats with filth.

Gov. Barstow, of Wisconsin, has vetoed the Prohibitory Liquor Law, which has recently been adopted by decided majorities in both branches of the Legislature. Through the assumption of the one man power, the rum traffic has again been entailed upon the people of Wisconsin, with all its attendant iniquities.

An attempt is being made to apply the peculiar principle of the Minie rifle to cannon. It is estimated that they may thus be constructed so as to carry with precision nearly four miles.

An effort is making in Charleston, S. C., to raise $10,000 for the benefit of Capt. Duncan N. Ingraham, as a token of admiration for his prompt interference in the Kosta affair at Smyrna.

The Canadian Government has introduced a bill to the Legislative Assembly, for abolishing the postage on all newspapers published in Canada. This measure will involve a sacrifice of revenue to the amount of about $30,000 a year; but it is believed that the amount will be cheerfully made up by the people.

In 1832, there were nine persons employed in the Boston post-office; now there are eighty; and to show the amount of business done, it is stated that 300 canvas bags, weighing 150 lbs. each, and 400 letter-bags, pass through the office daily.

The Milwaukee *Statesman* states that all the first mortgage bonds of the Milwaukee and Mississippi Railroad Company have been negotiated in this city, at the rate of 86 cents on the dollar. The Road will now be extended to the Wisconsin River without delay.

Two hundred and ninety-two glasses of liquor have been ascertained to have been sold in New York on a recent Sunday. The fines on these will amount to the snug little sum of $2,920. Eighty glasses are reported from one establishment.

Prof. Alexander Kennedy, for many years a teacher of elocution, and formerly the successor of Sheridan Knowles in that department in the Royal University of Dublin, Ireland, recently died in a grocery at Alton, from intemperance and exposure.

Mrs. Julia Freyberger has recovered $500 of Martin Mountjoy, at Noblesville, Ind., for damages caused by liquor sold to her husband, John Freyberger. A few such verdicts would somewhat reduce the profits of the trade.

A gentleman named Field was robbed, on the 17th ult., at Dunkirk, of about $1,400, by a barber named James Hall. The villain administered chloroform to Mr. Field, while shaving him, and thus effected his purpose.

We learn from a gentleman who has traveled pretty extensively through the States of the northwest during the past six weeks, that the prospect of the wheat crop was never better.

During the first fifteen days in March, the Central Railroad brought to Albany between twelve and thirteen thousand dressed hogs, all from the Western States, and principally from Chicago.

Revs. D. C. Henderson, Wm. M. King, and C. W. Dunlap, have resolved themselves into the "Presbytery of Texas." Their churches are three, and members forty.

The Board of Education of New York is considering the propriety of establishing a Free Academy for females. This is as it should be.

New York Markets—April 2, 1855.

Ashes—Pots $6 18; Pearls 6 25.

Flour and Meal—Flour 9 12 a 9 56 for State, 9 50 a 9 94 for Michigan, Indiana, and Ohio, 11 50 a 13 00 for extra Genesee. Rye Flour, 6 25 a 7 50. Corn Meal 4 37 for Jersey.

Grain—Wheat, not much doing, and prices nominal; some sales of white Southern at 2 42. Rye 1 34 a 1 36. Oats, 57 a 63c for Southern and Jersey, 67 a 73c for State and Western. Corn 97c a 1 00.

Provisions—Pork, 14 37 for new prime, 16 75 for new mess. Beef, 6 50 a 7 75 for prime, 9 50 a 12 00 for country mess. Dressed Hogs, 7¼ a 7¾c. Lard, 10c for choice. Butter, 12½ a 20c for Ohio, 22 a 29c for State. Cheese 10½ a 12½c.

Hay—80c per cwt for River.

Seeds—Clover, 10¾ a 11c. Timothy 3 50 per bushel for reaped. Rough Flax seed 1 90.

MARRIED,

In Bolivar, N. Y., on the evening of Feb. 4th, by Elder H. Cornwell, Mr. DAVID CRANDALL to Miss AUGUSTA FISK, both of Bolivar.

By the same, on the evening of March 25th, Mr. ROCKWELL S. WILLIAMS to Miss MARTHA JANE DAVY, all of Bolivar, N. Y.

March 15, 1855, by Eld. V. Hull, Mr. ELIJAH M. CAR to Miss SABRAH L. BABCOCK, all of Milton, Rock Co., Wis.

DIED,

In Jamestown, R. I., Feb. 18th, 1855, Mrs. SARAH A. CONGDON, wife of Benjamin Congdon, and daughter of the late Rev. Henry N. Burdick, aged 55 years. The deceased embraced religion in early life, and united with the Seventh-day Baptist Church at Newport, R. I., of which she remained a member until her death.
J. C.

In North Brookfield, N. Y., March 26th, at 2 o'clock P. M., ALEX. M. COVEY, Esq., of consumption, aged 39 years. Brother Covey experienced religion when young, and united with the 1st Seventh day Baptist Church in Brookfield, of which he remained a worthy member until death. And although his health had been gradually declining for the last two years, and he suffered much under the progress of wasting disease; yet he endured all with Christian fortitude and patience, and met the hour of his dissolution with great resignation and triumph. As a Christian, by his consistent deportment and life, he had won the confidence of all the lovers of Christ who knew him. As a citizen, having for a number of years held offices of trust, he had, by his kindness of disposition, and affability of manners, together with his uncompromising regard for the right, won the esteem of all. His love of truth and justice, with his decision of character, made him a firm defender of equal rights, and an able advocate of every true reform movement of the present day. Indeed, but few men have been more appreciated in life, or lamented in death. By this afflictive providence a fond wife and three children have been deprived of a good husband and father, and two aged parents, and a large circle of relatives and friends, deprived of a worthy son and esteemed friend.
J. C.

LETTERS.

Varnum Hull, Benj Clarke, H C Hubbard, L P Babcock (nothing due,) Isaac Hale (yes.) E Fairbanks, W B Gillett, D Saunders, E M Coon, Francis Tallett, J C Green, Josiah Langworthy, Erastus Clarke, G B Clarke, John Congdon, Albert Babcock, S N Stillman, Joshua Clarke, John Whitford.

RECEIPTS.

FOR THE SABBATH RECORDER:

Isaac Hale, Providence, R I	$2 00	to vol. 11	No. 52
J W Langworthy, Brand's I Works	1 50	11	40
I S Dunn, Plainfield, N J	2 00	12	52
D Saunders, Farmington, Ill	2 00	12	52
A P Saunders "	2 00	12	36
Joshua Wheeler "	2 00	11	52
E Clarke, Indian Creek, Mich	2 00	12	8
Russell G Burdick, Utica, Wis	2 00	11	52
J A Coon, DeRuyter	2 00	11	52
Francis Tallett, South Otselic	2 00	12	26
John J Tallett "	2 00	12	43
Joshua Clarke, Brookfield	2 00	11	52
Silas Spencer, North Brookfield	2 00	11	42
Sam'l N Stillman, Leonardsville	4 00	11	52
Tacy Stillman "	2 50	11	52

FOR THE SABBATH-SCHOOL VISITOR:

Dennis Saunders, Farmington, Ill	$1 00

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Dennis Saunders, Farmington, Ill, vol. 4	$1 00
Isaac S Dunn, Plainfield, N J "	1 00
Joel Crandall, Little Genesee "	1 00
Joshua Clarke, Brookfield "	1 00

WILLIAM M. ROGERS, Treasurer.

☞ Have you paid for the eleventh volume of the *Sabbath Recorder?* If not, it is high time you attended to that business. The volume will be completed in nine weeks, and during that time we must receive about one hundred and fifty dollars per week to enable the Society to close the year in as good a condition pecuniarily as it commenced. Let those who owe us from two to ten dollars each, consider what is their duty in the premises.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

Board Meetings.

THE next Quarterly Meetings of the Executive Boards of the Seventh-day Baptist Missionary, Tract, and Publishing Societies, will be held in the meeting-house at Plainfield, N. J., on the second First-day in April, 1855, commencing at 9 o'clock A. M.

MAYOR'S OFFICE, Jan. 2, 1855.

COMPLAINT BOOK.—There is opened at this office a Complaint Book under the charge of a competent person, for the purpose of receiving and entering all complaints of matters coming within the jurisdiction of the Municipal Authorities. The Mayor will entertain, and so far as the laws give him power, take cognizance of charges preferred by responsible parties for violation of ordinances and dereliction of duty upon the part of any person holding office under the City Government. By Order of the Mayor,
WM. H. STEPHENS, First Marshal.

All the papers in this City will please copy and send their bills to this office

The Good Time Come at Last.
Belcher's Religious Denominations in the United States
IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,
JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.

Alfred Academy,
At Alfred Center, Allegany Co., N. Y.
THE attention of the public is respectfully invited to the educational facilities of this Seminary.
1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.
2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes.* The health, morals, and manners of students are all looked after with parental solicitude.
3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry,* will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women.* In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.
4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.
The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. HULL, or W. C. KENYON.
Feb. 24th, 1855.

Bruce's New York Type Foundry,
ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.
All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.
Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.
The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.
☞ Printers of newspapers who choose to publish this advertisement, including this note, three times before the first day of July, 1855, and forward me one of the papers, will be allowed their bills at the time of purchasing five times the amount of my manufactures, Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Carol:
A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.
"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.
The following extracts from the Preface will give an idea of the scope and design of the work:—
This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.
About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.
A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.
How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music, and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

Cultivation of Spring Wheat.

The cultivation of spring wheat has been too much neglected in our country. Much of the land east of the State of New York, is unfitted for the profitable growth of winter wheat, and its cultivation there has been, for more than half a century, almost wholly abandoned. It seems not to have occurred to most of the farmers in that region, that the growing of spring wheat as a substitute, could be undertaken with success. The greatly augmented price of this valuable staple, within the past few years, however, has induced some of the most intelligent to try their long-abandoned wheat fields once more, and the most satisfactory results have followed their introduction of spring wheat. From 30 to 40 bushels have been repeatedly grown, at a cost not exceeding fifty cents per bushel; and this ought to be considered a satisfactory price, when it has for some time past readily commanded $2 per bushel.

The Soil for Wheat.—This must contain a due proportion of clay. Heavy clays, when under-drained and deeply worked, are the most enduring and productive for wheat; but choice wheat lands often embrace the lighter loams, and approach the alluvial, though the latter seldom prove good for this grain. It is not essential that the soil be a lime-stone, albeit a good application of lime is one of the best for it. A sandy soil is totally unfit for wheat.

Preparation and Manures.—The best preparation for wheat is a previous cleanly-hoed crop, a clover, ley, or freshly-turned meadow or pasture. The latter three are more sure for producing a sound crop than any other. If barnyard manures are to be used, they ought to be applied the previous year; or, if circumstances compel their use directly upon this crop, it must only be when thoroughly rotted. If the soil has not been made sufficiently rich by previous applications, then guano and bone-dust should be plowed in, at the rate of 200 to 300 pounds of guano per acre, and twice the quantity of fine bone-dust, or its equivalent of superphosphate. Lime is always a good preparation for wheat, but it is better that it should have lain in the ground a year or two before sowing the wheat, when possible. Few manures produce a better effect on wheat than an occasional dressing of salt, to the extent of 300 or 400 pounds per acre, sown broadcast upon the surface.

When the ground is a stiff clay, it is much better to plow it the preceding autumn, and as roughly as possible, so as to allow the winter frosts to pulverize it; and it is thus ready for sowing as soon as the frost has left the ground, and without any subsequent plowing. The guano should invariably be *plowed in,* and if done the preceding autumn, the better. Bone-dust and lime, and plaster, when the latter is used, should be kept near the surface of the soil, if possible. If the spring is wet, it may not be practicable to plow a stiff clay early enough to get in spring wheat seasonably; in which case it may be used for oats or some other crop. Lighter soils may be easily plowed in spring, (and the earlier the better,) and the wheat sowed immediately on the upturned furrows and thoroughly harrowed in.

The Varieties of Spring Wheat differ in popularity, somewhat according to locality; but more according to the period they have been grown in any section, the latest introduced, if of a choice kind, generally being preferred; showing conclusively, if this preference be well founded, that a change of seed occasionally is decidedly beneficial. We believe, however, that soil and situation have much to do with the success of this crop; and it is greatly to be regretted, that a more careful observation on the part of American farmers, has not assigned to peculiar soils and other considerations, particular varieties of spring wheat, as being best suited to insure the largest yield. The kinds most in vogue a few years since, were the Siberian, the Black Sea, and the Italian. These, though still largely cultivated, have recently given place in some measure to the Tea, the Golden Drop, and some others.

Preparation of Seed.—As a preventive of smut, it is better to wash all seed, however apparently clean it may be, in strong, warm brine for a few minutes, skim off the light and brown seeds which rise to the top, pour off the brine to heat again for another parcel of wheat, then sift slaked lime over it, and spread the wheat out on boards in the sun or under cover to dry. Sow as soon as dry. Urine, either from the house or stables, that has become stale, and is beginning to give off ammonia, (which is readily known by its pungent odor,) may be used instead of brine, and with perhaps equal efficacy; but in neither case ought the dusting, or rather thorough coating, with lime to be dispensed with, otherwise the kernels of the wheat adhere to each other rendering it difficult to sow. Soaking in brine over a quarter of an hour or so might injure the vitality of the seed; and if not sown soon after drying it might not germinate well. This is the best method we know of to rid the seed of any foul stuff, such as chess and the like, which still remains in it, after the most careful tillage and winnowing. If the wheat is poured into the brine slowly, and then well stirred up, this will be found floating on the top with the chaffy seeds, and can then be easily skimmed off.

Wheat should be sown with the Drill.—This secures a uniform depth of covering, which is seldom made deep enough with the harrow. It secures economy of seed, as all is buried and vegetates, and is not left to waste and depredation on the surface. There is a remaining and important consideration seldom thought of by the unreflecting. All plants require free circulation of air, equally with moisture and fertility of soil. Through their leaves they derive large portions of carbonic acid from the atmosphere, which aids so strongly in building up the structure of every plant, (nearly 50 per cent. of all consisting of carbon;) they drink in moisture from the humid air through every pore of stem, branch and leaf; and we are not quite certain that they do not draw somewhat from the air of that life-sustaining, crop-enlarging principle—ammonia. By drilling, we enable the plants to have the readiest access to a full supply of air; while by sowing broadcast, we place the growing wheat in the worst possible condition for obtaining it. Let a man hold a lighted taper on the lee end of one of these drills, thickly walled up by the standing grain, (which should always be made in the direction of the prevailing winds,) and he will find it blown out in a moment, when it would scarcely be seen to flicker on the edge of a broadcast field. This arrangement further aids the crop, by the prevention of rust, in certain conditions of the atmosphere, known as close, muggy (hot and damp) weather. A free circulation of air is the only preventive known for this malady.

Quantity of seed per Acre.—When sown broadcast, two bushels per acre is little enough, and two and a half is preferable, especially in stiff land. Spring wheat has but a few weeks to matrue in, and cannot therefore, like winter wheat, have time to *tiller*—throw off those innumerable seed-stalks from a single seed—which by tasking its powers at the root, prevents for a time, and till this object is accomplished, the rapid upward growth, and the formation and ripening of the berry.

Time of Sowing.—The earlier sown after the frost has fairly left the ground, the better. But it may be advantageously sown till the middle of April, or perhaps even the first of May, latitude, 41 degrees; and good crops have been grown when not put into the ground before the last of May. But late sowing renders the crop uncertain. The earliest sown is most likely to escape rust.

Quantity of product per Acre.—Spring wheat seldom produces as largely as winter wheat, though crops have been alledged, sometimes, to overrun 50 bushels per acre. We have numerous instances of premiums from our agricultural societies having been awarded, where the product came up nearly to 40 bushels per acre, and this, too, of heavy wheat. Mr. Eels, of Oneida County, has produced it weighing 64 pounds to the carefully-measured bushel.

Its intrinsic value for human food is beyond that of winter wheat, as it produces more of gluten—the flesh and muscle-forming principle—and is more nearly analogous to meat. An analysis of good English winter wheat, yielded only 19 per cent. of gluten, to 24 from spring wheat, though the proportion of starch—the fat-forming principle—was 77 per cent. of the former, to 70 of the latter.

The Merchantable value of Spring Wheat is usually about 10 per cent. below that of good winter wheat, as it yeilds a smaller proportion of white flour. But for all beneficial purposes, it may be considered fully equal to winter wheat. [Am. Agriculturist.

Wound of the Heart.

The case of Bill Poole, who was recently killed in the City of New York by a gang of ruffians, has excited some surprise from the fact that he survived his wounds eleven days, and the post-mortem examination curiously revealed that a bullet, which was supposed to have fallen from the wound in the chest, was found imbedded in the substance of the heart. The popular idea is that any wound of the heart is, necessarily, fatal almost immediately. And there are professional minds which are but little in advance of the common idea on this subject. It has not been a great many years since a professor, in the leading medical school in the United States, undertook to establish the fact, in the *American Journal of Medical Science*, that any wound of the heart was necessarily and immediately fatal. His essay was based upon the report of an extraordinary case which occurred in Tennessee, to which we shall refer presently.

We purpose to present some curious facts upon wounds of the heart, which are of interest to the public and which show very extraordinary results. The case of Poole, remarkable as it may appear, is an ordinary matter compared with some of the examples we shall present.

A physician of McNairy County, Tennessee, Dr. Randall, reported many years ago the case of a negro boy, who was wounded in the chest with a load of shot. The wound was given on the 5th of April, and the treatment of the case was skillful and very judicious. It was directed to the relief of inflammation of the lung, and there was no indication that the heart was wounded. The boy seemed to recover regularly and slowly up to the sixty-seventh day, when he died suddenly, from over indulgence in eating. The lung which was wounded never performed service after receiving the shot, and the death was due to the condition of the lung. In tracing the course of the wounds, after death, the physicians were astonished at finding three shot in the bottom of the ventricle and two shot in the bottom of the auricle of the heart. The wounds made in the substance of the heart were all firmly healed, and the internal surface of the cavities, in which the shot were found, betrayed no sign of having suffered in any way from the presence of the shot. The boy lived from the 5th of April to the 11th of June, or sixty-seven days, and the death was due to the lung according to the physicians in the case, and not to the shot in the heart.

It must be borne in mind, in reading the cases we present from the *Dictionnaire Medicale*, that incised wounds of the heart, such as are made by a sharp cutting weapon, are more apt to be fatal from immediate hemorrhage, than wounds made by gun-shot. The latter tear the blood-vessels, and torn arteries bleed less than those wounded with clean cuts. The examples we present of the latter class of wounds are, therefore, more extraordinary than any from gun-shots.

In the *Dictionnaire Medicale*, Saviard mentions a case in which the left ventricle of the heart and the septum or wall which divided it from the right ventricle were pierced through. The man lived four or five days. A clot of blood undoubtedly closed the opening at once, and prevented hemorrhage. In another case, the right ventricle was pierced, and the victim lived five days. And, in another case, a sword was passed through the right ventricle, the diaphragm, and liver, and the man lived until the ninth day. Morand exhibited this heart to the French Academy of Sciences, in 1735. M. Lèveille reports a case in which the left ventricle was pierced vertically, and a wound four or five lines in length was made. This victim lived until the 7th day. Dehors, Rhodius, and Fantoni, mention cases of wounds of the heart that were not fatal until the 14th, 16th, 17th, and even the 20th day.

The heart may contract spasmodically at the moment the weapon inflicts the damage, and thus close the wound until a clot of blood forms and prevents hemorrhage. Ambrose Pare, the great French surgeon, gives a remarkable case, evidently of this kind; and a case reported by Schenk, in a student of Ingolstadt, was certainly of this character.

Baron Larrey presented before the Academy a soldier, the side of whose heart was furrowed by a ball, but the man recovered.

But, probably, the most extraordinary case of gun-shot wound of the heart occurred at Cincinnati, in 1835. A Dr. Simmons reported the case in the *Western Journal of Medicine and of the Physical Sciences.* On the 21st of December a man named Maguire was shot in the chest with a ball weighing 74 to the pound. After being wounded, he chased his antagonist with activity for the distance of several rods, and then became faint, and fell. The attention of the physicians was directed to the possible occurrence of gangrene of the lung, and the treatment was designed to prevent that result. There was no sign, in the symptoms, of a wound in the heart. There was great thirst, as there is in all gun-shot wounds, intense pain in the region of the stomach, an accelerated pulse, with a wiry jerk on the second day; but there was no disturbance of the respiration until the fourth day. The man died on the afternoon of the fifth day, or ninety-seven hours after the wound. The examination, after death, revealed a remarkable state of things in the heart. About two and a half inches from its apex there was the appearance of a healed wound. It was not, of course, firm, for a blunt-pointed probe passed through this healing material into the right ventricle of the heart. The internal surface of the ventricle exhibited a lacerated wound, but no trace of the ball could be found. The auricle was not wounded, and great mystery prevailed over the lost trace of the ball. The ascending vein, which pours into the right auricle all the ascending blood from the lower divisions of the body, and the right ventricle and auricle were filled with what is called coagulated lymph. The great mystery in the case was the entire loss of all trace of the ball. It was not in the ventrical into which it had certainly passed, nor was there any perceptible wound of the auricle to mark its passage through it. In this state of things the large vein of which we have spoken was tied, and the heart and that part of the vein were taken out and placed in water. While they were undergoing maceration, the young man who was attending to the maceration thought there were evidences of a bruise on what is called the tricaspid valve. There is an oval opening between the right auricle and ventricle which is closed by this valve. The discovery thus made by maceration gave a clue to a search for the ball. As it had evidently, by the projectile force of the powder, passed through the ventricle and into the right auricle, through the oval opening, the search for it was made in the large vein, of which we have spoken as the vessel which conveys the blood from the lower members of the body into the right auricle. This vein is the largest in the human body. The two veins from the right and left extremities unite together opposite the fourth bone in what is called the loins, and make this large venous trunk. In the right one of these two veins the ball was found.

This, therefore, is a much more extraordinary case than Poole's, for the cavities of his heart were not wounded, and the facts connected with it show how erroneous the general notions are respecting wounds of the heart.

We have heard of a remarkable case in a quadruped, which came under the observation of a physician at the Virginia Springs. This physcian was fond of hunting, and on one occasion he killed a buck that was extraordinarily fat. In opening the animal he found the heart entirely transfixed with an elder stalk, which had run through it. It was evident from appearances that this elder stick had been in the heart for a great length of time. The wounds which it had made in its ingress had all healed perfectly, and no trace of inflammation was discoverable. There was no sign of disease in the substance of the heart in which the stalk was fixed. This animal had struck himself, at some time, violently against this elder, which transfixed his heart, and Nature had cured him. He recovered from this wound, and finally died at the hands of a doctor.

We have gathered these items of information for our readers, because of the general surprise manifested at the fact that Poole lived eleven days with a ball imbedded between the ventricles of his heart. [Louisville Journal.

American Pride.

A timid and famishing child recently found its way into the kitchen of a benevolent family, who had penetration enough to discover that he was no common beggar. The morsels of food given him were clutched at and devoured as if he were only a hungry animal; and he was nothing more at the moment. After he was satisfied with food, he wanted to depart, but his new friends were not satisfied; there was a mystery connected with him which they must penetrate. They persisted in refusing him egress until they had learned where he lived, and that he had a sick mother and two little sisters dying of cold and hunger. They immediately accompanied him to the poor tenement, where they were surprised to find it scarcely a stone's throw distant. The mystery was solved, in part, at once, and fully, before the day was over.

A sick woman raised herself up in bed, where her two little children cuddled together, and bade them begone. When her eye fell on her boy who brought them there, she upbraided and cursed him. It was evident that her reason was impaired. Sickness, and cold, and hunger, and destitution, and neglect, had driven her mad. There were some weeping eyes and throbbing hearts, and busy hands and feet in that neighborhood, until that famishing family were made comfortable; and, in the meantime, the story of their sufferings was rung from them.

They came to the city last spring, a happy family from a New England village, the hearts of the parents full of hope for themselves and their three little ones; the husband, an industrious mechanic, had always been able to provide well for the household. He suddenly sickened and died. The wife and mother was also taken sick and for months could do nothing to add to the little store of cash daily diminishing. She had written to those who should have come to her relief, but they had not responded to her appeal, and she proudly determined to struggle on alone. At one time she attained sufficient strength to take in washing, and for a little while was inspired with courage, but unusued to severe and constant labor, sickness again came upon her.

Weeks and months went away. Money all spent, articles of dress and furniture were pawned, until finally there was nothing left in the room that would bring a shilling at the pawnbroker's, and the last mouthful of food was divided among the children. She determined she would not beg; her children should not beg, and they might die, but they should not die beggars. For two days they had been without fuel or food, and that monomaniac mother had kept them from any effort to obtain aid, by the strong and mysterious influence of a determined parent. The cravings of nature had proved stronger with the boy of seven years than his mother's will, and he contrived to escape, and gain admittance to a house where his hunger could be satisfied. The great fear of the woman was lest she should be sent to the poor-house. "I would rather die," she said, "I would have thrown myself into the river, but it was frozen over, and I *had not strength enough to walk to the lake,* so I and my children shall die here, together."

She will never go to the poor-house; bereavement, anxiety, sickness, suffering, and want, have done their work upon her sensitive nature, and the next house she inhabits will be the narrow one appoined unto all living.

An Irish Nobleman.

The *Northern Whig* publishes the following extract from the will of the late Earl of Leitrim:—

"Forasmuch as all the property which my son will inherit is situated in Ireland, as he was himself born in Ireland, and that his family and nearest connexions are all Irish, I trust that he will ever consider himself an Irishman, and that he will not adopt the very contemptible modern fashion of looking down upon his country. Attachment to Ireland and attachment to England are perfectly compatible, without either renouncing the former, or feeling jealousy of the latter. I hope he will always feel strong attachment to both countries, for, upon the mutual attachment of the inhabitants of each to the other, their united strength and happiness must depend; but he should recollect that he never can be of consequence, or even respectable, in England, unless he is respectable in Ireland, for which purpose, I trust, he will consider it both his interest and his duty to have at least his country-residence in Ireland, to visit his estates as often as he conveniently can, to attend to the wants and interests of his tenantry, and to cultivate their attachment and good opinion. Should he ever attain a seat in either House of Parliament, let him regard it as his most essential duty to watch over the interests of Ireland—a duty now more peculiarly incumbent on every one connected with that country, since the Parliament of Ireland has merged in that of England. Whatever objects of ambition he may have, I trust that he will never pursue them by any but honorable means, and that if he attaches himself to a party, he will connect himself with men of strict constitutional principles, of liberal, enlightened, and disinterested views, but, above all, with men who are friends to Ireland."

Straw and Stalk Cutters.

Now is the time for stalk farmers to provide themselves with a good machine for cutting straw, hay and corn stalk. Stock farmers can do little else in winter than to take good care of the animals, and every consideration of economy is in favor of cutting feed. First, there is far less waste in using cut feed; and second, the same quantity is more available to the animal, especially to such as have not first rate teeth.

Now, we say, if you have not got a good cutting-machine, buy or make one right off, fit up a nice clean place on the barn floor, make a big mixing trough, and try the experiment of feeding cut straw, mixed with chopped grain, if you can spare it. This will pay better than to throw down the long dry feed into the fence corner, for the cattle to tread in the mud, so that you can have more time to sit by the fire and roast your shins. This is a bad policy.

In connection with the use of straw-cutters, farmers should get in the habit of having all their coarse grains chopped in a mill, before feeding. If stock feeders will not be persuaded to grind their corn, they should at least soak it in clean water for twelve hours before feeding.

In seasons of scarcity of hay, we have kept a team of working horses on cut rye straw, and chopped peas and buckwheat, and had them come out sleek and hearty in the spring. And in town we have kept a horse in constant use, and a cow giving milk, upon cut corn stalks and shorts, through the winter, quite as well as any other feed. A proper attention to this economy of fodder, will enable farmers to keep their stock in good order, and have something to sell, or to keep a much larger stock upon the same produce. It would be no hard matter for you to double the productiveness of your farms, and treble your stock upon the same acres.

The Next Census of New York.

From the Albany Evening Journal.

In pursuance of the requirements of the Constitution, there will be taken, during the month of June next, an enumeration of the population and products of industry of the State, after the form that has been prepared by the Secretary of State, under an act passed at the last session of the Legislature. This act has enabled the Secretary to introduce many new features in the schedules, which will, if carried out in a careful and thorough manner, produce an amount and variety of statistical information much more extensive and valuable than any hitherto attempted in this country, although, from necessity, less minute than some of the late European Censuses.

The questions embraced in the schedules, include the material and value of dwellings, the name of each person, with his age, sex, color, relation to the head of the family, native country, civil condition, years resident in the present town, and occupation; together with the fact whether a native or naturalized voter, or an alien, or a person of color not taxed, or the owner of land, or illiterate, or deaf and dumb, blind, insane, or idiotic.

The agricultural statistics include the names of the owners, agents or managers of each farm, the number of acres improved and unimproved, the value of the farm, stock and implements, the number of acres plowed, in fallow, or pastured the year previous, the amount cultivated, and quantity yielded of each of the leading crops raised in the State, and columns for the entry of the unenumerated articles, with their kind, quantity and value, so that the results will not only show the amount of capital invested, and relative profit of the staple agricultural products of the State, but also that of the most limited and local subject of farm culture. There are also inquiries relating to the number and value of domestic animals and their product, including the dairying interests, and of domestic manufactures of every class, with the kind, quantity and value of each.

The statistics of industry, other than agriculture and domestic manufactures, constitute a third and important class of inquiries, and are directed to the name and kind of business, the investments in reale state and machinery, the quantity, kind and value of the raw materials, and of the manufactured product; the motive power, and the number, class and wages of persons employed. This schedule is equally applicable to the shop, the factory, the mine or the quarry, and will embrace every interest in which labor is applied to the changing of the raw material into articles of domestic consumption or external commerce.

The statistics of marriages include the ages of the husband and wife, their previous civil condition, and place of marriage where different from the residence of the parties answering the inquiries. Concerning persons who have died, inquiries will be made, of the age, sex, color, civil condition, time of death, native country, trade or occupation, and disease or cause of death.

The number and value of school-houses, churches, and unincorporated literary, benevolent, or other institutions, and statistics relating to the capacity and usual attendance of churches, the salaries of clergy, and similar inquiries have been retained to preserve uniformity with former censuses, and particular inquiries are introduced in relation to periodical literature, &c.

The Marshals charged with the execution of this duty, will receive a pamphlet containing minute instructions for the filling of the columns of inquiry, with the view of obtaining that uniformity so necessary to a correct result.

Gen. Washington in a Passion.

When Stuart was painting Washington's portrait, he was rallied one day by the General for his slow work. The painter protested that the picture could not advance until the canvas was dry, and that there must yet be some delay. Upon arriving the next morning, Stuart turned his canvas and discovered to his great horror, that the picture was spoiled.

"General," said he, "somebody has held this picture to the fire."

Washington summoned his negro valet, Sam, and demanded of him, in great indignation, who had dared to touch the portrait. The trembling Sam replied, that, chancing to overhear Washington's expression of impatience at the slowness of the work, and the response of the artist that it must be dry before he could go on, he had ventured to put the canvas before the fire. Washington with great anger dismissed him, and told him not to show his face again. But the next day, after Stuart had arrived and was at work, Washington rang the bell and sent for Sam. He came in, abashed and trembling. The President drew a new silver watch from his pocket and said—

"Come here, Sam. Thake this watch, and whenever you look at it, remember that your master, in a moment of passion, said to you what he now regrets, and that he was not ashamed to confess that he had done so."

A New Potato.

A. B. Gray, during his recent exploration across the Continent for the purpose of ascertaining the practicability of constructing a railway to the Pacific, discovered a remarkable plant at the head of the Gulf of California, it being found in abundance through a range of naked sand hills skirting "Adair Bay." It is described as a parasite with a large and fleshy root, and has been called, "Ammabromr Sonoræ," signifying Sand Food of Sonora The fresh plant is cooked by roasting it on hot coals, and resembles the sweet potato in taste, having much saccharine matter about it. It is likewise dried and mixed with less palatable kinds of food, such as musquit, beans, &c. It is represented to be a very delicious vegetable, and could it be transplanted, Mr. Gray believes that it would constitute an important acquisition to the table, probably not second in demand to the sweet potato or asparagus.

It is said that the Tœnnge, or Sandwich Island potato has been introduced into cultivation in several of the Southern States. It is described as a delicious vegetable, and the plant is very productive. The editor of the San Antonio *Texan* says that a gentleman in that vicinity raised six bushels of the article upon a piece of ground fifteen feet square.

Corn and Cob Meal.—Much is said about the virtues of cob meal, and from some articles which we meet in the papers, one might infer that about all the value of corn was in the cob. There are about seven pounds of cobs to a bushel of corn. At the very best it cannot be worth more than so many pounds of straw. But to make it at all available it must be ground, and the grinding costs extra. This is not all. Corn meal, if not cooked, should be ground very fine for all kinds of stock; especially our northern yellow varieties. If the cob be ground with it, no miller will take pains to grind it fine, for the toll does not pay. For the purpose, then, of raising some seven pounds of straw the feeder of cob meal pays a pretty large sum in the loss, by extra toll and coarse grinding. Will some person who believes in cob meal just make a careful experiment on the subject?

The Grand Jury have indicted Lewis Baker, James Turner, Cornelius Linn, Chas. Van Pelt, John Hyler, John Morrissey, James Irving, and Patrick McLaughlin alias Paugene, for participation in the murder of Wm. Poole. Each indictment has two counts, in one of which each of these men is charged with the murder of Poole, and in the other, with being accessories before the fact, to the murder. All the parties except Baker, (who has thus far escaped arrest,) and Irving, (out on bail,) are in prison, and will probably remain there until brought out for trial.

Prof. Fairchild, of Oberlin, Ohio, states that on February 7, they had in that region a fall of dark-colored snow. The crystals were in the form of dense icy pellets, above the 20th of an inch in diameter. It fell to the depth of nearly an inch, and when melted it yielded about a half-inch of water. The snow had a distinct smoky taste, and on filtering it through paper a dark, sooty substance was obtained.

P. T. Barnum advertises a baby-show to come off at his Museum in New York on the 5th, 6th, 7th, and 8th days of June next. Only one hundred babies are to be admitted, and the premiums range from ten dollars to two hundred and fifty dollars.

A sound economy is a sound understanding brought into action. It is calculation realized. It is the doctrine of proportion reduced to practice. It is the foreseeing contingencies and providing against them.

We understand, says the *Transcript,* that Henry Hoyt, Esq., of the American Sunday School Union, has received an anonymous note, enclosing $90 for the Union—the proceeds, as the writer says, of Sunday sales of medicine in an apothecary-shop.

New York and Erie Railroad.

ON and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, asfollows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

† John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass. Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

THE ACQUISITION AND USE OF INTELLECTUAL POWER.

An Address delivered before the Ladies' Literary Society of Alfred Academy, by Mrs. E. E. Crandall. Published by request of the Society.

In the vast field of human intelligences, there is plainly visible a great diversity of intellect. This is seen in individuals, in races, and in the sexes. Difference of natural endowment may be one cause of this diversity—difference of condition *is* another.

In ages of barbarism, and in uncivilized nations of the present day, it has been and is the misfortune of woman, to act the part of slave—slave in all the severities of the term. Upon her has fallen not only the care of providing the majority of life's comforts for herself and *lord*, but also for her family—while upon him has devolved the management of the affairs of State, the carrying on of warfare, or the conducting the more intellectual machinery of life. Thence has grown the idea, that the female mind is less capacious or susceptible of receiving or conceiving great thoughts or mighty plans; thence has grown the idea, that hers is a mind cast in a smaller mold—a smaller emanation from the great "I am."

It is conceded, that circumstances have conspired to render the mental growth and vigor of our sex inferior to that of the opposite. Taken as a whole, it must be admitted, that ours have not been positions of extended observation, of close research, and prophetic vision. Really, there has seemed a want of mental stamina—indications of dwarfishness. But is it to natural endowment, or to circumstances, that may be traced the cause? When we remember numerous isolated instances in which woman, despite of obstacles, has shone forth in rarely excelled brilliancy and power, we accuse nature of no partiality. When, in the progress of time and events, as she becomes less and less the slave of circumstances, her mental prowess gives indications of unexcelled development, we are compelled to impute to condition, to difference of condition, what we would not willingly ascribe to nature. Thus, from the pall of obscurity, and the powerful press of public opinion against us, we think we see in the dim future a brighter prospect, when equality shall be rightly interpreted, and *every* mind be privileged to seek its own growth and form, like the *coral insect*, from every mental wave. It is the still pool that stagnates and becomes a fit covert for unclean things. But agitation is troubling the waters of conservatism, cleansing the pools of false prejudice, and preparing them for the reception of true principles. Agitation is abroad, importuning, reasoning, and reforming. Prophecy has even dared to lift the curtain of the future, and she tells us woman's mind, equally endowed with man's, is yet to enjoy equal advantages for development—that woman is yet to be promoted to undisputed positions of intellectual greatness. Who of us hopes in the fulfillment of this prophecy? Already in Alfred you are allowed to assemble on the same level with the more largely endowed, and measure powers with them, which, with other indications, gives us hope, and we take courage.

Thus we are led to the consideration of our subject—*the acquisition and the use of intellectual power*.

Power implies ability, strength, the faculty to do or perform—susceptibility of change. Intellectual power, considered passively, is the susceptibility of the mind to acquire strength of thought, or its capability of receiving and rightly disposing of knowledge. Considered actively, it implies mental activity and strength—power derived from the harmonious development and exercise of all the faculties of the mind. How shall this power be acquired?—how attained that superior development of mind so unidentical with its present self?—how reached that height which, surveying the expanse of thought and knowledge, is not content, but peers into the borders and highways of the future?

So much has already been written to aid the student, that any attempt to spread before you a feast of new ideas would prove nearly futile. But do the proverbs of Solomon cease to interest by being frequently held up as a mirror in which man inevitably sees reflected the tendency of his own ways—"vanity and vexation of spirit?" Are the pencilings of God's own hand less important to-day than when first they emerged from the terribleness of Sinai's holy mount? A thing of *intrinsic* value is not beggared by *use*. A principle is not measured by its novelty, but by its power of producing good.

Setting out upon this enterprise, its importance must from the beginning be seen and felt. The student must see clearly, that a pearl lies at the bottom worth diving for—that the treasures of mental truth are worth mining for. As the infant must be shown a desirable object before the perils of his tottering journey will be undertaken, so the infantile student must see something desirable in knowledge, before he will venture upon its unknown seas. The discernments of the mind beclouded, and the brightness of the golden apples of truth shrouded in darkness, how rarely would they be sought or found.

The fact that you are members of this Society, and laborers in this grand laboratory of learning, gives evidence of a foundation laid, on which may be built a glorious superstructure. It presupposes your true estimate of the importance of the enterprise in which you are engaged. Whatever is of great value, is secured by great pains-taking. Indeed, an object loses its importance in proportion to the ease with which it is secured. If every wave washed up a pearl, pearls might be worn by *beggars*. If knowledge came with every breath, *dandies* might measure brains with *sages*. Lazarus might have dined with Dives, had every mountain been a pile of gold. Bats might soar on high and gaze upon the sun, if eagles lent their eyes and wings; and even dolts grow quite discreet, did wisdom lend her skill. An abundant harvest is the reward of toil, and bread is sweetened by the labor it has cost.

The experience of all truly great men conveys the same lesson—the folly of supposing it possible to acquire intellectual power with ease and rapidity—of hoping for any other than a toilsome, wearying way. The young student must not suppose, because the advantages for study are multiplying so rapidly, he will therefore be under no necessity of thinking for himself. There need be no fear of books and teachers becoming so plenty as to divest knowledge of its charm of being sought. There will ever be steeps to ascend, crags to leap, and brambles to vex. Every one thus engaged must expect to grope about in dark places, and find his own way to the light. None may even reach the goal on borrowed wings—for such are powerless. Each one must set out on foot, survey his own route, drive down the stakes, swim here, dive there, and dig through mountains and rocks, before he can send the engine of *thought* over the world of "existing knowledge." Idle pleasures must be foregone, lest they should lead the mind from a clear perception of its aims. Discouragement will never remove difficulties; but diligence and perseverance wait on progress. Each obstacle overcome is strength gained for obtaining a new victory. Each faculty brought into proper discipline is an achievement preparatory to the healthy and harmonious development and exercise of all the powers of the mind. If mental toil is most severe of all, the joys of mind are most intense.

The different purposes of life, which intellectual power may subserve, probably form the first and strongest incentives to study.

A desire for wealth is a very common incentive to mental exertion. The young student pursues, perhaps, one of the professions, while his ruling object is a competency in life—nay, a position where wealth shall pour abundantly her treasures at his feet—a position which shall surround him with admirers, friends, and, as he supposes, secure him happiness. Love of glory not unfrequently forms the governing motive, which stimulates the activities of the mind, and leads on to the acquisition of intellectual power; while to another, the incentive may be the acquirement of knowledge for its own sake, unfettered by circumstances of self-love or personal interest.

But there is an incentive, pure, noble, and more powerful than any of these—a stimulus more "measureless and magnificent." It is furnished by religion. Love for the great Author of the Universe naturally creates within the soul a love for His works, and a supreme desire to know Him in His works and operations. Whatever may have been the chief incentive, it is exchanged for this, or greatly quickened by it. When other means have failed to engage the energies of the mind for the acquisition of knowledge, Piety has awakened a sense of obligation, and Duty has set the mental energies at work. The Christian is stimulated to the acquisition of intellectual power, that by the position thus acquired he may be able to make his mental powers of practical use in subserving the wants of mankind. It is the safer incentive, since, "apart from God's favor," even the most coveted attainments fail to give real satisfaction—since "all will be vanity to the heart that is vile, and all will be vexation to the spirit which the peace of God is not possessing." Bethink you of Solomon, how he was skilled in wisdom—how riches and honor and power were at his command—yet he resolves them all into "vanity and vexation of spirit." And why? Because they were not sanctified by the fear of God, as he in his penitence declares, "Hear the conclusion of the whole matter; fear God and keep his commandments, for this is the whole duty of man; for God shall bring every work into judgment, with every secret thing, whether it be good or whether it be evil." The Christian student fails not to put up a prayer that his endeared work may bear the test which shall surely try all the works of men. The degree, the dignity of attainment, thus arrived at, we may not estimate.

But what should be the use of intellectual power? This question has been asked and answered thousands of times, and yet the appeal is made to-night, because every one should count the cost and calculate the results of life.

Should we infer the answers of literary men from their lives and writings, how various would they appear! First, and perhaps most numerous, in all ages, though chronology has refused such a record, are money-makers, or writers for gold. The present age is especially fruitful of this class. How many this very night are puzzling their brains, taxing all their energies, to present to the world a popular book, a saleable romance, a thrilling, indescribable nonentity? How many are thus adding fuel to the flames of a fevered imagination, strengthening an unnatural and unsanctified mental appetite, robbing its victim of his germs of thought, the seeds of reflection, and stabbing future growth to the heart! How many Eugene Sues are still dealing out drugs particularly adapted to the wants of the mental inebriate, and so sure to induce delirium. And for what? For mere gain! Well may these mental gold-hunters be compared to the quicksilver that amalgamates with gold, and forms a partnership, which nevertheless, the fires of a heated "public opinion" will sooner or later volatilize, and leave the gold in others' coffers. The answer, then, which this class would make to this great question, would be, to amass wealth.

Again, in the *use* of intellectual power, very many make it the object of their highest ambition to have a name enrolled high in the "Temple of Fame." Willingly and heartily do they climb its rugged steeps, leap its chasms, descend its gorges, overcome every obstacle, to be numbered among the wise and great of the earth.

Plato, in his boyhood, aspired to become the great poet of Greece, the favored son, above all others, of Parnassian muses; but on comparing his verses with the stately numbers of the Ionian bards, he committed them to the flames, and said within himself, "If I cannot be the greater poet, I will yet be the better philosopher." Plato then was emulous of fame, and accordingly would have answered our question. We do not inquire whether a particular one was the sole, but whether it was the *ruling* ambition—for we believe absolute monomaniacs, as such, are very *rare*.

Byron's answer would have been different still. Early devoted to love and beauty, he cared little for philosophy or morals—he sought only the beautiful as applied to intellect. To drive a Scott from the field of poesy was enough of reputation. Human hopes and ambition he scorned, while to make vice appear sensitive, enamoring virtue, to him was heaven. His idea of the use of mental power was the production of the *beautiful*, and thus he employed it. Acquainted with the secret springs of the human heart, how easily, how powerfully, were they moved by his touch; yet, with equal reaction, how futile.

Bacon furnishes us with a solution of a still higher order. As monied capital is employed where productiveness seems visible, so mental capital should be employed where it will be productive, not of speculative ideas, which at best are doubtful realities, but of tangible truths. How sterile was the philosophizing of Aristotle, compared with that of Bacon! The former was a vast net-work of chimeras, fruitful only in "disputations and contentions"—the latter, in the "production of works for the benefit of the life of man." The former, indeed, speculation—the latter inquiries that were destined to diverge and extend to ultimate facts, and thus become food for all coming generations. The object of Bacon's mode of philosophizing was the "enlargement of the bounds of human empire to the effecting all things possible"—"the augmentation, by means of service, of the sum of human happiness, and the alleviation of human suffering." In a word, Bacon was eminently a utilitarian, who sought the discovery and application of truth.

Again, another class, of which the Apostle Paul is a fitting exponent, crowns the whole for importance, and for the glory of its results. And what was the character of Paul? He was a philosopher, a poet, a Christian. Where do we find a sounder philosophy, than in the doctrines of Paul, or sounder logic sustaining a philosophy than sustained his? Where do we find poetry of a higher order, "if force of thought, strength of feeling, power of imagination, (without an atom of fancy,) ardor of eloquence, and energy of language, go to constitute a poet?" Where a bolder, or more self-sacrificing, yet a more humble Christian, "becoming all things to all men, that he may thereby gain some?" Especially were his efforts directed to the renovation of the moral atmosphere, then so beclouded by the mists of self-righteousness and infidelity; not that other knowledge was valueless, but because there was the more important harvest, and the "laborers were few." Well indeed did the Apostle understand the proper use of intellectual power—the development of the whole man. But should it be urged, that Paul was the mouthpiece of Jehovah, we may but point you to the Edwardses, the Paysons, the Dwights, the Robert Halls, the Wesleys, a Luther—to a pious Pulcheria, the first female sovereign of Rome, "who attested her ardor and faith and Christian zeal in the erection of many magnificent churches and institutions for the poor and the stranger"—or an "Empress Helena, the mother of the great Constantine, who in his conversion ensured that of the Roman world." All Christian ages have bequeathed to posterity, in the influences of the great and good, a legacy of results that shall never cease their action and reaction.

Ladies of the "Literary," it is a happy coincidence and reflection, that in this institution you are watched over and cared for by those whom you should delight to regard as having attained this high and full development—every one of whom have proclaimed their faith in the atonement of Christ, and who are unceasing in pointing you to that fountain of living waters, of which if one drink he shall never thirst.

A survey of our subject shows us that words are inadequate to portray the importance, the real dignity, of intellectual power, possessed by an individual, whose incentives to its acquisition, rules for its use, and examples for imitation, have been derived from religion. Nowhere have we discovered aught to blight the aspirations of woman—aught to quench her thirstings for more copious draughts from the fountain of knowledge—to weaken her desires for a higher and broader range of perception and thought. Nowhere have we found a principle charging her with presumption or arrogance for hoping yet to make for herself a character less common-place—for seeking a more exalted and effectual position of influence in the world—nowhere found a principle forbidding her to measure the circumference and calculate the altitude of her own mental powers.

So intimate is the relation between position and influence, that knowing one, the other is easily inferred. Let us contemplate woman in some of the positions which she does and may occupy. Every society, whether in our own or other countries, in aristocratic or common circles, possesses women who will occupy exalted positions. Able pens have portrayed the deadly influences resulting from "popular amusements," yet there are thousands of women occupying positions of wealth and distinction, thus possessing effectual influence over great numbers of both sexes, who will nevertheless pervert it by countenancing these evils. There are women, too, of superior mental endowment and culture, whose genius emits scintillations which fall upon the hearts of thousands but to sear and crisp them with the influences of a corrupt literature, that, consecrated to works of reform, would have been like "seed sown in good ground," bringing forth "an hundred fold into the garner of our God."

We have never had a glimpse, the half has never been told us, of the degraded positions so many of our sex occupy. Our human natures would turn from them, while it would be only that part of the divine we may have retained, that would lead us into the "by-ways," into "the corners and dens" of the earth, to look upon bloated drunkenness, listen to terrifying threats and curses, and witness vice and wickedness in their most fearful forms, all arrived at and occupied by woman—such an extreme position in the chain whose opposite extreme is woman, created "little lower than the angels." But from a picture so revolting, let us rise to what we can conceive a position of excellence. When woman, mindful and attentive to her peculiar duties in life, still possesses ability and time to study and comprehend some of the wants of the "wide, wide world"—when she feels the bitter wave of sorrow roll over her breast in contemplation of human depravity—when she does this, and makes the cause of humanity *her* cause—makes use of every means in her power for the suppression of vice and error, for the intellectual and religious elevation of mankind—then has she not assumed and arrived at a position worthy her high calling?—has she not secured for herself a power, that shall constantly send forth high, noble, and reforming influences?

Contemplate a character in which wealth, talent and honor, are devoted to works of *reform*. From the position Mrs. Stowe has made for herself, has already gone, is going, and will continue to go out influences in keeping with that high position. Though pro-slavery advocates may rise up for judgment against the efficacy of her labors, yet we do not believe they will be lost. We will not ask them to show us the hidden influences struggling with iron-hearted masters, or the as yet undefined influences throbbing in the great heart of humanity.

While we would not cease to admire the character of excellence, we can do no less than regret, that any of our sex are so untrue to themselves, so untrue to what should be the aim of their lives, as to make a prodigal use of their God-given powers. We can do no less than feel a bitter sorrow for the untold misery in which so many exist, and more than ever do we feel the importance, the necessity, of woman's rousing herself and pursuing with energy the attainment of her highest resolves.

To-night let the question come home to each heart, what shall be my mission in life?—to what *position* do my present and enduring aspirations point me? And "as in water face answereth to face," so may each of you recognize your present likeness, and foresee your destiny. One other thought, and it is a joy-thrilling one, that our highest and most consecrated attainments in this world are but preparatory to an existence of eternal growth and glory, in the world which is to come.

"HE LEFT A VERY LARGE PROPERTY."

This is the closing sentence of a recent obituary, and it suggests some reflections.

What a pity he was obliged to leave it! He had taken great delight in accumulating it. As he added field to field, and farm to farm, he had looked with pride upon his extended domain, conscious that he was the largest land-holder in his town. His cattle, if not wandering upon a thousand hills, ranged over more than that number of acres of rich pasturage. Stocks, notes, bonds, mortgages, crowded his safe. And it was all the fruit of his own industry, energy, and good judgment. The rust of usury and the canker of extortion had not scarred any of his gold. It was well and fairly earned, and he loved it all the more because it was so. It grieved him to leave this large property, to depart from the world as poor as he came into it, and to enter the other world utterly destitute of the wealth he so much loved in this. But he had to leave it, every cent of it.

He might have taken it with him. Rather let us say, he might have sent it forward in advance of him. As the capitalist, who contemplates removing to a foreign country, converts his property into drafts, and remits from time to time to the land of his future residence, so *he* might have made remittances to that undiscovered country; so that on his arrival there, he would find abundant treasures laid up in heaven for him. Every dollar which he had given (consecrating it with sincere prayer) to assist in carrying the glad tidings of salvation to the ends of the earth—every contribution in aid of the many Christian enterprises for the glory of God and the good of man—every cup of cold water given to a disciple in the name of a disciple—every tear of pious sympathy for the suffering—every gift of kindly charity to the needy—would have added to the store of his "durable riches." He might have been rich towards God, and a joint heir with Jesus Christ to an inheritance incorruptible, undefiled, and that fadeth not away. If it was sad for him to leave that large property, how much sadder that he sent none of it before him!

It is much more pleasant to go to, than to leave, a large property. The man who, poor in this world's goods, but rich in faith, closes his eyes upon this life, goes to take possession of a large property. He owned not a foot of land on earth; but for him "sweet fields beyond the flood stand dressed in living green." His food here was coarse, perhaps scanty; but there, he will eat freely from the tree of life, which yields twelve manner of fruits. His garments here were plain and poor; but there, he shall be clothed in white robes, washed and made white in the blood of the Lamb. He associates here with those who are despised and rejected of man; but there, his companions will be an innumerable company of angels and the general assembly and Church of the first-born. Who would not rather go to a large property, than to leave it? [Vermont Chronicle.

A Sensible Daughter.—When Philip Henry, the father of the celebrated commentator, sought the hand of the only daughter and heiress of Mathews in marriage, an objection was made by her father, who admitted that he was a gentleman, a scholar, and an excellent preacher, but he was a stranger, and "they did not even know where he came from." "True," said the daughter, who had well weighed the excellent qualities and graces of the stranger, "but I know where he is going, and I should like to go with him;" and they walked life's pilgrimage together.

A RAIN DREAM.

BY WILLIAM CULLEN BRYANT.

These strifes, these tumults of the noisy world,
Where Fraud, the coward, tracks his prey by stealth,
And Strength, the ruffian, glories in his guilt,
Oppress the heart with sadness. Oh! my friend,
In what serener mood we look upon
The gloomiest aspects of the elements
Among the woods and fields. Let us awhile,
As the slow wind is rolling up the storm,
In fancy leave this maze of dusty streets,
Forever shaken by the importunate jar
Of Commerce, and upon the darkening air
Look from the shelter of our rural home.

Who is not awed that listens to the rain,
Sending his voice before him? Mighty rain!
The upland steeps are shrouded by the mists;
The vales are gloomy with thy shade; the pools
No longer glimmer, and the silvery streams
Darken to veins of lead at thy approach.
Oh! mighty rain! already thou art here:
And every roof is beaten by the streams,
And as thou passest, every glassy spring
Grows rough, and every leaf in all the woods
Is struck and quivers. All the hill-tops slake
Their thirst from thee; a thousand languishing fields,
A thousand fainting gardens, are refreshed;
A thousand idle rivulets start to speed,
And with the graver murmur of the storm
Blend their light voices as they hurry on.

Thou fill'st the circle of the atmosphere
Alone; there is no living thing abroad,
No bird to wing the air, nor beast to walk
The field; the squirrel in the forest seeks
His hollow tree; the marmot of the field
Has scampered to his den; the butterfly
Hides under her broad leaf; the insect crowds
That made the sunshine populous, lie close
In their mysterious shelters, whence the sun
Will summon them again. The mighty rain
Holds the vast empire of the sky alone.

I shut my eyes, and see, as in a dream,
The friendly clouds drop down spring violets
And summer columbines, and all the flowers
That tuft the woodland floor, or overreach
The streamlet; spiky grass for genial June,
Brown harvests for the waiting husbandmen,
And for the woods a deluge of fresh leaves.

I see these myriad drops that slake the dust,
Gathered in glorious streams, or rolling blue
In billows on the lake or on the deep,
And bearing navies. I behold them change
To threads of crystal as they sink in earth,
And leave its stains behind, to rise again
In pleasant nooks of verdure, where the child,
Thirsty with play, in both his little hands
Shall take the cool clear water, raising it
To wet his pretty lips. To-morrow noon
How proudly will the water-lily ride
The brimming pool, o'erlooking, like a queen,
Her circle of broad leaves! In lonely wastes,
When next the sunshine makes them beautiful,
Gay troops of butterflies shall light to drink
At the replenished hollows of the rock.

Now slowly falls the dull blank night, and still,
All through the starless hours the mighty rain
Smites with perpetual sound the forest leaves,
And beats the matted grass, and still the earth
Drinks the unstinted bounty of the clouds,
Drinks for her cottage wells, her woodland brooks,
Drinks for the springing trout, the toiling bee,
And brooding bird, drinks for her tender flowers,
Tall oaks, and all the herbage of her hills.

A melancholy sound is in the air,
A deep sigh in the distance, a shrill wail
Around my dwelling. 'T is the wind of night;
A lonely wanderer between earth and cloud,
In the black shadow and the chilly mist
Along the streaming mountain side, and through
The dripping woods, and o'er the splashy fields,
Roaming and sorrowing still like one who makes
The journey of life alone, and nowhere meets
A welcome or a friend, and still goes on
In darkness. Yet awhile, a little while,
And he shall toss the glittering leaves in play,
And dally with the flowers, and gaily lift
The slender herbs, pressed low by weight of rain,
And drive, in joyous triumph through the sky,
White clouds, the laggard remnants of the storm.

THE TURNING-POINT.

A few years ago, I was called to visit a gay and thoughtless young man, then on his sick and dying bed, and trembling in view of death and eternity.

Favored as he had been with the instructions and prayers of a godly mother, and with the consistent and eminently pious life of his brothers, yet whatever he may have felt, he had never before manifested any concern about his spiritual interest. But now, "distress and anguish" had come upon him; "a fearful looking for of judgment" filled his thoughts, and with sad moans and cries and bitter tears, he lamented his dreaded doom.

He was told of the infinite sufficiency of Christ's atonement for all the wants and woes of perishing sinners; of his perfect willingness to receive even the most guilty, the very "chief of sinners," of the "dying thief," etc., to all which he endeavored to listen; but, interrupting the speaker, he said,

"It is of no use to offer the gospel to *me*—it is *too late now*. I do not doubt that *some might* embrace the gospel on a death-bed, and be saved, but *I cannot*; for I passed the *turning-point* in the wrong direction two years ago. You remember the revival at O——, two years ago this summer; you know I was there, and it was the most solemn place I ever was in; every one seemed to be interested in religion, and then I felt that the time had come for me.

"The text on Sabbath morning was, 'I, if I be lifted up, will draw all men unto me;' and O, I felt that powerful drawing, and determined *that day* to seek the Lord. At the close of the service, an invitation was given to all who were concerned on the subject of religion, to remain for the purpose of receiving instruction, and for prayer. I resolved to accept the invitation, and arose and walked towards the pulpit, when I saw an old companion gazing and smiling at me. I could not bear his taunts, and turned into a cross aisle and went out of the house.

"Then I broke asunder the cords of Christ's love, and preferred this world to Christ and heaven. I have never felt those drawings since, and believe that my *turning-point* was then and there, when I stood hesitating in that aisle. I took the *broad road*, I *chose death*, and now, O, now, I have got it. I begin to *feel* it; the darkness of the pit enshrouds my soul, the fires of perdition are burning me up; O God, O God!"

I tried to pray with him, but so great was the terror of his mind, that his outcry of despair repeatedly drowned my voice. In a few hours the fever settled on his brain, and the poor young man left this world in a raving delirium.

Dear reader, are you unreconciled to God? O, take the solemn warning and reproof that this case presents. "Wisdom crieth aloud, saying, *Turn ye* at my reproof." How often, when listening to the preaching of the gospel have you felt the Divine drawings?" As often have you turned into the "broad way." Beware, beware; you too may pass the turning-point in the wrong direction, and if you do, all will be lost for eternity. [American Messenger.

ENCOURAGEMENT TO PRAYER.

Sir Walter Raleigh one day asking a favor from Queen Elizabeth, the latter said to him: "Raleigh, when will you leave off begging?" to which he answered, "When your Majesty leaves off giving." But think how much more bountiful God is, who did not give over granting Abraham his request for Sodom till he left off asking. And who can tell but if he had gone on and prayed that if five righteous persons had been found in Sodom, the city might have been spared for their sakes, according to his request? Can we think that God will hear the ravens when they cry, and neglect the doves that mourn in the valleys?—that he will hear the young lions when they roar, and forget the lambs that bleat after the sheep?—that he will hear Hagar and her Ishmael, that cry unto him in their extremities, and will turn his back upon the tears, or stop his ears to the prayers, of his own children that cry unto him daily, in the name of his dear Son, Christ Jesus? Undoubtedly not. St. Ambrose was wont to say, the better to comfort Monica, the mother of St. Augustine, who prayed much for him, "It is impossible that a son of many prayers and tears should perish." As long, therefore, as God gives us a heart to pray for any mercy, let us not be out of heart. And why so? Because then we beg no more than what God hath commanded us to ask, and we ask no more than what he has promised to give; and he hath promised no more than what he is able to perform; and he will perform no more than what he shall have glory for, and we know that his glory is dear unto him.

CUSTOMS DERIVED FROM THE INSTINCTS OF IMMORTALITY.

The Indian buries the hunting implements of his friend with him, that he may not want for the means of pursuing the chase in the unknown land to which he has taken his final flight. The ancient Egyptians embalmed their dead, under the notion that the soul would return after a cycle of ages, and that it would be an infinite misfortune to find its organic existence dissolved. Their burying ground was situated beyond a beautiful sheet of water, called Achesusia, or last state of man, over which the dead were ferried, from which the Grecian myth of Charon and his boat was no doubt derived. Beyond this lake, grounds were laid out to receive the dead. They were planted with trees, and intersected by canals, to render them, as their name imported, a literal Elysium. Indeed, a provision for the dead occupied more of their attention than that of the living, and while no vestige of their abodes in life remain, their mausoleums, catacombs, and pyramids, still survive, in grandeur, the wrecks of forty centuries. The exquisite touches of Grecian art converted the Parian and Pentelican marble into the form of men and gods, in obedience to the instincts within, by which the mortal is associated with the immortal, and the earthly destiny of man with the beings and scenes of a higher world. How much of the genius, industry, and wealth, of the world is controlled by this mysterious instinct! Man can no more be divested of it, than a fish of his instinct to swim, or the bird to fly. Atheism may befog, but cannot extinguish, the tendencies of the human soul towards immortality.

CHALMERS ON CALVINISM.

How comes it, that Scotland, which of all countries in Europe is the most signalized by the rigid Calvinism of her pulpit, should also be most signalized by the moral glory that sits on the aspect of her general population? How, in the name of mystery, should it happen, that such a theology as ours is conjoined with perhaps the yet most unvitiated peasantry among the nations of Christendom? The allegation against our churches is, that in the argumentation of our abstract and speculative controversies, the people are so little schooled to the performance of good works. And how is it, that in our courts of justice, when compared with the calendars of our sister kingdom, there should be so vastly less to do with their evil works? It is certainly a most important experience, that in that country where there is the most Calvinism, there should be the least crime—that what may be called the most doctrinal nation of Europe, should at the same time be the least depraved, either by their weekly profligacies or their Sabbath profanations.

This is the peasantry of which Burnet said, "They had a comprehension of matters of religion greater than I have seen among people of that sort any where." [Chalmers.

Thus is Life.—If we die to-day, the sun will shine as brightly, and the birds sing as sweetly to-morrow. Business will not be suspended for a moment, and the great mass will not bestow a thought to our memories. "Is he dead?" will be the solemn inquiry of a few, as they pass to their work. But no one will miss us except our immediate connections; and in a short time they will forget us, and laugh as merrily as when we sat beside them. Thus shall we all, now active in life, pass away. In a few years not a living being can say, "I remember him!" We live in another age, and did business with those who slumber in the tomb. Thus is life. How rapidly it passes! O, blessed are they who are held in everlasting remembrance.

The Retort Oblique.—A lady took umbrage at the use, by a gentleman, of a very common word, of which the primary and most obvious sense was unexceptionable, while its most remote and unusual signification was indelicate. "I beg pardon," said the offender, apologetically, "I certainly did not mean what you were thinking of!" A retort which was as philosophical as it was just and severe.

THE RESURRECTION AND THE AWARDS OF THE FUTURE.

Reply to Bro. Griswold Continued.

In our strictures upon the doctrine of the soul's unconsciousness between death and the resurrection, we argued, that the Creator had implanted in man's nature a capacity of being rewarded for virtue and punished for vice—that in consequence of this natural capacity, a life spent in the practice of strict virtue would be followed by happiness, with the same unerring certainty that effect follows cause, and that a life of wickedness would, in like manner and with like certainty, be followed by misery—that this was the way in which God recompensed his creatures according to the course of nature. Even in this life, men are, to a certain extent, recompensed in this way. But we supposed a case, in which death so immediaately and suddenly followed a virtuous or vicious course of life, that recompense in this world was impossible; and then the question was, whether, in such supposed case, God's power to reward, or punish, according to the course of nature, was frustrated. And we showed that it was effectually frustrated, if the soul was annihilated, or laid to sleep, when the body died. Such was our argument substantially, though not in precisely these words.

It is an important question, whether this is the *only* and *final* method of recompense? in other words, whether God does any thing more with one who dies in his sins than simply to leave him in that state, suffering merely the horrors of a guilty conscience; and whether He does any thing more with one who dies in the love of virtue than leave him under the dominion of such love, enjoying that happiness which the love of virtue naturally brings to the soul? Bro. Griswold *seems* to argue, that this is all the recompense which man ever receives. For he excepts to our admission of the necessity of a *miraculous resurrection of the body*, in order that both soul and body may be rewarded together; and says, "that if the course of nature is fully adequate to reward and punish in a future [life] for the deeds of this, then surely any miraculous addition would be superfluous, if not unjust." He thinks that "no miracle will be found necessary to insure the absolute certainty, measure, or degree of the rewards of the future state; but that both rewards and punishments, in that state, will be according to the course of nature."

But here a question might be started, whether the raising up of the body, at the coming of Christ, to be thenceforth the medium through which the soul shall receive its recompense of reward or punishment, really adds to and increases the measure of this recompense? Does it augment the happiness of the righteous? Does it enhance the misery of the wicked? And if it does, where is the "injustice" of the thing—especially, if it is a righteous principle of the divine government to take into account, not only the immediate fruits of one's conduct, but all the results which naturally flow from it? For example the infidelity of Paine was not only productive of mischief while he lived, but is, to this day, doing incalculable injury, and probably will continue to do so to the end of time. And if at the resurrection, when he shall have discovered, in the light of the judgment day, what the fearful results of his infidelity have been, there should be some addition to the measure of his punishment, where would be the "injustice" of it?

If you admit that the punishment will be increased, but deny that it will be done in any *miraculous* way, or in any other way than *according to the course of nature*, as before; we reply, that though the mode in which God will inflict the additional punishment, *after* the body has been miraculously raised, may be strictly according to nature, it is very evident that it cannot reach the soul through the *medium* of the body, if no such miracle should intervene. Besides, the resurrection and the consequent assemblage of mankind for judgment seem necessary, in order that a full development may be made to all of their guilt. It is necessary that the sinner know, not only the sins that he committed while he lived, but also what have been the mischievous results of his sins since he died. Of these he could neither be convicted, nor punished for them, *before* the resurrection, for *until then* they were not finished. It is only by the assembling of the world for judgment, and that strict scrutiny which is then made of the deeds of all in the varied relations they have sustained to each other, that the full measure of each one's guilt will become manifest. Not that a general assize is necessary, in order that God may find out how much punishment each sinner deserves, but that each one may know for himself what he deserves, and that the addition which is then made to his punishment is strictly just.

We were not aware that there was any thing, in our remarks on this subject formerly, implying a belief that neither saint nor sinner receives *any other* recompense, in the future world, than what is strictly according to the course of nature. If the only system of religion enjoined upon us were the Religion of Nature; if the only sins chargeable to our account were violations of the Law of Nature; if Christianity, as a positive Institution, had not been enjoined upon our faith; or if Christianity were but a mere republication of Natural Religion, without any new light, or other circumstances of peculiar advantage, adapted to the wants of mankind; if the Moral Government of the world had not been placed in the hands of Jesus Christ our Mediator, and the administration of it modified, in some very important respects, by his mediation; and did we not, on this account, lie under obligations of a special nature—we might admit, that the only rewards of virtue and vice, in the future world, were such as would be induced according to the course of nature. But for some very important reason, "the Father judgeth no man, but hath committed all judgment unto the Son." (John 5: 22.) It is before the tribunal of the Son that we must all appear, in order that the Son may receive the honor which is his due, as well as the Father. And though the essence of Revealed Religion, as distinguished from Natural, consists in religious regards to *the Son* and to *the Holy Spirit*, while the essence of Natural Religion consists in religious regards to *God the Father Almighty*, it is clear that Revealed Religion does not destroy the claims of Natural, nor the requisitions of Christianity at all invalidate the regard due to the Father. And since Revealed Religion does not annul Natural Religion, but confirms it, therefore, in the awards of a future life, the penalty of violating the duties of Natural Religion will be inflicted as well as the additional penalty of violating the commands of Revealed Religion. But as the annihilation scheme, or soul's dormancy, precludes the penalty of Natural Religion, and predicates the *whole* punishment which a sinner suffers upon a *miracle*, we repudiate it as contrary to both reason and Scripture.

We reserve for a future number some additional remarks on this topic. T. B. B.

☞ A typographical error, last week, makes us say the direct contrary of what we intended. In the second sentence of the first paragraph—"to show that God had not created man with a capacity of being rewarded or punished according to the course of nature"—for *with* read *without*.

CREEDS.

Some time since I gave my views on the subject of Creeds, and am satisfied that the view I then took of the matter was correct; and I would not introduce the question to the readers of the *Recorder* again, if it had been allowed to rest. But in some parts of the denomination the subject has been pushed before the churches, and used, with other things, for a kind of entering wedge to slab off and help make a new and separate sect. I do not wish to make light of any body's difficulties. But I am reminded in this case of a young man whose attention was called to a dead fox that lay by the side of the road. Looking steadily at the object by *moonlight*, he soon reached the conclusion, that it was the "devil," and on more close examination, concluded that he could see him "root in the snow" to cool his nose, and gave counsel to his companion that they should "leave on suspicion." Now it seems to me that our friends who propose to run from creeds, are only enjoying the benefits of moonlight. One would think, to hear the loud-sounding words that are used in denouncing creeds, that there must be something frightfully wicked in a church's having a creed. Let us inquire into the matter a little.

What is a creed? Perhaps Webster would be good authority. He says creeds are—"1. A brief summary of the articles of Christian faith; a symbol. 2. That which is believed; any system of principles which are believed and professed." Now let me ask those who are making "discord among brethren," (Pr. 6: 14—19,) what there is wrong in a church's having "articles of Christian faith?" Do not answer me, that churches have corrupt or unscriptural articles of faith; this is not the question. Nobody will dispute you here. Meet the question in the shape that the objections are raised in; which is, that creeds "are the work of the man of sin." The fact is, there can be no church without a creed. The ten commands are a "synopsis" of the law of God, and are so many articles of Christian faith. Can there be a gospel church where these articles are really rejected? Will our friends object to these articles of faith? They must, to make themselves consistent; and yet they have them printed on a card, and handed round. Here they are with a creed, in spite of themselves; and yet vehemently denouncing all creeds, and going so far as to say that "if the *Bible* was written off and received as such, they would *destroy it*—they would BURN IT UP." What madness! A gospel minister, rather than that the Bible should be received as articles of faith, would "DESTROY" the *priceless* book of God! God save the book from such hands.

But if it is objected, that what is meant is, that extracts from the Bible are not to be made, very well; say so when you hold up "creed-making" as a crime. But does it destroy the importance of a truth, because it is written somewhere else than in the Bible? Does the particular place where a truth is recorded affect its worth? It is the *truth*, and not the particular place, that is of worth. Take an instance: "Hear, O Israel, the Lord our God is one Lord." Has my writing it upon the page diminished from its importance? No, it is the same important truth. Call that Article 1st. Paul says, "He that comes to God, must believe that he is." This is a truth indispensable—the book of God would be deficient without it. But have I spoiled it by writing it here? No, it is the same important truth. That is Article 2d. "The seventh day is the Sabbath of the Lord thy God." This is Article 3d. "He that believeth and is baptized shall be saved." Art. 4th. Now, here is a creed. Is it wicked for a church to subscribe to these articles? "Sin is a transgression of the law." Give us the law we violate in subscribing to this creed, or insisting that others shall subscribe to it. Now, supposing we change the phraseology—but not the doctrine; then where is the crime? Do not say that it is a crime until you are prepared to sustain it. Then we invite you to the task, and will thank you kindly to show *us* our sin; we will then ask pardon of God, and "burn them up." One would almost be led to think, by the talk of some of our would-be reformers, that they think that the words in which revelation is clothed were as much inspired as the *sentiments* of which the *words* are signs. When we have fully presented the sentiment God designs to convey, we have accomplished all that can be accomplished, whether this has been accomplished by Greek, Hebrew, Latin, or any other language. Nor are we confined to any *set form of words*. If the great truths are presented, the object is secured, so far as that is concerned. The only important question is, not whether our creed is written or unwritten, but whether it is correct. It is the *truth* that makes a man "free," whether presented in the form of a creed or not. There is bondage in error embraced in any form. The fact is, no man can be a Christian without a creed; there can be no gospel church without a creed. We challenge our friends who are making war on creeds, to produce the instance. We challenge them to show that the mere *writing* out in form of any Christian truth is a crime. Our opponents will preach *their creeds*, and vehemently insist that they must be received, and threaten us with the "mark of the beast," if we do not receive them. Suppose, now, we adopt the sentiments of our brethren. Then we are welcomed with Christian cordiality. *All is now right.* But suppose now we go a little farther, and write off the doctrine, and adopt it as a creed. Then what? Has it spoiled it all? Yes, if I understand them, I have committed a great wrong. I want to know if God has hinged his government on such conditions as these? I believe it to be a painful misrepresentation of the high-toned moral character of God's government. The difficulty is an imaginary one, and not real.

Closely associated with this difficulty is another one urged against us, which is that of giving letters of standing to such members as propose to move their standing from one church to another. What a crime that—that a church should presume, when one of its members proposes to go where he or she is not known, to say by letter, that the brother or sister is esteemed as a Christian! And yet it is deemed to be a matter of sufficient importance for one of some pretensions to justify him in intruding himself upon the time and patience of a church to which he did not belong, and seriously urge it to be a departure from church propriety. To me, such a course looks more like an effort to rake up something to create dissatisfaction, than to promote peace and harmony among brethren. When men of sense seize upon such things, to create opposition and draw off, it shows to what extremes good men are driven, when they come to building up sects of their own. How molehills swell to mountains! When men come to be so wrapped up in their own cause as to see such crimes (as they call them) in others, they are as much unprepared to judge of their own conduct as they are that of others. They will find it quite as easy to depress their errors as to swell the real or supposed errors of others. V. HULL.

LETTER FROM A. M. WHITFORD.

To the Editors of the Sabbath Recorder:

It appears by the letters of Elder Maxson and Bailey, that their design was to take no public notice of the articles of W. and S.; but they have so far departed from it, (probably through fear that the reasons for their silence might be misconceived by the readers of the *Recorder*,) as to give publicity to the reasons which led them to this determination; thus giving the public the benefit of their estimate of those articles; which estimate, I think, will be readily admitted, was not intended to flatter their authors. By what process that which was published by Whitford and Summerbell became worthy of public notice and "respectful courtesy," when reiterated by a church, I am at a loss to conjecture; perhaps Eld. M. will deign to inform us. But my wish is mainly to notice some of the positions taken by Eld. B. to justify the publication of their joint communication; and not to defend my "strictures" upon it. I leave them with the readers of the *Recorder* to decide their character, merely remarking, that expressions such as "unworthy of their authors," "the spirit which dictated them," &c., is the common resort of those who find themselves occupying a position which they are unable to defend, and unwilling to abandon.

Eld. B., in his letter published Feb. 22d, does the Adams church a manifest wrong, unintentionally I presume. He says, "he (the Corresponding Secretary) published their (the church's) response, which he deemed an acceptance, while I viewed it *equivocal*, and did believe that they never intended to submit their acts of discipline to the inspection of any Council whatever; and their subsequent conduct has fully sustained the views I then entertained." The Adams church, in their response, say, "We most cordially accept them [the Council] in accordance with the Rules [Constitution] of the Association." If this is equivocal, the fault is in the Constitution of the Association, in not clearly defining its powers, and not in the response of the church. If any are dissatisfied with this acceptance, it must be those who wish (as was expressed at the Association) "all ecclesiastical technicalities laid aside," which I understand means to include the Constitution of the Association. If Eld. B. had doubts of the intentions of the Adams church in their response accepting the Council, there need have been none, as they were set out in the resolution adopted by them, and published in the *Recorder* of Jan. 18th, as follows: "*Resolved*, That we request the Council designated to meet with this church on the second Fourth-day of February next, and investigate the *acts* and proceedings of this church—allowing the church to join the issue with any member of the Central Association in any charges such member may present affecting the purity of its *acts* or *discipline*," &c. If this fully sustains the views which Eld. B. tells us he entertained, surely he must construe it by a mode peculiarly his own.

If the Council had any difficulty in deciding upon the propriety of attending to their appointment, it was doubtless owing to the ambiguousness of the act of the Association making the appointment; and Eld. B. seems to have been of the same opinion when the joint communication was written; for the object of it, as he expressly tells us, was not to have any thing *equivocal* explained by the churches, and thus set "themselves right before the Committee, but to explain to the churches and to the Council the intentions of the Association in making that appointment." Had Eld. B. read that communication immediately previous to writing the one of Feb. 22d, he probably would not have written this so much in conflict with the views expressed in that. Then there did not appear to be anything equivocal in the response of the churches. In analyzing it, he seems to be at no loss to comprehend their meaning; and the objection he urged to it was, its being too restricted (explicit certainly to warrant the conclusion) to meet the wishes of the Association. Upon this, his suggestion to the Council to consider their appointment a nullity was based. That the Council are as incapable of being improperly influenced in their decisions as any that could be selected, I probably believe as fully as Eld. B. Their being so, however, so far from proving it "too ridiculously absurd" to believe that there was a wish on the part of any to thus influence them, would only prove the folly of making the attempt. I am willing, however, that he should have the full benefit of his assertion, that he never entertained such thought. A. M. WHITFORD.

ADAMS, April 4th, 1855.

LETTER FROM MRS. SAUNDERS.

PALESTINE, Plains of Sharon, Feb. 26, 1855.

To the Executive Board of the Seventh-day Baptist Missionary Society:—

MY DEAR CHRISTIAN BRETHREN,—I feel it to be my duty to inform you of our present condition, as Mr. Saunders is now sick and unable to write. Mr. S. sent a letter to you on the 17th of December. We received yours of October 22d on the 12th of January, 1855. Mr. Saunders wishes me to say, "that he fully approves of the decision of the Board, and thinks that all of the property belonging to the Mission should be located together."

Our daughter has been sick with ague and fever for the last six weeks. She is now better, yet very much debilitated. Mr. Saunders has been confined to his bed two months and a half with this last attack—the first two weeks with Syrian fever, after which the disease took a different phase, when the typhoid symptoms appeared, and the disease increased so fearfully in violence, that for ten days I almost despaired of his recovery. By active and vigorous treatment, and through the mercy of God, I was able to subdue these alarming symptoms. Since that time he has been suffering much from chills and fever, and can only sit up long enough to have his bed made. Our Consul, and also the members of our colony, think that as soon as the weather is suitable, and Mr. S. has sufficient strength, he ought to be removed to some place in the Mountains for a time, in order to preserve his life, and a restoration to health. This will be attended with considerable expense. If the Board think this course advisable, they will see the necessity of appropriating means for that purpose immediately. May fervent and effectual prayer go up to God from our brethren and sisters at home, that He may shield this mission from the shafts of death.

Your sister in Christ, MARTHA SAUNDERS.

RELIGIOUS INTEREST IN WISCONSIN.—From a business letter of Eld. Julius M. Todd, dated Berlin, Wis., March 29, 1855, we copy the following interesting paragraph:—

"I have the pleasure of informing you, that it has pleased God to revive His work in this church. We have held evening meetings for nearly two weeks past, and some good has already been accomplished. The members of the church, with few exceptions, are in the work, and sinners are inquiring what they shall do. We commonly have from twenty to twenty-five forward for prayers every night. The work is an extensive one, having commenced in Dartford, visited Bluffton, and some other parts, and now it is going on among us. The burden now upon us is, that these inquiring sinners may find Him of whom 'Moses in the law, and the prophets did write.' Pray for us."

Rev. F. O. Nelson, the indefatigable Swede missionary, writes to the Home Mission Record, from St. Paul's, Min., that he has organized the first church of converted and baptized Swedes in the West, on the Rot River, in Minnesota Territory.

A JEW REPRESENTING THE CLERGY.

A striking illustration of the equality of religious sects in this country, was furnished at the banquet recently given by the Corporation of New York to the State Legislature. Among the toasts at that banquet, one was: "*The Clergy*—To them we look for sincerity, truth, and admonition." By appointment, it was responded to by a Jew, Rev. Dr. Raphall, who spoke as follows:—

Mr. Chairman: It is your pleasure to call upon me to respond for the clergy. Now, I am not in the habit of often acting as spokesman for my reverend brethren of the Christian church; and when I entered the room I certainly did not expect that I should have to do so this evening; nevertheless, I readily and cheerfully obey your call; for while I know that in the eye of God, all men are equal, I feel that it is my happy privilege to live in a country, a state, a city, in which all denominations are equal in the eye of the law. Here, indeed, freedom of conscience is recognized as God's choicest gift; civil and religious equality, as man's dearest right. To achieve that freedom and equality, Washington toiled in the field, Franklin in the cabinet, Jefferson and his high-souled coadjutors in the halls of legislation; and that which they, in their generation, so nobly achieved, we of the present age cherish, enjoy and maintain. As they transmitted it to us, so, with the blessing of the One on high, we shall bequeath it to our children, unimpaired, to have and to hold forever. When, therefore, your choice confers on me the pleasing and valued distinction of speaking for my brethren in the profession, I do so without the slightest hesitation. While they of the church or chapel claim the right to preach in the words of the New Testament: "On earth peace and good will toward men," we of the Synagogue do the same, as in the words of the Old Testament, we proclaim that we all have one father—that one God hath created us.

Sir, your toast requires of the clergy, sincerity, truth and admonition. Sincerity! How base must be the hireling who, in the exercise of his sacred functions, imposes upon his flock and tries to deceive mankind! Can he, dare he hope to deceive Him, whose all-seeing eye searcheth the heart and inward parts, and before whom no hypocrite shall come? Truth! We teach you the word of God; and however our interpretations of that word may vary, however much our opinions, as men, may conflict, the word of our God is true, and standeth forever! Admonition! While we remember that we ourselves, like you, are but sinful mortals, we also bear in mind, that we are the servants of a Master who is no respecter of persons, and unto whom lying lips are an abomination. No fawning, no flattery, must proceed from the tongue of him who is appointed to speak the word that reviveth the weary; he must not bend the knee before the Baal of popularity, nor yet flirt with the alluring seductions of worldly advantage. But firmly, yet meekly, he must exhort, reprove, admonish, the many as the few, the high as well as the low. But, sir, in addition to all that your toast requires, another duty is entrusted to us, full as dear to our hearts, and most precious to those unto whom it is extended; and that is, consolation. It is ours to penetrate into the haunts of sin and despair, to carry thither the good tidings of peace and salvation; to visit the home of sickness and sorrow, there to dispel the gloom of suffering by the rays of hope kindled at the divine mercy. It is ours to soothe the anguish of remorse by the balm of religion, and to direct the closing eye of the believer to his heavenly home beyond the grave, where dwelleth peace and bliss everlasting. To us it is given to plead the cause of poverty and distress, and to invoke the aid of private beneficence, which you, sir, and your worthy colleagues are the kindly and benevolent dispensers of, those munificent public charities which form so bright and pleasing a gem in the chaplet of our city's glories. And, sir, when we join you at your festive board, and partake of your hospitality on occasions like the present, it becomes our duty, while we direct your thanks to the Supreme Giver of all good, to implore His merciful protection for the land, the state, the city, we live in; that He may grant unto our legislators and representatives, wisdom and patriotism; unto our homes prosperity; unto our people peace and brotherly love. Mr. Chairman, for my colleagues, the clergy of all denominations, as well as for myself, I thank you.

RELIGION IN NEW YORK.

A late number of the *New York Christian Advocate and Journal*, contains an article headed "A Loud Call for Missionary Effort at Home," which unfolds a striking necessity in the wants of this city. In consequence of the removal of so great a portion of the people to the upper districts, the lower part of the city has been surrendered to commerce, and in the removal of many sanctuaries, has also been largely given up to the dominion of irreligion. The district in which houses of worship have been thus vacated and sold, is swarming with inhabitants, having "a greatly increased population." South of a given line, twenty-eight houses of worship have, within a few years, been sold by different denominations, leaving there but twenty-two, including Catholic, colored, Hicksite, French, etc., remaining. Commenting on this remarkable change, with a glance at what it involves, our cotemporary says:—

Now it is true that many who reside in the district we have marked out, and which has been so generally abandoned by the worshiping assemblies formerly there, have followed their churches up town, and still attend the means of grace as heretofore; but these constitute but a very small proportion of the population of the district. What, then, will become of those? Shall they be left to all the fearful consequences of ignorance and vice? What these consequences must be we already see in part; but the full effect of a destitution of religious teaching has not yet been seen. As patriots and good citizens, we have to fear the reign of lawless passion—liberty degenerating into licentiousness, setting at naught the wholesome restraints of legislation, and fiercely preying upon each other, as well as the orderly part of the community. Among the grounds of these apprehensions, besides the necessary moral degeneration of a people among whom the moral precepts of the gospel are lost, we may add the fact, that a considerable portion of the population are foreigners, many of whom "have left their country for their country's good," already ripened in vicious habits—the Papists, sinning with fancied impunity, because they look to what they vainly call sacraments, masses, and extreme unction, with priestly absolution in the last struggle of mortality—while many are the very dregs, the last filterings of infidelity, under the name of rationalism; the effects of which we have seen abroad, in the disappointment of the best hopes of humanity, whenever the people have attempted to revolutionize their political governments, cast down their oppressors, and establish free institutions. As there was no truly religious element among the people, or their leaders—no common moral standard with divine sanctions, and, consequently, no conscience, they necessarily ran into licentiousness and anarchy, and finally had to take refuge in despotism again.

We ask again, then, what is to be done under these deplorable circumstances? Are the evangelical denominations to look on in despair, until the fruits of this religious and moral destitution ripen into one wide spread moral pestilence? Do not the signs of the times call for a combined missionary effort to stay the moral pestilence already at our doors?

LORD JOHN RUSSELL AND THE JEWS.—When Lord John Russell was at Berlin, on his way to the Convention at Vienna, he received a deputation from the Jews, headed by their Rabbi, Dr. Philipsohn, who presented him with an address, expressive of their gratitude to him for the part he has always taken on the question of the restrictions imposed on Jews to sit in Parliament, and hoping that, on the termination of the war, the same liberal policy will be followed with regard to Turkey, so as to secure to the Hebrew race the same privileges and advantages accorded to other religious sects in the East. Lord John Russell replied the following day, and assured them that it was not the intention of Her Majesty the Queen, in settling the Oriental question, to make any difference between Jews and Christians residing in the Turkish dominions, but to use her influence that the Jews should enjoy exactly the same privileges as any other persuasion in the East. This gave offense to the orthodox Lutheran *Kreutz-Zeitung*, who would excommunicate Lord John and England, as heathen and publican, because "intending to make out of Turkey a State without any religion at all!" German Lutherans, for the most part, are as intolerant as Catholics, and need to learn the very first principles of religious liberty.

RELIGIOUS DESTITUTION AT THE SOUTH.—A convention of colporters was recently held at Charleston. In an account of their doings, we find the following paragraph:—

"The spiritual desolations in these States are more prevalent than is ordinarily supposed. There are, as you know, comparatively few towns and villages. The population is widely dispersed. Many thousands of white families are too remote from places of worship to listen steadily to the preaching of the Gospel, while public worship is too unfrequent in the country districts to furnish adequate instruction to those who desire it. A colporter in North Carolina found more than 500 families out of 2,900 visited in his native county, destitute of the Scriptures; and more than 600 families uniformly neglected the sanctuary. In another county, the colporter visited 13,000 souls, and found the belief in witchcraft, charms and conjurers, nearly universal; and his statement was confirmed by a clergyman and editor, of this city, who had visited the county two successive seasons."

MISSION TO JAPAN.—The *Independent* says that Rev. B. J. Bettelheim, M. D., who for nine years past has labored as a missionary in the Loochoo Islands, is now in New York, endeavoring to make arrangements for a mission to Japan. Dr. B. has thoroughly mastered the Japanese language, has prepared a grammar and a dictionary, and has translated into that tongue the Holy Scriptures. He is a man eminent for learning and piety; and though not connected with any missionary board, is entitled to the affection and the confidence of the friends of missions. His object has been commended to the favorable regard of Christians, by a committee of ministers of various denominations, and some plan will doubtless be devised for the early occupation of Japan.

RELIGIOUS INTELLIGENCE.

A Convention of Christianized Jews is to be held in New York city in May next. A correspondent of the Rochester *Advertiser* says that a prominent matter to be brought before the Convention is the consideration of the return of the Jewish people to Palestine, and to take measures to co-operate with Jews in England, (who have already moved in the matter,) and other parts of the Eastern world.

Mr. Turin, a Waldensian, has engaged in missionary labors among the Italians found in the great city of the East, Constantinople, and has a flourishing school under his care, in which the children are taught the first elements of Christianity—such a school as could not on any terms be gathered at Rome.

Since the triumph of the No License Law, in Texas, there has been a great increase in the demand for a substantial literature. Book stores are springing into existence in all the principal towns of the State. Book agents and pedlars, it is said, are also doing a profitable business.

The Methodists are exerting themselves with praiseworthy zeal to evangelize our foreign German population. Their German missions include fifteen presiding elders, one hundred and eighty preachers, and ten thousand communicants—the result of ten years' labor.

Rev. C. L. Brace, Agent of the Children's Aid Society, has received from a former pupil of his, lately deceased at New Haven, a legacy of $15,000, in trust for that Society.

The Constantinople correspondent of the New York *Evening Post* calculates the loss consequent upon the present war in Europe, up to Feb. 26th, at not less than 200,000 men.

A glass-factory at Roncocos Creek, N. J., was blown down by the gale on Monday, April 2d, and seven or eight persons were killed.

The postage on all letters to any part of this country must be prepaid after April 1st. *If not prepaid in full they will not be sent.*

General Intelligence.

European News.

The U. S. Mail Steamship Baltic, with European dates to March 24th, arrived at New York on the 6th inst.

In a commercial point of view, the news by her is considered very favorable. A general impression prevailed in monied circles, that peace would grow out of the Vienna Conference.

The first of the four points of guarantee, namely, that the Danubian Principalities be placed under the protectorate of the Five Powers, has been unanimously agreed to in the Congress of Vienna. The Czar Alexander has made several speeches—mild to the diplomatic body, and strong to the army. On the whole, his language is interpreted in a pacific sense.

The seige of Sevastopol makes but slow progress. Lord Raglan, in his latest dispatch, admits that the enemy is actively engaged in throwing up new works that enfilade the trenches, and that vast convoys of provisions and ammunition continue to enter the city. Some weeks will probably elapse ere either the Conference or the seige comes to a conclusion.

The Parliamentary inquiry into the management of the army of the Crimea continued its investigations, and continued to elicit evidence that the most extraordinary confusion prevailed in all departments of the administration of the army.

A singular accident occurred at Bristol. A cast-iron bridge, consisting of a single arch of 100 feet span, with six iron ribs, trussed by iron girders, tied and pinned, and supported by cast-iron stanchions, was struck by a steam propeller, and instantly the whole bridge fell with a tremendous crash into the river Avon. Several persons who were on the bridge when it fell are supposed to be lost. The bridge, which was known as "Hill's Bridge," was erected by the Coalbrookdale Iron Works Company, and occupied in its erection from 1805 to 1809. In 1808 part of the iron and stone work fell, and killed or wounded thirty-two persons. The steamer that caused the fall of the bridge had no cargo on board, and was propelled by an engine of no more than six horse power.

Louis Kossuth announces, by an advertisement, that he has formed a permanent engagement with the London *Atlas*, and solicits subscriptions for that (weekly) paper.

Dates from Shanghae are to the 16th January. On the 6th the French attempted to storm the city. Two hundred men landed from the French ships, and effected a breach, the steamers Jeanne d'Arc and Colbert commanding the city at the same time. Two detachments of French succeeded in mounting the breach, but were exposed to a severe fire from the houses. A party pushed on, and planted the French flag upon the north gate, but just then great confusion ensued from a party of Imperialists entering the breach and attempting to scale the walls. The French had to retire, and regained the breach, when the recall was sounded. The French lost 15 killed and 37 wounded. Admiral Laguerre awaits reënforcements, to resume operations. The English and American forces took no part in the affair.

California News.

California dates to March 16th were received in New York on the 7th inst. From the California papers the following summary of news is clipped.

The bank excitement which existed at the date of our previous summary has in a great measure subsided. The suspended banks have not resumed, and it is altogether improbable that any of them can resume.

Robinson & Co.'s Savings Bank has turned out as rotten as could be. The deposits amount to $207,000, and the assets nothing at all. It is doubtful if the depositors receive one cent on the dollar. Mr. Robinson has been arrested on a charge of embezzlement, and is now awaiting the action of the Grand Jury.

A number of mercantile failures have been recorded.

At Grass Valley, and several other places, there were symptoms of disturbances, consequent upon the failure of Adams & Co., but no actual violence was attempted.

At Sonora, on Sunday, a mob gathered and broke open the bank of Adams & Co., which had been closed since the 23d ult. A Committee was appointed, and depositors paid off to the full extent of their certificates. Some $10,000 above the evidences of deposit were found in the vault.

The newly-discovered diggings—the Kern River mines—receive their full share of public attention. People are flocking thither by land and water. The most wonderful stories are reported, many of them, undoubtedly, very much exaggerated.

Gen. Chamorro, President of Nicaragua, died at Grenada, on the 12th ult., and Gen. J. Estrada at present is his successor, as well as Commander-in-Chief of the army.

The rain has fallen abundantly of late, and all the streams are swollen. At Sacramento the river has been rising rapidly for several days past, and on Wednesday was but very little below the maximum hight attained since the foundation of the city.

The Supreme Court adjourned on the 6th, having rendered a number of very important decisions. One decision was to the effect, that persons who hold lands in the mining region for agricultural purposes cannot hold them against miners.

The Legislature has been occupied recently with several subjects bearing on the public morality. A bill prohibiting noisy and barbarous amusements on Sunday has passed both Houses, and awaits the signature of the Governor to become a law. A bill suppressing houses of ill-fame has passed both Houses, and one prohibiting raffles and lotteries has passed the House of Representatives.

The accounts from Oregon are favorable. The growing crops are uncommonly prosperous. Some excitement was produced in business circles by the news of the great failures in San Francisco, but it was confidently expected that no disastrous consequences would ensue in Oregon. A large military force is to be sent out directly against the Snake Indians who massacred the emigrants near Fort Boise during the last season.

From Utah we learn that a collision took place in Great Salt Lake City on New-Year's Day, between the United States soldiers and a number of the citizens. The affair commenced in a drinking-house, and terminated in an order from the authorities forbidding the sale of spirituous liquors in the city. No lives fortunately were sacrificed, though several were severely wounded on both sides.

Prohibition in New York.

New York has now a Prohibitory Liquor Law. It was passed in the Assembly by the decisive vote of 80 yeas to 45 nays. That it will be executed, there is little room to doubt. True, the rumsellers talk of getting it adjudged *unconstitutional;* but that is easier said than done. Meanwhile it becomes the friends of the law to rally for its support, and form such organizations as the circumstances may demand. The *Tribune* furnishes the following synopsis of the Act of the Legislature, which presents all its essential features:

1. No Rum, Brandy, Gin, Whisky, Wine, Beer, or other intoxicating liquors, can legally be sold nor given away in this State after the 4th day of July next, except by persons specially appointed and licensed to sell the above articles for mechanical, medicinal or sacramental purposes. And no license to sell as a beverage shall be granted from and after the date of the passage of this act. Neither shall it be lawful to keep the liquors aforesaid in any store, tavern, grocery, shop, boarding or victualing-house, nor room used for dancing, gambling, or other amusement.

2. Any citizen of good moral character, being an elector of the town or city in which he proposes to sell, and not being a peddler, nor interested in any tavern, grocery, fruit-store, confectionery, or other place of entertainment, nor employed therein, nor captain, agent, clerk, or other person employed on a vessel or steamboat, may, from and after the 1st of May next, keep and sell the liquors aforesaid, for mechanical, chemical, or medicinal purposes, or pure wine for sacramental use, provided he shall, within one year preceding, have filed in the office of the Clerk of the County in which such liquor is to be sold, an undertaking executed by himself, with two good and sufficient sureties, to be approved by the County Judge of said County, or in this City by one of the Judges of Common Pleas, that he will not violate any provision of this act, and that he will pay all fines, damages and costs which may be rendered against him in any action commenced under the provisions of this act, and shall also have taken and filed an oath that he does not use intoxicating liquor as a beverage, and will not sell it contrary to the intent of this act.

3. No person authorized to sell as above shall sell any liquor known by him to be impure or adulterated; nor shall he sell any to be drank on the premises; but he may sell to any sober person of full age whom he really believes to require it for some other use than as a beverage. Strict account is to be kept of all sales, in a book open to public inspection, and a monthly account of all sales is to be sworn to and filed with the Town or City Clerk by each seller.

4. Sales by persons unauthorized as aforesaid to be punished by a fine of $50 for the first offense, $100 and thirty days' imprisonment for the second, and for every subsequent offense of a fine $100 to $500, and imprisonment for not more than three nor less than six months. Any person licensed to sell as aforesaid who shall sell in violation of the conditions of his license is to be fined $100 and imprisoned thirty days for the first offense, made to pay all the costs, and prohibited from ever selling again in this State. He who gets liquor of a licensed seller by lying as to the use to be made of it is to pay a fine of $10 and costs, and, if he can't or won't fork over, he is to be imprisoned until he works out his little bill at the rate of $1 per day.

4. All Judges and Justices of the Peace to have power to hear and determine cases arising under this act, and to hold special sessions for the purpose. Costs as in other cases. Any citizen may complain of violations, and may appear on trial in behalf of the people, by counsel if he chooses.

5. If the District Attorney appears for the people, the costs recovered go to him; otherwise, to the complainant.

6. On the complaint of a credible person that he has reason to believe that intoxicating liquor is kept or deposited in some specified place or places, any magistrate may issue a search-warrant and have said place searched, and if any such liquor is found on such search, it may be seized and stored for future disposal. No dwelling house can be searched unless the occupant shall have previously been convicted of selling liquor unlawfully within the year preceding.

7. Due notice shall be given to the owner of said liquor, if he can be found—if not, to some person on the premises—of the seizure aforesaid; and he may respond by affidavit that said liquor was not kept in violation of law; and thereupon the question thus raised shall be tried, and, if a conviction results, penalties may be inflicted as aforesaid.

8. Appeals may be taken to higher Courts, from judgments under this law, by the complainant as well as by the defendant. Cases go up to the Court of Appeals only under a certificate of one of the Judges below, that a legal question is involved which ought to be passed on by that Court. All appeals under this act to have precedence of all civil cases.

9. These appeals to be litigated as others are; but if the complainant appeals and fails to prosecute his appeal, he shall be liable to the defendant for costs.

10. Liquor seized as aforesaid, without good ground, shall be returned by the officers to the place whence taken; but if it be proved to have been justly seized, the magistrate shall order it to be, and it thereupon shall be, destroyed. The vessels in which it was contained shall then be sold, and their proceeds applied to the satisfaction of the penalties and costs incurred by keeping the liquor as aforesaid.

11. Upon affidavit setting forth that the deponent verily believes that this law is violated, and that some person named has knowledge of such offense, any magistrate may summon such person before him, and require him to give testimony in the premises; and if he fails to obey the summons, he shall be fined not less than ten dollars, and, in default of payment, imprisoned as aforesaid.

12. Every sheriff, deputy, constable, marshal, or policeman, must serve all processes confided to him under this act, and must arrest every person whom he shall see engaged in violating it; also, seize all liquors which he may find kept in violation thereof. If he sees any person intoxicated in any public place, he must apprehend and keep him in jail until sober, when he shall be examined; and if it shall appear on his examination that his intoxication resulted from a violation of this act, then process shall immediately issue against the violator, and he be dealt with as aforesaid. If the sobered tippler won't swear or won't testify, he is to be sent back to jail till he will. To get publicly drunk is also an offense against this law, to be punished by a fine of $10.

13. All liquors seized under this act and not reclaimed within twenty days, to be forfeited. Ditto all liquors seized in the possession of any person caught violating this act.

14. It shall be the *right* of every citizen, but the *duty* of every Supervisor or Overseer of the Poor, to make complaint of every known or suspected violation of this act, and prosecute therefor in behalf of the people. But if anybody is guilty of malicious prosecution under this act, judgment shall be rendered against him—and execution shall issue thereon against his property and person. Fines collected under this act to be paid to the Overseers of the Poor.

15. A magistrate's certificate of conviction under this act to be evidence of that fact in all courts and places.

16. Law-defying liquor-sellers and convicts under this act may not sit as jurors in trials for alledged violations thereof. No action can be maintained for liquors sold or delivered, unless they were so sold in accordance with the spirit of this act.

17. Proof of sale of liquor under this act shall be *prima facie* evidence of unlawful sale, and proof of delivery shall be proof of sale. No person can justify as a licensed seller unless his answer to the complaint shall have averred that he was so, and further, that he verily believed, at the time of the sale, that the buyer would use the liquor in accordance with the provisions of this act.

18. No person or company, under a penalty of $50, shall convey more than five gallons of liquor within this State unless the name and residence of the person who is to receive it, with the words "Intoxicating Liquor," are plainly marked on the outside thereof. Whoever shall purchase liquors for any person not authorized to sell under this act, shall forfeit $100 by so doing.

19. Wherever there is a Penitentiary in any county, convicts under this act may be sent thither instead of to jail, and shall be closely confined therein.

20. Every public officer neglecting or refusing to perform any duty required of him by this act thereby commits a misdemeanor, for which he shall be punished by a fine not exceeding $500 and imprisonment for not more than six months. Resisting process under this act is also a misdemeanor, to be punished by a fine of not over $200 and imprisonment for not more than six months.

21. Costs are allowed to magistrates and officers for each service in enforcement of this act.

22. Cider may be sold in quantities of not less than ten gallons, but not to be drunk on the seller's premises. Alcohol may be manufactured, kept or sold; so may pure wine from home-grown grapes; and importers of foreign liquors may keep and sell the same in the original packages to persons authorized to sell under this act. Burning fluids, perfumery, essences, drugs and varnishes, composed in part of alcohol or spirituous liquor, may also be kept and sold, if not intended for use as a beverage or in evasion of this act. Liquors may not be seized in any bonded warehouse of the United States, nor while in transit thence to any place out of the State.

23. Grand Juries to be specially charged to inquire into violations of this act.

24. All acts inconsistent herewith are repealed; but suits in progress against violators of old-fashioned license laws are not abated by the passage of this act.

Arrest of a Defaulter.—One of the passengers by the steamship Union, which arrived at New York, April 4th, from Havre, was John M. Throck, recently a resident of Millsbury, Holmes County, Ohio, who was arrested in Germany on the charge of absconding from Ohio, with public funds amounting to about $20,000, and also, with having committed several forgeries. It appears that Throck was collector of taxes in Holmes County, and, after getting possession of the funds above mentioned, part of them by altering the figures of bills, absconded to Germany, his native country, in December last. A reward of $2,000 was offered for his arrest, and, as it was generally believed that he had left for that country, information was sent over, and the accused was arrested on his arrival. About $9,000 was found in his possession, mostly in drafts, the payment of which was stopped. Accused was taken in charge by Officer C. J. Loveland, of Ohio, on a requisition issued by Gov. Clark, of this State. Throck is a German, about 66 years of age, and up to the time of committing the crime was considered an honest man.

Emigration to Kansas.—An association under the title of "The Indiana Kansas Industrial and Literary Association," has been formed at Dublin, Indiana. The objects are: 1. To secure a territory sufficiently large for a home and a farm for each family. 2. To furnish buildings and machinery for the different mechanical and manufacturing pursuits of the company. 3. To establish a Manual Labor School, acceptable to all, where students can pay their expenses by their daily labor. 4. To erect suitable buildings for meetings, lyceums, and the general purposes of the association, in pursuance of the plans of the Society. Families will go on to Kansas as rapidly as tenements can be provided for their accommodation when they arrive there. It is expected that five hundred will remove at an early day.

The N. Y. *Tribune* of April 4th, says: We sincerely regret to be obliged to announce that the maturing obligations of Messrs. Page & Bacon, of St. Louis, and Messrs. Page, Bacon & Co., of San Francisco, were not paid to-day. Mr. Hoadley, the agent of the latter house, received directions early this morning, written last night, from Mr. Bacon, to make no more payments. The drafts of Messrs. Page & Bacon were refused by the Bank of America, which is the correspondent of that house in this city.

It was announced in our columns, with those of many other papers, that the Rev. J. R. Graves, editor of the Tennessee *Baptist*, had been recently assassinated, while making a little tour into the country. We are glad to see that Bro. Graves is still at his post as editor, and hence we very naturally infer that he is yet alive.

SUMMARY.

The sale of a portion of Daniel Webster's Marshfield property took place at the old homestead, on the 28th March. Real estate to the amount of $16,700 was sold. The same property cost originally over $18,000. A lot of cattle and sheep were also disposed of, which produced the sum of $2,100. Mr. Webster's affairs were left in a state of great embarrassment, but his friends, we believe, expect to be able to save to the family some 300 or 400 acres of the estate, including the old mansion. At the time of his decease, it seems the Massachusetts statesman owed the moderate sum of $140,000, or thereabouts.

A dispatch dated Philadelphia, Tuesday, April 3, 1855, says: The new and extensive glass factory at the town of Progress, mouth of the Rancocas Creek, New Jersey, was blown down yesterday during the gale, and 25 workmen, engaged in the manufacture of glass, were buried beneath the ruins. At the latest dates from the scene of the disaster, eight dead bodies had been taken from the ruins, and several others were seriously injured.

As a number of boys were sliding down hill, in the vicinity of Carthage, Jefferson Co., N. Y., a few days since, a difficulty arose between two of them, aged respectively 17 and 15 years. The latter, it seems, took possession of a sled belonging to the former, when a scuffle ensued, terminating in the death of the younger boy, whose neck was broken by a kick from his assailant. The name of the youngster who committed the act is Bohall.

The schooner Whale, Capt. Johnson, was wrecked on the night of the 1st inst., on Saybrook Bar, near the Lyme shore. She was loaded with pig iron from Philadelphia, and bound up the river. Capt. J. was found in the morning frozen to death in the rigging. Three men were taken off, nearly chilled through. A cabin boy was washed overboard. Capt. J. was formerly a well-known steamboat pilot.

Dr. John C. Warren has presented a copy of "Loring's Hundred Boston Orators" to each one of the theological institutions in the United States. The father of Dr. Warren, in 1783, delivered the first Fourth of July oration that was pronounced in the town of Boston. Gen. Joseph Warren, of Bunker Hill fame, was uncle of the donor above-named. He officiated as town-orator at the anniversary celebrations of the Boston Massacre, on the fifth of March, in the years 1772 and 1775.

A correspondent of the *Southern Presbyterian* proposes to the Presbyterians of South Carolina to meet together and spend a day and two nights in thanksgiving-services, on account of the gracious outpourings of the Spirit which have been enjoyed; nearly one-half of their forty-seven churches having been blessed with revivals, and many hundreds of persons having hopefully passed from death unto life.

Miss Martha Rockwood died in Lansingburg, last week, from the effects of poison contained in some maple sugar of which she had partaken. It is supposed the poison was imparted to the sugar by boiling it in a brass kettle. All the other members of the family who had partaken of the sugar were more or less affected by it. The poison was thrown from her stomach, but it engendered an inflammation, of which the victim doubtless died.

The Newark *Mercury* says that the noticeable effects of the hard times during the present winter are, a very marked diminution of the usual number of marriages, and the increase in the number of inventions for which applications are made. Affairs of the heart must give way to calculations of the head, in seasons when rigid economy becomes an imperious necessity.

In the debate on the bill now before the Pennsylvania Legislature, which prohibits the holding of church-property in perpetuity, as now practiced in the Catholic Church, it was stated that the opposition was almost entirely confined to the ecclesiastics of that church, and that a number of letters from intelligent Catholic laymen, entirely approving of the object of the bill, had been received.

We hear of a very powerful interest of religion among the students of Amherst College—perhaps the most so that has ever visited that favored institution. In the upper two classes alone, fifteen or more have become Christians, and scarcely any in the college are unaffected. Some of the best minds in the college have experienced the "great change."

"Thank God," says Rev. W. C. Milne, "that amid the confusion and anarchy in certain parts of China, our Protestant missionaries are carrying on their labors without interruption; and the Spirit appears to be blessing them in their work. Letters from Shanghae and Hong Kong give accounts of conversions from darkness unto light."

A clerical friend, who has been traveling extensively through Virginia, tells us that there is a most gratifying spirit abroad among the churches, in regard to the better support of their pastors. In some cases the salaries have been doubled, in others they have been increased one-half, and in not a few arrangements are making also to provide parsonages.

The leading editorial in *Zion's Herald* of March 7th, on the question, "Is there a Paucity of Ministers in the Methodist Episcopal Church?" states that there is a traveling preacher to every 163 members in the church, and, if local preachers be counted, one preacher to every 71 church-members.

The Terre Haute (Ind.) *American* says that the country thereabouts is literally swarming with wild pigeons. On the evening of the 9th, about 5 o'clock, a flock near a mile in length, by about sixty feet deep, passed directly over the city, making a noise audible at a great distance.

A dispatch dated Boston, Wednesday, March 4, 1855, says: The House has passed to a third reading a bill prohibiting the exclusion of colored children from any of the Public Schools, and the act will probably pass both branches with slight opposition.

The Wisconsin Assembly has passed the bill to prevent the use of jails or prisons of that State for confining persons under the Fugitive-Slave law of 1850, by the following vote: Yeas 44; Nays 25.

The "Association for the Improvement of the Condition of the Poor," in this city, have expended $58,537 since the first of January last.

A subscription has been set on foot by the many friends of Barnabas Bates to erect a monument to his memory in Mount Auburn, near Boston, where he was buried. Could the millions who are every day benefited by the ten years of laborious services of this "Father of Cheap Postage" be called upon to contribute but a penny each there would soon be funds enough to build a temple to perpetuate his good work.

It turns out that according to the books of the Treasury, Jacob Richardson, late Collector at Oswego, N. Y., is a defaulter to the tune of $202,000, for the recovery of which his bail are now being sued. The aggregate amount of the bonds under which Richardson's defalcation occurred, is but $45,000, which will doubtless be recovered, and, perhaps something more.

An Orthodox Congregational Church is to be formed by members of the Hampden colony for Kansas, previous to their departure. It is found that there are enough of those who propose to join the church and those that attend Congregational worship, to make a hopeful beginning.

The late James Brown left by his will the sum of five thousand dollars for the purchase of books on natural history for the library of Harvard College. During his life he made several valuable and judicious donations to our public libraries.

The Cincinnati *Commercial* says Mr. Ward, of Loveland, Ohio, recently brought from the Jersey nurseries 18,000 peach trees. An immense number of peach trees are being planted in the region round about the city.

The great Mariposa land claim of Col. Fremont has been decided in his favor by the United States Supreme Court, and the District Court is ordered to reverse its decision and enter the proper decree.

It is said that over ten thousand pounds of bread were week before last distributed by the Hebrew benevolent societies among their own poor in New York. The Hebrew population is estimated at 30,000.

The Maine Legislature passed a law at its late session that no person of foreign birth shall vote unless he shows his naturalization papers to "the authorities" at least three months before an election. The act took effect March 17.

The receipts of Niagara Suspension Bridge the last year amounted to $40,000, the first cost being but about $50,000. The new large structure just completed for railroad transportation, cost about $500,000.

Dr. Richardson and Dr. Ashbel Smith, two old experienced Physicians, of Texas, give it as their opinion, that the Brazos and Trinity Vallies are, for Consumption, equal to Cuba.

The Assembly of the Law School at Cambridge, Mass., has been dissolved by a vote of the Law Faculty, in consequence of the improper conduct of the young partisans of Judge Loring.

We received, says the *Congregational Journal*, a donation for Home Missions, the other day, amounting to $14 20, in five hundred and sixteen pieces of coin!

A belated snow-storm has just paid the interior of South Carolina a visit. It is though that all the crops are injured.

New York Markets—April 9, 1855.

Ashes—$6 00 a 6 12 for Pots and Pearls.

Flour and Meal—Flour 9 31 a 9 68 for State, 9 81 a 10 25 for Michigan, Indiana, and Ohio, 11 50 a 13 00 for extra Genesee. Rye Flour 6 37 a 7 56. Corn Meal 4 62 for Jersey.

Grain—Wheat 2 50 a 2 55 for fair to good Southern. Rye 1 38. Barley 1 33. Oats 62 a 67c. for Jersey, 72 a 77c. for State. Corn 1 05 for Western mixed.

Provisions—Pork 14 75 for new prime, 17 50 for new mess. Beef 6 50 a 8 00 for country prime, 9 50 a 12 00 for country mess. Lard 9½ a 11c. Butter 12 a 18c. for Ohio, 28 a 32c. for new State. Cheese 10½ a 12½c.

Hay—90c. per 100 lbs.

Lumber—17 00.

Seeds—Clover 10½ a 11c. Timothy 4 00 for reaped, Rough Flaxseed 1 85 a 1 90.

MARRIED,

In Dakota, Wis., on the 28th of March, 1855, by Eld. J. M. Todd, Mr. William C. Webb, of Wautoma, to Miss Mary M. Witter, of the former place.

DIED,

In Pawcatuck, R. I., at the residence of Wm. D. Wells, Esq., on the morning of the 15th March, Rev. Ebenezer Brown, aged 72 years.

In Pawcatuck, R. I., on the 20th March, of lung fever, Mrs. Edia Lewis, wife of Mr. Henry Lewis, in the 81st year of her age.

At New Market, N. J., March 29th, of a disease of the heart, Esther Dunn, wife of Dea. Randolph Dunn, aged 54 years. Mrs. Dunn was a daughter of the late Dea. Lewis Titsworth, and the first of the family of ten children to be borne to the tomb. She made a profession of religion in 1822, at the age of 22 years, and with her husband was baptized and united with the church, with which she remained a worthy member until called to swell the number of the church triumphant above. Although her disease was protracted for a series of years, and suffering also from a paralytic attack, yet she felt that these "light afflictions" would work for her "a far more exceeding and eternal weight of glory." She resigned herself into the hands of her Saviour, and having all things duly arranged, committed her spirit to the care of Him whose promise is yea and amen to the faithful, and thus bade adieu to earth. She was followed to the grave by a numerous circle of mourning relatives and friends, who cast upon it the mourner's tear and then retired.

LETTERS.

Winter Green, J B Wells, J M Todd, M S Green, J Saxton, O L Davis, G C Green, S S Griswold, John Whitford, S Johnson, P S Crandall, Silas Hammond, Peleg Clarke, D C Long, A B Spaulding, Noyes Spicer, W C Bailey, H W Babcock, Silvanus Carpenter, S A Taft, M A Rogers.

RECEIPTS.

FOR THE SABBATH RECORDER:

Peleg Clarke, Hopkinton, R I	$2 00	to vol. 11	No. 52
Alfred Clarke "	2 00	11	52
I. A Crandall, Rockville, R I	2 00	11	52
Samuel Crandall, Jr "	2 00	11	52
Alanson Crandall "	2 00	11	52
Albert Wells "	2 00	11	52
Nathan Palmer "	2 00	10	52
David P Rogers, Waterford, Ct	2 00	12	52
Jesse Barrett, Shiloh, N J	2 00	11	52
Theodore A Dunn, Plainfield, N J	4 00	11	52
Noyes Spicer, Indianapolis, Ia	1 00	12	13
R E Lanphear, Berlin	2 00	11	52
W C Bailey, Oneida Castle	2 00	11	45
Nancy Spaulding, Leonardsville	5 00	12	13

FOR THE SABBATH-SCHOOL VISITOR:

David Clawson, Marlboro, N J	$3 00
P L Berry, New London, Ct	40

FOR SEVENTH-DAY BAPTIST MEMORIAL:

Melissa Spaulding, Leonardsville	$1 00
Alanson Crandall, Rockville, R I	1 00

WILLIAM M. ROGERS, Treasurer.

☞ Have you paid for the eleventh volume of the *Sabbath Recorder?* If not, it is high time you attended to that business. The volume will be completed in eight weeks, and during that time we must receive about one hundred and fifty dollars per week to enable the Society to close the year in as good a condition pecuniarily as it commenced. Let those who owe us from two to ten dollars each, consider what is their duty in the premises.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Mayor's Office, Jan. 2, 1855.

COMPLAINT BOOK.—There is opened at this office a Complaint Book under the charge of a competent person, for the purpose of receiving and entering all complaints of matters coming within the urisdiction of the Municipal Authorities. The Mayor will entertain, and so far as the laws give him power, take cognizance of charges preferred by responsible parties for violation of ordinances and dereliction of duty upon the part of any person holding office under the City Government. By Order of the Mayor,
WM. H. STEPHENS, First Marshal.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.
Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

The Good Time Come at Last.
Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,
JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.

Alfred Academy,
At Alfred Center, Allegany Co., N. Y.

THE attention of the public is respectfully invited to the educational facilities of this Seminary.

1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.

2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes.* The health, morals, and manners of students are all looked after with parental solicitude.

3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry*, will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women.* In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.

4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.

The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. Hull, or W. C. Kenyon.

Feb. 24th, 1855.

Bruce's New York Type Foundry,

ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.

All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.

Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.

The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.

Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Carol:

A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.

"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.

The following extracts from the Preface will give an idea of the scope and design of the work:—

This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.

About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.

A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.

How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music, and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

Artificial Manure—Deterioration of the Soil.

It is a positive fact, that while we send vessels to the Lobos Islands, thousands of miles distant, and pay some millions annually for guano, in all our cities and villages we suffer the best of fertilizing materials to run into the sewers. Something must be done, and with alacrity, for economizing American agriculture. For want of pursuing a proper system of agriculture, the products of various States have been falling off for the past ten years. In Massachusetts, the New England *Farmer* has stated that, from 1840 to 1850, the hay crop had depreciated 12 per cent., although 300,000 acres had been added to those previously under tillage. The corn crop during the same period fell short 6,000 bushels; there had been a falling off of 160,000 sheep, and 70,000 swine. In the State of New York, from 1845 to 1850, 671,692 acres were added to those previously under cultivation, and yet there had been a most alarming falling off in all kinds of agricultural products. The number of horses had decreased 50,141; milch cows 68,066; sheep no less than 2,990,624; hogs 566,092; potatoes 7,255,066 bushels; peas and beans 1,182,054 bushels; flax 1,956,485 pounds; wheat 270,724 bushels; buckwheat 450,724 bushels. There was an increase in corn, rye, oats, barley, hay butter, and cheese, but no greater than the increase of population in that period, viz. 194,323 persons. No wonder potatoes are so dear; such a falling away of this crop accounts for it all. In Kentucky and Tennessee, there has been a great decrease in cattle in ten years; no less than 38,786 of neat cattle in the former and 72,086 in the latter State. In Indiana and Wisconsin there has also been a falling off in the amount of the crops raised, especially wheat, on the rich lands. If this state of depreciation goes on for twenty years more, we will have to import grain from other countries, instead of exporting to them, as we hitherto have done. The remedy is a better system of agriculture, especially a more liberal supply of fertilizing matters. It is very evident that unless soils have returned to them every year as much fertilizing matter as that which is taken away in crops, they must depreciate. There can be no mistake about this; it is plain to every man. There may be various ways of restoring this to the soil, but unless it is restored, the work of deterioration must go on. Those farmers who suppose they can, year after year, sell large crops of hay, wheat, oats, barley, potatoes, and butter, and supply but a scanty amount of manure to their farms, exhibit a great want of common sense and forethought. The grand idea, however, for the farmer, is to get a cheap supply of fertilizing matter; for it is very evident that if his fertilizers were to cost him as much as the returns which he receives for his surplus products, it would be no object for him to raise crops for sale. The cheaper the fertilizer, then, the more profitable must be the business of farming, the more abundant will be the crops, and the people will thereby be supplied with cheaper bread.

In England we perceive that great attention has lately been paid to obtaining the mud of sewers for manure, and were some company organized in this city to keep the sewers clear, perhaps a million of dollars might be saved annually to the farmers within an area of twenty miles from the City Hall. It would also be the means of making our city more healthy, by removing the pestilential effluvia which arise in warm weather from sewers, and it would save a vast annual outlay in keeping our docks from being filled up with the great quantities of mud which are swept down into them, especially during heavy showers. A patent for making sewerage manure has been taken out recently in England by Thomas Wickstead, C. E. It consists in mixing sewerage water with charcoal dust and lime, then allowing the matter to settle in large vats, and running off the clear repeatedly until the lime and charcoal are perfectly [illegible], after which it is dried, and put [illegible].

Alexander Manning, of London, has also obtained a patent for making manure from sewerage water, by employing lime and charcoal mixed with the sludge water obtained in making alum, which consists of sulphate of alumina. Charcoal and lime appear to be the best substances for deodorizing sewerage water, and absorbing the ammonia and phosphates contained in them. The simple question of converting sewerage into useful manure, for any company, is one of dollars and cents, and we cannot decide on this point. Our object is to direct attention to the obtaining of cheap fertilizers by any means, and that as soon as possible. [Scientific American.

Stumps.

In a timbered country, beginners at farming have to submit to the inconvenience of stumps and their roots, and it is no small trial of one's patience to attempt the plowing of land where they abound. It is generally considered the easiest as well as the most economical way, to seed newly cleared fields and let them lay in grass and pasture till all the smaller stumps, in fact, until the greater portion of all the stumps, have so far decayed as to be readily removed. Plowing is then done with more ease and economy, while the rotting of the smaller roots in the ground tend in some measure to enrich it. But one's necessities cannot always wait for the slow decay that time works, and the plow must turn up what soil it may, that corn, wheat, &c., may be planted and sown for the sustenance of the farmer's family.

The decaying process is hastened or retarded to some extent by the time at which the trunk is severed from the stump. Thus the tree which is cut in the winter or early in spring, leaves behind it a stump whose roots at the time are dormant, and which, at the invigorating call of spring, put forth their energies as usual to supply the wants of their nature, and the result is often that the stump shoots forth a crop of your boughs. As a consequence the stump is a long while yielding to decay. Cut a midsummer, or when the roots have nearly or quite exhausted their energies for the season—they have not the power to throw out a second growth. So when one has not the means or the machines for extracting stumps, he may materially hasten the time when he may enjoy unobstructed fields, by observing, so far as circumstances will admit, the proper time for chopping fallows.

To the good farmer, stumps are a continual source of annoyance, and he will leave no available means untried till his premises are rid of them. Drawings of various stump extractors have formerly been given, so any one could adopt that which should suit his condition best. There are some varieties of timber whose stumps will last longer than a lifetime, and it is necessary that forcible means are used for their removal, and the sooner one is rid of them the greater will he find the resultant profits, not only in the increase of the crop, but in the wear and tear of tools, teams and conscience. Among a field of stumps one can never make clean cultivation, except by greatly enhanced labor.

A Mr. Carr, in the *Maine Farmer*, gives a method he pursued to rid himself of a half dozen large white pine stumps that stood in a partially cleared field of one and a half acres, the soil of which was covered with mossy knolls and grass. He commenced with three men, clearing the earth away from one of the stumps so that fire could have free access to the larger portion of the stump. The surface roots were cut off and piled around the stump. The smaller stumps, rubbish etc., near by, were collected and heaped closely around the stump also, and when completed the pile was covered with the mossy turf from the knolls. All the stumps were served in the same manner, and then set on fire, care being had that whenever the turfy covering was burned through, its place was supplied with more. Thus the fires were kept burning some ten days, when the six heaps were raked open, and the pine stumps found to be nicely and completely charred through, except the ends of the roots that extended some distance into the ground. From the whole he obtained over 100 bushels of good charcoal, and more than 500 bushels of ashes from the brush, rubbish and turf. With these he dressed his meadow, and besides spread a quantity on the piece, which was nicely plowed in the fall for spring planting. Thus he cleared his piece of land, got completely rid of stumps, and found himself a gainer in the account, as he estimates the labor and results:

Dr.	To 30 days labor of men		$30 00
	To 1 1-2 days plowing with teams		6 00
			$36 00
Cr.	By 100 bushels charcoal	$10 00	
	By 500 " ashes	30 00	
		$40 00	
	Being a gain of		$4 00

to say nothing of a cord or more of first rate wood in the shape of coal brands. Perhaps Mr. Carr's experiment may serve as a useful hint to some reader.

An acquaintance, a young man of intelligence, tells me than an uncle of his had a method of riding his fields of pine and other stumps by boring one or more holes into them with an augur, and filling the cavity with saltpeter, plugging the hole up again. In a year or so it will have penetrated the stump, when, if in a dry time, a fire be kindled about it, it would consume without difficulty even to the extremities of the roots. We give it for what it is worth. Its merits are easily tested, and at very little cost or trouble.

Diseases of Animals.

Prevention is better than cure, with animals as with people. Plenty of good food and water, air and room to exercise, shelter from cold and storms, and from the burning sun and extreme heat of summer, a dry, comfortable place to sleep—all these are highly conductive to health of animals.

The vulue of salt, used frequently and in abundance, can hardly be exaggerated. Wherever it is practical, or otherwise convenient, salt should be provided so that animals can have free access to it. There is no danger of their eating enough to hurt them. The expense is small, the utility and advantage great. One of the tightest and richest farmers that we have ever known, a clear-headed old man, of ample experience, and as close a calculator as anybody—used to buy, annually, a large quantity of salt, several times as much in proportion to the stock that he kept as any in his neighborhood, and he used to take great pains to procure the very best quality. Turks Island he preferred, and when that was not to be had, such as most nearly resembled it. We have seen accounts of flocks of sheep dying in large numbers until they were liberally supplied with salt, and then going for years without a single instance of disease amongst them. The great value of salt has likewise been shown in the management of horses, though perhaps with less emphasis than in the treatment of sheep. The best way is to have a trough constantly supplied with salt, to which the animals have daily access.

Warts on Animals.—These excrescences are sometimes very troublesome on horses or cattle, spreading through a herd or drove as if by infection, growing to an enormous size, and impoverishing, as well as deforming their victims, often to death. Nothing is more disgusting, except a poll evil, than one of these when of large size. Some time since inquiry was made for a cure, and our recommendation was that of the advice given in the books, the use of severe acids, muriatic or sulphuric.

An old subscriber informs us that these remedies are of no avail whatever in a bad case, that they entirely crust over the wart with a scab, which soon drops off, and leaves it as bad as before. His remedy, which he declares sovereign and decisive, is to cut the thing off, and cauterize the wound with a hot iron. Cord the wart as tightly as a man, or even two can do it, close to the body or limb of the animal on which it grows, and after leaving it a week, tighten the cord again, and then immediately cut it off above or outside the cord, so as to prevent bleeding, and apply the iron heated red, till it is thoroughly seared, burning it down to near the ligature. The wound will heal directly, and the hair cover it at once. Our informant states that he had a horse worth one hundred dollars, from which he took seven warts, one of which weighed two and a half pounds, all in this manner, after trying acids, salves, and every thing else of which he could hear, and all to no purpose. [Prairie Farmer.

Hollow Horn in Cattle.—Feed liberally, and should the disease appear, give a tablespoonful of copperas, and a teaspoonful of sulphur once a day, for three or four days, and put half an ounce of turpentine on the head, back of the horns, two or three times. This I consider far preferable to, and equally efficient with the old, troublesome and unfeeling mode of boring the horns. [Ib.

Choked Cattle.—When an animal is choked by a substance getting into the windpipe, the New England *Cultivator* directs to raise the animal's head, open his jaws as wide as possible, and then throw down his throat a handful of gunpowder. This will cause him to eject the obstruction by coughing. But choking may frequently be relieved by ramming the obstructing substance down the throat of the animal with a smooth round stick.

Foot-rot.—Mr. W. Morgan, in the *Wool Grower*, has a way of curing foot-rot, which he gives: "There has been much said lately of the foot-rot in sheep, and as I have had it in my flock, and effected a cure by a very simple method, I will state it for the benefit of your readers. I put salt between their hoofs, and rubbed them together until they were quite chafed, and then put plenty of salt between the hoofs, and the cure was certain. I have told some of my friends, and they have tried the plan with the same success."

Charcoal and Salt for Sheep.—A contributor to the Northwestern *Cultivator* writes:—

"It is generally conceded that wet pastures are unfavorable to the health of sheep. I have kept a flock for four years in a pasture of this description, for the first two years with unfavorable results. My sheep were unhealthy, and many of them died. I ascribe it to the wetness of my pasture. Upon the recommendation of an old farmer I gave the sheep charcoal, mixed with salt. The beneficial effects of this mixture were soon apparent. My sheep presented a more healthful appearance. I have continued this treatment, and the animals have continued to thrive. I suppose the medicinal qualities of this mixture consists in the disinfecting property of the charcoal." And in the invaluable tonic and alterative properties of the salt, we may add; for, like many other remedial agents, this article, when given in small doses, augments the digestive functions. In larger doses it is cathartic.

Scab in Sheep.—Flower of sulphur is believed to be both a certain preventive and a safe cure. Let it be mixed with their salt, in the proportions of one of sulphur to two of salt, to equal parts of each when had, if they will eat it so. A portion of sulphur might be rubbed on spots where the wool is lost off. The mixture should be fed to them in troughs, that the sulphur may not be lost. It is also advisable to shelter them from rain immediately after administering such doses. Two or three doses will generally rid a flock of it, and a few doses in a year will prevent their taking the disease. [Prairie Farmer.

Horn Distemper, etc., in Cows.—I have from my boyhood been acquainted with, and administered for the disease in cows called horn distemper, horn ail, &c, and have never failed of effecting a speedy cure, nor did my father, who for many years used the same simple remedy.

Immediately after the symptoms appear, which are want of appetite, coldness of the horns, dryness of the nose, and dullness of the eyes, with a small gimlet I bore a hole about three inches from where the horn connects with the head, into which, with a small syringe, I inject once a day, about two table spoonfuls of vinegar, to which there has been previously added of each one teaspoonful of black pepper and salt. The hole should be kept closed with some kind of wax, except when administering the medicine.

[Cor. Country Gentleman.

How the Poet Works.

It was a small back room of a large building in the centre of the town, and looking immediately upon one of the meanest masses of dead brick walls in Sheffield; from *its* windows he could see none of the fine scenery in the neighborhood, that might serve even to *remind* him in summer of pastoral Alpine landscapes, or in winter of falling avalanches—of the cottages, the lakes, or the waterfalls of Switzerland at any season. Mr. Everett one day remarked to Montgomery that Matlock would be a fine situation for the permanent residence of a poet, as the beauty and variety of the scenery, according to the current opinion, would induce sublime thoughts. He partly exploded the notion; observing that he should have to lament for his own situation, if it was so. "From the room in which I sit to write," said Montgomery, "and where some of my happiest pieces have been produced—those I mean which are most popular—all the prospect I have is a confined yard, where there are some miserable old walls and the back of houses, which present to the eye neither beauty, variety, or anything else calculated to inspire a single thought, except concerning the rough surface of the bricks, the corners of which have either been chipped off by violence or fretted away by the weather. No; as a general rule, whatever of poetry is to be derived from scenery, must be secured before we sit down to compose—the impressions must be made already, and the mind must be abstracted from surrounding objects. It will not do to be expatiating abroad in observations, when we should be at home in concentration of thought."

[James Montgomery.

The Basin of the Atlantic Ocean.

The basin of the Atlantic Ocean is a long trough, separating the Old World from the New, and extending probably from pole to pole. This ocean furrow was probably scored into a solid crust of our planet by the Almighty hand, that there the waters which he called seas might be gathered together so as to let the dry land appear and fit the earth for the habitation of man. From the top of Chimborazo to the bottom of the Atlantic, at the deepest place yet reached by the plummet in the Northern Atlantic, the distance in a verticle line is nine miles. Could the waters of the Atlantic be drawn off so as to expose to view this great sea-gash, which separates continents and extends from the Arctic to the Antarctic, it would present a scene the most rugged, grand and imposing. The very ribs of the solid earth, with the foundations of the sea, would be brought to light, and we should have presented to us, at one view, in the empty cradle of the ocean, "a thousand fearful wrecks," with that dreadful array of dead men's skulls, great anchors, heaps of pearls and inestimable stones, which in the poet's eye, lie scattered in the bottom of the sea, making it hideous with sights of ugly death. The deepest part of the North Atlantic is probably somewhere between the Bermudas and the Grand Banks. The waters of the Gulf of Mexico are held in a basin about a mile deep in the deepest part. There is at the bottom of the sea, between Cape Race in Newfoundland and Cape Clear in Ireland, a remarkable steppe, which is already known as the telegraphic plateau. A company is now engaged with the project of a submarine telegraph across the Atlantic. It is proposed to carry the wires along this plateau from the eastern shores of Newfoundland to the western shores of Ireland. The great circle distance between these two shore lines is 1600 miles, and the sea along this route is probably nowhere more than 10,000 feet deep. [Prof. Maury.

A Steamship to Talk About.

An immense iron steamship is now constructing at the yard of Scott, Russel & Co., at Blackwall, near London, for the Eastern Navigation Company. She is to be a screw and paddle steamer. The dimensions will be nearly as follows: Tonnage, 10,000 tons, or builder's measurement, 22,000 tons; extreme length, 500 feet; extreme breadth, 82 feet; depth of hold, 58 feet, with screw and paddle engines of the aggregate nominal horse power, 2,800 horse; stowage for coals, 10,000 tons; for cargo, 5,000 tons; 500 first class cabins, with ample space for troops and lower class passengers. Her entire construction will be similar to the tube of the Britannia bridge, a kind of double ship, with a space of 2 feet 8 inches between, of a cellular formation. She is to have 14 water-tight compartments, most of them 40 feet apart. With these, it is said she will carry out sufficient fuel for a voyage to Calcutta and Australia and back to England, and avoid the delay of lenngthened stoppages and coaling, which other steamships are subject to. It is expected that she will accomplish the voyage between England and India, by the Cape, in 30 or 33 days less time than the distance is at present done by sea-going steamers. She is to be completed in eighteen months.

The Puzzled Pig.

One of our western farmers, being very much annoyed last summer by his best sow breaking into the cornfield, search was instituted in vain for a hole in the rail fence. Failing to find any, an attempt was next made to drive out the animal by the same way of her entrance; but of course without success. The owner then resolved to watch her proceedings; and posting himself at night in a fence corner, he saw her enter at one end of a hollow log, outside the field, and emerge at the other end, within the enclosure. "Eureka," cried he, "I have you now, old lady!" Accordingly, he proceeded, after turning her out once more, to so arrange the log, (it being very crooked) that both ends opened on the outside of the field. The next day the animal was observed to enter at her accustomed place, and shortly emerge again. "Her astonishment," says our informant, "at finding herself in the same field whence she had started is too lidicrous to be described! She looked this way and then that, grunted her dissatisfaction, and finally returned to the original starting place; and after a deliberate survey of matters, to satisfy herself that it was all right, she again entered the log. On emerging once more on the wrong side, she evinced even more surprise than before, and turning about, retraced the log in an opposite direction. Finding this effort likewise in vain, after looking long and attentively at the position of things, with a short, angry grunt of disappointment, and perhaps fear, she turned short round, and started off on a brisk run; nor could either coaxing or driving ever after induce her to visit that part of the field." She seemed to have a "superstition" concerning the spot. [Knickerbocker.

Value of Leached Ashes.

Some weeks since, I noticed in the *Rural* an inquiry in relation to the value of lime and ashes for wheat. As to lime I have nothing to say, having no practical knowledge on the subject; but as to leached ashes, I have used them more or less for some fifteen years. Naturally, our soil is not adapted to the growing of wheat, so that but few of our farmers attempt to raise any; yet, by the right kind of culture, and the application of leached ashes, it is as sure and paying a crop as we can raise.

For the last ten years, I have sowed from 2 to 2 1–2 acres of wheat—just enough for bread for my family. I apply from 5 to 10 loads of leached ashes to the acre—and should always apply 10 if they could be procured. Sometimes I have drawn them in the winter and spread them, plowing them in, in the spring; at others, I have drawn them and placed them in heaps near the field, and immediately after my wheat is sown and harrowed in, I draw them on and spread them evenly as may be. In so doing, I have not failed for the last ten years of a fair crop, weevil seasons not excepted, while most of my neighbors that have sown on equally as good or better land, have either entirely or partially failed of a crop. This, I know, is to be attributed, in part, at least, to the ashes, from satisfactory tests.

On almost all other kinds of crop, ashes are a most valuable manure, richly paying the expense of purchasing and drawing, where it does not exceed $1 per load.

[Rural New Yorker.

The Napoleon of Cattle-Breeders.—The *Prairie Farmer* gives a long and interesting account of Mr. Jacob Strawn, the Napoleon of cattle-breeders in Illinois. He was born in Pennsylvania, at an early day removed to Licking county, Ohio, where he remained eleven years, and in 1831 removed to Illinois, located on 300 acres near Jacksonville. Buying and selling cattle has been the business of his life, and he has kept on adding to his stock and his broad acres, until his sales of cattle the past season exceeded $96,000, and his farm in Morgan county consists of 7,800 acres in a body, and his farm in Sangamon, of 8,500 acres, both as good land as the sun ever shone upon. His passion for steers began at ten years of age, and it has been growing for forty years. To buy cattle, drive them, feed them, sell them, then own other droves and go through the same process, has been and is the absorbing idea of his mind. He has added to his lands not for speculation, for he never sold an acre in Illinois, but to accommodate his herds. Last fall he had on his farm 2,900 acres of corn, 2,000 head of cattle, 700 hogs to follow and fatten after his cattle, 50 horses, and from 50 to 100 mules. He raises no wheat, oats, or other small grain; the whole surface of his domain being devoted to timber, grass and corn. The half section, 320 acres, is a favorite size for a field on Mr. Strawn's farm, and Mr. S. makes it a condition with all who cultivate for him, that no weeds are to be tolerated. One man will tend a field of 40 acres of corn. The yield is generally 80 bushels to the acre, which is grown and put into stacks at a cost to Mr. S. of 8 cents to the bushel. The corn is fed out, stalks, ears and all.

Soldiering with the Gilding Off.—Here are careless, daring sort of sentences from an officer in the Crimea; but they have a meaning for those who would encourage the military spirit, and delight in holiday parades, without thinking to what they may lead—what is war, for which they are the "preparing."

"We are out here 'soldiering with the gilding off,' and many a young gentleman would be forever cured of his love of arms if he could but see one day's fighting, and have one day's parade of the men who do it. Fortunate it is for us that we have a youth on whom to rely, and that there are in old England men 'who delight in war,' and who will be ready to incur privation, danger and death, at her summons. As to young ladies suffering from 'the scarlet fever,'—the pupils of the 'L. E. L.' school, who are forever thinking of heroes and champions, 'of crowning conquerors' brows with flowers,' and wishing for 'Arab steeds and falchions bright'—if they could but for one instant have stood beside me and gazed into one of the pits where some thirty 'clods of the valley,' all covered with scarlet and blue cloth, with lace and broidery, and blood, were lying side by side, and staring up to heaven with their sightless orbs as they were about to be consigned to the worms, they would feel the horrors of their hero worship, and would join in prayer for the advent of that day—if come it ever may—when war shall be no more, and when the shedding of blood shall cease."

A Touching Custom.—A common practice in Paris, which impresses a stranger favorably, is that of lifting or taking off the hat when a funeral passes. A writer on this subject relates the following:—

"Some years since, we were one of that rushing crowd ever pouring up and down Broadway. When in front of old St. Paul's, all eyes were attracted by the appearance of the crew of the French war vessel, La Belle Poule, which then visited the United States under the command of the Prince de Joinville. The crew were in their naval dress uniform, bright and beautiful, and were sauntering along seeing the sights. All at once they stopped, formed a line, faced inward, and uncovered. How exquisite and touching was the scene when we discovered in that thoughtless, busy, hurrying crowd, a man of foreign birth, evidently poor and friendless, under whose arm was carried a tiny coffin, and by his side the stricken mother. They were in search of a burial for their babe, and were jostled and unheeded in that gay torrent of humanity, until they met these hardy tempest-tossed mariners, who on the instant, with bared heads, stood in silent respect, while the sacred ashes of the unknown infant were passing.

Tansy.—A writer in the New York *Times* recommends the sowing of tansy about the roots of peach trees, as a means of preserving them. He says that he once knew a large peach tree which was more than forty years old, while several generations of similar trees in the same soil had passed away. This led to examination, and a bed of tansy was discovered about the trunk. It was naturally inferred that the preservation of this tree to such a green old age, was attributable to the presence of this plant. It was decided to try the experiment on others, and accordingly a few of the roots were placed about each of the other trees on the premises, some of which gave signs of decay. Not only has it preserved for several years the sound trees, but renovated those that were unsound. The odor of the plant, he says, doubtless keeps off the insect enemies of this kind of tree, and it might have the same effect on others, as the plum, apple and pear, as well as the elm, sycamare, and other ornamental trees.

Smells.—In an article in the *Eclectic Magazine* for March, on the Chemistry of Common Life is the following paragraph: There is a possibility of compounding smells infinitely more terrific than any which nature produces, and of employing them in warfare either for purposes of defense or annoyance. Some substances are sufficiently atrocious in themselves. Swallow a small pellet of powdered sulphur, and it will diffuse a noisome atmosphere around the individual for many days. Take a quarter of a grain of a preparation of telluriam, and though in itself inodorous, it will impart such a disgusting fetor to the breath and perspiration, that the dearest friend of the victim will be ready to indict him as a public nuisance. If a bubble of seleniuretted hydrogen gas be permitted to escape into a room, it will attack the company with symptoms of severe colds and bronchial affections, which will last many days.

Orchards.—Clean the bark of your trees early in spring. Plant out young trees, and in doing so cut off broken and bruised ends of roots and end of tap-root. Use a sharp knife and cut upwards, so that the clean face of the cut when in the ground will be downwards, or like the angle of the first cut of a quill on making a pen when held in a proper position for writing. Dig the holes large and replace the sub-soil with good surface mold, (from the woods, if you can get it,) and manure freely, (old manure.) Many trees require lime and other substances; to succeed well, (see Downing,) do not let the roots come in immediate contact with the manure, nor bend the roots from their proper position; the hole must be large enough to receive them.

The Home of Taste.—How easy to be neat! to be clean! How easy to arrange the rooms with the most graceful propriety! How easy it is to invest our houses with the truest elegance! Elegance resides not with the upholsterer or the draper; it is not in the mosaics, the carpeting, the rosewood, the mahogany, the candelabra, or the marble ornaments; it exists in the spirit presiding over the chambers of the dwelling. Contentment must always be most graceful; it sheds serenity over the scene of its abode; it transforms a waste into a garden. The home lighted by these intimations of a nobler and brighter life may be wanting in much the discontented desire; but to its inhabitants it will be a palace, for outvieing the oriental in brilliancy and glory.

Much of the pain and pleasure of mankind arise from the conjectures which every one makes of the thoughts of others. We all enjoy praise which we do not hear, and resent contempt which we do not see.

New York and Erie Railroad.

On and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass. Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. Sands; retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

FOOTPRINTS OF JEHOVAH IN THE AGES OF REVELATION—NO. 7.

Fifth and Sixth Days.

These are distinguished from the other days of the week by the creation of all animated nature, and from each other by distinct classes—the *fifth day* by the waters producing all those classes of insects and fishes, and sea monsters, whose native element is the water, and the great variety of fowls that fly in the atmosphere above—the sixth day by the earth bringing forth the insect, the reptile, the cattle, and the wild beasts of the forest, whose native element is the dry land. That a great radical distinction exists in the habits and natures of these innumerable classes, is obvious enough—so obvious, that notwithstanding the pagan fables of mermaids, winged lions, or griffons, no instance of any species of the two distinct classes generating together has ever been found; nature cannot produce such a monstrous hybrid. Oh, ye pre-Adamite ages, that geological sages delight to trace up ere time begun, or Adam was fashioned to man, what were the laws of fate which limited your fecundate powers, that ye could never bring forth one poor griffon, to gratify kings, poets, philosophers, or sages, who have sighed and sought to find such a genus! Poor bats—poor membraneous squirrels, and inflated, undulating serpent, your bare webbed members can never compensate for the want of a *feather* or a *fin*. You are of a genus that don't make the pagan compound. Ye sculptors and painters, your genius outwits the ages of geology; but alas! your productions are like the gods of the heathen—they have not the breath of life in them! The record of the man of God has stood the test of near six thousand years, and yet is as impregnable and demonstrable as the existence of ocean and earth!

"And God said, Let the waters bring forth abundantly the moving creature that hath life, and fowl that may fly above the earth in the open firmament of heaven. And God created great *sea monsters*, and every living creature that moves, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind. And God saw that it was *perfect*. And God blessed them, saying, Be fruitful, and multiply, and fill the waters in the seas, and let fowl multiply in the earth." At this time, water insects, fishes and fowls, are the most prolific creatures existing. It is said by naturalists, that a tench spawns a thousand eggs, a carp twenty thousand, a cod millions; and that thirty thousand animalculæ have been reckoned in a drop of water. Pools and ponds, rivers and lakes, are full of living, moving creatures, and the great ocean itself teems with animated beings. The forest and the prairie, the ocean, islands, and the foaming Atlantic wave, are every where enlivened by the feathered fowl. In five thousand miles travel over the broad bosom of the world, I have neither found nor heard of a solitude of inhabitable firmament without them. "O Lord, how manifold are thy works; in wisdom hast thou made them all."

"And God said, Let the earth bring forth the living creature after his kind, and cattle and creeping thing, and beast of the earth after his kind. And it was so. And God saw that it was completed." There is something so remarkable in the impassable barrier God has made between the creatures of the waters and the creatures of the land, that I have never found sufficient philosophy to account for it on mere natural principles. It appears to be so absolute, that there is no invading it. Even the amphibious cannot generate or raise their offspring in more than one element; not only are their classes distinct, but each kind are so distinct that the number of kinds can never be multiplied. Hybrids, whether of fowl or of quadruped, can never reproduce! He who made them saw that His work was good, or complete, and has forever put it beyond the power of the creatures He has formed, to multiply forms and natures that He has not made. How pagan-like are the theories of those would-be philosophers, who imagined that animated organization was at first spontaneous, and then progressive from the lowest forms to the highest! How blasphemous to find in the head of a monkey and the form of the negro, the connecting links between the brute and the human species! Little less does it appear to me for the geologist to dogmatize upon pre-Adamite ages, because he finds the leafy form, the woody fibre, the herbaceous and floral shapes of known or unknown kinds, in slate or coal formations. While I write, the window before me has a variety of beautiful impressions of the pine and the palm, and many other herbaceous forms, all made by the frost, although there is not a native pine or palm tree nearer, the one than a thousand miles, and the other five hundred. So almost every figure ever found in a plane, is abundant in the snow flakes outside the door. It is as easy for nature to form these shapes in the rock, the slate, and the coal beneath the surface of the earth, as it is in the frosty atmosphere of winter, or in the balmy breezes of summer. Chemical or geological forms are more permanent than the herbaceous, and the herbaceous than the frozen; but the original chemistry of the one is as inscrutable as the other; all are the works of Jehovah; and I dare not—I would not for all the reputation or wealth that the world of science could give me—make His works contradict His words. I follow where the footsteps of Jehovah's revelation lead.

S. D.

For the Sabbath Recorder.

RESPONSIBILITY OF PROFESSING CHRISTIANS.

No one doubts the obligation of professing religion as soon as there is satisfactory evidence of a divine change. Nor does any one endeavor to raise an argument against the binding duties devolving upon every professor. Yet perhaps but few entertain such views of the weight of responsibility lying upon them as they ought. Hasty professions are often made under no sound considerations, but persons are moved to it by excitement or an effect produced on the passions. In all probability, if it was as disreputable to profess Christianity as it used to be, and persecution and exposure to death were likely to attend it, persons would be more calculating. No doubt many would demur about taking their stand among the followers of the Lamb, if imprisonment and the stake were likely to be the result; and many throw off their profession as quick as they can their garments. The present times are easy upon professors, and, generally speaking, there is no fear of evil results from the world. Perhaps, in some cases, to cast in our lot with the people of God may be a stepping-stone to worldly improvement and success. It is hard to believe that, provided the holy and exemplary and self-denying Christianity of primitive times were carried out, we should escape so easy as we do. The spirit of the world is the same as it ever was—perfectly antagonistic to real pure and spiritual Christianity. Man in an unregenerate state hates God as a spiritual and holy being, and all that bear his image; and were there less dissimilarity between the professor and the profane, human nature would show its real character in persecuting the saints. Whatever may be the results, however, it must be remembered, that every professor of religion occupies new ground, and is bound by every consideration to carry out his profession as the Scriptures require, and bear the natural lineaments of a renewed and sanctified nature, and if he is not prepared to do this, to throw up his profession altogether.

There is a great deal of work for a Christian to perform, and the moment he has joined the ranks of the Lord's people, he is bound to set about it, without delay, and follow it up until he is called to his reward. There is much to be done internally—much to oppose and vanquish. The enemy that had entire possession, and had despoiled the beautiful house in all its departments, still lingers around, and is ever ready to renew his devastation, and must be faithfully studied and steadily resisted. In this department of duty there must be no remissness; for God holds us responsible, both for the discharge of the duty and the result. He has given his Word to deposit in our hearts, that we might not sin against him, and his Spirit to arm us for the conflict. The opposition required to be carried out is but part of the work—for improvement is as much bound upon us as others, and we are held responsible equally for growth in knowledge and gracious dispositions and tendencies. If we consider Christianity only as it refers to us individually, it is most certainly a vast enterprise. There is an unlimited volume of truth furnished from nature, providence, and grace, to be studied and learned. The mind, with all its energies, must be engaged, and every facility laid hold of for the intellectual, and especially the spiritual improvement, of which we are capable. Pefection is the standard, and though possibly in this world we may never arrive at it, yet it is well to get as near as possible. The higher our attainments in Christian knowledge and holiness, the brighter will be our example, the happier ourselves, and the more qualified for the future life.

If all the facilities for improvement are binding, then surely we are responsible for our time. It is by study and reflection and reading (especially divine truth) and prayer, that divine influences may be imparted—that we shall grow in grace and in the knowledge of our Lord Jesus Christ. Alas! how many hours, months, and years, are spent in doing nothing, and worse than nothing—spent amid the pleasures and follies of the world, and in those pursuits which tend to lead us away from God, and disqualify us for devotion and usefulness. Many of our youthful professors think but very little of the step they have taken, when under excitement they came forward and united with the church. It seems as if they never considered the onerous duties which devolve upon them, and the new course of life they have to pursue. Hence their time is spent with their old light, trifling and worldly companions, instead of improving it in the acquisition of useful knowledge, which would prepare them for future life. This deficiency in the outset—this want of a proper calculation—it may be a destitution of religious principle—lays a foundation for a dwarfish Christianity, and often for apostacy. At this period a basis is laid, if ever, perhaps, for a good, sound, enlightened and useful character; but in many cases the time passes unimproved, and it may sometimes in future life occasion the lamentation, I have spent my time for nought.

The last consideration, though not the least, we shall present, is the influence exerted upon all around us. This is a point of vast importance, and lies with tremendous weight upon every serious and sensible mind. It has to do with sentiments and conduct, or every-day life. The sentiments we utter are either true or false. They will have a good or evil tendency, according to their character, and will produce greater or less results, according to the deference paid to us by mankind, and the different dispositions and tendencies of mind in those who hear or read them. The sentiments presented to others are not evanescent, vanishing like a shadow, but substantial things—we may say of endless duration. One generation passes away, and another cometh, and the sentiments uttered by parents and ministers and teachers, and all public men, last and are extended on to future generations. Many an erroneous book, written ages ago, is still doing its mischief, and will to an indefinite period. Converted infidels, who have scattered their opinions and issued them through the press, have experienced the keenest anguish on reflection of the results produced on mankind. The every-day life is a volume that every one reads who knows and can observe our demeanor. Our actions are written on the memory of others, and perhaps there is no one living but produces some influence on some minds. The effect of our lives will be in proportion to the position we occupy in society, and the estimation of mankind. Upon the whole, we shall see that the amount of responsibility attached to us is not to be defined, and in all probability the judgment day alone can disclose it. How important, then, to walk circumspectly—to act as in the sight of God, and in view of a solemn reckoning; for our Maker and Judge holds us responsible for every thing we say and do, and expects that we will improve the talents entrusted to us for the good of mankind and his glory. [illegible]

SALEM, N. J.

THE GOOD PASTOR.

Last week (says the N. Y. *Evangelist*) we translated from Rousseau, an eloquent tribute to the Christian pastor. That testimony was just. No character on earth has such moral beauty. It is indeed a happiness of this profession, that it involves no injury of rivals—that one's success is not another's ruin. The faithful pastor is only a minister of good. He is the village peace-maker, the school visitor, and the comforter of the sick and the dying, as well as the preacher of righteousness and salvation.

By his very office he is a public benefactor, a fountain of good influences. He is the trusted friend of all his people, their counselor and guide. To him it belongs to confirm the wavering in faith—to inspire hope and courage in those who are ready to despair; and to cheer the spirit that is about to plunge into the awful night of death. His work is complete when he sees those to whom he has preached, departing from life in peace and in triumph. Legh Richmond, in his Young Cottager, thus describes the death of that poor child:

"She turned towards me with a look of surprising earnestness and animation, saying, You, Sir, have been my best friend on earth; you have taught me the way to heaven, and I love and thank you for it; you have borne with my weakness and my ignorance; you have spoken to me of the love of Christ, and he has made me to feel it in my heart; I shall see him face to face—he will never leave me nor forsake me. Dear Sir, God bless you."

Who would not prefer this benediction of a dying child to all the applauses of successful ambition? This is the pastor's joy and crown. His reward is not in fame—but in good accomplished, in tears dried, in sorrows soothed, and human spirits redeemed. The greatest minister is he who has saved from death the greatest number of his fellow-beings.

The secret of his power lies in preserving pure and stainless this sacred character. Great importance is given to talent and study, and justly so. But after all, the strongest influence which one man can exert over another, is a superior moral feeling. It is the power of a sincere heart, of devotedness, of purity of life, of patience under suffering, of love and of humility.

Pascal distinguishes three kinds of greatness among men—Power, Intellect and Virtue. "Great geniuses have their empire, their renown, their elevation, their victories, and have no need of external grandeur. They are discerned not by eyes, but by spirits—but that is enough. The saints have their empire, their renown, their elevation, their victories, and have need neither of external glory nor intellectual fame, which do not belong to their order of minds, and which can neither add to nor take from that eminence which they desire. They are seen not by the eyes or by the curious spirits of men, but by God and by angels—God alone is sufficient for them."

Here is the distinction at which the minister of Christ is to aim. All cannot be great men. But all can be useful. All can be devoted to doing good, and exert that influence which comes from a holy life.

SIC VITA—SUCH IS LIFE.

At the east end of this aisle—Church of St. Mary Overy, London—stands a monument, a portion of whose inscription consists of the first verse of the following beautiful poem, which is thought, and with some probability, to be the production of Quarles.—*Annals of St. Mary Overy, by W. Taylor, p.* 99.

Like to the damask rose you see,
Or like the blossom on the tree,
Or like the dainty flower of May,
Or like the morning of the day,
Or like the sun, or like the shade,
Or like the gourd which Jonah had:
Even so is man, whose thread is spun,
Drawn out and cut, and so is done!
The rose withers, the blossom blasteth,
The flower fades, the morning hasteth,
The sun sets, the shadow flies,
The gourd consumes, the man he dies.

Like to the grass that's newly sprung,
Or like the tale that's just begun,
Or like the bird that's here to-day,
Or like the pearled dew of May,
Or like an hour, or like a span,
Or like the singing of a swan;
E'en such is man, who lives by breath;
Is here, is there; in life, in death;
The grass decays, the tale doth end,
The bird is flown, the dews ascend,
The hour is short, the span not long,
The swan's near death! man's life is done!

Like to a bubble on a brook,
Or—in a mirror—like a look,
Or like a shuttle in the hand,
Or like a writing on the sand,
Or like a thought, or like a dream,
Or like the gliding of a stream;
E'en such is man, whose life is breath,
Is here, is there; in life, in death!
The bubble's burst; the look's forgot;
The shuttle's flung; the writing's blot;
The thought is pass'd; the dream is gone;
The water glides—man's life is done!

A SABBATH AMONG THE SAMARITANS.

The Rev. Dr. Prime, well known as the Irenæus of the New York *Observer*, and now the acting editor of that paper, is about to issue "Travels in Europe and the East," in two volumes. He is a graceful and pleasing writer, and in his lengthened tour enjoyed abundant facilities for making a most readable and valuable book. The following graphic sketch, which is from the advanced sheets of the work, describe a Sabbath among the Samaritans, and the procession of that ancient people to Mount Gerizim, where they still perform their religious rites four times a year:—

A remnant of the ancient Samaritans still lingers in Nablous. After our morning service, we walked out and found their synagogue, a low building, which we reached by passing underneath the basement of one or two houses, and up a narrow lane, till we came to a platform, where the priest was smoking with several of his friends around him. At our request, he came down and led us through the court—in which a large apricot tree was standing, loaded with fruit—and unlocking the door of the synagogue, he requested us to take off our shoes, which we did; and in our stockings we walked in. The room was low and arched, with heavy, gloomy walls. A few lamps were suspended across it, and book-shelves, on which were scattered copies of parchment. At one side of the room was a platform with a single step, and behind a curtain, in a recess, were kept the sacred records.

The old priest asked us various questions about Paris, and London, and America; and whether there were any Samaritans in our country, or in any of the countries through which we had passed. He manifested but very little interest when we told him that we knew of none. He spoke of the Jews—whom they hate as of old—and said that the Messiah was not to come of Judah; and denied the correctness of the interpretations which have been given by modern commentators. He then inquired of us if we would give him a present for showing us the old manuscript which they claim to be 3460 years old. We assented to his terms, and he stepped behind the curtain and produced it. It was on wire rollers, and had an ornamented head-piece to the box which enclosed it. The whole was covered with a rich silk embroidery, and kept with great care. As it was brought out, a few Samaritans, who had come in with us, laid their hands reverentially on their breasts, as if deeply affected with veneration for the ancient manuscript. We sat down, Turkish fashion, upon the floor, and examined it. If it is as old as is pretended, it must be the most remarkable preservation on earth; but we had no faith whatever in the story. The venerable priest, with his long, white beard, discoursed upon it, to our very slight edification, as we did not understand a word he said, unless it was interpreted by Mr. Thompson, who was our medium of conversation. The natives, with fixed eyes, listened as long as it was open. We gave the old man a half dollar, according to agreement, and then, at his request, doubled the donation. The doorkeeper and two or three others clamored also for a present; and after all had been about half satisfied, we took our departure.

I must add, that some scholars regard this manuscript as undoubtedly very ancient, and therefore of great value. As this sect will doubtless soon become extinct, those who believe in its importance have suggested the expediency of taking measures to secure it from destruction.

Taking a lad with us for our guide, we walked out of the city, to wander for an hour or two among scenes of sacred interest that skirt this remarkable and venerable town. It was natural that we should wish to go from the synagogue of the Samaritans to the hill on which they had worshiped from the earliest ages of their history. Even now, and four times in every year, they march in solemn procession, reading the law as they go, and ascend to the summit of Gerizim and perform their worship, not without the shedding of blood. It was, therefore, with strong and strange emotions that we took their line of march, and on the Sabbath day, when, more than on any other, we would feel the contrast between our own and the ancient Jewish forms of religion, we wended our way out of the upper gate. The path led us through well-tilled gardens, and among various fruit trees, to a large fountain where several women were washing clothes. They made themselves merry with our appearance, and we were pleased to see that they ventured to enjoy themselves by the inspection of strangers. The winding path up the hill, to avoid the steepness of a more direct ascent, was rough, but in twenty minutes we arrived at the ridge, and then bore off to the eastward toward a wely, or tomb of a saint. A short distance from this was a hole in the ground stoned up, perhaps six feet deep and four across; ashes and brands were lying in it, the memorials of recent sacrifice. For although we have the impression that even in Judea there is no more sacrifice for sin, and the day has long since gone by when the blood of bulls or of goats is shed in worship of the God of heaven, it is true that this remnant of the ancient Samaritans come up hither, and once in every year, at the feast of the Passover, they slay and burn seven lambs at the going down of the sun. They lodge all night in tents upon the mountain and descend the next day. Again they come on the day of Pentecost, and at the Feast of Tabernacles, and on the day of Atonement; a people over whose hearts is a double veil, and who will doubtless never have it removed. A little further on we came to the foundations of a large fortress or temple, the walls of it about ten feet thick and made of immense stones. We were ready to believe that this is the ancient temple of the Samaritans; but Dr. Robinson determines it to be the remains of a castle erected by Justinian.

Certain it is the Samaritans themselves attach no sacredness to these ruins; and their tradition would undoubtedly have preserved the identity of these stones with those of their temple, if such were the fact. We examined with much attention a number of flat stones, on the west side of the walls, lying on the ground, under which we are told are the twelve stones brought up by the children of Israel from the river Jordan, and with which the altar of the Samaritans on this hill is said to have been built. Now they are buried under these; and here they are to lie until the Guide, the Saviour of the Samaritans—not the Messiah of the Jews—appears.

And then we came to the Holy Place—the Most Holy—a broad flat rock, like a threshing-floor, level with the surrounding earth, and sloping westward to a cistern into which the blood of sacrifices may have flowed. No one of their people now treads upon it unless he first takes off his shoes. Wherever they now pray, they turn their faces toward this sacred spot. Doubtless their temple stood over this rock and the site of its wall can be distinctly traced. In their zeal to have a monopoly of the holy places, the Samaritans show us on this height the spot where Abraham offered his son. As we stood among these memorials of this remarkable people, it was painful to reflect that they are perishing from among men, without the slightest evidence being given that any of them are brought to the knowledge of the truth. They are dwindling away, and one or two generations more will probably terminate their race. Dr. Robinson thinks that there are not more than one hundred and fifty now left in their entire community.

A CHRISTIAN'S DEATH.

We find in *Zion's Advocate* a thrilling narrative of the dying hours of Rev. C. B. Davis, a Baptist minister, who recently died in Portland, after long and excruciating sufferings. It was communicated by Rev. Dr. Shailer. We make a few extracts:—

One day he said:

"As the foundation of my religious peace, every thing instantly slides away from me, except a renovating faith in the atoning sacrifice and merits of the Son of God. Here I seem to cling with all the earnestness of which my nature is capable; and I do so because, whether living or dying, I can find no other resting-place in the universe for my spirit. In anguish or in relief, and almost instinctively, the voiceless outgoings of my soul are:

'Rock of Ages, cleft for me,
Let me hide myself in thee.'"

"I would choose no affliction, nor aggravate the trials of life by repining comparisons, as if the bitterest dregs of grief were mine alone, or this or that form of adversity were preferable to my own. I would submissively and adoringly accept whatever trial God appoints, since that is always the very best affliction."

"The affliction of some persons is as if an eagle were unpinioned to expand and soar and praise its Maker. The affliction of others is as if an ox had broken his leg; they hobble along with their eyes and aims only downward to the earth. Their brutish nature is unchanged."

"Strange existence!—declining into vigor, dying into life, expiring into immortality! passing away, that I may remain forever—sinking into the grave, that I may reach the heavenly places—suffering onward into the far more exceeding and eternal weight of glory! O, what is man? What am I? A sinner, a poor sinner."

"Were I able, I would love to write a tract on immortality, from the gate of the celestial world, and multiply and scatter it, like leaves from the tree of life, to the loved ones on earth to whom I can no longer speak."

"Sufferings indescribable, sufferings indescribable, sufferings indescribable; but happiness beyond description, happiness beyond description, happiness beyond description."

Very frequently in the severity of his sufferings he would exclaim, "Lamb of God, be my pattern, be my pattern!"

"God my supporter and my hope,
My help forever nigh"—

"Yes, forever nigh. Blessed forever."

"This dying into life—this expiring into immortality—O, how glorious! how infinitely blessed!"

"There's glory in my soul, unutterable and inexpressible. A sinner saved through Christ! O, divine and infinite love!"

"The apostle's vision of a rainbow round about the throne could not exceed some views of the heavenly world that have been presented to my mind. An artist would joyfully spend ten thousand years to represent such glory."

"I have asked God only to give me a quiet trust in him, as that is all I think my poor shattered frame can bear. He has given me that, and much more. He has lifted the veil and given me such a view of himself, of Christ, of the Holy Spirit, that full and complete divinity, that I cannot express to any human being. My soul seems lit up with the glory of God. I would love to prostrate myself before him, and offer one prayer, and then lay down this body of death that my spirit might soar to those blest regions of glory."

When told by the physician that he could not live twenty-four hours longer, he exclaimed, "blessed, blessed news! Welcome, everlasting life."

He lingered a few hours, but was not able to converse much, though in the full possession of his reason, and with his countenance and soul glowing with joy. His last words were, "Ease in death—ease in death—peace, peace, peace. Amen. Amen."

A moment before his death, after the power of utterance was gone, his companion said, "If all is peace still, press my hand." He pressed her hand, and departed to his peaceful and heavenly home.

WELL ANSWERED.

We clip the following from the occasional correspondence of the *Evangelical Lutheran*. It contains a hint which may be useful to more than one smart young man.

One of our smart ministerial youngsters had a church to dedicate, and wrote to a venerable brother, inviting him to preach the sermon on the occasion. He used language something like the following:—

"We expect great things of you; load your heaviest piece of artillery, give us a regular 48 pounder; let your shot be heated to the intensest white; ram all down with a handspike, and let there be such a report as will exceed an Alpine avalanche in thundering roar; blow your loudest trumpet; beat your biggest drum, let your steam whistle give out its most piercing scream. The Methodists and Presbyterians have lately had their big guns here; I want one of ours to be fired off too. Now, mind, every one will be on tiptoe, and we shall be disappointed if you do not make a most decided hit. The extent of our collection will depend upon your effort, and if you do not come up to the expectations of the people, we shall not do much. All the lawyers and doctors in town will be there, and you must come well prepared," &c.

The venerable minister answered somewhat after this fashion:—

"I never was a soldier, and do not understand artillery tactics; I never blew anything but a tin toy-trumpet, and that only when I was a child; I have not beat a drum since I used to hammer my mother's brass kettle with her rolling-pin, and for this I got beat myself; my jaws have grown stiff, and I cannot whistle any more at all, much less do it after the locomotive fashion. I am neither a big gun nor a little gun, though I do sometimes shoot at *simple* people. You see, then, I am not qualified to perform your service, and you must get some other brother to do your firing, drumming, trumpeting, and whistling. I am sure the lawyers and the doctors would be disappointed, for people usually are, where the highest expectations have been cherished; and as, according to your own owning, the collection would be small in consequence, I will not be the cause of it, and hence must decline."

AN AGED SAINT IN A POOR-HOUSE.

In a religious paper, during the present year, there was published an obituary notice of a Christian female who had died, at the age of seventy-six, in a country poor-house. The obituary says of her that, "more than half a century ago, she became the subject of God's grace; that she loved the praying circle, and house of God, always loved to talk about the Saviour's love, and the exercises of a gracious soul." A recent correspondent of the paper in which this obituary appeared, passes some very just censures upon the church with which this aged Christian was connected, and furthermore adds, "I have reason to believe that, from the time she was sent to the poor-house to the day of her death, she never heard a sermon, never was made glad by a pastoral visit; but there lived and died a church neglected, but not a God-forgotten saint."

We publish the above without giving names, localities or dates; for our purpose is not to point the finger of scorn at any one, but to impress a profitable lesson upon ourselves. Is it, disciple of Christ, an impossibility for such a sad occurrence to happen in the church where *we* worship? Is there such a degree of Christian acquaintanceship among the brethren of the household of faith, that one of our church-members could not fall into poverty and sickness without its being known, and if known, without the sufferer's being pitied and relieved? Do we feel, in any adequate degree, that one purpose of our being incorporated into a church is, that mutual sympathy may be in continual exercise? And that it can only be exercised by seeking to know at least some little about those with whom God commands us to rejoice and weep? There is danger lest, in the hurry and bustle of these busy times of ours, we do not often enough question ourselves as to the duties we owe to God, to others, and to ourselves, in the varied relations of life.

[Christian Intelligencer.

BIBLE BONES.—An old man once said: "For a long period I puzzled myself about the difficulties of the Scripture, until at last I came to the resolution that reading the Bible was like *eating fish*. When I find a difficulty, I lay it aside and call it a *bone*. Why should I choke on the bone, when there is so much nutricious meat for me? Some day, perhaps I may find that even the bone may afford me nourishment."

THE AWARDS OF THE FUTURE.

Continued from last week.

The Scriptures declare that "the carnal mind is enmity against God." Rom. 8: 7. And the carnal mind is the governing principle of all who are not renewed by grace; for "that which is born of the flesh is flesh." John 3: 6. Perhaps some may suppose, that the term "enmity" does not imply that sinners positively *hate* God, but only that they prefer their own gratification to the service which He requires. It is certain, however, that this preference is obstinate and unyielding; nothing but the Spirit of God can overcome it. Besides, if we consider the nature of the service which God requires, we shall find that it consists, not merely in external acts, or such acts as are apparent to men, but in the exercise of *love* to Him. A positive *delight* or *complacency* in the Divine Being is as much a requirement of the Law as any thing else. And as God insists upon this, and will continue to insist upon it, not only in this world, but in the next, and to all eternity, it is clear, that the sinner's obstinate and unyielding refusal to delight in Him amounts to nothing short of positive hatred.

Now it is most certain that, in the exercise of this hatred, the sinner can find no happiness. So long as the objects of time and sense engage his attention, the necessity of loving God with a positive delight in His character may not be so pressed upon him as to arouse him to any particular consciousness that the actual feeling of his heart is positive hatred instead; therefore, he is not aware that his hatred, or enmity, is of such a nature that it must, of necessity, destroy his happiness. Hence, he imagines that the misery of a sinner in the future state grows mainly, if not altogether, out of the *arbitrary appointment* of God; and sometimes, he vents himself in blasphemy against God on this account. It is nevertheless true, that his hatred is of that nature that, when it is brought into action under a clear view of the fact that God insists upon a feeling directly the opposite, it will render him perfectly miserable; there is no element of happiness in it. And it is certain, that this clear view will arise, when the objects of time and sense are done with. No intelligent being can take leave of these objects, and pass into the next world, conscious that he will behold them, and have to do with them, no more, without at once awaking to see that there is a natural necessity that *some* object shall engage his mind and enlist his affections. This object is God; and the sinner and God being thus brought together, (face to face, as it were,) God insists upon that love, or delight, in Him, which is the fulfilling of the Law, and the sinner, having no heart for it, obstinately and perseveringly refuses. The necessary result is misery, nothing else but misery.

We all know, from experience, that in the exercise of hatred, even towards a fellow creature, there is naught but unhappiness. The faculty or power of hating is a very important element of our nature, it is true, and was given us for wise and important ends; but it is lawfully exercised, only when the object towards which it is directed may be lawfully destroyed. If directed towards an object which it is wrong to destroy, it is unlawfully and wickedly exercised, and is therefore a source of unhappiness to the subject of it. Two persons who cordially hate each other, may enjoy comparative quietude of mind, so long as they do not come into one another's way, nor think of one another. But let them be brought face to face; let them be shut up in the same room together; compel them to be one another's companions for a time—and how quickly is the scene changed! If they do not, in the exercise of their mutual hatred, attempt one another's lives, they are at least as wretched as they well can be. What is there in their hatred to make them happy? What element of comfort can there be in it? They feel themselves so completely wretched, that they long to get away from one another's company. Every minute they are together seems an hour, every hour a day. They cannot endure it; they need to love one another in order to be happy. If one of them loves, and the other hates, then the one who hates will be unhappy, the other will be happy! That there was such an element of misery wrapped up in their nature, they never suspected; but now, being brought into circumstances which call it into exercise, they awake to the full consciousness of it, and are unhappy without any thing arbitrarily inflicted upon them to make them so.

So when a sinner goes out of this world into the next, and has bid adieu to all the objects of sense which entertained his mind and filled his heart here, he finds no other objects to engage his attention but those which are spiritual. In such objects he must find his happiness, if he can. These objects are God, angels, the spirits of good men, devils, and the spirits of wicked men. Some of these he must be able to associate with, and love, if he would be happy. That he can associate with devils and wicked men, so as to love them, and feel that they are lovely, is impossible. And he cannot associate with and delight in angels and good men, unless he can also delight in God, for they all bear the image of God, and only reflect what they receive from God. He is therefore shut up to the necessity of finding his happiness in God, if he finds it at all. And being in this situation, it may be said of him, that he is brought face to face with God, notwithstanding God is absolutely invisible. He is now fairly awake to the necessity of loving God with a positive love and delight. But alas! he cannot do so. Enmity against God is the governing principle of his heart. The moral perfections of God afford him no satisfaction; and the more he contemplates these perfections, the greater is his opposition to them. Instead of loving, he hates his Maker, and in the exercise of this hatred is perfectly miserable, although nothing is arbitrarily inflicted upon him to render him so. The more he thinks of God, the more he hates Him; and the more he hates, the more miserable he feels. And as he never can forbear to think of God, because he can never again get into a situation where other objects will occupy his attention, so his misery goes on increasing to all eternity—the worm that never dies—the inward fire that never is quenched. The employment of no force is needed to drive him from God's throne, for gladly would he flee away to some place where God is not, if such place could be found; but "whither shall he go from God's Spirit, or whither shall he flee from his presence?" Whichever way he turns is hell, because he himself is hell.

According to this view, the hell of sinners in the future world grows out of, and is caused by, the enmity of their hearts against God, and is not a condition of torment *arbitrarily imposed* upon them by a stronger Power. And the eternal hopelessness of it grows out of the determined obstinacy, the unyielding perverseness, of their enmity. It is an enmity deep-rooted, desperate, and pervading every power and faculty of their nature. Moral suasion has no power to subdue it; the most intense sufferings do not furnish motives sufficiently weighty to induce them to dismiss it; in short, no power but that of the Spirit of God is at all adequate to destroy it. Hence, when an unrenewed sinner passes into the world of spirits, nothing is wanting to make it a hell of hopeless, irremediable despair, but for God to leave him to himself, or simply to say, "Let him that is filthy be filthy still."

Such is the way, then, in which the punishment of sinners can take place strictly *according to the course of nature.* And as we remarked, substantially, in our last, if *Natural Religion* were the only system of religion devolving its obligations upon man—if Christianity and its sanctions had not been introduced, and the moral government of the world thereby modified in some very important respects, probably no other punishment would be inflicted. But if the mediation of Jesus Christ *does* modify the moral government of the world, it must exercise its modification upon the final judgment and the retributions which thence follow.

But we shall pursue this point in another article. We had expected to say all we had to offer, this week; but for the sake of presenting our views upon the dependence of the recompenses of eternity upon the innate laws of our nature, and because of the importance of the subject, we have spread out our thoughts more than was necessary to meet the issue raised by Bro. Griswold. T. B. B.

AGRICULTURE IN PALESTINE.

A copy of the *Evening Post*, containing the following article from the pen of Mr. Bryant, and the letter of Mrs. M., were received, accompanied with a ten dollar bill as a contribution to the enterprise which he so highly commends. T. B. S.

The Agricultural Missionaries in the Holy Land.

In another part of this sheet will be found a very interesting letter from one of the most active and intelligent of the little band of Americans who have founded in Palestine a mission, the ultimate object of which is the spread of Christianity, but one of the principal means of which is the introduction of the system of agriculture and husbandry practiced in our own country. If any practical demonstration were wanted of the wisdom of this method of conciliating the minds of men to the Christian religion, it is to be found in the success of the mission thus far. Every day seems to add to the regard in which these missionaries are held by the Mohammedan natives of the country. The old prejudices against foreigners and Christians are so far relaxed in their favor, that their enterprise is regarded as a benefaction to the country, and for the first time a foreigner and a Christian has received a conveyance in fee of land on the plain of Sharon.

This plain is one of the finest parts of Palestine. The old Hebrew poets refer to its rich fields and flowery pastures, nor is its fertility at all diminished by the lapse of time. At present it gives the Arabs plentiful crops of barley where it is cultivated, and its old olive groves, planted centuries ago, yield abundance of fruit. Its chief town, near to which the mission is situated, is Jaffa, the ancient Joppa, one of the finest cities in all Syria, and anciently, until Herod formed the harbor of Cesarea, the only port possessed by the Israelites. This place has an increasing trade; it is the residence of American and European consuls, and its site, on a bold promontory crowned by a castle and surrounded by gardens and groves of fruit trees, is thought the most beautiful of all the cities of the Syrian coast. The plain of Sharon yields three harvests a year, the first without irrigation, the two others by the aid of water conducted to the roots of the growing plants.

On a former occasion we explained, that the object of the missionaries was to furnish the Jews of Palestine, now supported by the alms of their brethren in various parts of the world, with the means of acquiring their own livelihood, and to induce them to embrace Christianity. Their method of making proselytes is the most indirect and insinuating possible. They stand between the Jews and the Arabs, by whom the Jews are despised, ill-treated, excluded from the pursuit of agriculture, and obliged to live in towns where they can have no occupation; they protect this unfortunate class, give them work and wages, and set them an example of unwearied beneficence. If, after this, they are not won over to the Christian faith, their benefactors are not in fault.

So successful, however, have been their efforts in softening the prejudices of the Arab inhabitants against the Jewish race, that the mission has already attracted the notice of the benevolent in England and in Germany. In England two societies have been formed on a similar basis, one among the Jews and the other among the Christians. The Christian society has already selected the site of its mission in the neighborhood of Cesarea, which lies about thirty-five miles to the north of Jaffa, a heap of ruins tenanted by jackals, on the shore of the Mediterranean.

The Germans, before forming their society, sent out one of their countrymen to Palestine, who remained a considerable time in Jaffa and at the mission, making minute inquiries, observing carefully the proceedings of the missionaries, and watching their success. On his return he made a report which led to the formation of an association with the like objects.

The very slow progress of missions, conducted in the usual manner, has discouraged many benevolent persons who would otherwise be disposed to contribute liberally towards them. It seems to us that in assisting the Agricultural Misson at Jaffa they could not possibly commit a mistake.

The Agricultural Mission at Jaffa.

Letter from Mrs. Minor to her Son in this Country.

The First Conveyance of Real Estate in Jaffa to a Christian—Terms of Purchase—Visit from Mohammed Amalgee—His Mode of saying his Prayers—Grist Mills in Jaffa—Tediousness of Negotiation—Agriculture.

HEBREW BIARRAH, PLAINS OF SHARON,
February 15, 1855.

MY DEAR SON:—We are happy to inform you that we have at length made a selection among the several pieces of land offered to us for purchase by native owners. Through the favor of the authorities of Jaffa, we have secured it in the safest possible manner, not only receiving a deed from the owner, made out and sealed by the Turkish Divan, but also an attested copy of the original grant of this particular land from the Sultan. We expected that the deed would be made out in the name of a responsible native, who would afterwards make it over to us, as has been the universal practice, in similar purchases, by Christians and foreigners; but after the documents were delivered to our Consul, we learned that they had been given, most unexpectedly, to us, in my own name, with the declaration, in the redundant style of Arabic courtesy, that it was the first deed ever thus made out to a Christian and foreigner in Jaffa!

As we had before ascertained, that it is impossible for non-resident foreigners to receive a deed in their own name, we are obliged, for the security of the generous donors, to send them a legally executed mortgage on the land, in the English language, in case of a Providential discontinuance of our work, through death, or unforseen calamities, while the Arabic documents are deposited in the United States Vice-Consulate of Jaffa. While we occupied land by lease only, a number of the principal and more intelligent inhabitants when visiting us would frequently urge us to settle more permanently among them, and express doubts of our remaining, remarking, that other foreigners are generally satisfied with a residence of a year or two at most. In the few days since our purchase, we have received the kindest assurances and congratulations from neighboring landholders and persons in authority—the former declaring that our establishment in their vicinity will greatly increase the value of their property.

Mohammed Amalgee, one of the first executive officers of Jaffa, came out to make us a special visit to-day, to inform us that he had particularly spoken to the new Pasha, (this week arrived from Constantinople on his way to Jerusalem,) recommending us and our object to him, who was so much interested that he determined to communicate with the Sultan, with the design of securing to us every privilege necessary in prosecuting our benevolent work. We could but feel grateful to a Higher Power for this friendly expression from such a quarter. Our visitor again and again repeated, "Now you will remain with us and we shall work together," as he looked over the plain toward Jaffa, at the beautiful little mount on our land. He familiarly related particulars respecting himself and family, and requested medicine for a serious difficulty with which he was afflicted.

As we had dined at his house, and knew something of his luxurious style of living, and disinclination for exercise, we proposed a temperate diet and frequent horseback excursions, which course his good sense evidently approved. While sitting with us, his hour of prayer approached; he suddenly arose, and first laid his gold-embroidered mantle with its glittering epaulettes upon the floor, and also a fine cloth tunic. As he is enormously corpulent, we supposed him overheated, and begged to lay them on a table He replied, that he desired the privilege of observing his devotions, and had laid them down for that purpose. He then stepped out on the terrace before the open door, and called for a "breek," (a water-can with a spout;) one of our people understood his need, and immediately poured water on his hands; after he had washed his face, he sat down upon the ground, and elevating his feet on a stone, washed them also. After wiping with a towel, which we presented, he left his red morocco slippers at the door, and in his naked feet stepped upon his robes, and seven times reverentially bowed himself, praying in a low and earnest tone.

Soon after, one of our Jewish apprentices came in haste on a mule across the plains from the north. He and our principal helper, J. S., had gone with several animals with wheat to the government mills, on the river Ogy, the same morning. He now came back to inform us that there was a new superintendent at the mills, who, not knowing us, charged an exorbitant toll as for strangers, demanding more money than they had taken with them. Amalgee inquired into the particulars, and was very indignant, and though unattended by his usual suite, whom he had sent up to Jerusalem to escort the Pacha, he insisted on riding out to the mills (about two miles) to reprimand the superintendent and reduce our toll. Our young Jew cantered after him, delighted at the idea of such a triumph over the avaricious Arab miller. After two hours Amalgee returned, having accomplished his purpose, and seemed very happy in the opportunity of proving to us the sincerity of his previous expressions of readiness to serve us. Again, February 16, our men did not return from the mills until this morning, and we learn that the superintendent had kept their grain waiting all day, until near evening, and then appropriated but one set of stones to their use, (there are eleven, running day and night,) and had taxed them five times what we have before paid. Further to oppress them, just before the Amalgee arrived, the use of the one set had been refused through the night! In this distress, to the great relief of our faithful helpers, Amalgee appeared, called for the superin tendent, and had a short converse with him, and immediately four set of stones were ap propriated to us, and the toll was reduced below what they require of the natives.

Excuse these minute details, as I wish you to understand how important in our daily toil is the friendly acquaintance and favor of our Turkish superiors. But I commenced writing with the intention of speaking more particularly of our new purchase. We had received about five hundred dollars from benevolent friends, to aid in securing land and a suitable site for building, in order to establish our work on a more permanent basis. As this sum was not sufficient to purchase a farm with buildings and improvements upon it, we desired to obtain an elevation near the sea, on account of health; for building, connected with as much good soil as possible, and this also in an eligible situation, at a convenient distance from Jaffa, our seaport and market. With these considerations we regard our late investment as most happy and favorable. Our land lies about two miles northeast of Jaffa, near the sea. A fine elevation on its eastern side commands a beautiful view of Jaffa, its orange gardens, and the sea all along the coast towards Mount Carmel. It has a level of good soil, three sides enclosing the hill; on the north, and west, and south. The elevation is covered with young grape vines, almond and apricot trees; there is also a flourishing orchard of five thousand mulberry trees on a portion of the level, which are here very valuable. Its area contains about thirty-three acres. On account of the trees and vines, and its nearness to Jaffa, it is considered by good judges as worth more than we have paid for it. The expense of planting and culture of the trees and vines, has been estimated by our neighbors as equal to the whole sum. On each side adjoining, good level land is now offered to us on moderate terms, and it would be most desirable to secure it before it may be taken by others, to enlarge our farm sufficiently for wheat and barley, at least for the consumption of our large family and working animals. But this we have no prospect at present of doing, as we shall first more particularly need aid in building a shelter for ourselves and our laborers, before our time is out on our present leased Biarrah.

The slow manner of doing business here is a great contrast to that which we have been accustomed to at home. For instance, first, the native owner sent us word that he wished to sell this land, stating the price that he had paid for it, and that he would take the same. After ascertaining the facts in the case, and examining the premises, we decided to purchase it, and sent him notice through our kind native Consul. He returned word that it was ours, and that he would come (bookrah) tomorrow, and show us the boundaries and conclude the bargain. After two weeks he came, attended by the Consul and several friends as witnesses. He is a man of wealth and distinction in Jaffa, and owns eight orange plantations. After a short stay, coffee and smoking, and the usual salams, we accompanied them with one attendant to the land and rode round the boundaries, after which our Consul led the way to the summit of the mount, where, sitting on their horses, they made a circle. The golden sun was just hanging over the blue waters of the sea before setting, and the white domes of Jaffa were bathed in the light of their reflections. The Consul addressed Immanuel, the owner, in a solemn and earnest manner, demanding of him, in the presence of those witnesses, if he that day sold to us the perpetual right and possession of the land before us, for such a sum. Immanuel, with the same appearance of solemnity, gave answer in something of the ancient style of the children of Heth to Abraham, that on the Consul's account, and particularly for our sakes, he was happy to grant it and certain privileges and appurtenances, though "worth" so much and so much, yet between him and us they were nothing, and must not be mentioned. After most poetical and piously-expressed acknowledgements of his graciousness, the Consul then addressed us in the same manner, asking if we would accept the terms, and purchase the land before us? We simply responded in the affirmative, being as unprepared as unable in fluency of Arabic to repeat the professions of usual native compliments. Then followed the benedictions and blessings of the whole company, that peace and prosperity might abide with us there, and ejaculatory appeals for Divine protection and favor to our settlement and labors.

At parting, Immanuel promised to have the necessary documents prepared and completed the day following and delivered to the Consul. After full ten days they were deposited in the Consulate. They consist of two rolls, the first, the copy of the primitive grant of the land from the Sultan; and the other a deed from Immanuel to us. The whole process occupied nearly six weeks. We immediately commenced work, two men ploughing between the vines and trees, which is necessary every year to keep them well through the dry season; two more pruning vines and almond trees, which are small, having been much neglected; and two others have commenced a ditch three and a half feet wide and deep around it, intending to set out a cactus-hedge on the thrown-up soil within, if strength and means permit.

It is a very flourishing season. Our wheat looks well, our barley in some places begins to head. In our garden we have now, of excellent qualities, from which we gather daily, white and sweet potatoes, beets, ruta baga, turnips, cabbage, peas, beans and lettuce in fine heads. We have gathered our oranges and sold them in Jaffa, but we have citrons and lemons still hanging on the trees. The almond trees only are blossoming. We have this week commenced planting white potatoes, Indian corn, cucumbers, squashes, tomatoes, egg plants, beans, etc., expecting one crop before we commence raising water in May. The sick, and suffering, and destitute, are with us, and still claim much of our time and service, and all we can spare from our gardens and narrow store. The cases of suffering among the sick and poor Jews have increased the last month. They assure us that they have only received in Jaffa thirty-two piasters each (about one dollar twenty-eight cents) from the great contributions raised abroad for their relief. The daily calls of this distress, and the necessary expenses of our increasing agricultural labor, notwithstanding the severe economy we endure, have so exhausted our limited means that we are greatly straitened in our work, yet we still trust in that Providential Love that has hitherto been manifested for our relief in the darkest hours of trial and privation. Your ever devoted. C. S. M.

CONSTITUTION AND SUNDAY LAWS.

Mistake Corrected.

In an article in the *Recorder* of March 29th, taken from the *New York Dispatch*, we find the following:—

"There is a law on the statute books of the State of New York '*respecting* an establishment of religion,' and 'abridging the freedom of the press,' by making the publication of a paper on a certain day of the week an indictable offense. The law assumes the 'establishment' of the *Christian religion*, to the exclusion of all other religions, and compels the citizens of other religions and of no religion to a mock compliance with that which their consciences disapprove, inflicting punishment for disobedience, as near to burning at the stake as the utmost stretch of the spirit of the age will allow."

Now the above extract would have been all very good, if the writer in the *Dispatch* had inserted the *Roman religion* instead of the "*Christian religion*," as above. We understand the Christian religion to be "the religion of Christ." And as the religion of Christ has nothing to do with any Sunday laws, so also no Sunday law has any thing to do with the Christian religion. A very little acquaintance with history will show to any man, that the Sunday laws, (as respects "rest" on the first day of the week,) *originated* with Constantine, Emperor of *Rome*, about A. D. 321. Therefore, the "*Sunday laws*" are all *Roman religion*, and not the *Christian religion!* And so far as there are now any "*Sunday laws*" *established* in any of the United States, so far *the Roman religion is now established by law in the United States!*

If the writer in the *N. Y. Dispatch* would begin at the right end of the subject, and lay the axe at the root of the right tree, there might be some hope of good being done. C.

THE JEWS IN JERUSALEM.

The following complete and intelligible sketch of the condition of the Jews in Jerusalem was recently forwarded to Dr. Phillipsohn, by whom it was made public. It is indeed a sad state of things, which places on the poor-list 2,800 persons out of 3,600. Surely, something different from the present arrangement is needed to give permanent relief to such a population. The writer says:

"The Jewish population of Jerusalem consists of 5,500 souls, which is divided into two principal congregations, the Sephardim and Ashkenazim. The former number 3,600 souls, 2,800 of which are on the poor-list. They follow the Spanish rite, and derive their origin from the Turkish provinces of Roumelia, Asia Minor, and Egypt, also from Persia and India, further, from Tunis, Tripolis, Algiers, and Morocco. They are governed by a perfectly organized hierarchy of 'Chacanim' (Sages,) with the Chacam Bashaw Rabbenu Abulafy at their head, who has several assistants, the principal of whom is Rabbi Abraham, Ashkenasi.

"The Ashkenasim, about 1,800 in number, follow the German rite, and derive their origin from Europe. They are divided into Perushim and Chasidim. The former, coming from Lithuania, has 950 individuals on the poor-list, and its affairs are administered by a Beth Din, at whose head stands the chief Rabbi, Jesai Bordaki. The Chasidim, deriving their origin from Volkynia (Russia,) Poland, and Gallicia, with 550 names on the poor-list, has its own administration under Rabbi Nisim Back. There is also a small congregation, consisting of 10 families of German origin, with 57 individuals on the poor-list, who, however, stand under the Beth Din of the Perushim.

"Sir Moses Montefiore generally transmits the funds collected for the poor of the Holy Land to the heads of the respective congregations, who distribute the money equally among the poor, sending the receipts signed by each recipient to that gentleman, who then collates them with the list of the poor in his hand, and which list is modified according to the changes taking place among the poor. In other respects, the whole Jewish population of Jerusalem may be divided into Chacanim (Talmudical scholars) and tradespeople. Half of this population consists of Chacanim, who have no other occupation save study at the 'Yeshiboth' (Talmudic academies)."

FASTING AND PRAYER.

The Queen of England has been advised to proclaim a National Fast, and the Bishop of Oxford has contributed a collection of prayers for the use of the devout. The proclamation is received with a very ill grace. It is argued, that it is the rulers who should fast and pray for their sins, and not the nation, which has been sufficiently afflicted. A homily, too, has been read to Samuel, Bishop of Oxford, for his edification; his "Prayers for our Present Troubles" being the text. The homilist thus notices and holds forth:—

"'At the request of many persons,' the Bishop of Oxford lately prepared some forms of prayer for use during the present grievous war. It is a little book of twelve pages, and its design pious and good; but no sound and intelligent Churchman can read them in a mood befitting these serious times, without having the words arise in his mind—'*Ye have not, because ye ask amiss.*' The prayers altogether want adaptation; they are not to the point and purpose, or only so in the slightest degree; the crying and specific sins of the nation, of our rulers, the sins of Englishmen, having public rights and duties, are not confessed; the special wants and requirements, the crying necessities, and real troubles of the time, have no recognition or utterance in these prayers of our Right Rev. Diocesan. His candor, his charity, and his humility, will admit this freedom in the season of Lent, and his quick intelligence will apprehend our meaning almost without illustration; *verbum sap.* It will not need that we should quote for him, at length, the Father who in many words says, that Christians should labor and do with all their might, and then pray as if their labor were nothing. *Ora et labore.* It is of no use to pray, if we do not act—it is profane to ask for miracles with folded hands. In his Collects, the Bishop prays for our fleets and armies: 'Bless them with strength, courage and victory;' 'succor and defend our brethren in our fleets and army;' 'defend our hosts from all dangers of their enemies.' But how shall there be *strength* without food? Will prayer move tons of food, which the proper authorities know not how to touch with one of their fingers? Prayer against enemies, certainly; but the most earnest and continued should be 'Save, O save us from our friends!' 'Give us strength and grace to overcome and vanquish the foolish, the idle, the selfish, the factious, the wicked, in place and power, and enable us to act up to our rights and duties as Englishmen.'"

FEAST OF THE PASSOVER.—The Jews of New York observed the festival of the Passover this year with more than usual eclat. To them it commemorates an event of surpassing interest and importance—their coming out of Egypt on that night when the destroying angel that slew the first-born of the Egyptians passed over the houses of the Hebrews without entering them, as they were marked with the blood of the lamb, which for this reason was called the paschal lamb. There are no less than twelve synagogues in this city; and for some period preceding the commencement of the festival, preparations were made for the feast, which consists of a piece of lamb, representing the lamb sacrificial, bitter herbs, unleavened bread, with a preparation used as a spice, intended to image the cement made for their Egyptian taskmasters. Advertisements abounded, addressed to Israelites, recommendatory—we use the words of Israel Nusbaum—of "a first rate article." Matzoh was in preparation as early as the fourth of last month; and board was offered, where the devoutly disposed should be enabled to comply with all the material requirements of the ordinance. Unleavened bread and all kinds of confectionery have been in chief demand. German Jewish cooks have been in special request. How significant is the fact, (says one of our exchanges,) that while other ceremonies have been preserved by the Jews in their integrity, there is no sacrifice of the paschal lamb—that no priest, no household, presents this offering, the symbol of their deliverance, any more as to the Lord, and that, notwithstanding the unbelief of the Jewish race, and their intentioned persevering adherence to immemorial customs, they are powerless to countervail the Word fulfilled in their experience, as well as their hearing—'there remaineth no more sacrifice for sin.'

TENURE OF CHURCH PROPERTY IN NEW YORK.—The church tenure act recently passed by the Legislature of New York, has been signed by the Governor, and is now a law. It declares all future conveyances to Priests, Bishops, and other ecclesiastics, in their official character, or as corporations sole, void. It also declares void all future conveyances of lands consecrated to religious purposes, unless made to a religious corporation, organized in conformity to the statutes of the State, which require such corporations to consist of at least three Trustees, and not to have an annual revenue of more than $3,000, excepting the Ministers, Elders, and Deacons of the Reformed Protestant Dutch Church of New York; the Rector, Church Wardens and Vestrymen of Trinity Church, New York; and the Minister, Elders, and Deacons of the First Presbyterian Church of New York. As to such lands at present held by individuals, (Bishops or others,) it provides that they shall be deemed to be held in trust for the congregations who use them; and that they shall revert to those congregations on the death of the individuals who now have the title. In case the congregation do not organize a corporation to take the title, the land shall escheat to the State, to be held in trust by it until such a corporation shall be organized.

AMERICAN TRACT SOCIETY.—The church in Farmington, Ct., (Rev. Dr. Porter, pastor,) has adopted the following resolution among others, viz:—

"That the refusal of the American Tract Society to treat slavery as it does intemperance, gambling, and other gross immoralities, or even as it does dancing, sleeping in church, and similar faults, is grossly inconsistent, and if persisted in, will justly forfeit the confidence and support of the Christian community."

The same sentiment is more and more widely pervading the community at large, and will ultimately make itself felt throughout the entire circle of evangelical churches holding fast upon the institutions of God, and the inalienable rights of humanity.

OPINIONS OF RUSSIAN PRISONERS.—The Rev. E. Stallybrass, who is laboring for the spiritual benefit of Russian prisoners in England, says: "As an instance of the manner in which they regarded England, he might say, that it was a common saying amongst the prisoners, 'You English depend on France, France depends on you, and the Turks depend on both; but our Emperor depends on God alone, and fights for him alone!' They spoke of the Emperor as God's Anointed, and to think a thought wrong against him was considered one of the greatest sins."

DEATH OF A MISSIONARY.—Intelligence has been received, that the Rev. John Scudder, Missionary of the American Board in India, died near Capetown, Africa, on the 13th of January, of apoplexy. He had left Madras, and taken residence near Capetown, for the benefit of his healty.

The books published by the Methodist Book Concern amount to not less than 1,000 different volumes. The periodicals have the following circulation:—The Methodist Quarterly, 3,000; National Magazine, 20,000; Ladies' Repository, 20,000; Christian Advocate and Journal, 30,000; Sunday-School Advocate, 130,000; Missionary Advocate, 40,000.

RELIGIOUS INTELLIGENCE.

News from the Missions of the American Board, read at the late monthly concert, had some points of interest. The death of Rev. Mr. Hum, of Bombay, was noticed; also numerous accessions to the churches in Madura. There is a greatly increased demand for evangelical books in Turkey. Orders are received from all parts of the empire, and many proofs occur to show that the reading of them is not in vain. A great work would seem to be in progress in Cesarea, and the numerous villages adjacent. The people are beginning in numbers to listen to the preaching, and many signs of a veritable revival of religion exist.

The *Congregationalist* states that the Congregational church in Hanover, Mass., with not a little difficulty, has for many years raised $400 per annum for the support of its pastors; a division has recently occurred for the better accommodation of the parish; a new house of worship has been erected two miles from the center of the town, costing about $4,000, and a parsonage costing $2,000, and they give their minister $800; the old church has received a new impulse also, and is re-fitting its house of worship, raises with comparative ease a salary of $700 for its minister, and is about to secure a parsonage.

The Rev. Mr. Chichester, who succeeds to the vast estates of the late Lord O'Niel, (valued at £40,000 per annum, and wholly free from incumbrances,) is at present incumbent of St. Michin's, one of the poorer parishes in Dublin, and to which he was but recently promoted from the still poorer incumbancy of St. Michael's. By a late Parliamentary return, it appears that the annual amount of "minister's money" to which the latter parish is liable is no more than £36.

Revivals of religion are going on in various parts of Illinois, with signal success. In Paris, there have been 381 accessions to the Methodist church, and in Beardstown 147. In the North Rich Woods, in Greene county, a few weeks since, there was quite a revival; 46 persons professed religion, and joined the church. There has been a protracted meeting in the Methodist church in Carrollton, which resulted in the conversion of 15.

We understand, says the Montreal *Witness*, that raffles and lotteries are becoming alarmingly common in some of our rural districts, where farmers wishing to dispose of their *animals, implements, etc.*, resort to this mode to get them off at much more than their market value. These lotteries, most objectionable in themselves, are rendered still more so by the drinking and disturbance which too frequently attend them.

The old homestead in which Mr. Calhoun first saw the light, stands on the eastern edge of a beautiful tract of country which is known as the Calhoun settlement. The plantation passed, a few years since, from the hands of a younger member of the family to Mr. John White, and is now occupied by his overseer as a *negro quarter*. Other changes, too, and more impressive, have come over this venerable relic of the past.

There is a sect in Australia known as Bible Christians. The South Australian *Register* says they did not spring from the Methodist body, but rather from the Church of England. They could scarcely be called a "people" thirty-nine years ago, but now the members number 17,000, and possess 600 chapels, capable of holding 150,000 worshipers, all built upon the voluntary principle.

Rev. J. S. Clark, Secretary of the Congregational Library Association, makes an appeal for funds to purchase the library of Rev. Dr. Williams, of Red Cross Street, London, which is said to be exceedingly rich in Nonconformist history and biography. The collection is offered on reasonable terms, and it is thought, would be very valuable in this country.

According to a calculation founded on the Clergy List, the number of clergy in England and Wales amounted at the commencement of the year 1854 to 18,420; at the commencement of 1855 it is 18,750; showing an increase of three hundred and thirty, which is about the excess of ordinations over deaths notified in the *Ecclesiastical Gazette.*

A new Presbyterian church was dedicated at Mechanicsville, Saratoga Co., N. Y., on the 15th ult. Sermon by the Rev. Dr. Beman. After sermon, a debt of over $400 was removed by the congregation, and then the house was dedicated as a sacred gift to the Lord.

A very interesting revival of religion has recently taken place in the Allen-st. Presbyterian Church, New York City, under the pastoral care of the Rev. George C. Lucas. Upwards of fifty have been converted, and a deep interest is still felt in the subject.

The circulation of the *Methodist National Magazine* is put down at 17,000, the *Christian Advocate and Journal* at 30,000, and the *Sunday-School Advocate* at 90,000. The *Quarterly Review*, however, does not pay expenses.

The *Mississippian* says that $10,000 have been raised in Lexington, Missouri, to assist settlers from slave-holding States to go to Kansas; and urgues the Mississippians to organize, and not to leave to Missouri the laboring oar of making Kansas a slave State.

The Carmine Street Church, New York, have very generously offered to their Pastor, the Rev. T. H. Skinner, Jr., leave of absence, for a voyage to Europe, of six months or more, engaging to supply the pulpit meanwhile, and to defray the expenses of the tour.

The Pope is about to erect a colossal statue of the Virgin Mary at Rome, in celebration of the triumph of the Immaculate Conception dogma. Three hundred medals are to be struck of Virgin Australian gold.

The McIntyre estate, which has been bequeathed to the city of Zanesville, Ohio, in order that the proceeds thereof might be applied to the support of a school for the poor, now amounts to $300,000.

The *Times* advertises contributions to the fund for relief of the Jews famishing in the Holy Land, amounting to nearly £7,500. Sir Moses Montefiore and Dr. Adler acknowledge the contributions.

The Unitarian Association has sent a missionary to India, the Rev. C. H. A. Dall, the first foreign missionary ever sent by that denomination. Mr. Dall's object is rather one of exploration than of permanent occupancy.

One of the Troy papers says that during the religious revival now in progress in the Third-st. Baptist church, Rev. Dr. Baldwin's, no less than seventy-five persons have been added to the church.

European News.

By the steamer Washington we have European news to March 28th. The following summary includes the principal items.

Intelligence from Vienna dated March 23, state that the Conferences were progressing favorably. The Third Point, relative to the diminution of Russian power in the Black Sea, was to be discussed on the 26th ult.

According to the Vienna *Presse*, the English Government has very favorably received the project of transforming Sinope into a strong fortified port, and also of surrounding Constantinople with extensive fortifications, both on the land and sea sides.

Letters from the Crimea of the 17th ult. announces that Omer Pasha arrived at the camp of the Allies on the 12th. On the 13th the Russians opened the fire of their batteries on the heights of Balaklava. The English, assisted by Gen. Viroys, routed them. On the 17th the Russians attacked the whole line of the Allies, but were driven back with great loss.

Advices from Odessa of the 21st ult. state that the Russians, in spite of repeated attacks, maintain the position they had taken on Malakoff Hill, on the 24th February, from which their guns play upon the French lines, and upon part of the camp.

By a dispatch received from Lord Raglan, and dated before Sebastopol, March 10, his Lordship says that the weather still continues exceedingly fine, and that great hopes are entertained that the sick would materially benefit by the change in the temperature. Every effort was being directed to the maintenance of the camp in a healthy state. The advanced batteries of the English wing were said to be making considerable progress. According to the information of deserters, the event of the death of the Emperor of Russia had not been promulgated at Sebastopol.

The London *Morning Herald* says: "We are informed, on good authority, that the Emperor of the French has agreed to send 50,000 additional troops to the Crimea, if it should be necessary, after the Vienna Congress, on the condition that England shall find vessels to convey them."

The Emperor Louis Napoleon and the Empress were to arrive in England on a visit to her Majesty Queen Victoria, on the 15th inst.

The Sebastopol Inquiry Committee continues its sittings, and the revelations made become every day more and more appalling. Mr. S. G. Osborne was examined on the 24th ult., and, as an eye-witness of the scenes which he describes, gives the last touch to the dreadful picture by informing the country that the wounded and sick soldiers, by hundreds and by thousands, were literally starved to death.

From China we learn that the French had again attacked Shanghae, but were repulsed by the insurgents. Report says that the insurgents around Canton had taken the Tiger Fort, and plundered the surrounding villages.

The Struggle in Kansas.—It seems to be quite evident, from the tone of the Pro-Slavery papers of Kansas, that that Territory is deemed and taken to belong exclusively to the Slaveholders. All their articles upon the subject proceed upon the assumption that all persons who are opposed to the introduction of Slavery there, are intruders, to be expelled by the revolver and bowie-knife, or if they persist in remaining, to pay the penalty of their heresy by being lynched. The Missourians are invoked to come armed and with plenty of ammunition to drive out the immigrants from the Free States, and even the Governor himself is threatened with hanging, as the following beautiful extract from the Kansas *Pioneer* shows:—

"We would not like to see the Governor dangling in the air by the neck—he will soon be dead, dead, dead, without that—merely because we consider him a fair specimen of Eastern chivalry, and a very fair sample of a Free-Soiler; but if he is an Abolitionist at heart and in action, and would abet in running off darkies into Canada, it might be well enough to place the noose around his neck, by way of experiment, if it were only to hear him cough and see him make pretty faces."

Slavery in the N. Y. Legislature.—In the New York State Senate, last week, several anti-slavery resolutions were adopted by an average vote of 16 to 9. These resolutions strongly condemn the Repeal of the Missouri Compromise as tending to Slavery extension; demand of Congress the enactment against the further extension of Human Bondage into Territories formerly consecrated to Freedom; declare that the Repeal of the Missouri Compromise releases the people of the Free States from all compromises on Slavery outside of the Constitution; and while they thus recognize Constitutional obligations, the Fugitive Slave bill is pronounced a violation of the Constitution, the rights of the several States, and the principles of justice, and disgraceful to the spirit and civilization of the age, and its repeal is demanded for the welfare of the Union and the principles of republican liberty.

Death of the Rev. Dr. Scudder.—The Rev. John Scudder, M. D., for thirty-five years Missionary of the American Board in India, died at Wynberg, near Cape Town, Africa, on the 13th of January last, of apoplexy. Dr. Scudder was a minister of the Dutch Reformed Church and his station was Madras, but for a few months he had been residing at the Cape for the benefit of his health, which had become considerably impaired by his continued labors in a tropical climate. He had been much benefitted by his residence in South Africa, and had actually engaged his passage for Madras, when he was suddenly cut down by a stroke of apoplexy. Dr. Scudder was a most useful and admirable Missionary, combining in one person the skillful physcian and the devoted and zealous preacher. He was originally a physcians in good practice in New York, but, having his heart in the work of missions, he gave up his practice and embarked as a Missionary for India, and there has labored with unremitting fidelity and most abundant success for more than thirty years. Of his large family of nine children, three sons and one daughter are now Missionaries in India, two sons are under appointment to go out as Missionaries, and one son and daughter are in a course of training for the same field of usefulness. Mrs. Scudder, who was a true helpmate to her devoted husband, was a sister of the Rev. Dr. Waterbury, of Boston. She died several years since.

Lands Secured from the Indians.—The *Washington Star* says that under the treaties made by the Commissioner of Indian Affairs with various tribes, in the last year or so, the United States have obtained lands from the Indians located west of the Missouri and the Missouri State line, as follows: From the Omahas, about 600,000,000 acres; Ottoes and Missourians, 3,000,000 acres; Shawnees, 1,600,000 acres; Delawares, 275,000 acres; Sacs and Foxes, 435,000 acres; Kickapoos, 768,000 acres; Iowas, 125,000 acres; Kaskaskias and others, 94,000 acres; and from the Miamis, 325,000 acres. Individual reservations are provided for in these treaties, and also some portions of the lands above mentioned are to be sold for the benefit of the Indians ceding them. This is the case with the Delawares' lands. Such lands are not subject to be squatted on, as this Government cannot, by act of Congress assign lands held in trust to be disposed of for the benefit of others, to squatters.

A Roman Catholic Row.—A dispatch dated Oxford, N. Y., Monday, April 9, 1855, says: A most disgraceful riot occurred at this place yesterday morning. It appears that a Roman Catholic, one who had previously been married by a Protestant clergyman, and who, in consequence, was excommunicated, yesterday entered the Catholic Church during services, whereupon the priest, Father Calton, ordered him to be "put out," which order was faithfully executed. At the door a fight commenced, in which the priest is said to be implicated. The exercises in the church were suspended, and the crowd adjourned to the nearest hotel, where a more general fight ensued between the Catholics and Protestants—the former coming off second-best. The priest was arrested, and held to bail, with several others, in the sum of $1,000, to keep the peace. He has also been served with a writ from the Supreme Court, at the instance of one of his countrymen, who claims private damages.

A Question of Conscience.—The Presbyterian *Herald* propounds a question to whom it may concern. The question is this: "Can a Christian man or woman, with a *good conscience*, continue to take a newspaper for two, three, four, five, six, seven, eight or ten years, causing the editor and publisher to pay out actual cash, besides their own labor, to enable them to send the paper, and the subscribers during that time sending no equivalent for it, though the mails are always at their doors, ready to convey what they may wish to send to the publisher, and he is willing to run the risk of its safe arrival, rather than lie out of his money? Is such a course of conduct obeying the apostolical injunction to 'owe no man any thing, but to love one another?' Is it doing unto others as they would have others do unto them, their respective positions being exchanged?"

SUMMARY.

Mr. Van Schaick, President of the Croton Board, writes to Mayor Wood, urging the importance of more reservoir room. The Croton Works now furnish 30,000,000 of gallons daily, or 46 gallons to each inhabitant. Of this quantity, 17,000,000 gallons are wasted. This most wanton and enormous waste it may be possible to diminish by severe measures, but no human power can subdue it to such a degree as to render the City safe in case of an accident, without increasing the supply by an additional reservoir.

The Receivers' sale by Simeon Draper of the elegant furniture (in one lot) in the Brevoort House, cor. Tenth-st. and Fifth-av., New York, was held last week. The first cost of the furniture was $100,000. The sale commenced at 12 o'clock. The first bid was offered by Joseph Naylor, Esq., at $20,000. The next bid was offered by A. T. Stewart at $20,100. The bidding was then continued solely between the above persons, with considerable spirit, and was finally knocked down to A. T. Stewart at $28,100.

Alexander K. McClung, Esq., of Jackson, Miss., committed suicide recently in that city, by blowing out his brains. He was a remarkable man, and had run a remarkable career. In early life he was a lieutenant in the Navy, but from his quarrelsome disposition he was compelled to resign and retire to private life. He was a graduate of West Point Military Academy, and a man of the highest order of intellect. He fought a number of duels in his life, and with a single exception, always murdered his opponent.

A singular robbery was perpetrated recently upon a passenger on the train from Columbus, Ohio. Mr. S. C. Moore, of New York, was offered by a neighboring passenger, several sugar lozenges, which he ate. Soon after he became very drowsy, and slept soundly till aroused by the conductor. Feeling very sick, and attributing his somnolency to the lozenges, he was advised to examine his pockets. He found them picked of his pocket-book, in which he had $275.

The Romanists in Ireland are divided into two factions, whose aims are essentially antagonistic; the party of the priests, and the party of the people. Messrs. Lucas, Duffy, and Moore, are the leaders of the latter, and are studying zealously to elevate the Irish nation, and to improve their general social condition. The party of the priests, headed by Archbishop Cullen, overlook all social amelioration, and aspire to consolidate the power of the Church, taking advantage of every concession made by Parliament.

An important suit was terminated in Boston last week, growing out of Bishop Doane's debts. The Bishop married a rich widow, Mrs. Perkins, to whom an annuity of $6,000 a year was left. To provide for the debts contracted by the Bishop, this annuity was mortgaged to the amount of $1,000 a year. The trustees denied the power to alienate it from its original design, and were sustained in their position by the court.

The *Journal of Commerce* gives a list of forty-two fires which have occurred during the month of March. The estimated loss in no instance was less than $10,000; and one was as high as $500,000. The total estimated loss for the month by these fires is one million six hundred thousand dollars! And for the three months past, the estimated loss by fires is nearly four millions of dollars!

The Washington *Union* announces another Cuban outrage. The brig P. R. Hickman, from Boston, bound to Matanzas, when a few miles from the coast of Cuba, was fired at three times by a Spanish cruiser. The first ball was thrown astern of the brig, the second fired ahead of her, and the third was fired, it is supposed, with the intention of hitting the vessel. After an examination of the Hickman's papers, she was allowed to proceed on her voyage.

Seventy-five tuns of coin have been engaged as part of a cargo of a vessel now loading in New York for Constantinople, and the shippers, is is said, have forty-five tuns more, which they are anxious to engage. It is all in kreutzers, (the copper coin of Germany, nearly equal in value to our cent) and comprises a collection made, probably, from the money brought out by emigrants. It was taken by a vessel at $8 per tun freight.

For some months past a gang of young villains, eight in number, have been committing burglaries in Chenango County, N. Y., and all efforts to arrest them have, until recently, proved fruitless. Seven of them, however, have at last been caught, and the eighth, Loring H. Rockwell, was traced to this City, whither he was pursued by Sheriff Wilcox, and, with the aid of Officer Sampson, of the reserve corps, taken into custody.

The notes of all the suspended Free Banks of Illinois are now redeemed at par by the Auditor of that State—he having sold the stocks which were pledged for security of the notes. The suspended Bank notes of Wisconsin are also redeemed at par. These facts certainly speak very well for the Banking laws of those States, and the good management of the officers who administer them.

The Toledo *Blade*, of April 6th, says:—"The tide of western travel this spring is very large. Yesterday at noon, an extra train of fifteen passenger-cars, all full, came in on the Cleveland and Toledo Road. In the evening another train of eight cars came in on the same road, all full. Each day brings an average of 18 or 20 passenger-cars from the east, which contain about 600 or 800 passengers."

The receipts for duties in New York, Boston, Philadelphia, New Orleans, Baltimore and Charleston, during the last two months, have been $7,407,147, showing a decrease of about $4,500,000 on the same period of last year. This indicates an aggregate decrease of about twenty millions of imports during the two months.

The Baltimore *American* says that the cost of living in that city is fully one hundred per cent. higher than it was ten years ago. All kinds of meats are held at prices far beyond the means of the poor, and fish, which heretofore has been the chief living of a large class of the community, is now put beyond their reach.

The Hon. John C. Gray, in a communication to the Board of Agriculture, states that there grow in the United States one hundred and forty different varieties of forest trees, which attain a greater height than thirty feet, while, according to Michaux, the empire of France can boast of but eighteen of the same description.

We have a week later news from California. Business was still much depressed, though there is better news in regard to some of the suspended bankers. Wells, Fargo & Co. had resumed payment, and Page, Bacon & Co. would also resume on the 29th. The failures of Dr. Wright and Adams & Co. are said to be very bad. Mining interests were improving.

The Executive Committee of the New York State Temperance Society, have issued an address to the people of the State on occasion of the passage of the Prohibitory Law. It is an interesting and timely document, discussing the history of the law and the present duties of its friends.

A younger son of Judge Kane, of Philadelphia, Dr. John K. Kane, who has recently graduated with the highest honors at the University (medical) of Pennsylvania, is to go out as the surgeon of one of the ships of the expedition soon to start for the Arctic seas in search of the unfortunate expedition of his elder brother.

The Baltic brought intelligence of the death of Martin Van Buren, Jr., son of the ex-President. He died in Paris, on the 20th ult. A large number of Americans accompanied his remains to their temporary resting-place in the cemetery of Montmartre.

Theodore Parker, Wendell Phillips, and others, indicted for aiding in the Burns riots, were discharged on the 12th inst., in consequence of some defects in the indictments. The decision was hailed with loud applause by the spectators.

A patent has been obtained for the preparation of maize leaf, as a substitute for tobacco. The patentees claim for their manufactured weed anti-nervous qualities, and that it is a pleasant tonic, and therefore promotive of good health. It is said to have a sweet and pungent flavor.

The Waukesha (Wis.) *Plaindealer* of March 21, says that a thousand good laborers would find steady employment and the highest wages paid among the farmers of the country. It adds, that ten thousand laborers would find steady employment at from $12 to 20 per month in the State.

Corcoran & Riggs have paid into the Treasury about $100,000 attached in their hands by Government, being about one-fourth the amount fraudulently obtained by Gardner under the award of the Mexican Commission.

A late arrival from the Cape of Good Hope brings intelligence, that an epidemic disease was raging among horses, hundreds dying daily. In some localities not a horse was left alive.

The Paris correspondent of the *Courier des Etats Unis* says that there is in Jorbert street, Paris, an institution where young men are furnished to order, to dance at parties and private balls.

The Know Nothings of the Massachusetts Legislature propose to enact that no person born out of the United States shall be eligible to office in that Commonwealth.

The rental of the young Earl of Shrewsbury, in both countries, is £43,000 a year, unemcumbered, besides a large sum in the funds accumulated during his minority.

The Canal Commissioners have fixed on the 1st of May as the day for the opening of navigation on the New York State Canals.

The ship James Cheston was recently brought into the port of Liverpool by a crew put on board of her from another ship—her own officers and crew having abandoned her at sea. The officers and crew have since turned up, and say that she was water-logged when they left her; but those who took her into port say she was in good condition, except a few auger-holes bored in her near the water-line.

The Administration at Washington have detached Col. Richard Delafield, of the Engineers, Major Alfred Mordecai, of the Ordnance, and Capt. Geo. B. McClelland, of the Cavalry, on special duty, to proceed to Sevastopol, to inspect the works there, and view the operations of the war.

Four cities now stand upon the waters of the two broad rivers which enter the Bay of New York, and in New York, Brooklyn, Jersey, and Hoboken cities, over a million of souls have come to live where one-fifth of that number lived a quarter of a century ago.

The Legislature of New York adjourned on the 14th inst., after having passed about five hundred Acts, of which the Prohibitory Liquor Law was the principal, and worth more than all the rest.

The news of the death of the Emperor Paul, in 1801, was twenty-one days in getting to London. That of the late Emperor Nicholas, according to Lord Clarendon's statement, four hours and a quarter.

Commodore Vanderbilt has reduced the price of passage in his new line of European Steamers, for first cabin from $130 to $110; second cabin, from $75 to $60.

A contract has been made for the completion of the Mississippi and Milwaukee Railroad to the Mississippi during the present year.

Rector College, at Pruntytown, Va., was destroyed by fire, a few days ago. The building cost $10,000, and the library, minerals, and curiosities, were worth about $2,000

Dr. Merle D'Aubigne, the historian of the Reformation, is writing a life of Luther, to illustrate a series of drawings by M. Labouchere.

Isaac Newton, the well known proprietor of the Hudson river steamboats, died in this city, April 7th.

Grain—Wheat 2 70 for white Michigan. Rye 1 45 a 1 50. Barley 1 25 a 1 27. Oats 66 a 77c. for Southern and Jersey, 73 a 78c. for State and Western. Corn 1 08 a 1 10.

Provisions—Pork, 15 00 for new prime, 17 75 for new mess. Beef 6 50 a 8 00 for country prime, 9 50 a 12 00 for country mess. Lard 10½ a 11c. Butter 12 a 20c. for Ohio, 27 a 32c. for State. Cheese 10 a 12½c.

Hay—95c. a 1 00 per cwt.

Lumber—15 00 a 17 00 for Spruce and Pine.

Potatoes—2 75 a 3 25 per bbl. for Western reds, 4 00 a 4 25 for Mercers and Carters.

Seeds—Clover 10½ a 11½c. Timothy 4 00 a 4 25. Rough Flaxseed 1 85 a 1 90 for 56 lbs.

Wool—25 a 28c. for native, 40 a 43c. for Ameriaan Saxony Fleece.

MARRIED,

In New York, on the 2d inst., by Rev. J. Bailey, Mr. Iretus G. Cardner, of Plainfield, N. J., to Miss Joanna E. Briggs, of New York City.

In Alfred, April 4, by Eld. N. V. Hull, Mr. Ralph D. Smith to Miss Margaret M. Gardner.

In Milton, Wis., March 10th, by Eld. J. M. Stephenson, Mr. T. M. Steward, of Madison, to Miss Myrta E. Wells, eldest daughter of Wm. B. Wells.

In Verona, N. Y., on the 4th inst., by Rev. Charles Machin, Mr. John Williams, of Verona, to Miss Wealthy Clarke, of Darien, Genesee Co., N. Y.

DIED,

At his residence in Durhamville, town of Verona, N. Y., on the 24th day of March, 1855, Nelson Green, son of Caleb and Susannah Green, aged 46 years. The deceased had enjoyed his usual health until a few days previous to his death, when he was suddenly prostrated upon a painful dying couch. At about the same time, a favorite son, three years of age, was attacked with a disease which terminated in death three days previous to that of the father. Thus have the hopes of a bright and cheerful circle been suddenly and forever blasted by the entrance of the pale messenger, who has taken from the embrace of a fond wife and mother a kind husband and lovely child, and from four dependent children, a tender father and affectionate brother. Nor does this stroke send mourning to their hearts alone. Aged parents mourn for a dutiful son; brothers and sisters, and a large circle of relatives and friends, are deeply afflicted thereby, and many are the tears of affectionate sorrow which fall over the memory of the departed. But they mourn not without hope. Some time previous to his death he publicly professed his interest in Christ, and was baptized with a view to connect himself with the church; but it pleased the Lord to remove him before these intentions were carried into effect, and we trust he is now rendering a purer and more exalted service to his Redeemer in the church above. Of the esteem in which he was held in his own village, a pleasing testimony was given on the day of his burial—business being for the most part suspended, and an air of stillness and solemnity reigned—a just tribute of respect to the memory of one of its most active and useful citizens, deeply interested in its prosperity, and ever contributing, by his example, influence, and liberality, to whatever concerned its improvement in education, morality, and religion. H.

LETTERS.

Augustus Barnes, Benjamin Clarke, J B Wells, W B Maxson, D P Curtis, O D Langworthy, Silas Taber, J R Butts, E D Spicer, J F Morgan, A M West (yes.) P B Vars, N V Hull, S S Griswold, E M Crandall, H W Randolph, Winter Green, H V Dunham.

RECEIPTS.

FOR THE SABBATH RECORDER:

W C Tanner, Mystic Bridge, Ct	$2 00	to vol. 11	No. 52
C S Titsworth, Newark, N J	2 00	12	43
H M Sheldon, Albion Center, Wis	2 00	12	43

O D Green, C Saunders, L T Rogers, E M Crandall, G B Clarke, 35c each	1 75

WILLIAM M. ROGERS, Treasurer.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somervill (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.

Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

Woodworth's Youth's Cabinet

IS the best illustrated dollar magazine in the Union. Send for a specimen of it, if you are not acquainted with it. The editor is giving a change to his subscribers to get 12 splendid volumes of books for nothing, as premiums. You can have a chance too, if you will subscribe; and now is the time, as a new volume has just commenced. Yearly subscription, $1; single number, 12 cents, or four postage stamps. Address the Publisher,
D. A. WOODWORTH,
118 Nassau-st., New York.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States.

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,
JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.

Alfred Academy,

At Alfred Center, Allegany Co., N. Y.

THE attention of the public is respectfully invited to the educational facilities of this Seminary.

1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.

2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes*. The health, morals, and manners of students are all looked after with parental solicitude.

3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry*, will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women*. In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.

4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.

The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. Hull, or W. C. Kenyon.
Feb. 24th, 1855.

Bruce's New York Type Foundry,

ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.

All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.

Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.

The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.
Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Carol:

A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.

"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.

The following extracts from the Preface will give an idea of the scope and design of the work:—

This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath-Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.

About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.

A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.

How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music, and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

From the American Agriculturist.

How we Keep our Hens.

Hen-house, in the appropriate sense of the word, we have none. We have no doubt of the utility of these structures, and that something very much better than our contrivance could be got up with a little leisure to plan it, and money to build with. But we have had eggs and chickens enough for the last five years, to satisfy our editorial ambition, without the trouble of putting up a hen-house. Our barn stands on the south side of a hill, and under a part we have a cellar excavated, stoned and pointed with mortar. It makes a snug warm room, about 20 feet by 10, opening to the south. A large ventilator communicates with the barn above, and the door is kept open at all times, except in snow storms and the coldest nights when the thermometer is in the neighborhood of zero. On such occasions, when Jack Frost is out in state, we close the door. On either side of the cellar there are large long poles put up for roosts, three on a side, and at such heights from the ground that they are easily reached by the fowls, and that the droppings from the upper row of fowls falls clear of their neighbors below them. Underneath the roosts we keep a good supply of charcoal dust or muck, and in addition to this we make a constant use of plaster. As often as every morning, in mild weather, and every other morning in cold, we sprinkle a large shovelful upon the droppings. This keeps the air perfectly sweet, and absorbs the most of the ammonia. The olfactories are a very good meter for the necessary quantity of plaster, and the rule is to sprinkle as much and as often as you can detect any unpleasant odor. This is essential to the health of the fowls, and we have no doubt that more fowls die of bad air, from lack of attention, than from all other causes united. The manure made in this way is very powerful; not equal to guano in value, pound for pound, but much cheaper than guano at the cost of its manufacture. It forms a very handsome item in the annual profits of keeping fowls.

In the yard upon which the cellar opens, we have a large pile of refuse cabbages, not quite good enough for market, and a little too good for the compost heap. These are gathered late in the fall, when frozen, and covered with salt-hay or other refuse matter. They keep in a frozen state nearly all winter. The hens have constant access to them, and get all the green food they want. This, with the other attentions, keeps them in fine health. They have pounded oystershells both in the cellar and in the yard, and fresh water every day. The staple feed is Indian corn, raw, soaked and in meal scalded. This is varied with oats, and the sweepings of grain stores and screenings from the city.

We should probably get some eggs without further effort, but to make success certain we give fish two or three times a week. A small fish caught in all our salt-water creeks and ditches, called the mummychaug, makes excellent food for fowls. Fish offal from the market, or butcher's offal, would answer as well. Beginning the fowl season November 1st, with a flock of pullets hatched the preceding April, we have eggs, constantly and in abundance, through the coldest weather. The quantity increases after February, and the three following months it rains eggs on our hill, and the thunder of Shanghae eloquence wakes the echoes of every morning hour.

We keep in their purity. White Dorkings, Buff Shanghaes, and Chittagongs. The Asiatic fowls are the only reliable winter layers, and make early chickens for broiling better than any variety we have tried. The cross of the Dorking with the Shanghae makes a very plump, fine fleshed fowl for the table; and they are not bad layers. The Buff Dorking, made by this cross, is a very handsome, sprightly bird. With a stock of forty or fifty fowls we raise all the eggs, and chickens used in a large family, and from a debt and credit kept for several years, it appears that each fowl pays about a dollar clear profit. No other investment on the premises pays so well. W. C.

Popular Superstitions.

In Berkshire, England, there is a popular superstition that a ring made from a piece of silver collected at the communion is a cure for convulsions and fits of every kind. Another curious English superstition, by way of charm, is recorded: that a silver ring will cure fits if it be made of five sixpences, collected from five different bachelors, to be conveyed by the hand of a bachelor to a smith that is a bachelor. None of the persons who give the sixpences are to know for what purpose or to whom they gave them. While in Devonshire there is a notion that the king's evil can be cured by wearing a ring made of three nails or screws which have been used to fasten a coffin that has been dug out of the churchyard.

There is a medical charm in Ireland to cure warts. A wedding ring is procured and the warts touched or pricked with a gooseberry thorn through the ring.

A wedding ring rubbed upon that little abscess called a sty, which is frequently seen on the tarsi of the eyes, is said to remove it. In Somersetshire, England, there is a superstition that the ring-finger, stroked along any sore or wound, will soon heal it. All the other fingers are said to be poisonous, especially the fore-finger. In Suffolk, England, nine young men of a parish subscribed a crooked sixpence each to be moulded into a ring for a young woman afflicted with fits. The clergy in that country are not frequently asked for sacramental silver to make rings of. to cure falling sickness; and it is thought cruel to refuse. There is a singular custom prevailing in some parts of Northamptonshire, and probably there are other places where a similar practice exists. If a female is afflicted with fits, nine pieces of silver money and nine three halfpennies are collected from nine bachelors. The silver money is converted into a ring, to be worn by the afflicted person, and the three halfpennies (*i. e.* 1½d.) are paid to the maker of the ring, an inadequate remuneration for his labor, but which he good naturedly accepts. If the afflicted person be a male the contributions are levied upon females. In Norfolk, a ring was made from nine sixpences freely given by person of the opposite sex, and it was considered a charm against epilepsy. 'I have seen,' says a correspondent in Notes and Queries, nine sixpences brough to a silver-smith, with a request that he would make them into a ring; but 1 1-2 d. was not tendering to him for making, nor do I think that any three halfpennies are collected for payment. After the patient had left the shop, the silversmith informed me that such requests were of frequent occurrence, and that he supplied the patients with thick-silver rings, but never took the trouble to manufacture them from the sixpences."

Clock-Manufacturers in New Haven.

Few persons are aware of the fact, that by far the greatest number of the clocks now in use throughout the world come from the progressive little State of Connecticut. New Haven furnishes one-half of the number, and the towns of Bristol and Plymonth supply, each, one-fourth. It is thought that the capital yearly invested is now $300,000, and that the annual business amounts to $1,000,000, while it has been estimated that this business, in its various departments, gives support to between two and three thousand mechanics, with their families. The most extensive manufactory of clocks in New Haven is that founded by Chauncey Jerome, the present Mayor of that city, 1844. The Jerome Clock Manufacturing Company is a joint-stock company, formed in 1850, with a capital of $80,000. The business of the first year amounted to $150,000. Its capital at present is $150,000, and the yearly value of its business $500,000. They employ 300 hands in New Haven, mostly men with families, partially boys and girls, and 200 in Bristol, where their clock-movements are made. In addition to this, they carry on a factory at Ansonia, where 25 or 30 hands are employed. The monthly earnings of these hands amount to $20,000. The average number of hours of labor per day is ten. The number of clocks made yearly is 200,000—800 per day, embracing 50 distinct varieties. The highest wholesale price, per dozen, is $100—the lowest $10. To produce these, they annually consume the following raw material:—

Pine Lumber (feet)	2,500,000
Mahogany and Rosewood (feet)	1,000,000
Looking-Glass Plates	50,000
Boxes of Glass	4,000
Casks of Nails	1,500
Iron (tuns)	600
Glue (bbls.)	500
Rolled and cut Brass (tuns)	150
Varnish (bbls.)	100
Tin (tuns)	35

Their lumber is obtained directly from Maine and Western New York. The other materials are supplied by New York City.

There are many other factories in the State, equal in extent with that of the Jerome Company, and the statistics we have given concerning the latter will form a fair criterion to judge of the extent to which the business of clock-making is carried on. In fact, the world is not too extensive a market for the number of time-pieces made by these various Companies. [N. Y. Tribune.

Draining by Wells.

You wish to know if land can be drained by wells. I have made one experiment only, and that was entirely successful. I owned a piece of land on which there was a basin of about three-fourths of an acre, which received the surplus water of at least ten acres. It would sometimes be from two to three feet deep in the center. The water stood in the basin at least eight months in the year, and the basin was full every hard rain the other four months. On the 3d of August, 1841, I dug a well nine feet deep in the center of the basin, and came to living water, which rose very rapidly, so much so that I expected to see it run over the top in a short time. I think the water rose at least two feet in ten minutes and then stopped, and remained at that depth until a heavy rain of three days. I then went to look at the well, expecting to find it full and running over; but to my utter astonishment, there was not more than two and a half feet in the well. It had risen about four feet during the storm I should judge by the marks on the side of the well. There must have been a great quantity of water run into the well, as at least ten acres discharged its surplus water into it, and the rain fell in torrents during three days. I then dug four open drains leading into the well, and the land has been sufficiently dry for wheat, corn, oats, or grass, ever since. It has been in grass for the last 12 years, and has borne a heavy crop of first rate hay.

I should advise in all instances, to dig until you come to living water, and then the water will pass off in the fissures of the earth. I have not the least doubt but that almost any spring can be drained by digging a well at a little distance, and leading the water into it. I would state that I filled the well full of stone, thinking it would be cheaper to dig a new one than to stone it and keep it covered, if it should fail to carry off the water.

[Country Gentleman.

Trees from Seed.

A few years ago we made a large collection of the seeds of shade and ornamental trees, both deciduous and evergreen, and planted with much care, but not a seed did vegetate. This season we have found out what was the matter; we planted too deep. It is well known, that in the pine regions of Georgia this has been a great mast year, and we now find everywhere where the winged seeds have met the surface soil, they have thrown out roots, and begun the form of a tree. They had no planting but what nature gave them, and dame nature is a tolerable horticulturist. We invariably plant tree seed; just soil enough to preserve the moisture is all that is necessary.

An ornamental tree grown from seed, may be made any thing the cultivator wishes it. A fruit tree grown from seed is most likely to be healthy, and may prove a sure and valuable variety. It has been a question of time with most of us; we could not wait for tree seeds to form trees. A pine seed will make boards in twelve years. Apple seeds will make fruit-bearing trees in four years. Grapes in eight and ten years. Peaches and plums in two years. The China-tree seed will make a shade tree in four years. A man may have a forest or an orchard from seed, if he will. Even the acorn and hickory nut may be planted with profit. Plant tree seeds, reader, and you will be astonished at the work of your own hands in a few years. [Ex.

Unlawful Marrying.—At Oxford, England, recently, the Rev. John Allen Giles, D. C. L., was indicted for marrying at uncanonical hours, and making a false entry in the register. Dr. Giles, it appeared, was a man of great literary attainments, who spent much of his time in study. The parties married were a young woman in his service, to a shoemaker of the village of Bampton. By the laws, no marriage can take place before eight o'clock in the morning; but he had married them at half past six, without a license or banns, and had made an entry in the register of the marriage having taken place two days before. He had sent piteous appeals to the Bishop of Oxford, stating that he had erred in ignorance of the law, and offering, if the prosecution were foregone, to do any penance that might be imposed. On the trial it was proved that Dr. Giles had been the means of getting Mr. and Mrs. Pratt out of the way, they having sailed to Australia, the doctor having paid their passage money. The jury found a verdict of guilty, but recommended the prisoner to mercy; and in addressing the court, he stated that he had worked for years past very hard at the rate of twelve hours a day, publishing the ancient records of the country. 120 volumes were the result of his labors. His study had been so great that he frequently did not know what he was doing. Lord Campbell, the presiding Judge, sentenced him to imprisonment, without hard labor, for twelve months. [Boston Traveler.

Congressional Morality.

We were infinitely amused three or four weeks ago by a practical joke in Washington City upon a number of the nice men of Congress. It was too good to be left unpublished. A couple of merry fellows, one of them a distinguished Member of Congress from a Southern State, and the other a distinguished ex-editor from Kentucky, concocted a letter purporting to be addressed by a young lady to a very fine-looking gentleman. It was got up in first rate style. The pretended young lady set forth therein that she had several times seen the gentleman she was addressing; that she was captivated by his fine face and manly form; that her heart was deeply touched by all she saw and heard of him; that she *must* make his acquaintance before his departure from the city; that she hoped and prayed he would forgive her seeming boldness, as it was the first imprudent act of her life; that she had always moved, and was still moving in the highest circles of the Capital; that she would be upon a certain square of a certain street at precisely 12 o'clock on the following day, in a dress which she described with great particularity, and that she hoped and trusted he would meet her, and thus afford her an opportunity of a brief personal intercourse with the idol of her heart. The two wags had between thirty and forty copies of this letter, written by a female friend of theirs, and they sent these copies to between thirty and forty members of Congress, selecting those of course who were known to entertain a very exalted opinion of their own personal fascinations. Everything being thus arranged, the two jokers called upon us and another young gentleman, explained what they had done, and invited us to get into their carriage, and ride with them to the point of assignation and see the sights. We unhesitatingly consented, and we saw sights sure enough. Riding upon the designated square, we beheld the whole of the thirty or forty members, Northern men and Southern men, Whigs, Democrats, and Know Nothings, walking to and fro, all gazing earnestly in every direction, and at every female figure to discover the object of their anxious search. We concluded, that, if a few more copies of the letter had been sent to members of the House of Representatives, the House would have had to adjourn for the want of a quorum.

[Louisville Journal.

Notes Upon Apples.

In my selection of Apples for my family's use, I have found the following kinds not only very choice, but forming a succession of ripe ones. Commencing with the Hawley, the very prince of all apples, and one combining all the good qualities for dessert as well as for cooking, I have found the Fameuse an excellent successor, then the Scolloped Cornish, or Red Gilliflower, which in all respects is a most superior apple, in eating from November to January; next the Jonathan, a most beautiful medium sized, high colored, red fruit, fresh, spicy and juicy; after that the Green Sweeting, ripening in January, and continuing good for two months; to be followed by the Red Canada, which is a most delicious apple, very mild sub-acid and juicy, agreeable in every respect, lasting till my Northern Spys begin to ripen, say the first of March, which continue good as long as it is possible to keep one's hands off of them. Could I have interspersed with the Rambo, a place would have been found in my cellar for a barrel of them. It is an uncertain fruit, the tree never bearing oftener than every other year. It is so choice that it is not wonderful that it takes two seasons for production.

For cooking, the Twenty-ounce cannot be excelled while it lasts. Then comes the Rhode Island Greening, a true and abiding apple, as well as a most profitable one for pies and sauce. For a sweet apple in its season (early fall,) I much admire the Baile Sweeting; it is a great favorite with us. I wish producers would be sure to raise all the good varieties, for you have to look to different orchards for a selection of twelve varieties of choice fruit. Some are better grown than others, and I would like to have mine from such persons as take the best care of their trees to ensure the best fruit. J. H. WATTS.

A Faithful Girl.

A case of woman's devotion has recently been brought to our knowledge, says the Chicago *Tribune*, which certainly equals anything that we have ever met with in the realms of romance. The circumstances occurred in this city, and are perfectly authenticated. While the small pox was raging here a few weeks ago, a young man employed in a store on Lake street, was seized with the disease. It was, of course, improper for him to remain there, and the people with whom he lived, who were distant relatives of his, refused to permit him to stay in their house. The result was, that he was taken to the pest house.

It so happened that he was engaged to be married to a most estimable and amiable young lady. No sooner did she hear of his condition than she determined at once that she would nurse him. She underwent vaccination, and then went where they had taken her betrothed to the pest house. Here she found him, alone, sick, wretched, deserted by all the world. And here she remained, like a ministering angel, waiting beside his bed of pain, soothing his distresses and attending to his wants. He died. But how consoling must have been his last moments!

Though all the world had forsaken him, she, whom he loved better than all the world, remained faithful to the last. Her hand it was that smoothed his pillow; her eyes stilled beamed upon him with mournful but unabated affection; into her ear he poured his last words of love, of sorrow, and of hopes that in this world might never be fulfilled.

It recalled to our mind, when we heard it, the words that Bulwer puts in the mouth of one of his characters: "To be watched and tended by the one we love, who would not walk blind and barefoot over the world?"

Hints for the Fruit Garden.

Pruning Grape Vines—Now is the time to attend to this important matter, if it has not already been done. Cut off from one-third to one-half of the past season's growth from the main shoots, and cut the side shoots back to within one or two buds of the main branches taking care not to cut so close to the buds as to injure them by the drying of the end of the branch. The fruit ripens better, and the vines are more productive and longer lived, for being thoroughly pruned.

Currants and Gooseberries also need pruning to have their fruit in perfection. All the branches more than two years old should be cut out of currant bushes, and gooseberries should be cut back nearly one-half of the last year's growth and the weak and straggling branches cut out, particularly where they are trained as drawf standards, which is the only correct mode.

Fruit Trees of all kinds should be pruned as soon as the severe cold weather is over—early in April is a good time—unless the object be to induce fruitfulness, checking a too luxuriant growth, in which case it should be delayed until about the first of July. Pruning them gives a sudden check to the growth of a tree, and, by removing a portion of the leaves, also partially prevents the formation of new roots, thus favoring the formation of fruit buds. The more rapid the growth of the trees, the less tendency there is to the formation of fruit buds, but whatever retards growth and consequently obstructs the circulation of sap favors that object. It is not of course desirable to induce fruitfulness until the trees attain a respectable size, and hence young trees should always be trained and cultivated in such a manner as to induce a vigorous growth.

Jewish Marriage Ceremony.

Between the hours of 12 and 1 o'clock yesterday, says the Baltimore *Sun* of March 26, a blissful scene was witnessed by a large concourse of friends in the Synagoguo of the Jews, on Lloyd street. Three happy couples were, at the same ceremony, united in the bands of holy wedlock by the Rev. Dr. Hockheimer. The candidates for matrimonial honors, in pairs, having appeared within the altar, a long white woolen robe was thrown entirely over each couple. The Rev. gentleman ascended the desk and delivered an address; then descending, he approached the first couple and caused the gentleman to place upon the right fore finger of the lady a ring. This was followed by the male attendant tendering to the groom a glass of wine; the bridesmaid followed this example, and the groom and bride each partook of the wine. The minister then read—the robe was entirely removed—and the wine again handed and tasted as before. The ceremony in the two other cases was precisely similar. The brides were appropriately attired in white, with crape shawls embroidered. Head dresses, light caps neatly trimmed with evergreen. Throughout the entire service there was deep silence and solemnity, and the ceremony (though the lauguage was not understood by some) was evidently conducted with ability.

Silvering Mirrors.

The silvering of mirrors is performed in the following manner: A sheet of tin foil, the size of the proposed mirror, is laid on a flat table, and rubbed over with a little mercury, until the latter, to a certain degree, amalgamates with the tin. A large quantity of mercury is then poured over it, the workmen having certain indications informing them whether the sheet is in a properly prepared state or not. When all is right, the edge of a sheet of paper or cloth is laid upon the edge of the mercury, and the glass is then slid gently along, pushing part of the quicksilver before it, and resting upon the remainder. When the plate is fairly laid on, the surface is entirely covered by heavy weights, for the purpose of expelling all the mercury except that which has combined with the tin foil, and in this state it is allowed to remain, the table having a slight inclination, until the mercury has drained off. In the case of large plates, this sometimes occupies a long time; and even after the glass has been lifted and set on edge, small quantities continue to ooze out. When the plate is lifted, the tin foil adheres to the back, and the mirror is formed.

Why the Romans Went to Bed Early.—In one of the late London papers we find the following reason why, by De Quincy: "They went to bed early in those ages, simply because their worthy mother earth could not afford them candles. She, good old lady or good young lady, (for geologists know not whether she is in that stage of her progress which corresponds to gray hairs, or to infancy, or a 'certain age,') she, good lady, would certainly have shuddered to hear any of her natives inquiring for candles. 'Candles, indeed!' she would have said, 'whoever heard of such a thing? and with so much excellent daylight running to waste, as I have provided gratis! What will the wretches want next?' The Romans, therefore, who saw no joke in sitting round a table in the dark, went off to bed as the darkness began. Everybody did so. Old Numa Pompilius himself was obliged to trundle off in the dusk. Tarquinius may have been a very superb fellow; but I doubt whether he ever saw a farthing rush-light. And though it may be thought that plots and conspiracies would flourish in such a city of darkness, it is not to be considered that the conspirators themselves had no more candles than honest men; both parties were in the dark."

Care of Cherry Trees.—In answer to an inquiry in a recent number, I would recommend lime as a remedy for imperfect bearing in the cherry tree. The season before this last, the drouth affected a young Tartarian cherry tree so much that the leaves curled and grew very little. Very late in the fall, I placed a quantity of slacked lime around the tree, but not so as to touch the trunk; and last summer it grew very fast—the leaves not curling, although the drought was harder than the year before. Scrape the bark and dig about the roots and apply lime. Old bones that are left after making soap, will make plum trees bear, if applied around the roots of the trees. [Rural New Yorker.

Spring Wheat.—As far as we can ascertain, spring-wheat sustained less injury from the weevil last year, in most cases, than the winter wheat. It did not wholly escape, as some have claimed, but, as a general thing good crops were obtained. We hazard nothing in saying that a large breadth of land will be sown with wheat this spring. We have always supposed that the earlier it could be got in, after the ground was in good condition to work, the more likely it was to produce largely; but some good farmers think it is better to sow late in order to escape the weevil. Spring wheat does very well on a recently inverted sod; a lighter and more active soil than for winter wheat is desirable. For this reason, ashes, lime, or anything that will quicken the soil, would be likely to benefit it more than they improve winter wheat. There are several varieties—the Tea, the Black Sea, the Fife, the Canadian Club, being the most generally approved. One and a half bushels per acre is usually sown. We think two bushels none too much. [Coun. Gen.

Church Organs.—The present organist at Breslau gives, in a book just published, some curious facts respecting the external embellishment of the organs in the seventeenth and beginning of the eighteenth centuries. The whole case was ornamented with statues, heads of angels, vases, foliage, and even figures of animals. Songs of nightingales, cries of the cuckoo, celebrated holy Christmas, and proclaimed to the Christian assembly the birth of the Redeemer, and eagles flapped their wings, or flew towards the artificial sun. The crown, however, of all these absurdities, was the fox's tail. It was intended to frighten away from the organ all those curious and inquisitive persons, who by thronging around it, often disturbed the organist. Thus when they pulled out this stop, suddenly a large fox-tail flew into their faces! Another absurd contrivance, is the tremolando, a register which on funeral services, fast days, and on Good Friday, was to indicate the sobbing, sighing and trembling of men. [Times.

Discovery of Ancient Greek Sculpture.—Letters from Athens mention the discovery of 300 antique statues, or fragments of sculpture, recently brought to light by excavations at Argos, on the site of the Temple of Juno. These precious remains of ancient art have been recovered by the Greek Government; and, if it had any large spirit or interest in archæology, Argos possesses, within its classic soil quarries of invaluable works of sculpture buried in the ruins of the ancient city, and which might be reclaimed at no great cost. Indeed, the sites of the old Greek temples in many districts, excavated by the Government or by the capital of associations, would probably, by sale of the works discovered, amply repay the outlay.

Value of What is Common.—Through the vulgar error of undervaluing what is common, we are apt indeed, to pass these by as but of little worth. But, as in the outward creation, so in the soul, the common is the most precious. "Science and art may invent splendid modes of illuminating the apartments of the opulent; but these are all poor and worthless compared with the light which the sun sends into our windows, which he pours freely, impartially, over hill and valley, which kindles duly the eastern and western sky; and so the common lights of reason, conscience, and love, are of more worth and dignity than the rare endowments which give celebrity to a few. [Channing.

Spring Manuring.—A correspondent of the Massachusetts *Ploughman* says:—

I have pear trees that appeared to be dying, and had not made any wood, or borne fruit for years, that matured a fine crop of fruit the first year after the early application of manure, and made on some branches 20 inches of wood. These trees had been manured and dug around, and every effort made to start them the summer before, but all to no purpose. I have pear grafts that made between four and five feet in one season, on trees that were not making any wood before.

The man who anxiously avoids the shadow of a granite post, but dashes against the post itself, is not a whit more witless than he who fears the appearance of doing wrong, but is not afraid to do the wrong which he thinks will not appear. When Lord Chesterfield counselled hollow-hearted politeness—advised the forms of graciousness, instead of things themselves—he must have seemed to any superior order of human beings, as the silly ape, who puts a wig upon his head, and expects to be reverenced as a judge.

Sometime in July last, the French steamer Chimere put into Norfolk, with a great many of her crew suffering from yellow fever, where every attention was paid to the patients by the chief surgeon of the Naval Hospital, Dr. T. Williamson, and also by Dr. James Harrison. The French Government, by a decree of Jan. 7th, has rewarded Dr. Williamson with a gold medal of the largest size, and Dr. Harrison with another gold medal of honor, of the first class.

The Legislature of Michigan has passed a law concerning churches and religious societies, establishing uniform rules for the acquisition, tenure, control and disposition of property conveyed or dedicated for religious purposes. It provides that all church property shall vest and descend, with the improvements, in perpetual succession to, and shall be held by, the trustees provided in the act, in trust for such church, congregation or society.

James Wilson, now residing in St. Johnsbury, Vt., at the advanced age of 92, is said to have been the maker of the first pair of celestial and terrestrial globes in America. The first edition of his globes was published in 1814; they were of rude appearance, but were well received, and being encouraged to continue in the business, he established a large manufactory in Albany, where the manufacture has since been carried on.

Female Reforms had bettter be looking up a new stock of gentleman's wearing apparel before they go into the Western States. The following resolution was adopted by the Illinois House of Representatives: That a fine $500 be hereafter imposed on any lady, who shall lecture in public, in any part of the State, without first putting on gentleman's apparel.

Mr. J. G. Phillimore reminded the House of Commons, the other evening, that it was notorious that Marlborough was an illiterate man; that Marshal Saxe could hardly write his name; and that not one of the marshals of Napoleon, with the exception of Bernadotte, was an educated man.

New York and Erie Railroad.

ON and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, asfollows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

† John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post-paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

FOOTPRINTS OF JEHOVAH IN THE AGES OF REVELATION—NO. 8.

Creation Completed.

After the earth, at God's command, had brought forth cattle, worms, and beasts of the earth, each distinct in its kind, "God said, Let us make man in our image, after our likeness, and let them have dominion over the fish of the sea, and over the fowls of the air, and over the cattle, and over all the earth, and over every creeping thing that creepeth upon the earth. So God created man in his own image; in the image of God created he him; male and female created he them." Man, like all other living creatures on the earth, was made of the dust of the ground; but there is a specialty given to his creation, that there is not to any other creature or class of creatures. After the Spirit of God had brooded over the primeval, unshaped mass of which earth was composed, every successive act of creation was produced by a single volition of Jehovah's will. "He spake and it was done; he commanded and it stood fast." But when man is to be made, a conference is held, and the distinction he is to receive above every other creature on earth is specified before he is formed. It was the image of his Creator that should distinguish him; and the sequence, rule over every other creature that inhabits the earth. According to the apostle (1 Cor. 11 : 7,) this distinction belonged not to Adam *only, but to men in all their generations.* As Paul understood Moses, so, it is manifest from the general tenor of the Hebrew Scriptures, all the ancient worthies understood the appointment of Jehovah. Thus the eighth Psalm—"Thou madest him to have dominion over the works of thy hands; thou hast put all things in subjection under his feet; all sheep and oxen, yea, and the beasts of the field, the fowls of the air, and the fish of the sea, and whatsoever walketh through the paths of the seas." God is ruler of the universe; man is a ruler over the lower creation. Of the fowls of the air and the fishes of the seas it is said, that the waters brought forth abundantly; of cattle and worms and beasts of the earth, the earth brought them forth; i. e., their natures complete at once. But when God had formed man of the dust of the ground, he breathed into his nostrils the breath of life, and man was a living soul. In the brute creation, the process is one; in the creation of man it is dual. At the beginning God separated man from the brute, and there is no affinity in their natures now. At the first, he was made a little lower than angels, and crowned with glory and honor; and though marred and defaced by sin, the dignity of his nature remains.

In this six days cosmogony, what a beautiful progression is given from day to day—what a glorious culmination! First, there is the dark, unfashioned chaos, over which brooded the Spirit of God, with enlivening power, and broke the dominion of ancient night by the formation of light and the alternate rule of day. The wide, wild waste of waters is now divided by the cheerful, buoyant, expansive atmosphere. This is succeeded by the dry land, rising amid the receding waters, leaving the mountain ranges, the ridging hills, undulating plains, and winding vales, all clothed with verdure, or blooming, or bearing alimentary fruit. Next the auroral sun peers over all this scene of beauty and pleasure, until his diurnal orbicular race gives way for the moon and stars to cheer the succeeding night. Thus prepared for vitality, the fowls and winged insects sip and taste the first nectar of a virgin world; fishes and innumerable moving creatures fill the seas; quadrupeds and creeping things occupy the world, till at length man is created, and put in proprietary of them all.

The progress is from darkness to light—from chaos to order—from barrenness to fertility—from the inanimate to vitality—from the corporeal to the intellectual—and all subordinated to the latter—the only being allied to its Creator by a rational and accountable soul. "And God saw every thing which he had made, and behold it was exceeding good. And the evening and the morning were the sixth day. Thus the heavens and the earth were *finished*, and all the host of them."

There have been convulsions and modifications of the surface of the earth, but no *creations* since that first six days' works were finished. Profane history, written, hieroglyphical, and monumental, is some thirty-three hundred years old, but can show no well-attested statement of a new creation of vegetable or animated nature—not a single genus or order of either kind. The Hebrew and patriarchal histories go back to creation itself; but there is no intimation of a single addition to creation since the first six days' work was completed. It is a very possible thing, that some orders of animals that existed at first have perished, and with some others it may yet be so; but spontaneous creation is a figment of pagans and infidel philosophers. Science may investigate nature as it now exists, and discover things unknown to former generations; but it is by faith alone that we can know how the worlds were made; it is faith in divine testimony! Why should it be discredited for theory founded upon indefinite, inferential circumstances? All facts in history, tradition, and nature, show that mountains and plains, rivers and oceans, are now where they were four thousand years ago. Man, corporeally and intellectually, is universally of the same genus now as he was when Moses wrote!

There is intuitive in man an intellectual superiority, and a moral sense, which no animal of sea or air or land can ever approach! These are facts which show plainly the original unity of all the families of mankind; and the truth of the Mosaic record, and the Christian Scriptures which testify that "God hath made of one blood all nations of men for to dwell upon the face of all the earth." The animal creation are as much his inferiors now in capacity and nature, and as subject to his control, as Moses speaks of them at the beginning. The order of nature in the seasons of the year, diurnal and annual; the productions of the earth, herbaceous and fruit-bearing and seed-producing, are now just as the six days cosmogony relates them. There are some undeniable evidences of great surface changes in the present formation of local conditions of the earth; but there are good evidences that the leading geological bases of the world are as they were at the end of the first six days of creation. In Moses' times, the site of Eden was known, marked by rivers, gold and precious stones. The deluge is described as covering the tops of the highest mountains, and the ark rested upon one of those mountains, near the original residence of man.

Every proposition in the Mosaic cosmogony contains a foot-print of Jehovah. S. D.

For the Sabbath Recorder.

WORLDLY COMFORMITY.

"Be not ye conformed to this world." Rom. 12 : 2.

All the inhabitants of the earth have rebelled against God, their rightful sovereign. Those who continue in this state of alienation from God—whose "portion is in this life"—who "worship the creature and not the Creator"—are emphatically styled "the world." Christians are those who are "seeking a better country," a heavenly one. They have been called out from "this world." They have been brought from darkness to light." The design of Christ's advent and sufferings was to "redeem His people from all iniquity, and purify unto himself *a peculiar people*, zealous of good works." And He designed that His people should "stand fast in the liberty wherewith they had been made free, and not be entangled again by the yoke of bondage." Hence the injunction in the text. If it was needful in the days of the apostles to warn Christians against worldly conformity, when associations with the world were in a great measure cut off, how much more the necessity of our heeding the injunction now, when we are constantly associating with the ungodly, some of whom are our kindred and nearest earthly friends, and when multitudes of professed Christians are really conformed to this world.

I will notice briefly the ways in which worldly conformity appears. It exists when love to God and his cause, and desires for heavenly glories, decline—when the eye is no longer single to "the glory of God," and when the mind becomes absorbed in the pursuit of earthly pleasures, fame or wealth. And when this is the case, it is manifested by words spoken. "Out of the abundance of the heart the mouth speaketh." First, then, we witness a conformity to the world in the language of violent passion and fretfulness, in evil speaking, in "jesting and foolish talking," in language nearly allied to the profane, and in habitually worldly conversation.

2d. It is manifest in imitating the men of the world in the manner of men's conducting in their *business transactions.* We are commanded to "love our neighbor as ourselves." Christ has said, "Whatsoever ye would that men should do to you, do ye even so to them." This heavenly rule, given to guide us in buying, selling, and trading, as well as in all our intercourse with men, is generally disregarded, not only by professed worldings, but by multitudes of the professed disciples of Jesus. How willing, alas! are many of them to live, in part at least, upon the unpaid or part-paid labor of others! How ready to take advantage of the ignorance or necessities of others! And how few, as they enter any branch of business, inquire what the results will be as it respects the general welfare! How few conscientiously refrain from those kinds of business which tend to impoverish and demoralize the community!

3d. We may see worldly conformity exhibited in the *popular benevolence* (so called) *of the times.* The world at large being destitute of true love to man, exhibits a Pharisaic counterfeit, which seeks and secures the praise of men for its reward. Too many professed Christians seem to possess the same spirit. They seem very ready to engage in those public charities which are very popular, much more so than where their help is more needed, but where the praise of men will be withheld.

4th. The love of display so general among professed Christians at the present day is clearly an instance of conformity to this world. We are commanded to "do all" that we do "to the glory of God." The world is intent on securing selfish gratifications. They like to gratify pride, vanity, and inordinate appetites, and to imitate one another. Church members follow in the same direction. Instead of following the meek and lowly Jesus, many of them in these respects copy closely the enemies of Jesus, the proud and wicked world. This is seen in the manner of setting tables, building and furnishing houses, in their carriages, harnesses, dress and ornaments, and many other things. True, the poor are famishing for the want of plain food, and plain clothing, and in many lands there is "a famine of hearing the words of the Lord," yet these extravagances continue to increase. As it respects dress and ornaments, Jesus through his apostles has given explicit directions. These are given particularly to the female sex, for obvious reasons, yet the principle is applicable to the other sex. These are, that "women should adorn themselves in modest apparel, with shamefacedness and sobriety, *not with broidered hair, or gold, or pearls, or costly array.*" 1 Tim. 2 : 9. "Whose adorning, let it not be that outward adorning, of plaiting the hair, and of wearing of gold, or putting on of apparel; but let it be the hidden man of the heart, even the ornament of a meek and quiet spirit, which is in the sight of God of great price." 1 Pet. 3 : 3, 4. Reader, do you not see that the prevailing customs of the times are in direct opposition to these Scriptures? And how are these principles regarded now-a-days by those who claim to be the light of the world? They seem to be almost entirely neglected and forgotten. On this subject the pulpit is silent, and frequently ministers and their wives, and deacons and their wives, are leaders in violating these blessed rules! Sometimes those guilty of disregarding these rules urge, that though they have these ornaments on, yet they do not take pride in these things. But let it be remembered, that not pride alone is forbidden here, but actually the putting on of these things, whether pride is taken in them or not. But the objector manifests a spirit of pride, in not yielding in this respect, implicitly, to the revealed will of the Master. Sometimes it is urged, in palliation of the practice of wearing gold, that it is done in compliance with the request of some deceased friend. Yet the wishes of friends, dead or living, when opposed to the command of Christ, ought not to control us one moment. He who died for us, and lives forevermore, justly demands full obedience at our hands. How it becomes the professed followers of Christ, to appear like humble Christians, and not like vain worldings.

5th. The extreme difficulty of settling differences among church members, at the present time, is an evidence of worldly conformity. In cases of contending parties, but a little time usually passes before both are in the wrong. Both refuse to confess and make restitution; pride and self-will increase as the matter continues to be talked over; and labor put forth to reconcile the parties, frequently serves to alineate them the more, and to increase the spirit of bitterness. Here is exhibited the spirit of the world exactly. If the Spirit of Christ ruled in each heart, each one would feel constrained to confess his own wrong, without waiting for the other.

6th. There is *a worldly way* of keeping the Sabbath, or rather of *pretending to keep it.* The worldly spirit predominating, no preparation is made for the Sabbath beforehand; ordinary business is continued till after holy time has commenced. And then chores are to be done. With many, there are no exercises of spiritual worship, but the whole period of sacred rest is given up to business, secular conversation, worldly visiting, amusement, reading books and papers on science, agriculture, general news, &c. Have such read and pondered in their minds the instructions of God by the prophet, in Isaiah 58 : 13, where we are told, that in order to be favored of God we must "turn away our feet from the Sabbath, from doing our pleasure on his holy day, and call the Sabbath a delight, the holy of the Lord, honorable, and must honor him, not doing our own ways, nor finding our own pleasure, nor speaking our own words." This worldly fashion of keeping the Sabbath, or rather of not keeping it, is a great hindrance to the spiritual prosperity of many, and a great stumbling block in the way of the progress of the Sabbath cause.

7th. There is a conformity to the world manifested in the way many act when they attend religious meetings. We should attend these for the purpose of worshiping God in spirit, of getting good to our own souls, and doing good to the souls of others. Some attend from the force of habit; some to see and be seen; some to criticise the sermon; some to be amused; and some to have a literary repast.

8th. There is a worldly way of preaching. There are those who make preaching the means of gaining a livelihood, rather than of saving souls. Truth is often diluted to suit the popular taste, and that part of the gospel which is heart-searching and unpleasant to the carnal ear, is left out. Thus the preacher may secure popularity and earthly gain, but the cause of God retrogrades, the number of backsliders is increased, and the hands of the wicked are strengthened, so that they do not turn away from their wickedness.

9th. In *prayer and praise* there is sometimes exhibited a spirit of worldly conformity. Where an effort is made to secure the praise of men, by a display of eloquence or musical talent, there is a worldly spirit.

These are some but not all the instances in which worldly conformity appears. Worldly conformity leads away from Christ, from spiritual enjoyment and usefulness, into darkness, lukewarmness, and death. "If any man love the world, the love of the Father is not in him." Reader, are you, in any of the ways above described, or in any other way, conformed to this world? If you will follow the world, you must be condemned with the world. O, "come out from among them, and be separate!" Flee from these worldly practices; follow the footsteps of Jesus; bear the cross; endure to the end; and eternal glory shall be yours. C. A. O.

OBSTACLES TO MISSIONS.

There has been, we apprehend, *a great lack of genuine self-denial*, on the part of the great body of professed Christians. They have only given what they could spare without serious inconvenience. While they have often incurred heavy liabilities to extend their business operations, add to their real estate, or build and furnish a princely dwelling, they have made the very fact of their being thus unwarrantably involved, an excuse for giving "mites" grudgingly; or, perhaps, offered it as a reason for not giving at all; they are in debt, and likely to be as long as they live. But they sadly overlook *the chief item* of their indebtedness—the debt of love and gratitude they owe their dying Lord, for the hopes and blessings of the gospel. They pay but meagre installments on *this* claim, and seem to have little fear of soon being called to give an account of their stewardship.

"I can give so much," said one at a missionary meeting, "to the cause this year, *and not feel it.*" "Then *double it*, brother, *and feel it,*" said another; "it will do you good to *feel it.*" The Church might "double" her contributions of men and means and "not feel it." She *ought* to increase them TENFOLD, and then she would but *just begin* to feel it. I fear the mass of professed Christians have yet to learn their *first lesson* in the school of self-denial. When have *they* ever denied themselves the comforts of life, to aid in saving a perishing world? When have their houses, wardrobes, or tables, been more scantily furnished on account of what they have given to the cause of missions? Let such facts as the following (and they are but few among a multitude that might be cited) indicate:—

"A believer of excellent religious character, in almost every particular, declined contributing to a benevolent object, because *he could not afford it.* Scarcely a week passed by, before he entertained a social gathering at his house, with a variety of viands, at an expense, probably, of not less than *ten* dollars. Another, who could only give twenty-five cents to a worthy object, spread a banquet on the following evening, for a large company of invited guests, at an expense of at least *fifteen dollars.* An agent called on a wealthy Christian for aid; but he refused, on the ground that his present outlays were so large that he could not afford it. He was building a splendid house, at an expense of *seventy thousand dollars*, including the preparation and adornment of his grounds. By dint of perseverance, however, the agent induced him to give *one dollar.*

If, from any cause, there is a pressure in the money market, or they have fallen short of their expected income, how many *lessen* the amount of their contributions, or perhaps excuse themselves from giving at all. Instead of curtailing their expenses, that they may be able to respond to the calls of a sin-stricken world, *they stint God's offering first*, and treat the great interests of his kingdom as secondary On the other hand, if unusually prospered, how seldom are their gifts unusually large! How few in the Church are unwilling to deny themselves the use of *tobacco*, for the sake of increasing their donations for benevolent purposes; and yet I believe *double the amount* is expended by professed Christians for that narcotic, than they give to send the gospel to the heathen. Is appetite their god, or not?

There is *a very unequal and unjust division of personal labor and sacrifice* in the present mode of managing missionary operations. Those who go forth as the servants and representatives of the Church, are expected to sacrifice every earthly comfort, besides devoting *themselves* "a living (I had almost said a *dying*) sacrifice" to the cause. They must bid adieu to home, friends, and native land—isolate themselves from intelligent, refined society—tear their children from their embrace, and send them amongst strangers to be educated, unless they choose to bring them up amid the pollutions of heathenism. As a general rule, they are barely allowed a salary sufficient to meet their actual expenses, when eked out with the strictest economy; and sometimes (I blush to write it) *not even that.* Although missionaries are generally looked upon as preëminently *good* men, yet they are the very last to be treated with a generous and ample support. The fear *seems* to be, that they would become *worldly-minded, and lose their missionary spirit*, if placed in comfortable circumstances. But if the means for procuring the comforts and conveniences of life would prove such a snare to the toiling missionary, is there *no* danger that Christians at home, surrounded with *luxuries* as well as comforts, should "wax fat and kick," like Jeshurun of old? And would not larger and more frequent drafts upon the treasury of the Church have a tendency to reduce that dangerous *plethora* that now cripples its efforts and renders it so sadly imbecile?

[American Missionary.

WHY SHOULD I CALL THEE DEATH?

Where, on thy kindly pinions, tarriest thou,
O soft celestial breath?
Sent to my spirit from the Infinite,
Why should I call thee Death?

On my white couch all day I wait for thee,
And through the dewy night;
Hath He commissioned thee to wing so slow
And calm thy solemn flight?

In velvet fields I know the lambkins play,
And infant violets peep;
Come swifter, ere my almost parted heart
Return for these to weep.

Where still and pale I fade from hour to hour,
Eyes keeping watch like stars,
Make earth so dear that still my spirit rests
Without the crystal bars.

Should I repine while here in arms of love,
Just under heaven's bright gate,
Until the angel of the Lord come down,
A little while I wait.

This lower sky is gloriously fair—
I am not tired of earth;
From other spheres I shall look love to thee,
Land of my mortal birth.

But I have caught a vision of the palms
Around the mount of God—
That mystic tree whose branches spread the way
Which Christ the prophet trod;

And underneath their shade my soul must dwell
With souls beatified—
I heard it whispered in the holy night
By angels at my side

Then, where on thy slow pinions tarriest thou,
O soft celestial breath?
Sent to my spirit from the Infinite,
Why should I call thee Death?

MARY HUBBELL.

LITTLE BY LITTLE.

From the window near which I now write, I saw, some time ago, several workmen clearing away the rubbish from a vacant lot over the way. Then others came, who, spadeful by spadeful, dug deep foundations. Presently the masons began their work. Click! click! click! Incessantly their hammers were going. One rude stone after another was fitted and adjusted in the solid walls, which soon began to rise above the level of the ground. Then the brick laying began. Brick after brick! brick after brick!—so the wall rises. Now they have reached the second story, and now the third. Still the same quiet and gradual process is going on. Brick upon brick! brick upon brick! Now they have reached the fourth story, and now the fifth. I look from my window this morning, and the house is enclosed and completed. There it stands! an extensive and imposing five-story edifice, towering far up, and capable of affording ample accommodations for purposes of trade or residence.

I cannot help *thinking* as I look at that house. It was but as yesterday that it was begun, yet there it stands completed. How was it put there? Little by little. There was no miracle wrought. No giant's strength was applied to it. No Hercules labored upon it. Plain, common men, did all the work. Brick upon brick! They toiled patiently and steadily, but always doing their work little by little. Now look at it! How astonishing a result has come from those many little bits of labor, well planned and perseveringly performed!

But stay. I look at other builders, and I see results quite as wonderful. The successful tradesman, the eminent physician, the distinguished lawyer, the illustrious statesman, how were their names and fortunes built up? Not by mushroom growth, but brick upon brick. A settled plan—a fixed and comprehensive purpose, to begin with. Then a little to-day, a little to-morrow, a little every day. A steady, earnest, judicious, persevering industry. Thus was built up the splendid fortune, the extensive practice, the illustrious name.

I look further. I see other builders, in the Church of Christ. I see an eminent minister of the Gospel, not long since gone to his rest. His fame for piety, and usefulness, and learning, are wide as the Christian world. He stood in the first rank of the preachers of the Gospel. Volume after volume came forth from his exhaustless mind and his untiring hand. Millions of pages of his undying thoughts have been scattered in various languages through many lands. What a glorious reputation did he build up! What an enviable work of usefulness did he do! How was it done? Brick upon brick! Little by little! A well-settled plan of life, a steady industry, an untiring perseverance, some thing well done every day—and behold the edifice!

I looked into the dwelling of an aged and eminent saint. The sweet perfume of holiness filled the dwelling. All venerated, all praised, all loved him. He seemed to live ever on the verge of heaven. His converse was with God and Jesus. He looked by faith on things unseen. His piety shone forth in every word and work. How was this blessed character formed? Not by the transformation of a day or a year did this sinful man acquire it. Little by little! One application to the blood of cleansing, then another. One temptation resisted, then another. One besetting sin conquered, then another. One little act of piety, and then another. Little by little. By persevering industry, by steady effort, that blessed character was, with God's help, formed.

I looked beyond the boundaries of life and time. I saw the redeemed clustered around the throne of the glorified Jesus. Among the hosts were some excelling other saints, whose robes were of transcendant whiteness, whose crowns were of peculiar weight and lustre, whose songs were of more exquisite melody, whose joys surpassed even the ordinary joys of heaven. O, wondrous exaltation in happiness and glory! Whence came it? By what miracle thus lifted above the multitudes of the fallen and redeemed ones? By a miracle of grace, truly. All, all, from first to last, of grace. Yet, through grace, little by little. A settled, heavenward aim; a steady, daily, persevering struggle thitherward. A little good done to-day, a little more to-morrow, a little every day. Not the fortuitous gain of a day, of an hour; not the sudden and unaccountable result of some extraordinary conjunction of outward circumstances; but the faithful occupation, day by day, of the five, the two, or the one talent committed to them by their Lord.

Builders for time! Builders, in time, for eternity! Despise not the *little things* of life, its little opportunities, its little gains, its little temptations, its little sins, its little calls to usefulness. Let your plans be well laid, both for time and for eternity. Be ever found adding one little to another. Lay one brick on another, daily, assiduously, perseveringly; and when the magnificent castles in dreamland, for which others despise your unpretending, plodding round of daily exertion, shall have clean vanished and gone, *your* building will stand forth in sight of men and angels, firm, capacious, and beautiful for ever. [Home and Foreign Record.

MORAVIANS IN RUSSIA.

On the banks of the Wolga, near Czarizin, the Moravian settlement of Sarepta was founded in 1765, at the express desire of the Empress Catherine II. To this settlement and its population, chiefly German, various privileges have from time been conceded by the Russian Government, and as subjects of the Russian crown they have been treated with kindness; but as a missionary community, attempting the conversion of the heathen in the Russian empire, they have experienced the same difficulties as have fallen to the lot of other Protestant churches. After laboring patiently and with little apparent success for many years among the Calmuchs around them, the brethren were enabled at length to gather a small flock of converts from this singular race, and began measures to form them into a regular congregation, by administering to them the rites of the Christian church; the Greek clergy interposed to prevent this, and the civil power sustained them in their interposition, and compelled the brethren to desist from their efforts and abandon the field at the moment when their toils were beginning to meet their reward; and now for more than thirty years, the Moravians have been entirely shut out from the sphere of missionary usefulness in Russia! This single fact illustrates the spirit of the entire Greek church, and its Imperial Protector; Protestant missions and the Oracles of God are as carefully excluded from every part of the Russian empire as from the Papal States of Italy; and the triumph of the Czar in his present contest for the throne of Turkey, would secure the overthrow of every Protestant mission in that country, and the banishment of every missionary, with all his books, types, and other assistances in the work of evangelization. So the missionaries in the field understand it; so the history of the past foretells it; and so the avowed object of the war on the part of the Czar assures it. Ought not prayer then to be made unto God without ceasing for the downfall of the civil and ecclesiastical despotism wielded by the mighty autocrat. [Congregationalist.

THE RICH AND THE POOR.

When I compare together different classes, as existing at this moment in the civilized world, I cannot think the difference between the rich and poor, in regard to mere physical suffering, so great as is some times imagined. That some of the indigent among us die of scanty food, is undoubtedly true; but vastly more, in this community, die from eating too much than from eating too little; vastly more from excess than starvation. So, as to clothing, many shiver from want of defenses against the cold; but there is vastly more suffering among the rich from absurd and criminal modes of dress, which fashion has sanctioned, than among the poor from a deficiency of raiment. Our daughters are oftener brought to the grave by their rich attire, than our beggars by their nakedness. So the poor are over worked; but they suffer less than many among the rich, who have no work to do, no interesting object to fill up life, to satisfy the infinite cravings of man for action. According to our present modes of education, how many of our daughters are victims of *ennui!*—a misery unknown to the poor, and more intolerable than the weariness of excessive toil. The idle young man, spending the day in exhibiting his person in the street, ought not to excite the envy of the overtasked poor; and the cumberer of the ground is found exclusively among the rich.

[Channing.

"DIVINE AND HUMAN WORKS."

In an age when popular language, having a tendency to affect atheistically popular feeling and faith, deifies science and art, it is well to see how man's fabrics are imitations of the Divine work. For this purpose the following, from *Household Words*, deserves to be read and considered:—

A bird is a model ship constructed by the hand of God, in which the condition of swiftness, manageability and lightness are absolutely and necessarily the same as in vessels built by the hand of man. There are not in the world two things which resemble each other more stongly, both mechanically and physically speaking, than the carcass and framework of a bird and a ship. The breast-bone so exactly resembles a keel, that the English language has retained the name. The wings are the oars, the tail the rudder. That original observer, Huber, the Genevese, who has carefully noticed the flight of birds of prey, has even made use of the metaphor thus suggested to establish a characteristic distinction between rowers and sailors. The rowers are the falcons who have the first or second wing feather the longest, and who are able by means of this powerful oar to dart right into the wind's eye. The mere sailors are the eagles, the vultures, and the buzzards, whose rounded wings resemble sails.

THE AWARDS OF THE FUTURE.

Reply to Bro. Griswold—Concluded.

We come now to consider the question whether the punishment of the sinner, in the future world, which takes place *according to the course of nature*, (that is, in some such way as we set forth in our last,) is the *whole measure* of what will be experienced. In other words, does God simply *abandon* the sinner, or does He *positively inflict* some evil? Does He just leave the sinner to the workings of his own enmity of heart and the misery that naturally results, or does He render "indignation and wrath, tribulation and anguish," besides?

To make the solution of this question as simple as possible, let us employ a familiar illustration. A certain field is filled with plants and flowers of the most variegated colors, and of the richest fragrance. The youth who beholds the scene, is strongly inclined to enter the field, and avail himself of the delights which are so temptingly presented, but his father positively forbids him. But the temptation becomes too strong for him to resist, and so, in defiance of his father's prohibition, he enters, wanders about, plucks the flowers, inhales their delicious fragrance, and then returns home. After a time, his flesh begins to smart, blotches and swellings ensue, finally corroding ulcers break forth, and he becomes a most pitiable object of suffering. He is poisoned. Those flowers, so beautiful to look upon, and so pleasant to the smell, contained a subtle poison, that has diffused itself through the poor child's system.

"The child," says one, "is rightly punished for his disobedience to his father." But if all this suffering is the penalty which the child pays for disobeying his father, what shall be said of another youth, who went into the field with him, and suffers, in consequence, the same kind and amount of misery? For this was a youth, whose parent had *not* forbidden him; yet he suffers, in every respect, like the first. The truth is, that in the first case, as well as in the second, the penalty suffered is simply the penalty of *imprudence*. The youth, in his ignorance, has violated a *natural* law, and therefore disease has come upon him. He is not yet punished for contempt of parental authority.

But when he has suffered sufficiently for his *imprudence*, would it be wrong—would it be unjust—would it be cruel, harsh, or unfeeling—for his father to call him to account for his disobedience? Would it not, rather, be a duty which the father owes to himself as the governor of his own family, to inflict some sort of punishment upon a child so disobedient, and thus to vindicate his rightful authority? Should he allow the matter to pass, others of his children might rebel, if not in the same form, yet in other ways, and so all respect for him as one in whom authority to govern and restrain was rightfully lodged would soon cease. It is certainly right that the disobedient child be punished. The "addition" which is made to the suffering he has already undergone, is neither "superfluous" nor "unjust."

Our illustration shows just how the matter stands in regard to the retributions of the future life. The Law of Nature is violated in every instance of wrong doing. Even the heathen, who know nothing about Revealed Religion, are chargeable with sin, because they violate "the law written in their hearts." For it is not necessary that a duty be *commanded*, or *positively enjoined*, as the Law was from Mount Sinai, in order that it may become binding. The things enjoined in the Decalogue were duties long before they were promulged in that form. Indeed, they grow, so naturally and obviously, out of the relation man sustains to his Creator and his fellow-creatures, that he is reckoned a sinner for not performing them, even if he knows nothing about that written, or revealed, law which commands them. "But sin is not imputed where there is no law." (Rom. 5 : 13.) And if man is under law, even though he knows nothing about Divine Revelation, he is under its penalty; for law without a penalty is no law at all. Accordingly, his violations of duty must be followed by *suffering;* and his *suffering* is of that nature which we set forth in our last—the misery which grows, *naturally*, out of unsubdued enmity and remorse of conscience.

But man is bound, not only by the law inlaid in the elemental principles of his nature, but also by the written or revealed Law contained in the Scriptures. And though the revealed Law is but a copy of that which is written in the heart, and sets forth precisely the same duties, yet, inasmuch as God *positively enjoins* it, it comes with an additional sanction. The whole revealed Law thus partakes of the nature of a Positive Institution, and we are bound to keep it, not merely because the harmony of nature is disturbed by our disobedience, but because God, in the exercise of sovereign and rightful authority, requires it. To speak in the symbolical or figurative style of our illustration, we are bound to keep out of the field, not merely because danger lurks there, but because our Father commands us.

Now, though our violations of duty as indicated by the light of nature must necessarily entail suffering upon us, in the future state; and though this suffering will be fearfully intense because of the strength of our enmity against God, and irremediable because of the fixed obstinacy and perverseness of our enmity; it is nevertheless clear, that the *revealed* and *commanded* Law of God lays us under additional guilt. "The Law entered that the offense might abound." (Rom. 5 : 20.) And if the offense abounds because of the entrance of the law, reason teaches that the penalty should be increased in the same ratio. God's authority as the Giver of the Law, and the rightful Moral Governor of the Universe, must be vindicated. Therefore, an "addition" to that measure of sufferings which the transgressor receives *according to the course of nature*, is neither "superfluous" nor "unjust." It is just as it should be; and if a miracle should be needed to ensure this addition, a miracle will be resorted to.

This "addition" is *the penalty proper* of the Divine Law revealed in the Scriptures. It is the precise thing threatened in what was said to Adam (Gen. 2: 17,) "In the day thou eatest thereof, thou shalt surely die;" and in Ezek. 18: 4, "The soul that sinneth, it shall die;" and in Rom. 6: 23, "The wages of sin is death." (See also James 1: 15.) What are the constituent elements of this additional suffering, or in what manner it is brought about, we pretend not to say. But the fact that Jesus Christ endured it, when he was made a curse for us, proves, not only that it is possible for one to suffer more than takes place strictly according to the course of nature, but that the proper penalty of the Law is not met by what is only according to nature. For certainly, Jesus Christ never possessed any enmity against God to be a source of misery to his soul, nor did he ever commit sin to be the occasion of remorse of conscience. His punishment was *not* according to the course of nature. Yet the sorrows of hell laid hold upon him, and so intense was his agony, that the blood forced itself through the pores of his skin. The consciousness that he had glorified his Father on the earth, and finished the work given him to do, without failing or being discouraged, could not save him. The curse came upon him, and he suffered awfully—fearfully. "It pleased the Lord to bruise him." (Isa. 53 : 10.)

We are aware, that writers on the Atonement have sometimes labored to show, that what Christ suffered, when he was made a curse for us, was not the identical curse which the Law denounces against sinners, but something which the Father was pleased to consider a full equivalent; grounding their argument upon the assumption that the curse, or penalty proper, of the Law, consists of "a painful consciousness of having done wrong—a sense of having offended God—bitter self-reproach for having broken the law of love—and the stormy horrors of a guilty and condemning conscience." But such reasoning (we think) overlooks the clear distinction between the law as inlaid in the principles of our nature, and the law as revealed, commanded and enjoined by sovereign authority. Christ endured the curse—the penalty proper—of the revealed Law of God. And since what he endured was something entirely independent of, and separate from, a consciousness of having done wrong, so in the great day of retribution, when God rises up to vindicate his outraged authority, He will inflict upon the sinner something over and above the stormy horrors of a guilty and condemning conscience—an "addition" neither "superfluous" nor "unjust."

It certainly gives strength to our argument, that the Scriptures represent the infliction of the penalty of the law as beginning at the Day of Judgment, and not as soon as the sinner ceases to live on earth. "Indignation and wrath, tribulation and anguish," are poured out upon the evil doer "*in the day when God shall judge the secrets of men by Jesus Christ.*" (Rom. 2 : 8, 9, 16.) The rejecters of the gospel will be "punished with everlasting destruction from the presence of the Lord, and from the glory of his power, *when he shall come to be glorified in his saints—in that day when he shall be revealed from heaven with his mighty angels.*" (2 Thes. 1 : 7–10.) "Depart ye cursed" takes effect "*when the Son of man shall come in his glory, and all the holy angels with him, and shall sit upon the throne of his glory.*" (Matt. 25 : 31.) The gospel "judges" the rejecters of it "*in the last day.*" (John 12: 48.) Now, if there were no other kind of punishment except that which takes place strictly according to the course of nature, with what propriety could it be said to date its beginning at the Judgment of the Last Day? Certainly, with no propriety whatever, unless we admit the miserable doctrine of man's unconsciousness between death and the judgment. And even then, there would be no propriety in it, because punishment according to the course of nature would be precluded, and a miracle would be necessary to place the sinner in a condition to be punished at all. Clearly, then, the penalty proper of the revealed Law of God is something over and above what is strictly according to nature. For, on the supposition that sinners live in the intermediate state, the stormy horrors of a guilty conscience must commence with them as soon as their connection with this world is broken.

This is an intensely interesting subject. We have spread out our thoughts more diffusely than was necessary for a reply to our correspondent, but our object has been, not so much to defend our position, as to set forth the views which the question has suggested. Still, we have not said all we wished, nor all we intended. The modifying influence which the Mediation of Christ has upon the moral government of God, and therefore upon the retributions of the future, has not been considered. But as our correspondent "has more to say," he need not wait for any thing farther from us. T. B. B.

THE CHURCH AND THE SCHOOL.

American Colleges.

"After God had carried us safe to New England, and we had builded our houses, provided necessaries for our livelihood, reared convenient places for God's worship, and settled the civil government—one of the next things we longed for and looked after was *to advance learning, and perpetuate it to posterity—dreading to leave an illiterate ministry to the churches when our present ministers shall lie in the dust.*"

Such is the record which the Pilgrims left of their views and their action. The Church, the Government, and the School, were their first and mutual care. Liberty, learning, and religion, were their priceless legacy to posterity. The church and the college were planted side by side as the great conservators of liberty and a Christian civilization. The American college has been demanded, from the first, by the church, as an ally in accomplishing her great mission.

"Pro Christo et Ecclesia"—*for Christ and the Church*—was the motto adopted by the founders of the first American College. Yale College originated in a "sincere regard and zeal for upholding the Protestant religion by a succession of learned and orthodox men." Princeton College was founded for the "purpose of supplying the church with learned and able ministers of the Word." Amherst, and Williams, and Dartmouth, "were born of the prayers, and baptized with the tears, of holy men." A meeting convened for the purpose of founding a Western College, proceeded, in a body, to the intended location, in the primeval forest, and there kneeling on the snow, dedicated the spot to the Father, the Son, and the Holy Ghost, for a Christian College. The same may be said of nearly all of the American colleges.

"Nearly all of those institutions," says Prof. Tyler, "which have lived and prospered, and exerted a decided influence, even in our literary and political history, were established by evangelical Christians; and have been taught, for the most part, by evangelical ministers, with a direct and special reference to supplying these churches, and the country, and the world, with a learned and pious evangelical ministry. Institutions established by worldly men, for merely worldly objects, have not prospered. Infidelity, or irreligion, or no religion, may have founded them, but it could not sustain them; and it has been found necessary to transfer them to the hands of religious guardians and teachers, in order to save them from utter extinction. They have been planned by the wisdom of political sages, and fostered by the wealth and power of the State, but they could not be well managed and governed without the sanctions of religion. They have not won the confidence of parents and guardians, for even irreligious parents do not generally want their children educated in infidelity or impiety; and Christianity, though hated in itself, has been welcomed as a necessary means—though excluded by statutes and constitutions, it has, sooner or later, been admitted to a practical and controling influence." Thomas Jefferson made an attempt to found a University without any connection with religion. "It was nursed with all possible care; but it could not prosper. There was a blight upon it. They could keep neither professors nor scholars, till at last they altered the plan, brought in a man of God to teach religion, and the institution has since been very prosperous." "Baptists and Methodists, Congregationalists, and Presbyterians—indeed, nearly all of the evangelical Protestant sects, have their prosperous literary institutions in almost every State of the Union; but infidelity has yet to make its first successful enterprise of this sort; and State policy, State patronage, exclusive of religious influence, cannot show a single flourishing American college."

"The State of Ohio," says Prof. Stowe, "undertook to establish colleges without the church. She had a most magnificent educational endowment, as rich for her as Oxford and Cambridge for England—and if as carefully invested and husbanded, would in time have produced proportionately as large a revenue—but for want of steady supervision, the endowments were frittered away to almost nothing, compared with what they might have been—and neither of her colleges has ever been of any practical efficiency, except while put under the special care of some religious denomination." Michigan, Wisconsin, and several of the other States, especially the Southern, have tried or are trying the experiment, but feebleness, inefficiency, or decay, have marked their efforts thus far. The teachers in such institutions are too much under the control of political demagogues. They have to pay more attention to their own politics than to the morals and manners of their students. If they can show certificates of proper standing in politics, it is apt to be considered of more importance than religious culture.

While colleges cannot live and flourish without the religious element, without the aid and support of the church, neither can the church long prosper without the college. Such is the testimony of history in respect to the old world—and such is its testimony in respect to the American churches. All of the leading and efficient denominations have them. It is true that the Methodists, at first, had no colleges—and why? "Because the Methodists in England, under Wesley, were not a church—did not profess to be a church—they were simply a society for the promotion of a revival of religion in the church of England, and the educational institutions of the national church were their educational institutions. In this country, from the necessity of the case, they became a church by themselves; and though they endeavored to live here as they had done in England, they soon found it absolutely impossible—to maintain their church existence and influence, they saw that they must maintain colleges, and they do. What denomination is establishing colleges with such rapidity and success, and in such numbers?" A like course should be pursued by the whole Christian church.

Sad are the consequences, when the intimate relationship subsisting between the church and the school is sundered, and hostility springs up; but seldom does this alienation or perversion of an institution take place, when founded in the faith and prayers of evangelical Christianity. "It is said," remarks Prof. Stowe, "that such institutions are often perverted, and turned against the designs of their founders. This is a mistake. Occasionally there is a temporary perversion; but only occasionally, and not long at a time. Harvard College is alledged as an instance of perversion; and out of all the respectable colleges in the United States, at least 120 in number, this is the only one which can be mentioned as an instance of perversion. One in one hundred and twenty is certainly a very small proportion, and just enough of an exception to prove the rule. Harvard has been in existence something more than 213 years, and for at least 150 years of that time it did answer the purpose of its founders—it did supply the country with an evangelical ministry—and now the power of the supposed perversion is already broken, and again the Spirit of God is already in the College, and soon the hearts of the fathers will be turned upon the children. The same is true of most of the Universities of Europe, founded by pious men. They have been in existence some of them 500 years, and of the five centuries of their existence, they may have been perverted to rationalism and unbelief, some of them fifty, some seventy-five years—and now all of them are again returning, with more or less rapidity, to evangelical ground. What safer investment on earth? In the mutations and fluctuations of opinion, perverted institutions, founded in faith and prayer, after a while always come back purified and better than ever before. Wirtemberg and Harvard will yet be nurseries of men, who will preach the gospel with less admixture of human error, and set it in a clearer and brighter light, than was ever done even by Luther and the Mathers. The spirit of the founders of an institution is a permanent spirit—it never quite dies out, and is always ready to be resuscitated. The promise is not more sure to parents in regard to the training of their children, than is the Providence of God in regard to the pious founders of institutions of learning. We have been too apt to look on the dark side of the picture—to think of the few diseased spots, and forget to remember the many healthy ones." *

REVIVAL AT GREEN HILL, R. I.

DORRVILLE, R. I., April 9th, 1855.

To the Editors of the Sabbath Recorder:—

It has been suggested to me, that it might be proper to send you some further account of the revival interest at Green Hill and vicinity, for the information of those who have an interest in that field of labor.

Eld. C. M. Lewis went to that place as soon as Eld. H. H. Baker left, and continued his labors (in connection with mine) for most of the time during two months or more. Soon after Bro. L. went there, he presented the claims of God to the people, and among those claims he presented the Bible Sabbath, which caused some to take offense, and violently to condemn the course. They then separated from us, and commenced a series of meetings by themselves; and although a strenuous effort was made to draw the interest after them, yet, thanks be to God, His *presence* was not withdrawn; for I must acknowledge that the power of God has been manifested in a manner I never witnessed before. It has been the opinion of some of our people, that in time of revival, to lay the duty of keeping the Sabbath before the congregation, would cause the religious interest to wane; but not so in this instance, for the very opposition raised by our opponents was overruled by God to direct some to investigate the question of difference, who formerly had little or no interest in religion, which resulted in their conversion to God and his truth. One brother, in relating his experience, said that before the Sabbath question came up, he had not given his attention to religion; but in hearing the severe censures heaped upon the Sabbath-keeping Christians, he was induced to read the Bible, that he might know whether those hard reproaches were just; and he not only found that the seventh day was the only weekly Sabbath, but he also found divine truth that convicted him of sin and led him to the Saviour. During the continuance of the work of divine grace, 44 have been baptized; 39 have joined the Seventh-day Baptist Church at South Kingston, over 30 of them converts to the Sabbath, and 13 of the number are heads of families, and there are several others who have not yet joined the Church, but have commenced keeping the Bible Sabbath. Between 20 and 30 have been baptized and joined the Baptist Church at Perryville, who came out in the revival at Green Hill. Thus far a degree of faithfulness has characterized the conduct of the converts. In view of the interest, I have spent most of the time for three months, and now I am attending three meetings a week at that place, and shall continue to go there and spend every Sabbath with that church until the meeting of Association at Pawcatuck, R. I., when arrangements should be made to have preaching there every Sabbath the year following.

Yours in the Gospel, HENRY CLARKE.

AFFAIRS AT SHANGHAE.

Just before sending this paper to press, we received an interesting letter from Eld. Solomon Carpenter, of Shanghae, China, which we shall probably publish in full next week. Meanwhile our friends will be glad to learn of the health and safety of our missionary brethren, though they are in the midst of danger. In consequence of a change of policy on the part of the representatives of the foreign powers, the Imperialists had been allowed to take possession of the "old race course," (near where Bro. Carpenter's new house stands,) and there they were erecting batteries and having frequent skirmishes. Bro. C. represented the case to the American Consul, who directed him to abandon the house as unsafe. The Consul had opposed the project of allowing the Imperialists to come upon the ground in question, and had obtained from the Chinese authorities funds enough to pay for seven American houses, (including those of brethren Carpenter and Wardner,) in case of their being destroyed. Mr. Wardner's house had been partially destroyed, and the Consul had paid him $1,200 for it. If Mr. Carpenter's house is destroyed, the Consul is to pay him $1,500 for it, which is about its cost. At the time of writing, Mr. Carpenter's family were snugly quartered in a little burgalow belonging to James McDonald, and Mr. Wardner's family were quartered in the house of a friend, Mr. Wright. The letter closes as follows:—

Feb. 5.—There has been a delay of the mail until this date, and I have to add, that the people in the city are in an awful state of suffering from want of food. Dr. Lockhart, as a privileged man, has been allowed by the French to visit the city until four days ago. The last time he went in, I sent by him a letter and a little money to the people in our house, expecting to obtain a reply within a day or two; but as no foreigner is now allowed entrance, I have got none; and as others are starving to death daily, it may be that those in whom we feel more immediately interested have already passed that dreadful ordeal. One missionary said to-day, that he expected his whole school, including the teacher, were starving to death.

There was talk of the surrender of the city to-day, but the leaders doubtless shrink with horror from the death by inches which they know awaits them in case they fall into the hands of the Imperialists. Poor, poor Shanghae! Deep is her distress—unutterable is her woe. Some, to avoid death by starvation, leap over the wall, to the great hazard of breaking their bones. Others prefer to meet the king of terrors by hanging or drowning.

ARCHÆOLOGICAL DISCOVERIES IN SIDON.

A correspondent of the *Journal of Commerce* (N. Y.,) writes an interesting letter from Beirut in Syria, descriptive of some important archæological discoveries which have recently been made in the ancient city of Sidon, and it is believed that farther investigations will reveal to the eyes of the searchers monuments and other relics of the past, which, although not equal in magnificence to those of Nineveh, will possess greater value in the history of letters and the disposal of certain questions of archæology. Sidon is thirty miles south from Beirut, and contains a population of about ten thousand persons. In the winter of 1833–34, some Musselmen, who were digging for treasures in the old grave yards of the city, uncovered three copper pots, each containing eight hundred pieces of gold. The whole value of the treasure was about $12,000. After this discovery, excavations were commenced upon a larger scale, and as it has turned out with more important results. The correspondent of the *Journal of Commerce* says:—

"On the 19th of January last some men were digging for more hid treasure in an ancient cemetery on the plain of Sidon, called Mughorat Tabloon, when, at the depth of about twelve feet below the surface, and near the walls of an ancient edifice, they uncovered a *sarcophagus*, upon the lid of which there is a long Phœnician inscription. The lid is of a blue-black marble, intensely hard, and taking a very fine polish. The lid is about eight feet long by four feet wide. The upper end is wrought into the figure of a female head and shoulders, of almost a giant size. The features are Egyptian, with large, full, almond-shaped eyes, the nose flattened, and lips remarkably thick, and somewhat after the negro mould. The whole countenance is smiling, agreeable, and expressive, beyond any thing I have ever seen in the disinterred monuments of Egypt or Nineveh. The head-dress resembles that which appears in Egyptian figures, while on each shoulder there is the head of some bird—a dove or pigeon—and the bosom is covered by what appears to be a sort of cape, with a deep fringe, as of lace.

"On the lid, below the figure head, is the inscription, consisting of twenty-two long lines, closely written. The letters are in perfect preservation, and can be read with the utmost ease and accuracy, and the whole forms by far the longest and most perfect inscription yet discovered in this most ancient language and character. It appears to be mainly a genealogical history of the person buried in the sarcophagus, who, it appears, was a King of Sidon. The names of Baal and Ashtoreth, the well known gods of the Sidonians, occur repeatedly in these inscriptions. Some of the words are Hebrew, as *melek*, king; while the forms of some letters are so much like those of the ancient Greek as at once to indicate the relationship. Letters were invented by the Phœnicians. Here we seem to see them dropping from their hands in the first casting. I have a copy of the inscription before me, with the figure head, taken with great accuracy by the pen of a young Arab, which could hardly be exceeded by photography or lithography. I wish I could forward it to you, to be used in your paper. It was sent to me by a friend in Sidon, and it is the more valuable from the fact that, at present, additional copies cannot be taken."

The inscription was not perfectly deciphered at last accounts. The Rev. Mr. Thomson, an American missionary at Sidon, and the Rev. Dr. Smith of Beirut, had, however, translated a large part of it with little difficulty, and expected soon to complete their work. In the meantime a controversy had arisen between the English and French Consuls at Beirut respecting the ownership of the sarcophagus. One had made a contract with the owner of the land, by which he was entitled to whatever he should discover in it; and the workmen of the other had discovered the relic within the claim of the first. Both were extremely anxious to obtain it at any cost, with the intention of sending it to London or Paris; and for the purpose of preventing any serious trouble, the Turkish governor of Sidon had closed up the ground and surrounded it by a guard of soldiers, while the question of ownership was being decided by the Courts.

LETTER FROM A CONVERT TO THE SABBATH.—Several weeks ago, at the suggestion of a friend, we sent a few Sabbath Tracts to a man in Connecticut who had recently commenced keeping the Bible Sabbath. Last week we received a letter from him enclosing money for more tracts, and giving some account of his feelings. The following extract will be generally interesting:—

MY BROTHER—Although personally a stranger, yet I feel to address you in language the world cannot understand—in language that even Christians cannot understand, except as they leave the commandments of men, (who make void the commandments of God by their tradition,) and come into the liberty of the sons of God. For many years I have had a controversy with the Almighty with regard to the Sabbath that he has "sanctified and made holy;" and since that controversy is ended by my being conformed to the will of God, our sympathies cannot but be mutual, both with regard to the conflicts through which I have passed, and the sacredness that God has thrown around the day that he has made holy. I have noticed one thing, in my experience with "the world," and that is, that with the exception of increasing the wealth of an individual, we cannot impart such satisfaction as by conforming to his religious opinions; and if this is the fact with regard to the unconverted of the world, how much more should those rejoice together who have sacrificed and laid aside their education, the commandments of men, their preferences, the honors, business, and friendship of the world, and in their place have incurred the hatred, the contempt, the frowns, and the persecutions, not only of the world, but also of those we esteem as "members of the body of Christ"—how much, I say, should those rejoice together who have thus separated themselves from the world. But I am alone; as far as my eye can reach, east, west, north, or south, I know of no one that has thus turned aside from the corruptions of men to serve the God of heaven; and in the bitterness of my soul I repeat the language of the scriptures, "There is none that understand, that seek after God; they are all gone out of the way; there is none that doeth good, no, not one." Yet I see around me many that have not bowed the knee to the image of Baal, and my soul cries out to the Lord, that he would bring them into the liberty of the sons of God.

DR. BEAUMONT.—Dr. Beaumont and the late Dr. Morrison, of China, married two sisters. Mrs. Beaumont is left with seven children, one of whom only is married, a daughter, to the Rev. Mr. Milne, who has been a missionary to China, but has now returned to England, the victim of a distressing epilepsy. There are three sons; the eldest is a law-student, the second is studying medicine, and the youngest, about 14, is at school. Dr. B. died a poor man as to silver and gold, and the allowance from the Widows' Fund is a poor pittance indeed. Knowing this, the Hull Methodists have originated a subscription for the family, and the responses are already of the most generous character, so much so, that the committee express their determination to raise at least £2,000, or $10,000.

LIQUOR-SELLING IN NEW YORK.—The Mayor of New York has made public through the newspapers his intentions relative to enforcing the Prohibitory Liquor Law. Rum-sellers will find no "aid and comfort" in him. He says that whatever may be his opinion in regard to the law itself, he can not shrink from the duty imposed upon him of seeing that it is executed. He therefore calls upon the friends of law and order to aid him in sustaining the law—"a principle upon which rests the corner-stone of all our national prosperity and greatness."

In the Board of Councilmen, a motion has been made, and referred for legal advice, to extend all existing rum-licenses to the 4th of July, if the new law will permit. The same Board has repealed the ordinance recently passed concerning liquor-selling on Sunday.

MISSIONS IN CHINA.—At a recent meeting of the Executive Committee of the American Tract Society, a letter was read from Rev. Mr. Williams, of Canton, enclosing a list of the entire Chinese missionary force, namely, American 46, English 24, Swiss 2, German 3, total 75; and states that the operations of the Christian press are much interrupted by the civil strife. Rev. Mr. Lord, of the Baptist Mission, Ningpo, comfirms Mr. Williams' statement respecting the influence of the Revolution on Christian labors, and discourages the use of the Roman character in Chinese printing.

THE BRITISH MUSEUM ON SUNDAY.—In the House of Commons, recently, a proposition was made to have the British Museum thrown open on Sundays. Forty eight members sustained the proposition, and two hundred and thirty-five voted against it.

RELIGIOUS INTELLIGENCE.

Dr. Lewysohn has just published, under the title of *Monuments des Justes*, sixty inscriptions on the tomb stones in the Jewish Cemetery of Worms. This little work, which is accompanied by two lithographs, representing the exterior and interior of Raschi's oratory, has already produced a great sensation in the learned world of Germany. The biographical, historical and such archœological notices furnished by the author for the better understanding of these epitaphs are of a high interest and an inestimable value to Israelitish history.

The *Christian Review*, published by J. J. Woolsey in this city, and edited by Drs. Turnbull and Murdock, of Hartford, opens with an elaborate article on the Book of Acts, reviewing the valuable "Commentary" by Professor Hackett, of Newton. Next follows a severe criticism of Mr. Bancroft's oration on the Progress of Society. After this are articles on the Habitability of Worlds, Hume's Philosophy, Constantinople and the Eastern Question, Bassil the Great, and the Baptismal Formula.

A correspondent of the New York *Observer* writes that "the town of Belvidere, N. J., has been visited by the gracious influence of the Holy Spirit. In the First Presbyterian church, under the pastoral charge of Rev. Mr. Reeves, nearly fifty persons have expressed a hope in the atonement of our blessed Lord, and the good work continues unabatedly. In the Methodist church of the same place, many have found an interest in the Saviour."

In the Baltimore Methodist Conference, the other day, Rev. R. Caddan stated that 200 preachers of that body chewed tobacco, and 100 smoked cigars, all of them expending $6,000 per annum, which he said would support two missionaries in China. Some of the preachers defended themselves, affirming that tobacco did them good, though Bishop Waugh said he did not see how any minister of God could make such a statement.

The venerable "Father Sawyer," of Maine, has a worthy compeer in Vermont, in the person of the Rev. Mr. Hobart, of Berlin. He is nearly ninety-three years of age, but preaches twice every Sunday, and attends a third service regularly. He uses no manuscript, but either extemporizes his sermons or delivers them from memory. *He lives a mile and a half from the house of worship, to and from which he walks as a matter of choice.*

The Methodist Conference of South Carolina commenced missionary labor among the slaves twenty-six years ago. In 1854 there were 22 missions of this kind in the State, which report more than ten thousand communicants The adult free and slave colored population of South Carolina is 178,000, of whom 45,000, about one-fourth, are members of the Methodist church.

The dwelling of Rev. A. H. Dashiel, D. D., pastor of the Presbyterian church in Shelbyville, Tenn., has been totally destroyed by fire. It is supposed to have originated accidentally from a stove-pipe. The Doctor's library—one of the finest in the State—together with all his manuscripts, including six hundred sermons and lectures, which he had prepared for the press and designed publishing, was consumed.

The Promoters of Western Asiatic Missions recently held a meeting at Liverpool, England, when the reports and statements which came before the assembly of the progress of the Gospel in Constantinople, and among the Greeks and Armenians, were of a highly encouraging and cheering character.

Rev. Hiram Wilson, long a missionary among the fugitive slaves of Canada, has been spending some weeks in the East, soliciting aid for his mission. He represents the refugees to be doing well, gaining a comfortable subsistence, and showing marked progress in education and religion.

Rev. Wm. Bates, of Northbridge, Mass. was led, by the inadequacy of his support, to ask a dismission from his people. But his people were not willing that he should be dismissed, until they had made an effort. The society, though small in point of numbers and wealth, unanimously voted to add to their pastor's salary $150.

Prof. Gillespie, of Union College, is about making a tour of Europe, to examine the methods and courses of instruction there in practical science, with a view to the extension of the course of Civil Engineering, which he organized in the above named institution ten years ago, and to collect instruments, models, drawings, etc.

In a note Dr. Sprague received from Alexander Von Humboldt, while in Berlin, the following significant sentence occurs: "Any American, especially any one belonging to the State of New York, which has abolished slavery, will always be welcome to the study of Alexander Von Humboldt."

The Rev. Dr. Cone has resigned his membership in the Executive Committee of the American Baptist Home Missionary Society, because, as he says, he "can no longer serve in a partisan Board."

Missions in Kansas.—There are four mission stations among the Shawnees in Kansas, the Methodist Church South having two, the Baptist one, and Quakers one. The two latter and one of the Methodists are actively anti-slavery. The Rev. J. Johnson, of the Methodist Church, is a large slaveholder, and cultivates 600 acres of the finest lands in the Shawnee Reservation. When this man went into the territory, "an humble missionary of the Cross," it is said that himself and wife, with all their worldly goods, rode, not on "a colt the foal of an ass," but on an *ox*, a single ox, which slaveholding has *matched* at length, humanity bearing the other end of the yoke, that this divine may till his broad acres and fare sumptuously.

Good Advice.—The *California Christian Advocate* gives some common sense advice: "Never build a house of worship upon a back street or upon the top of a hill. Let the most eligible site always be selected, and you will be much more likely to get a good attendance at Church. Never build what is improperly called a 'union church;' they are often the cause of much unkind feeling among professing Christians. If each denomination cannot have a house of their own, the proper way to do is for some one of them to lead in the enterprise, with the definite understanding, that the house is to be owned and conducted by them."

European News.

The U. S. M. Steamer Nashville, with seven days later news from Europe, arrived at New York on the 22d inst.

The intelligence by this arrival, although somewhat scanty, is interesting. The Vienna Conference had adjourned until April the 9th, when it was expected the disputed Third Point would be discussed and decided in presence of the French and Turkish Ministers of Foreign Affairs, Drouyn de l'Huys and Aa'ali Pacha, who had set out for Vienna. It is quite impossible to divine what may be the result of the Conference, but it is certain that the public mind in Britain is not sanguine as to peace. A series of sanguinary conflicts had been fought by the French before Sevastopol. The latest reported of these battles is stated to have put 3,000 men hors du combat. We are yet without detail. Although these encounters were sanguinary, they are said not to alter the face of affairs. Both armies are employed in strengthening their positions, and preparing for the grand operations of the spring campaign. Another detachment of the Baltic fleet had sailed from Spithead, and the flying squadron had arrived out.

On the 16th inst., Napoleon was expected at Windsor. The programme of his stay was not fixed. There were some apprehensions that French or Italian refugees might endanger his personal safety, and probably no public demonstration would greet him in England. The visit is to be a visit to the Queen, not to the people. His time will be spent principally inside of Buckingham Palace, Windsor Castle and Osborne House.

Pennsylvania Liquor Law.

The Governor of Pennsylvania has signed the bill to "Restrain the Sale of Intoxicating Liquors," and it is now a law. It provides:

"That from and after the first day of October next, it shall be unlawful to keep or maintain any house, room or place, where vinous, spiritous, malt or brewed liquors, or any admixture thereof, can be sold or drunk. That all persons who violate this section shall be deemed guilty of a misdemeanor, and, upon conviction, shall be sentenced to pay a fine not exceeding *fifty dollars*, and shall undergo an imprisonment not exceeding one month. That for a second, or any subsequent offense, the penalty shall be a fine not exceeding one hundred dollars, and imprisonment not exceeding three months. That it shall be unlawful for any person to sell spirituous, malt, or brewed liquors in less quantity than one quart, and even then license must be obtained from the Court of Quarter Sessions; and no license shall be granted to the keeper of any hotel, inn, tavern, restaurant, eating-house, theater, oyster-house, or cellar, or other place of entertainment, amusement or refreshment. That no license shall be granted without the payment to the Receiver of Taxes, of three times the amount now fixed by law, and in no case shall a license be granted for a less sum than $30. That the license shall be conspicuously displayed in a frame under glass, nor shall any license authorize a sale of spirituous, vinous, or malt liquors on Sunday; that the provisions of the act as to appraisement or license, shall not extend to importers, to commissioned auctioneers, nor to brewers or distillers selling in quantities not less than five gallons. And finally, that this act shall not interfere with any persons holding a license heretofore granted, until the time for which the same was granted shall have expired. Nor shall any license which may be granted before the 1st day of July next, authorize the sale of said liquors or admixtures after the 1st day of October next. In brief, then, after the time just specified, it will be illegal, according to this new law, to sell vinous, spirituous, or malt liquors, or any admixture thereof, at any hotel, inn, tavern, restaurant, eating-house, theater, or other place of entertainment, in any portion of the State of Pennsylvania."

Great is Slavery.—The slave case recently tried at Cincinnati, Ohio, of which we gave some account, furnishes another illustration of the extent to which slavery rules this country. The colored woman was from Kentucky, and after a fair trial was pronounced free by an Ohio State Court. Immediately after that decision she was seized by a United States Marshal, and dragged before a United States Commissioner, on the charge of being a fugitive slave. This Marshal, having hid the woman away, and having failed to produce her on a writ of habeas corpus issued by a State Judge, was, in consequence of this refusal, committed to jail as being guilty of a contempt. The kidnappers were frightened at these vigorous proceedings, and the slave-catching Commissioner who had issued the warrant, very speedily came to the conclusion that the claim was unfounded, and that the woman was free. The next thing was to get the slave-hunting Marshall out of jail. For that purpose, application was made to Mr. Justice McLean, of the Supreme Court of the United States, who, having brought before him the chop-fallen Marshal on a writ of habeas corpus, discharged him from jail on the ground that he had been improperly committed by the State Judge, and that he was fully justified by the Commissioner's warrant in arresting and holding the woman.

Gifts of Slaves.—The claim of Rev. Mr. Dennison to the girl Rosetta, which has created so much difficulty in Ohio, is pressed so pertinaciously on the pretext that he attaches a special value to her as property, because she was a gift, to his deceased wife from her father in Virginia. The *Western Christian Advocate*, of March 28th, has a letter from Rev. J. B. Finley, describing one of these patriarchal gifts which he met on board a steamer in going down the Mississippi river from St. Louis:

"On the boat on which we descended the river, was a poor yellow woman and two little children, who had been torn from her husband and their father, never to meet again on earth. Some woman from Texas had visited her parents in Tennessee, and her mother had made a present of them to her; but the grandfather, who owned the husband, would not let him go. This poor woman wore in her sad countenance her loss; and it was told by a lady on board that, at the parting, the husband and father was frantic. Such scenes of inhumanity are almost too bad to stain a pure white sheet of paper. Yet this mistress seemed to feel no more than if she had been separating a cow from her calf or a mare from her colt."

The Kansas Election.—It is well understood, that the recent election in Kansas was carried for Slavery by allowing a large number of Missourians to come into the territory and have things their own way. Under date of Independence, March 31, 9 P. M., the St. Louis *Republican* publishes the following:—

"Several hundred returning emigrants from Kansas have just entered our city. They were preceded by the Westport and Independence brass bands. They came in at the west side of the public square, and proceeded entirely around it, the bands cheering us with fine music, and the emigrants with good news. Immediately following the bands, were about two hundred horsemen, in regular order; following these were one hundred and fifty wagons, carriages, etc. They gave repeated cheers for Kansas and Missouri. They report that not an anti-slavery man will be in the Legislature of Kansas. We have made a clean sweep."

Relief to the Poor.—From memoranda in our possession, (says the *Asmonean*,) we find that nearly fifteen hundred dollars were distributed by the Jewish Congregations and Societies, in various forms, for the relief of the distressed of New York, during Passover. When we look back to the hardships of the winter, and note how deeply the Institutions have been taxed to ward off starvation from the people, we see much to praise in their beneficence. New York is the emporium of foreign trade for the Union; it is also the receiving port for the greater portion of the European immigration. Here, the houseless and the homeless find kindness, food and shelter, enabling them to plan out a future for themselves; many a man now flourishing in the interior found the stepping stone to fortune in the aid meted out to him from the generosity of New York Merchants.

A Female Slave Escaped.—A few days ago, the captain of the American steamship Jamestown applied to the Deputy Marshal, New York, for advice as to the recovery of a fugitive female slave, who had been secreted on board his vessel under very singular circumstances. The steamer, when at Norfolk, Va., took on board as a passenger a female slave, the property of a widow lady. The slave was to go to Washington and there remain for a brief period and then return home to Norfolk. The captain saw her go ashore at her destination, and having settled his business, the steamer came on to New York, and shortly after it was at the wharf, a negro named Johnson, who was employed as cook on board, was seen most gallantly escorting her up the street to a hack, which was driven off before the captain could interfere. A pursuit was made, and the parties traced to a house in Sullivan street. The captain set a watch on the house, and hastened to the Marshal; but, as there was no proof that the runaway was a slave, or a fugitive from labor or service, nothing could be done to assist the captain, although his vessel will be forfeited by the laws of Virginia, and the officers and crew are liable to be imprisoned for aiding in the escape of a slave.

The Newfoundland Sub-Marine Telegraph.—Fields, the Managing Director of the Company for laying down a sub-marine telegraph wire between London, Newfoundland and New York, has just returned from Europe, where he is said to have made a very favorable contract for the sub-marine cable to connect Newfoundland with Cape Breton. This cable is to be seventy miles in length, and is to be ready for shipment on the 1st of May. The Company confidently expects to have telegraphic communication established between New York and St. John's, Newfoundland, by the 1st of July next. It may not be generally known, that when this telegraphic communication is completed, it is intended that the Collins steamers shall call at St. John's on both their outward and inward voyages.

SUMMARY.

The Legislature of the Territory of Nebraska adjourned, on the 16th inst., after passing a large number of laws. Among them were thirty-eight general acts, sixteen to incorporate towns and cities, three schools and colleges, two for railroads, thirty-five for ferries and bridges, and eleven for miscellaneous objects. Also, special acts organizing twenty-three counties, and ordering the survey and laying out of eleven territorial roads. Among the joint resolutions is one asking of Congress a grant of land to aid in building a railroad from Plattsmouth (mouth of the Platte River) to the South Pass.

Washington Irving is suffering from the effects of a casualty which occurred on Wednesday. Mr. Irving was riding on the River Road, near Sunny Side, when his horse took fright and ran way. The animal's head was fortunately toward home, for which he made at a terrible pace. Mr. Irving kept his seat, and might have escaped unhurt, but as the horse turned from the main road he fell and threw his rider, who was taken up stunned by the fall. Mr. Irving remained insensible for several hours, and is yet not entirely out of danger. He suffered in a similar manner, though less severely, by the restlessness of the same horse, last summer.

John Reed, one of the oldest citizens of Clarke County, Indiana, died last week. He was one of the early settlers of the country, and has been engaged in several fights with the Indians. At one time he was attacked in the woods by six Indians, but succeeded in escaping with only two wounds. He was also engaged in the battle of Tippecanoe.

The *Union* states that intelligence has been received at the Pension Office of the death of Hugh Harris, a soldier of the Revolution. He died at Jonesboro', Tennessee, on the 13th of February, at the extraordinary age of 110 years. He was married to his last wife, who is now in receipt of a pension as his widow, in the 90th year of his age.

Mr. Brittain, one of the spiritual newspaper editors, in the course of a lecture delivered recently at the Brooklyn Institute, exhibited some paintings which he said were done by spirits. In spite of their celestial origin, they were miserable daubs.

The Queen of England, it is said, has forbidden all fancy work at Court, in order that her Majesty and attendants may devote their leisure time to the making of comfortable articles to be sent to the brave men in the Crimea.

Mr. Eli Humiston, of Derby, Conn., aged 67, came to his death in a singular manner a few nights since. His son, a young lad, was gargling pepper tea for a sore throat, when the father wanted some to drink. He took a swallow, which strangled him so much that his friends feared death would immediately ensue. They gave him some tea, which apparently relieved him; but in a few moments he complained of feeling bad, said he wished he had let it alone, for he was afraid he should be troubled with it all night. His family, seeing that he changed fast, sent for the nearest neighbor, but before he got there Mr. Humiston was dead. He had ruptured a blood-vessel in his lungs, which caused his death.

Passengers who travel by the New York and New Haven cars have a grand chance of "seeing the elephant." Going from New York, the cars pass the farm of P. T. Barnum, a mile or so before reaching Bridgeport, Ct. On that farm, and in plain view from the railroad, an elephant may be seen every pleasant day, attached to a large plow, and doing up the "sub-soiling" in first rate style, at the rate of about three distinct double-horse teams. The animal is perfectly tractable. His attendant rides him, while a colored man guides the plow.

The magnetic telegraph between Bombay, Madras, and Calcutta, was opened on the 1st of February. The whole enterprise embraces a distance of over two thousand miles, and has been completed in a little more than a year. The distance from Aden to Bombay is two thousand one hundred and seventy miles, so that, with the completion of the railroad across the desert to Suez, and the telegraph from Alexandria to Trieste, communication from London to Calcutta can be had in a fortnight's time.

On Saturday, Mr. A. W. Wilson, a printer, was returning to work from his home in South Boston, and when near Dover street bridge he heard cries proceeding from the water, and perceived a youngster struggling in the briny element, and making vain attempts to reach the shore. Without a moment's hesitation, Mr. Wilson jumped into the water, and succeeded in rescuing the boy. After placing him safely on shore, Mr. Wilson had an opportunity to examine his features more closely, and to his great surprise and joy discovered that he had rescued his own son.

Messrs. Lewis Tappan, William Goodell, Gerrit Smith, S. S. Jocelyn, W. E. Whiting, James McCune Smith, George Whipple, and Frederick Douglass, have issued an address to the friends of the abolition of Slavery, calling for a National Convention, to be held at Syracuse on the 26th, 27th and 28th days of next June, for the purpose of reorganizing the Anti Slavery movements upon a more progressive and effective basis.

There has been a large quantity of rape seed received at the Patent Office, recently imported by the Light-House Board, for the purpose of experiment and distribution. The oil procured from this seed is exclusively used in England for the purpose of burning in light houses. The plant is easily cultivated, and might prove a profitable crop.

The Cork (Ireland) *Examiner* states that Mr. Grice Smith, of Castle Widenham, a gentleman of high position and large fortune, has been committed to jail for a month, and sentenced to hard labor on the treadmill, for having, along with two other landed proprietors, torn down the gates of several gentlemen, and wrenched off all the knockers.

It is said that Mr. Baxter, the inventor of the mode of printing in oil colors, has recently, by an ingenious modification of his system, adapted his process to the production of a species of photographic prints, which possesses many advantages over the existing mode of calotype printing.

The Rutland (Vt.) *Herald*, says that on Tuesday night and Wednesday, April 10th and 11th, a foot of snow fell in Rutland, making the first good sleighing since December. On the mountains the snow was 3 feet deep. In New Hampshire, north of Concord, the snow was quite deep, last week; in the woods some two feet.

The Maine Law in Illinois is to be voted on by the people the first Monday in June. A capital fund has been raised in Chicago by the liquor-dealers, and a campaign paper issued to oppose this wise and salutary measure. The new organ is entitled the *Anti-Prohibitionist*, and is circulated gratuitously throughout the State.

The Grand Lodge of Odd Fellows, of Virginia, has adopted the Martha Washington Female College, at Abingdon, and will take measures to insure its completion. It is contemplated to make such arrangements as will insure to the indigent daughters of every deceased Odd Fellow the benefit of a good education.

By the way of Boston, we have some interesting intelligence from Paraguay. One of our war-steamers, the Water-Witch, has been fired into, apparently without the least reason. One man was killed. The fire was briskly returned, but it does not appear with what effect.

A Rochester miller, on reliable data, says that only 1,500,000 bushels of wheat, or 300,000 barrels of flour, can come forward this spring from the West. This does not include any estimate of the amount from Canada. The stocks at the East are small.

The Boston *Transcript* says that the late Miss Elizabeth Pratt, of Boston, who died a few days since, bequeathed twenty thousand dollars to the Massachusetts General Hospital.

Under the Bounty Land act of March 3, 1855, the first claim was presented to the Pension-Office about the 10th ult., and up to this date 81,700 applications have been received.

The Catholic *Mirror* says the phrase about making graven images was omitted in the decalogue, in the Catholic catechism, "in order not to fatigue or overburden the *memory of children!*"

A train of forty cars, containing live stock, was brought into Albany, on Saturday afternoon, on the Central Railway. The train was nearly a quarter of a mile in length.

The notes of the Government Stock Bank of Michigan, must be sent to the State Treasurer's office, at Lansing, on or before the 28th inst.

The corner-stone of a Jewish Synagogue was laid at St. Louis, on the 16th inst. It is the first structure for Israelitish worship ever commenced west of the Mississippi.

The money article of the *N. Y. Tribune* of April 19th, says: Breadstuffs are still buoyant, with moderate supplies. State Flour is selling at $9 75 a $10. The best grades of Flour are selling at $11 50 a $13. Wheat is scarce, and White brings $2 40 per bushel. Rye is $1 48 a $1 50. Corn is without important change, but rather better for future delivery. The range is $1 08 a $1 10 per bushel. Pork is again better. The sales are at $17 75 a $17 87½, and $15, for new Mess and Prime.

On Monday, April 16th, between 7,000 and 8,000 applications for lands under the new bounty law were received at the Land Bureau, Washington—the largest ever received in one day. During the previous week 20,700 applications were received.

A church of deaf mutes has been organized in New York, and vestrymen elected—three of them deaf and dumb; lots have been purchased for the church building, which will contain a lecture-room, reading-room, and library.

The editor and proprietor of the *Merchant's Magazine*, Freeman Hunt, Esq., is about to issue a collection of biographies of some of New York's most eminent merchants.

The carriage which the Hon. Daniel Webster used was sold at auction in Boston, by Mr. Riddle, on Saturday, for $17 50—a less sum than would have been realized for a good hand cart.

The House of Representatives of Wisconsin by a vote of 44 to 27 have restored the death penalty in that State. The Senate have yet to act upon the matter.

New York Markets—April 24, 1855.

Ashes—Pots $5 87; Pearls 6 12.

Flour and Meal—Flour 10 00 a 10 31 for common to good State, 10 50 for Michigan and Indiana, 11 50 a 13 00 for extra Genesee. Rye Flour 6 37 a 8 00. Corn Meal 5 00 for Jersey.

Grain—Wheat, 2 75 for white Southern, 2 80 for prime Genesee to arrive in May. Rye 1 45 a 1 50. Barley 1 25 a 1 35. Oats 81 a 86c. for State, 76 a 80c. for Jersey. Corn 1 09 a 1 12.

Provisions—Pork 15 25 for Western prime, 17 75 for new mess. Beef 7 00 a 8 00 for country prime, 6 92 a 12 00 for country mess. Lard 10 a 11¼c. Butter 11 a 15c. for Ohio, 25 a 30c. for new State. Cheese 10 a 12½c.

Lumber—16 00 for Spruce and Pine.

Potatoes—2 75 a 3 25 per bbl. for Reds and Pinkeyes, 4 00 a 4 25 for Mercers and Carters.

Seeds—Clover 10 a 11½c. Timothy 4 25 for reaped. Flaxseed 1 85 a 1 90.

Wool—25 a 28c. for native, 40 a 43c. for American Saxony Fleece.

MARRIED.

In Dakota, Waushara Co., Wis., on the 28th March, 1855, by Rev. J. M. Todd, William C. Webb, Esq., Attorney at Law, of Wautoma, to Miss Mary M., daughter of Josiah Witter, Esq., of Dakota.

In Christiana, Wisconsin, April 9th, by Eld. Z. Campbell, Mr. J. L. Pope, of Columbus, Chenango Co., N. Y., to Miss Fanny E. Coon, of Utica, Dane Co., Wis.

In Clarkville, Madison Co., N. Y., on the evening of the 10th inst., by Eld. J. Clarke, Mr. Geo. L. White, of Brookfield, N. Y., to Miss Lucy M. Hills, of the former place.

At Lost Creek, Va., Jan. 1, 1855, by Eld. Samuel D. Davis, Mr. Chapin F. Randolph, of New Salem, Va., to Miss Margaret Kennedy, of Lost Creek.

At the close of divine service, April 14, by Rev. W. B. Gillett, Mr. Eli B. Ayars to Miss Rebecca Jane Ayars, all of Shiloh, N. J.

DIED,

In South Kingston, R. I., March 23, 1855, Mercy Browning, widow of the late John Browning, in the 71st year of her age. She was a faithful member of the Seventh-day Baptist Church at South Kingston, and we trust she has gone to join the church triumphant.

H. C.

In Rockville, R. I., April 15th, of consumption, Mary A., daughter of Asa and Sarah Woodmancy, aged 12 years, 11 months, and 19 days.

LETTERS.

Charles Potter, F F Randolph, W B Gillett, P S Crandall, S A Taft, T W Black, Wm Utter, J B Wells, N V Hull, Andrew Babcock, E G Champlin, Thomas A Maxson, Winter Green, G H Perry, I Hale, Delatrius Davis (sent by Express with parcel to R Babcock, Clarence,) J L Boyd, T G Bailey, Joshua Clarke, Reuben Davis (no,) M Wells, Daniel Root, Eli Forsyth, Z Campbell.

RECEIPTS.

FOR THE SABBATH RECORDER:

W Woodmancy, Rockville, R I	$2 00	to vol. 11	No. 52
Geo H Perry, Hopkinton, R I	2 00	11	52
W B Haynes, Mystic Bridge, Ct	2 00	11	52
D A F Randolph, Bridgeton, N J	3 00	13	26
Jasper T Davis, Adario, Wis	2 00	11	39
D Babcock, Johnstown Center	2 00	12	26
Jonathan Babcock, Brookfield	2 00	11	52

A Sister in Hopkinton, for Missions	2 00

A. D. TITSWORTH, Treasurer.

☞ It is intended hereafter to acknowledge, immediately after each Board Meeting, all the money received during the previous quarter. This will explain the non-acknowledgment here of money from Milton, Wis., which has come to hand since the above report was passed over to the printers.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.
Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

Woodworth's Youth's Cabinet

IS the best illustrated dollar magazine in the Union. Send for a specimen of it, if you are not acquainted with it. The editor is giving a change to his subscribers to get 12 splendid volumes of books for nothing, as premiums. You can have a chance too, if you will subscribe; and now is the time, as a new volume has just commenced. Yearly subscription, $1; single number, 12 cents, or four postage stamps. Address the Publisher,
D. A. WOODWORTH,
118 Nassau-st., New York.

The Good Time Come at Last.
Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,
JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.

Alfred Academy,
At Alfred Center, Allegany Co., N. Y.

THE attention of the public is respectfully invited to the educational facilities of this Seminary.

1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.

2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes*. The health, morals, and manners of students are all looked after with parental solicitude.

3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry*, will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women*. In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.

4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.

The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. Hull, or W. C. Kenyon.
Feb. 24th, 1855.

Bruce's New York Type Foundry,

ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.

All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.

Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.

The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.
Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Carol:

A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.

"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.

The following extracts from the Preface will give an idea of the scope and design of the work:—

This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.

About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.

A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.

How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

How they Make the Famous Cheshire Cheeses.

I had obtained leave to come at seven in the morning to see the whole process of cheese making. The maidens, of whom there are always three, and sometimes four, rise at five o'clock. There is the milking and the breakfast; and by seven they are ready to begin upon the cheese.

The milk of the evening before was put into tubs, except what is wanted for butter and domestic use. The tubs which receive the milk are two; and there are two more to contain the whey of the preceding batch. When the evening's and morning's milk were poured (mixed) in the two tubs, there were about fifty gallons in each, the yield of sixty cows, ten of the seventy cows on the farm being dry, or calving at the time.

There are two things to be put into this deluge of milk, one for show, and the other for use. For show, a table spoonful of annetto is mixed in. The annetto is a thick, viscid, dark red substance, thicker than treacle, and quite as dark. It is made from the lining of the seed-pod, and from the pressed seeds of a South American and West Indian plant, of the Bixa kind; and it is used merely to color the cheese. There cannot be too little of it put in, for its taste is nauseous to the last degree; and its properties are purgative. There is a constant tendency among the cheese-makers to put in more and more, to make the cheese rich, as they see, which means merely high colored. Mrs. S., however, allows only one spoonful to a tub of fifty gallons; and that cannot well hurt any body.

The other substance put in is the rennet. Irish rennet is found to be the best. Some of the farmers in the cheese districts bargain with the butchers, in selling their calves, to have the stomachs back again; but they must for the most part, use them for their own cheese making; for the regular cheese dairies are provided with the stomaches of Irish calves brought by traveling agents. Mrs. S. buys enough in the spring for the whole year. She keeps it in a basket on the shelf in the cheese house, cuts off a few small pieces of the long dead stomach, which looks half-way between tripe and parchment, and soaks them in a pipkin with cold water for a few minutes. Some people pour boiling water on them, and let it stand till cold; but the cold water does quite as well, and causes no delay.

There is some appearance of mystery in a cup full of water, in which a bit of calf's stomach has been washed, turning fifty gallons of milk into curd in a quarter of an hour; and till lately it was a mystery what the gastric juice of all stomachs was composed of, and how it acted. Now the chemists have ascertained what are the constituents of this wonderful secretion, this juice which is in all stomachs, which has no effect on living creatures, but reduces all dead substances that are swallowed into one uniform pulp, the best part of which goes to nourish the frame. But how it acts there is no knowing, any more than how any of the changes of the living frame are produced. There it is, in the stomach of the calf when killed; and the coats of the stomach are dried; and after many months, the juice is as good as ever for turning milk into curd, in Cheshire in the autumn, just as it did in the stomach of the living calf, down in County Kerry in the spring. While the process is going on, a wooden bowl, with hot water, floats on the surface of the milk, and some people put into the tub a pint or so, in summer, and more in winter.

The maids are not idle while the curd is setting. One stout woman draws several pailsful of milk from a copper in one corner, for the pigs; and next, she sets about skimming the whey of yesterday. A thick cream has risen, and makes that great tub look exceedingly rich. She skims it, and deposits the cream in an earthern jar, ready for the churn; and then she empties the whey, by pailsful, into what seems to be a great copper in another corner; but as the whey vanishes, it is clear the copper is a funnel. The whey runs off through a pipe to the piggery. She is a clever girl who does this. She wears a blue bib like a child's, up to her collar bones, and her gown is short, to a most sensible degree, as is that of the other dairy maids. They do not go slopping and draggling about as ladies do in London streets, but have their dress no lower than the ankle, and shoes thick enough to keep them out of the damp of the brick moist floor. This girl wants to tilt the tub when she gets near the bottom. She begs no help, but hoists her stout apron through one of the handles, and while she hoists it, kicks a log of wood under the tub. When emptied, the tub is well scalded, and left to hold the evening's milk.

The head dairymaid is meantime looking to the cheeses made on Thursday, Wednesday, and Tuesday, to-day being Friday. In the two rooms now under observation there are six presses, more being in other parts of the premises. These presses look like any first stone that any prince is going to lay for a public building—a square mass, which ascends and descends by a screw. The two cheeses made on Tuesday are taken out and examined. They are pressed into keelers—tubs made into substantial oak, lessening in size to suit the lessening bulk of the cheese as it dries. The cheese is now turned out of its keeler, and the damp binder which bandaged it is thrown aside. It is put into the keeler again, the other end up, and the part which does not go in—for the keeler holds only about two-thirds of it yet—is bound round with a broad strip of tin pierced with holes, and called a fillet. This fillet is bandaged round the cheese with a linen binder about three inches broad; then a cloth is thrown over the top, and the whole is pushed under the block of the press, which is screwed down upon it. The Wednesday's cheeses are bigger and moister, and some whey is still oozing from the holes of the fillet. The Thursday's cheeses are very soft and yellow, and only beginning to have a rind. The whey runs out with a touch of your thumb. The maid reaches a handful of long skewers from the shelf. She stabs the cheese through and through in all directions, and throws aside the cloth in which it was wrapped, and which is wringing wet. It is now wrapped in a dry cloth, put, the other end up, into its keeler, bound with a fillet like the others, but with the difference that half a dozen of the long skewers are stuck into the holes of the fillet. Then the binder goes on, the cloth is closed over the whole, and it is set aside—not under the press to-day, but with a weight upon it, a slate cover, which has a wooden handle to lift it by.

These newer cheeses are more or less wet with whey; they are seamed and marked with the creases of the binders and cloths, and knobbed in a rather pretty way with buttons answering to the holes of the fillet. These marks are all to be ironed out, before the cheeses get dry, with a sailor's goose. The goose stands on the stove in the middle of the room, beside the flat irons used to smooth the cloths and binders. The ironing of cheeses strikes one as a curious sort of laundry business.

Now for to-day's cheeses. In a trice every thing is put away, the dressers wiped down, and the coast made clear for the great operation. I stand between fifty gallons of thick custard, to every appearance, on the one hand, and fifty gallons in the other. A very long, blunt knife is handed to the widow, who this morning does the honors with her own hands. She scores the curd in all directions, calls for a spoon, and invites me to taste the curd. It is very good indeed, to one who has as yet had no breakfast, though kindly invited to the widow's well spread table an hour ago. The breaker is next handed. The breaker is like a round gridiron, delicately made of thick wire, and fastened to a slender broomstick. With a graceful and slow motion, Mrs. S. plunges in the breaker and works it gently up and down, and hither and thither, searching every part of the great tub, that no lump of curd may remain unbroken. When she turns—in ten minutes or so—to the second tub, the curd of the first all sinks to the bottom. Then comes the dairymaid and fishes and rakes among the whey with a bowl, till she brings the greater part of the curd to her side of the tub. Then she throws aside the bowl; and while she retains the mass with one arm, she sweeps the whey with the other for all the curd that is yet abroad. There seems to be such a quantity that one can hardly believe that it all goes to make one cheese. Some of the cheeses, however, weigh one hundred weight, or even more, while those made in winter dwindle to sixty pounds or less.

Two clean white baskets, like round washing baskets, only slighter, are ready on the dresser. A cloth being put into one of these as a lining, the curd is heaped into it, when the last morsel that can be caught is fished out. The basket is put into a tub to drain, and the whey is left where it is to send up cream for to-morrow's skimming and churning. In two or three hours the curd will be dry enough for the final making of the cheese. It is broken up by hand as fine as possible and salted. The salt is worked in very thoroughly. Mrs. S. can only say she salts it to her own taste. The head dairymaid thinks that she puts about two pounds of salt to the largest of their cheeses. The salting done, the cheese is fit for the treatment described in the case of the Thursday's production; and it will come out to-morrow morning oozing whey through the holes of the fillet and wherever pressed; and it will be stabbed and impaled with those long skewers like its predecessor of yesterday. Meantime the main business of the day is done. If the girls are skillful and diligent, they can get every thing out of the way before dinner at half-past twelve. There is plenty of hot water in the kitchen copper, which holds one hundred gallons. The keelers are scoured, the utensils all scalded, the cloths and binders washed, and every place wiped and swept and made tidy before dinner. There is no reason why the girls should not sit down to their sewing, or their own employments of any sort, till the cows come home for the evening milking. Some awkward ones do not get through their work till four in the afternoon, but if they get tired it is nobody's fault but their own. At nine every body is off to bed.

Woman's Sphere.

Charles Dickens never wrote anything more beautiful and true than the following:—

"The true woman, for whose ambition a husband's love and her children's adoration are sufficient; who applies her military instincts to the discipline of her household, and whose legislations exercise themselves in making laws for her nurse; whose intellect has field enough for her in communion with her husband, and whose heart asks no other honors than his love and admiration; a woman who does not think it a weakness to attend to her toilet, and does not disdain to be beautiful; who believes in the virtue of glossy hair and well-fitting gowns, and who eschews rents and ravelled edges, slip-shod shoes and audacious make-ups; a woman who speaks low, and does not speak much; who is patient and gentle and intellectual and industrious; who loves more than she reasons, and rarely argues, but adjusts with a smile; such a woman is the wife we have all dreamed of once in our lives, and who is the mother we still worship in the backward distance of the past; such a woman as this does more for woman's cause than all the sea-captains, barristers, judges, and members of Parliament put together—and God-given and God-blessed as she is."

A Salt Mountain.

I have said that the other reason we have come to Berchtesgaden, was to see the salt-mines. We put on a suit of miner's clothes, and walked right into a mountain of almost solid salt. Entering what appeared a handsome vault in the mountain side, we found ourselves in a gallery built up and arched with marble. As we penetrated towards the center, this marble gave place to wood, and in some places the galleries had no lining at all. We passed through many such galleries, always walking upright, and at last came to some immense chambers, deep, high, and broad, without a pillar to support the vast roof, or to break the curious impression left upon us by this wide, dark, gloomy solitude, whose bounds even the concentrated light of all our lanterns refused to reveal. These chambers are artificial, not natural. A small chamber is first hewn out by the miners, and then water is allowed to flow in and almost fill it. This water, kept in agitation many days, dissolves gradually the salt, and when it has taken up as much as it will hold, it is drawn off and compelled, by the torture of a good fire, to yield up its stolen treasure. Of course, every time the operation is repeated the chambers become larger. There are several of them in the mountain—the largest, unhappily, being just now full of water, we could not see it. As we had entered the chamber in which we were, quite near the roof, (a phenomenon which I could explain if I had time,) we were invited to descend to the floor by a somewhat novel process. If you have ever seen the process of "shooting grain" from the upper story of a depot into a vessel, you will form some idea of the manner in which we were "shot" from our elevation to the depths below. Provided with leather mittens, and an apron of the same material, which we tied on behind, we seated ourselves on a smooth wooden slide, inclined at an angle of about forty-five, and the start once given, we involuntarily obeyed the laws of gravity, and went forward with ever-increasing velocity. I hardly had time to think how or where I was going to *strike*, when I found myself standing in a very bewildered position in the center of the vault, and a small boy beside me asking for his leather mittens. We were, of course, *eased off* before being brought to a halt; but I am thoroughly convinced that this is one of those modes of traveling that one must get used to.

After seeing some splendid specimens of crystalized salt, we ascended again by a wearisome staircase; and having penetrated the mountain in all to the distance of full a mile, we were again *shot* out of it in little more than a minute—not, however, on a *board*, but on a *railroad*. Seating ourselves on a hand-car, we again obeyed the "universal law," and clattered away through the twistings of the narrow gallery, till at last we bolted out of the door we had entered, like a bomb-shell out of a mortar. We again assumed the costume of civilized life, and went away with mysterious looks at the mountain whose grave exterior gave no indication of the busy life that swarmed in its deep recesses.

[Cor. Presbyterian.

Royal Wedding at Berlin.

There was a royal wedding at Berlin, on the 29th, between Prince Frederic Carl of Prussia, and the Princess Maria Anna of Dessau. "The symbolical act of marrying in this country," writes the *Times* correspondent, "consists of the clergyman's presenting to each of the bridal couple the ring he has just received from the other. At this exchange of rings, on this occasion, thrice twelve guns are fired. After the ceremony is over, the newly married couple retire to a State saloon, and there receive the congratulations of the royal family; the guests and witnesses, in the meantime, betaking themselves to the Weisser Saal, in which the throne stands. When all is in order, the royal and bridal party enter the Wessier Saal, and take their places at a card-table under the canopy of the throne, and affect to be playing at cards, while all the personages of the Court approach and bow reverentially to the players and file off in due order. The card-playing party on the dais consists on this occasion of the King and Queen of Prussia, the King of Hanover, and the bridal couple; the rest of the royal family and visitors seat themselves at card-tables on either side of the throne. When all the obeisances have been made, supper is announced, and the king breaks up the card-party. Immediately after the soup, the king proposes the health of the bridal couple, and after it has been drunk, gives permission to the Court functionaries to go and sup; having done this expeditiously, they return and take up their places behind the royal party, preparatory to leaving the saloon On returning to the Weisser Saal, the King and Queen, the King of Hanover, and the bridal couple take their seats again under the throne canopy, and the *fackel-tanz*, or torch-dance, commences. This unmeaning relic of a heathenish practice, which has been preserved here ever since Prussia had a king, consists of a *polonaise*, walked by twelve of the Ministers of State, actual and retired, two and two, with white wax tapers in their hands, preceded by the High Marshal, and followed by the bridal couple, round the saloon. After one circuit has been made, the bride invites the king to take a turn, in which they are followed by the twelve Ministers; this done, she invites all the princes in rotation to make the round of the room with her, followed by the same unhappy and unwilling votaries of an obsolete Terpsichore. This example is followed by the bridegroom, who subsequently leads out the Queen and all the Princesses in turn, on each occasion followed by the aforementioned unfortunate gentlemen. After the *fackel-tanz* is over, the Ministers of State precede the whole party to the entrance of the Saal, where the wax tapers are handed over to pages, who conduct the procession further to the private apartments of the bridal couple. After a short space of time, the bridal crown is returned to the charge of the proper functionary, and carried back to its place of safe deposit, and the mistress of the ceremonies appears at the door and distributes the garter of the bride among the expectant cavaliers—that is to say, a riband cut up into pieces is given to them to make believe with."

The Magnet and Cold.

History informs us that many of the countries of Europe, which now possess very mild winters, at one time experienced severe cold during this season of the year. The Tiber at Rome was often frozen over, and snow at one time lay for forty days in that city. The Euxine Sea was frozen over every winter during the time of Ovid, and the rivers Rhine and Rhone used to be frozen so deep that the ice sustained loaded wagons. The waters of the Tiber, Rhine and Rhone, now flow freely every winter, ice is unknown at Rome, and the waves of the Euxine dash their wintry foam uncrystalized upon the rocks.

Some have ascribed these climate changes to agriculture—the cutting down of dense forests, the exposure of the upturned soil to the summer sun, and the draining of the great marshes. We do not believe that such great changes could have been produced in the climate of any country by agriculture, and we are certain that no such theory can account for the contrary change of climate—from warm to cold winters—which history tells us has taken place in other countries than those named. Greenland received its name from the emerald herbage which clothed its valleys and mountains; and its east coast, which is now inaccessible on account of the perpetual ice heaped upon its shores, was, in the eleventh century, the seat of flourishing Scandinavian colonies, all trace of which is now lost. Cold Labrador was named Vinland by the Northmen who visited it in the year 1000, and who were charmed with its then mild climate. The cause of these changes is an important inquiry.

A pamphlet by John Murray, civil engineer, has recently been published in London, in which he endeavors to account for these great changes of climate by the changeable position of the magnetic poles. The magnetic variation, or declination of the needle is well known. At the present time it amounts in London to about twenty-three degrees west of north, while in 1659 the line of variation passed through England, and then moved gradually west until 1816. In that year a great removal of ice took place on the coast of Greenland; hence it is inferred that the cold meridian, which is now supposed to pass through Canada and Siberia, may at one time have passed through Italy; and that if the magnetic meridian returns, as it is now doing, to its old lines in Europe, Rome may once more see her Tiber frozen over, and the merry Rhinelander drive his team on the ice of the classic river.

Whether the changes of climate mentioned have been caused by the change of the magnetic meridian or not, we have too few facts before us, at present, to decide conclusively; but the idea, once spread abroad, will soon lead to such investigation as will no doubt remove every obscurity, and settle the question.

[Scientific American.

Compost.

A few years ago I had a quantity of rough straw manure in my barn-yard, and having no ground upon which I cared to put such stuff, I thought I would try an experiment with it. The first thing I did was to plough a few shallow furrows in a good sod on the side of a road in a lane. I then had a load of this barn-yard litter brought and thrown down on the sod where it had not been plowed, and spread to an extent of about ten by twenty feet. We next brought a load of lime, and spread it all over the manure; and while the wagon went for another load of manure, we covered the lime with a layer of sods, perhaps to the amount of a wagon load. Thus we went on with as many covers of manure, lime, and sods, as we could heap on, and finished by covering all over with loose soil. We then made another similar heap, which used up all our materials.

This was done in May or June. The following April we opened our compost heaps. The whole mass was like bone ashes, and in the cavities, the nitre evolved in the process of decomposition was deposited or precipitated in great abundance, and had the appearance of heavy white frost. We spread it at about the rate of two hundred bushels to the acre on a piece of ground that had been severely cropped for thirty or forty years without manure, plowed it in, and planted corn. It yielded fully one hundred bushels of ears to the acre, and subsequent crops have abundantly attested the value of that manure. The decomposition appeared to be perfect, and at the same time the volatile salts (the most valuable part) were absorbed or condensed by the earthy matters, with which the animal and vegetable ingredients of the mass were incorporated.

Muck or swamp mud would be better than sods where it can be obtained. In the compost of which I have spoken, the lime did not form more than one-fourth the weight of the masses—in bulk much less. It was fresh, and for several days the heaps were warm and sent off a little steam. [Farmer's Journal.

Improvements.

M. Scheutz, of Stockholm, has invented a calculating machine of great power and accuracy, printing the results on tables up to eight ciphers. It can produce a more complete collection of logarithms than any other. A committee of the Royal Society is appointed to examine it.

Mr. E. S. Hyde has invented a new sort of double ear-trumpet, applied to both ears at once, and fastened to the head by a spring. Ladies may wear them under their hair so that the fact can hardly be suspected. They are said to enable deaf persons to hear with uncommon distinctness, and to possess many advantages over ordinary ear-trumpets.

Mr. Hughes, of Ky., has invented a printing telegraph, by which one cup of Morse's battery will send a message as far as one hundred cups by any other telegraphic instrument. The instrument is operated by keys, and no matter how many keys may be touched, the corresponding letters are impressed upon the paper.

A Mr. Foster has invented a brick, made of a mixture of three parts of sand and one of lime. The bricks resemble whitish sand-stone, are impervious to damp, exceedingly strong and hard, and grow more so every year; by exposure to the air they require much less mortar, in laying, than the clay bricks, so that the amount of lime required to make bricks and put them together in a building does not exceed the quantity necessary in ordinary brick-building operations.

Resuscitating Fruit Trees.

A correspondent in the Germantown *Telegraph* gives the following statement of an experiment in resuscitating an old apple tree:

"On my farm there is an apple tree of very large size, standing by the side of the road, but some two rods within the line of the fence, and in lands that have been cultivated regularly, either in roots, grass, or grains, till within a period of twelve years, when a change in my field operations, induced me to turn it out to pasture. Some twenty years since—and about six years before I became acquainted with it—this tree rather abruptly ceased bearing. Its age at the time was unknown. Thinking that it might be resuscitated, I commenced the undertaking by digging around the trunk to the distance of the longest limbs, and to the depth of one foot, inverting the sward, and placing it over the roots, and in immediate contact with them. On this sward I sowed quick lime, wood ashes, and gypsum—one bushel of each being used—and covered it with chaffed oat straw to the depth of two inches, when compressed; fine soil was then thrown on till the excavation was nearly filled; after which a cart load of fine compost was dumped on and evenly spread over the whole. The dead limbs were next cut out, and the top reduced to one-half its former size. The cavities caused by the falling off of old and decayed limbs, two cases extended nearly to the center of the trunk, were filled with "Forsyth's Cement," and all the limbs which could be reached, or safely got at in any way, were scraped and washed with suds. This work was performed in the spring of 1850. The next year the tree blossomed, and produced a few apples, which matured. The next season the bearing was abundant, and since then, it has not ceased to produce a good crop." [Farmer's Journal.

A London correspondent says that there have been amusing typographical blunders of the telegraph from the East, giving rise to some hardly less amusing criticisms. For instance, it was stated "that Lord Stratford de Redcliffe had left Constantinople in a *terrible fright*," and guesses as to its cause were thick and wise, until it turned out that it was in the *Terrible* frigate.

English Ladies at Therapia.—A hospital surgeon, writing home, remarks on the lady-nurses at Therapia. He says:—

"The lady-nurses who are here have been most kind and attentive to the sick and wounded, sitting by their bedsides reading to them, etc. Before they arrived, many men were discharged from the hospital for passage to Malta or England very thinly clad. Now they have nice warm comforters and clothing given them. Imagine, if possible, the daughter of a baronet in Belgrave square, with good property, (and not at all bad-looking,) laying one side all her wealth, and leaving a comfortable home to come here and stand at the washing-tub in an underground back-kitchen. This she has done daily for the last fortnight, even when snow and frost have been on the ground. Also, Miss ——, another daughter of a baronet, going from the bedside to the kitchen, ironing, etc. Well may Old England be proud of her daughters, when we see what sacrifices they are ready to make in order that they may fully carry out the Divine precepts of love and charity; and so high is the standard of the ladies of our country, that it is of little consequence what office they perform, for whether at the washing-tub or in the drawing-room they are the same in all that renders them high in the estimation of God and man."

Black Knots on Plum Trees.—We see a variety of cures recommended in the papers for the Black Knot an the plum tree, but thus far, after having tried each of the remedies recommended at the different dates of their publication, and which includes all that has lately been repeated, we assert, without the fear of contradiction, that the Black Knot cannot be cured after it has fairly made its appearance, by any process yet made public.

[Working Farmer.

On reading the above to an experienced fruit grower, Mr. H. N. Langworthy, he assures us that it is not altogether correct. He avers that the Black Knot can be headed, if not entirely cured, by attending to it in season. His process is to cut off the limb as far below the excresence as there is any discoloration of the bark. This must be done in the early stage of the disease, as soon as any enlargement is discovered, and during the growing season of the tree. The branches cut off should be burned. The process requires vigilance, and continued attention each season, on account of the prevalence of the insect which causes the disease.

Potatoes.—The *Neueces Valley* says: There is a piece of ground on St. Joseph Island, two or three acres in size, which was planted last spring in sweet potatoes. The potatoes grew and so did the weeds—the cultivation of the ground was neglected, and the owner had no idea of digging it, till curiosity one day prompted him to examine and see if he could find any potatoe vines among the weeds. He found vines, and this very naturally encouraged him to look for potatoes. This he did, and to his astonishment he found, to use his own language—"an abundance of the finest my blue eyes ever blazed upon." After digging a winter's supply for his family, he sold the "patch" for a round sum. The purchaser supplied his cellar with potatoes, sold enough to pay the principal and a handsome interest on his investment, when he sold out to a third. The purchaser followed the example of the previous one, and sold to a fourth. The land changed hands six or seven times, each purchaser making something of a speculation on the purchase and sale, when it finally fell into the hands of our fellow citizens, Capt. Jenkins, who is digging yet.

Rotation of Crops in the Garden.—It is the custom of many, who have small vegetable gardens, to plant the same crops in the same pots year after year. This may be done, and good crops may be obtained, if the land is deeply trenched and thoroughly manured every year. But without these precautions crops will almost certainly degenerate. The turnips very likely will become maggoty and rot, and the peas fail to fill out well, and the cabbages show small heads. Though we manure abundantly and work the soil two spits deep, we find it of great advantage to change the locality of the crops every year, with few exceptions. Asparagus cannot very well be changed, and onions seem to do better upon the same spot year after year. [Am. Agricul.

Apples.—The common apple tree was introduced into New England almost as soon as it began to be settled. The seeds of the apples were brought here at the order of the Governor and Company of the Massachusetts Bay, in 1629. Governor's Island, in Boston harbor, was given to Governor Winthrop, in 1682, on condition that he should plant an orchard there. The famous Baldwin apple originated in Massachusetts. It originated in Wilmington, near a century ago, in that part of the town now called Somerville, on the farm of a Mr. Butters. Hence it was known for a time as the Butters apple. It finally took its name from Col. Baldwin, of Woburn. [Boston Chronicle.

Terrier Dogs.—Nearly every farmer keeps one or more dogs; and many, permit me to say plainly, are mere curs of no value whatever. Now a pure bred Terrier is more valuable upon a farmstead, for destroying rats and mice, about the house and barn, than a dozen cats. I have kept a Terrier the past two years, and previous to that, my barn was overrun with rats—now they are rarely to be seen, or heard, upon my premises. The Terrier is also good as a watch-dog; quick to hear and give notice of intruders, and a dog that thieves dread, as it is impossible to coax or wheedle him into silence. [Ohio Far.

Bees and Fruit Trees.—A writer in a literary journal of Paris states that the bees greatly improve the fructification of fruit trees. Orchards in which several hives are kept always produce more fruit than those in which there are none. In the Provinces on the Rhine, the fruits are more abundant and finer than in any other part of Germany, and there it is the custom to keep large quantities of bees. Plants, too, which bees visit, thrive better in the neighborhood of hives.

Burnt clay is now extensively used, in some sections of the country, as a manure for garden soil. It is generally prepared, I believe, by first accumulating a sufficient quantity of woody matter, and covering it with clay. The mass is then ignited, and burnt till the wood is reduced to coal and ashes, similar to the manner pursued in coal burning. The charcoal, ashes and clay thus furnished, constitute an excellent dressing, and produce highly beneficial effects on both crop and soil.

New York and Erie Railroad.

ON and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, asfollows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.
Price 25 Cents per Box. Five Boxes for $1 00.
Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,
PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher,

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

STAND ON YOUR WATCH-TOWER.

Stand on your watch-tower; for the enemy is abroad, and is active. Christianity is assailed on every hand. The citadel of truth is attacked, and God's people must defend it. Even many who profess to be on the Lord's side, are beguiled, and receiving error in the guise of fresh discovered truth, and unconsciously, we suppose, are opposing the grand essentials of our holy religion. Many have been led astray, until they are bewildered with their own theories, and the doctrines they have embraced.

Geology, true as it is in itself, abstract from divine revelation, is taking the place in some minds of revealed truth, and the latter is rejected, so much as to throw doubt on all or any of the sacred writings. Christians, be awake to the infinite importance of revealed truth, as the basis of your hopes, and the source of all spiritual consolation. Whatever discoveries geologists may make, and whatever theories they may base upon them, the Scriptures must stand distinct and alone. The finger of God is more emphatically visible here than any where else, and in the mighty result, spiritually and civilly, and upon the largest scale, the book of God throws geology into the shade—yea, into utter contempt.

Philosophy, too, with its vast and interesting disclosures, is often placed in the room of gospel truth, and spoken of as far more interesting than the old story of the Crucified, and the heart-cheering doctrines which cluster around the Cross. We heard an old professor, and a preacher, say, the other day, that it would be far better to teach people how far it was to the sun, and its immense size, and the size and distance of the planets, &c., than to preach of heaven and hell, and all the old-fashioned doctrines of theology. Beware, young Christians, how you handle the new theories advanced in the Christian world, or set your estimate upon systems that are not found in the Bible—or lest you allow them to take the place of revealed truth altogether. We do not object to geology, or philosophy, or any of the real sciences; they are all good, and give us vast ideas of the grandeur and glory of the dominions of our Heavenly Father; but they must not be the rivals to God's revealed truth.

We have another formidable enemy to the Christianity of the Bible, in the numerous *periodicals* of the day. These are got up professedly to suit all tastes and dispositions; and hence consist of a variety of matter—of truth and fiction—good and bad history—true and false morality. Most of the articles, however, are far better not read by Christians, especially inexperienced ones. It is to be feared, that the light, trashy, and fictitious reading of the present day, is a fruitful source of mischief to the church of Christ. This kind of reading vitiates the taste for substantial and soul-improving truth, fills the mind with vain conceit and pride, leads the professor away from a sober-minded and sound belief, and disqualifies for the discharge of the useful duties of the church. Beware of these traps of the enemy, lest you forsake the pure fountain of truth for the polluted waters of fiction and error.

Perhaps, upon a certain class of professors, the new fangled system of *psychology* and the old systems of *magic* and *necromancy*, have done the most harm, and are still doing their mischief. Oh, to see such numbers of church members crowding in to see all the antics and foolish tricks of persons under a mesmeric influence, is astonishing. Yet the unwary may get entangled in the snare; for individuals come into our respectable towns, with professions calculated to deceive, and get access to places of worship to perform their wonderful feats, and withal their benevolent operations. The magician may have a smaller sanction, perhaps, from professors, but some who love the wonderful must see for amusement. The *spirit-rapping*—(which is nothing less, as we think, than old-fashioned necromancy, or familiarity with wicked spirits, or the spirit of divination, such as Paul cast out of the damsel at Thyatira)—has done more evil to the church of Christ than any thing of late years. Some professors of long standing, and of influence in the church, have been seduced by it, and their houses have been open for its practice, and they have even become mediums themselves. We saw, some time since, a very interesting state of things in progress, checked and finally stopped by this infernal artifice, practiced by a professor and a member of a church. These things are evil, and must be guarded against and frowned upon by the followers of Christ, for they militate against the prosperity of Zion. These last-noticed evils, however, are not so likely to shake the faith of the inexperienced and unfortified professor in divine revelation as the former. The one may drive off the soul from the Rock of Ages, and send it drifting along by every false and dangerous current, until it is carried by the rapids into the deep abyss. The other may bewilder, distract, and corrupt, but leave the foundation untouched. Our Lord said to his disciples, "Watch and pray, lest ye enter into temptation." The apostle Paul says, "See that ye walk circumspectly;" and again, "Put on the whole armor of God, that ye may be able to stand against the wiles of the devil."

GEORGE R. WHEELER.

THE REFLEX INFLUENCE OF BENEVOLENCE.

A Lecture by the Rev. N. V. Hull, delivered before the Ladies' Home Society, of Alfred, Feb. 10, 1855.

Mankind are so constituted, that whatever they hear, see, feel, taste, smell, or do, immediately impresses them with its nature and character. This is not true with regard to our intelligence simply, but is equally true in regard to our moral sense. To illustrate—if you should taste of some kind of pleasant fruit, your whole animal if not moral nature would instantly experience a pleasant sensation—a sensation diffusing itself through your whole frame, so that by a law of your being other things in which you are interested and with which you are connected will seem to be tinged and affected by it. If you should read of some bold and daring adventure, or a thrilling account of the escape of your friend from imminent danger, your emotional nature would be aroused, and your sympathies excited, so that you would seem to enter into the very spirit of the scenes which are the subject of reflection. If you should look upon a painting drawn by a master hand, representing some striking but mournful event in the history of the past—as, for instance, the betrayal of our Saviour by Judas Iscariot, or his crucifixion by the Jews and Romans—how instantly would the spirit of these transactions be transferred to your own bosoms, producing in the one instance a feeling of melancholy disgust and abhorrence, and in the other like feelings, mingled with tenderness, awe, and reverence. Or, should we look on a canvas faithfully representing that defiant act of our Revolutionary sires, when they became such bold and daring innovators in regard to domestic affairs, as to turn Boston Harbor into a tea-pot, despite the sneers of English nobility, the acts of a venerable Parliament, or the wrath of an incensed and mighty monarch, how instantly would every feeling of patriotism be aroused within you, and your bosoms swell with admiration!

So also, when you listen to the woeful tale of the sufferer, and look upon the living testimonials of the truthfulness of his sad recital, you feel rushing unbidden, as from pent fountains, tears of sympathy and compassion, and at once your feet haste on errands of mercy, and tarry not by the way, and your hands become angels who grudge not their service, nor the offering their generosity has supplied.

Again, how often have you, when sitting by the suffering sick, and looking upon their feverish countenances, felt an inward distress because of your conscious inability to bring that relief which your sympathizing heart would gladly extend to them. It is upon this principle, that the spirit and manners of our associates are transferred to ourselves. Thus, if you shall constantly mingle with the gay and trifling, with the frivolous and fickle, the dissipated and the vicious, how soon will you find your own feet beginning to slide, and your heart departing from the good and the right way. If you shall associate with the irritable and fault-finding, you are exposed to have your own principles relaxed, and your temper changed from the stable and kind to the fickle and morose, from the generous and forgiving to the exacting and vindictive.

But, that we may cover the whole ground taken in the commencement of this address, let us proceed to show that this principle obtains also in respect to our *doing*. In order to this, we will select an example or two illustrative of the point. Take, then, the miser—allow, if you please, that he has naturally a covetous and penurious disposition. But once let that disposition be indulged, let him cultivate the "love of money," let him begin to hoard his wealth, hiding it as it were from himself, how will its preciousness increase in his estimation, and how will his mind become excited to devise new plans for the future safe-keeping and faster increase of his idolized treasure. How will his heart harden against the poor, the fatherless, and the widow, and his heavy hand oppress the "hireling in his wages," and how will every noble and generous sentiment fade from his bosom, until he will not only become a misanthrope, but will also lose all self-respect, and sink to the level of the lowest and most detestable *thing!*

Again, let a young man, perhaps mild and gentle—it may be reared under the influence of Christian example—let him become the soldier, exposed to all the congealing influences of the camp—let him become familiar with the blood and carnage of the battle-field, and how hardened will he become! All those feelings of his sensitive nature that abhorred the shedding of blood, and trembled at death, and shrank from the vileness and heaven-daring wickedness with which he is now associated, and of which he is now guilty, have become obliviated, and in their stead rise up principles and feelings which only rank him with fearful ghosts, and demons still more fearful!

But, let the heavens be glad, and the earth rejoice, that, cold as the human heart is, there is a heat that can warm it. Dark as it is, there is a light that can send its rays into its most hidden recesses. Wild and drear as it may be, there is a power that can regenerate it, a spirit that can charm and tame it, and make it to become a fruitful field, all covered with flowers, the most odorous and beautiful, with vines and shrubs and trees bearing fruit most delicious to the taste, giving strength to the spirit, as well as life to the flesh. Depraved and debased as is the heart of man, there is nevertheless left to it something that whispers of the "image of God," that tells of its author, and points to its source. Though the human heart be a ruin, there are remains nevertheless that tell of former magnificence and power, of beauty, order, and harmony of arrangement, sustaining and affirming the truth of that saying of Holy Writ, wherein it is declared, that man, when he came from the hand of his maker, was not only "good," but "very good." It may be that these evidences are hidden beneath the dust and rubbish of fallen greatness, *but they are there!* It may be that they are scattered like minute particles of gold in deep layers of sand, or lodged in the crevices of rocks, or intermixed with quartz; still there is a power that can bring to light these precious particles, and reveal their richness and beauty—that can "crush" these rocks, and reveal their hidden treasures. But while there is such a power, and its manifestations we have often witnessed, it nevertheless conforms itself in its operations to the laws of the being upon which its magic skill is displayed; hence, in this work of reformation and development, the unseen power works through the ordained and seen instruments, causing them when so put in motion to work out the most glorious results, making the fruits of this labor to be seen in the instrument itself. Hence it is, that in the divine economy there is a certain reflex influence attending every work of man, so that if he works evil, evil will spring up in himself; if he works good, a corresponding result will be produced in himself.

But let us for a moment think of the extra ordinary character of this arrangement of the "maker of our frames." It was said by an apostle, "Whatsoever a man soweth, that shall he also reap." Hence, if you sow wheat, you shall reap wheat, but if you sow tares, you shall reap tares. But this is not all—if you sow wheat in your neighbor's field, wheat shall spring up and grow in your own! If you sow tares in your neighbor's field, though you even do it stealthily, they shall more certainly spring up and grow in your own than in his; for, though God may prevent their taking root in his field, yet in yours they have already taken root and are springing up and growing rank and strong.

This, then, is the principle upon which we go in this lecture, that whatever a man does to another shall be done to himself. He that does good to another shall have good returned upon himself, and he who harms another shall not escape harm himself. It was most truthfully said by an ancient man of God, who had had great experience in human affairs, and had seen much of the operations of the divine government, "Be sure your sin will find you out." Let us remember, then, that this is not a mere happen so, a thing that possibly may be so, and possibly not, but that it is a law of God, a decree of Heaven, and we cannot escape it!

There are, ordinarily, two principles which control men in their actions—one is the pleasure to be derived from them, and the other is the profit. We will then consider these two principles, as they bear upon the theme we are considering—"*The reflex influence of benevolence.*"

1. *The pleasures of benevolence.* But upon the very threshold of our statement, we are questioned as to who it is that experiences pleasure in performing the works of benevolence? I answer, All those who have a *heart* for it. It may then be asked, whether there are not those who are incapable of experiencing these pleasures? To which I answer, Very few, at least in a degree; for while it is readily granted that benevolence in its highest sense is a Christian grace, it is nevertheless confidently affirmed, that the principle in man responding to this grace, and making him capable of becoming its recipient, either in the sympathies of his heart or in his volitions, exists in every man, so that, in a subordinate sense, and to a limited extent, even the man of the world may experience pleasure from engaging in the works of benevolence and charity. If an objection be raised upon the score of human depravity—the presence and depth of that depravity I freely admit; but for all this man still has knowledge, sympathy, and conscience. He knows something of the nature of human suffering and woe. He sympathizes with the oppressed and forsaken, and his conscience urges him to duty. If this were not so, we see not how a man could become a Christian; he would be wanting in certain essential elements of being to qualify him for the reception and exercise of the grace of God. We say, then, that every man is conscious of mental and moral pain when he does wrong, and of mental and moral pleasure when he does right.

But touching those faculties which yield us enjoyment upon yielding to their demands, it will have been observed, that those possessing moral qualities bring us far greater pleasure than those lacking this quality. Hence those actions that combine with the moral the sympathetic qualities of our nature, always having the consent of the intelligence, are capable of yielding us the greatest amount of pleasure possible, and the duties of ordinary benevolence are precisely of this character. We say, then, that one of the reflex influences of benevolence is to produce a divine satisfaction in the heart. It calls for no wrath from God, nor demands repentance of the creature, but is continually whispering peace to the conscience, and bestowing blessing upon the heart. O, with what gentle, yet full accent, does it say, "Well done, good and faithful servant." Even the gentle winds as they blow seem to declare it, and the murmuring water-fall, as it winds its devious way among the rocks, and leaps laughingly from precipice to precipice, speaks approvingly of the "good deed done to the impotent man." So, there being peace within, there is peace also wherever the spirit and thoughts of man wander; permitting him to have peace with nature, he first having been true to nature.

Another of the reflex influences of benevolence is, that it makes man better. It gives him clearer views of the law of natural dependence, arising out of human weakness and universal human misery. As he witnesses the misery of others, and administers to their necessities, he is led to consider his own liability to come to want, and therefore becomes chastened in spirit, seeing that he is also "compassed about with infirmities." It subdues his pride, and causes him to say, low bending upon his knees, "Lord, what is man that thou are mindful of him, or ~~the~~ son of man that thou visitest him!"

But it does not stop here. The savor of his influence extends, and the whole man partakes of it. There is not a faculty of his soul but is made to feel the presence and power of this grace, and seems excited by its example to perform its own office so that we say he is a better man. Nor is he simply a better man in himself, but he is equally a better man in the relations of life. Is he a husband? The refining influence exerted upon his spirit makes his mind clearer to apprehend his obligations, and he finds himself more ready to discharge them. He sympathizes more in the trials incident to his companion's calling, and it excites him to duty in relieving her of unnecessary burdens. Is he a father? It makes him more far-seeing in regard to the wants and destinies of his children; for he has clearer views of human nature in all its relations. Also, having a refined and sensitive heart, he will not unnecessarily give arbitrary commands, nor unfeelingly chastise them. But it also makes him a better citizen—a better inhabitant of earth. Of what value to society is a curmudgeon? How dark and selfish is his mind! How unfitted for everything but to get and save money! Who of all the sighing sons and daughters of want and woe would stretch out to him their bony hands for relief? As soon might the famishing child seek nourishment from the flinty rock, or the starving man seek relief among the dead. But the heart of the benevolent man is made still more benevolent by its exercises, and therefore adjusts itself to the condition of life. Remembering "we have the poor always with us," and that whenever we will we may do them good. He does not seek to hide his eyes from the miseries that are around him. Though pained to hear the cry of the needy, he is ever ready to afford them whatever aid is within his power, upon the principle that the "liberal soul deviseth liberal things." Nor is there any thing more true, than that the more he does the more he has a heart to do.

But another of the reflex influences of benevolence, and the last I shall mention on this occasion, is that it brings one so within the range of the divine favor that he who sendeth the rain and withholdeth the frost, and who "loveth the cheerful giver," has decreed in his behalf that the law of increase shall decide in his favor, so that it is said, "There is that giveth, and yet increaseth." Indeed, strange and bold as the saying may seem to be, it is nevertheless true, that he that is kind to the poor, and has therefore laid him under obligation, has created in his own behalf a debt which shall not fail to be paid; for inspiration saith, "He that hath pity upon the poor, lendeth to the Lord; and that which he hath given will he pay him again." Nor is this law applicable to him alone who can give much, for while it is true that he "which soweth bountifully shall also reap bountifully," it is equally so, that "he that giveth a cup of cold water in the name of a disciple, shall have a disciple's reward."

This sentiment may seem strange to some. They may say, "How can giving increase one's wealth?" Now this may seem strange for a man who lives in this world like the swine under the oak, which never looks up to see whence its supplies come. A man that only looks to the earth for corn and wheat—to the vine and tree for fruit—may be expected to question, and higgle, and doubt, when such sentiments are uttered. Still, we believe, and firmly believe, that he "that casteth his bread upon the waters shall find it after many days;" and the ground of our faith is this. that "there is a God, in whom we live, and move, and have our being"—that from Him "cometh every good and perfect gift"—that He "causeth the grass to grow for the cattle, and herb for the service of man." Hence it was proper for the servant of the Holy One to say, "Thou makest the out-going of the morning and the evening to rejoice. Thou visitest the earth and waterest it. Thou waterest the ridges thereof abundantly. Thou settlest the furrows thereof. Thou makest it soft with showers. Thou blessest the springing thereof. Thou crownest the year with thy goodness, and thy paths drop fatness. They drop upon the pastures of the wilderness, and the little hills rejoice on every side. The pastures are clothed with flocks; the valleys are also covered with corn."

It is as much the purpose of this Divine Being, who "worketh all things after the counsel of his own will," to cause the blessing bestowed upon the needy to return upon the bestower, as that the clouds that shed their grateful contents upon the dry and thirsty ground shall themselves be replenished. It always has been, and always will be, that the "merciful will find mercy," and "he that watereth shall himself be watered."

We invite you to look into the history of the past, and see what abundant proofs are afforded of the truth of our position. There is not a page written where they do not abound—not a generation of men have lived, who have not experienced and witnessed the development of this sentiment; so that the Gentile as well as the Jew, the Pagan as well as the Christian, has become familiar with it, and learned to respect its truthfulness.

And finally, how appropriate, that among the many worthy objects of charity that present themselves before us, and press their claims upon us, and receive our attention, the one in whose interest this organization is, should receive a share of our attention. Whose poverty shall excite our sympathy, if that of helpless innocence does not? Whose wretchedness shall command the exercise of our benevolence, when the terrible destitution of guileless children does not? Only think once of destitute stranger children—of fatherless, motherless, comfortless, friendless, poor children—cast forth upon this cold, gay, thoughtless, running, jostling, rushing world, without a hand to lead, a kind voice to soothe and direct, or a friend to protect them—and there are thousands of such—and tell me, are they not objects worthy of your benevolence?

Up, then, and earn for yourselves the character beautifully described in the living oracles. "When the ear heard me, then it blessed me; and when the eye saw me, it gave witness to me; because I delivered the poor that cried, and the fatherless, and him that had none to help him. The blessing of him that was ready to perish came upon me; and I caused the widow's heart to sing for joy. I put on righteousness, and it clothed me; my judgment was as a robe and a diadem. I was eyes to the blind, and feet was I to the lame. I was father to the poor; and the cause which I knew not I searched out. And I brake the jaws of the wicked, and pluck the spoil out of his teeth."

For the Sabbath Recorder.

NOT FOR MYSELF ALONE.

The bright-winged bird, that with varying flight,
  Joyously seeks the azure dome,
Finding in heaven's glorious light,
  Portals befitting a minstrel's home,
Speaks to earth's children in voice of song,
  From the height of its airy throne,
"I live the notes of joy to prolong,
  And not for myself alone."

The tiny flowret, that lovingly peeps
  From the moss in the deep wild-wood,
Hid from the blast that wailingly sweeps
  O'er earth in her darkened mood,
Makes bright the dark shadows that circle its home,
  With a light that is not their own,
And cheering sad hearts as they wearily roam,
  Lives not for itself alone.

The radiant gems, that so proudly gleam
  In the coronet of night,
Keeping their vigils while weary ones dream
  Of a home of changeless night,
Forget not love's mission, but still look down,
  Through the mist of the upper deep,
A semblance bright of that glorious crown,
  Reserved for those who weep.

The streamlet, that glides so joyously on,
  With a melody sweet yet wild,
Reflecting alike the aged form
  And the face of the laughing child,
Refreshes the earth as it wanders by,
  And offers with gladsome tone
Its thrilling music, like harp-string's sigh,
  And not to itself alone.

The cooling breeze, that wafts to our hearts
  The cadence of nature's sweet voice,
Robbing from sorrow her poisonous dart,
  And bidding the weary rejoice,
On its vestal wing bears the mourner's prayer,
  To the foot of our father's throne,
And backward to earth brings the incense of love,
  And not for itself alone.

And man, shall he live in this beautiful sphere,
  Mid the glories of earth, sea, and sky,
The fragile shrine of ambition to rear,
  That shall crumble, and fade, and die—
Not heeding the pallid cheek of woe,
  Or the bondsman's weary moan,
Grasping earth's treasures with miserly care,
  And all for himself alone?

JUNE CLIFTON.

HOPKINTON, R. I.

THE MAN WITH A SHORT CREED.

'I am not skeptical, as many suppose,' said Mr. Williams, 'but I confess I have but little respect for the creeds of sects. Men study to find the means of supporting them; that is, such is the course pursued by the advocates of each creed. Hence every one is satisfied with his own creed, and of course regards all others as heretics. If there were no creeds in the world, there would be more religion in the world; there would not be so many infidels.'

'What is your idea of a creed?—what do you understand a creed to be?'

'A set of dogmas which a man must believe, whether he can understand them or not, under pain of perdition.'

'I do not think you will find that definition in any standard dictionary, nor will you find the word used in that sense by good writers.'

'What is *your* idea of a creed?'

'A creed is a statement of one's understanding of the Scriptures—of the interpretation he puts on the Scriptures.'

'Why not take the Scriptures just as they are, and have a divine instead of a human creed?'

'All denominations of Christians do take the Bible as their only infallible rule of faith and practice; still, it is well for men to compare their views as to their understanding of the Scriptures, and the great points of the system therein taught. You know there are diversities of views as to the meaning of many portions of Scripture. Those can walk together best who are agreed on those points. How can that agreement be known, or rather, how can those of like views be brought together so readily, as by having summaries of doctrine, which may enable men to know when they do agree, and to act together accordingly?'

'If that were the only use of creeds, they might not be so very objectionable; but they are forced down men's throats, and put an end to all freedom of thought.'

'May I be excused from assenting to your assertion, till you have proved it?'

'There are some things so plain that there is no need of proving them. I take this to be one of them.'

'I do not; I require proof. We have no forcing process that I am aware of—no inquisition. The creeds of all denominations are before the world, are open to attack, and are defended only by the arguments of their advocates. No one is forced to attach himself to any denomination. Men are as free to adopt whatever creed they choose, as they are to adopt any form of dress they choose.'

'Only they must keep within the bounds allowed by public opinion.'

'In that respect the case is the same with creeds as with dress.'

'You cannot deny that creeds have been sources of great intolerance, and for that cause, if for no other, ought to be abolished.'

'I might deny your premises so far as free countries are concerned; but your conclusions would not follow necessarily, even if your premises are true. Would you abolish your creed with the rest?'

'I have none to abolish.'

'Do you not believe any thing?'

'Yes, I believe the Bible, or that part of it which came from God.'

'What do you understand the Bible to teach as to the character of Christ and the atonement? You know my views on that subject; do you agree with me?'

'By no means. I do not regard Christ as a divine being, and I do not believe that any thing but repentance is necessary in order that God may forgive sin.'

'My views are, as you well know, expressed in the Confession of Faith of the church to which I belong.'

'Yes, I have studied it in former days.'

'The difference between us then is, that I have a written, and you an unwritten creed.'

'I don't admit that I have any creed. Besides, there is another great difference. You believe every thing there is in your creed, whether you understand it or not. I never believe any thing unless I fully understand it.'

'That is an important difference, truly. You say you believe only what you fully comprehend?'

'Yes; and in my view that is the only course befitting a rational man.'

'You must have a very short creed, then; or else you are gifted with powers of understanding superior to those of other men.'

'I make no pretension to anything beyond plain common sense. As to a short creed, I think that the shorter a thing is the better.'

'You would not apply that remark to life. But as to length of creed, let us consider. You believe in the electric telegraph.'

'Yes, I have the evidence of testimony and of my own senses to authorize that belief.'

'What is it which makes the recording apparatus work?'

'The electric fluid.'

'Do you know it is a fluid?'

'It is generally called a fluid by philosophers.'

'I know it is, but you require evidence that cannot be disputed. Did you or any other man ever see or feel it, so as to know that it is a fluid?'

'I have seen and felt its effects.'

'No doubt, but do you know what those effects are the effects of?'

'Of electricity.'

'Do you fully understand what electricity is?'

'I understand that it is something which is adequate to the production of the effects above spoken of.'

'You say it is *something*; you do not tell what it is. Do you fully understand what it is?'

'I suppose no one does.'

'Then, on your own principles, you are not to believe in it; you never believe what you cannot comprehend.'

'I comprehend that it produces certain effects by its current, and I comprehend how those effects cause the recording apparatus to operate. I therefore believe those things.'

'But you have now come on the ground I occupy. You believe not only what you comprehend, but in the existence of an agent whose nature and mode of existence you do not comprehend. Strike out that, and your telegraph would not work at all. Again; I think I heard you say the other day, that you had never studied the science and art of navigation; you believe there is such a science and art?'

'I understand there is such a science.'

'You believe the fact that there is such a science, though you understand very little about it. On your principle, that you will believe nothing which you do not fully understand, you ought not to believe in navigation. What we have said respecting navigation will apply to most of the sciences, and to portions of every science; you must refuse to believe in them. You see, we are shortening your creed very fast.'

'Creeds, properly speaking, relate to matters pertaining to religion.'

'Very well; let us see how long your creed stretches in that direction. You believe in God; do you thoroughly understand God?'

'I understand the existence of a great first cause of all things, as well as I understand the existence of a maker of this house.'

'Do you believe that God is a Spirit?'

'I am not a materialist.'

'Do you understand perfectly what a purely spiritual existence is?'

'I can understand the existence of God as a spirit as well as I can understand the existence of the soul as a spirit.'

'I do not deny that; but do you perfectly understand the nature of God or of the human soul?'

'I don't know as we perfectly understand the nature of anything.'

'Then, according to your principle, you cannot believe in the nature of anything—you cannot believe that anything has a nature. Strike the nature of God and of the human soul, and of everything else, out of your creed, and there would not be much left to believe. I think you would have a pretty short creed. The truth is, my friend, there is no single truth within the reach of our minds which has not connections and relations beyond the reach of our faculties. Every truth branches out into infinity, and the finite mind cannot comprehend infinity. You daily receive truths on the testimony of others, the nature and relations of which you do not comprehend. An astronomer of veracity tells you he has discovered a new planet. You believe the fact, though you may not understand one of the steps by which the discovery was made. In like manner, you are to receive, on the testimony of God, truths, the connections and relations of which you do not, and perhaps cannot, understand. Whatever is supported by adequate evidence, is to be believed, whether we can fully understand it or not.'

'You and I have studied in different schools of logic. Good morning.' [N. Y. Observer.

AN ARTLESS ARGUMENT.—Naimbanna, a black prince, arrived in England from the neighborhood of Sierra Leone, in 1791. The gentleman to whose care he was entrusted took great pains to convince him that the Bible is the Word of God, and he received it as such with real reverence and simplicity. When he was asked what it was that satisfied him on this subject, he replied: "When I found all good men minding the Bible, and calling it the Word of God, and all bad men disregarding it, I then was sure that the Bible must be what all good men call it, the Word of God."

In all our calamities and afflictions it may serve as a comfort to know that he who loses anything and gets wisdom by it, gains by the loss.

AWARDS OF THE FUTURE—AGAIN.

We thought we would say nothing more on the subject suggested by Bro. Griswold's communication, but farther consideration induces us to submit a few additional remarks.

The fact that the Law of God is *revealed*, or *commanded*, gives the whole of it the character of *positive* law. A distinction between what is positive and what is moral in religion is sometimes made, and there can be no reasonable question but what the distinction is a just one. But as the whole Moral Law is as much matter of revealed command as positive Institutions are, they both stand, in this respect, upon a level; the whole has the character of positive Law.

The administration of positive Law is put in the hands of Jesus Christ. It was for His sake that the Law was revealed. To serve as a "schoolmaster to bring us to Christ," it was given, (Gal. 3: 24,) and this is said, not merely of *ceremonial* law, but of that law from whose "curse" Christ has redeemed us Gentiles. (See verse 13.) To convince of the exceeding sinfulness of sin, was the Law given, (Rom. 5: 20, and 7: 9, 13,) that the sinner might be driven to Christ for mercy; and but for this, it had never been given at all. The world would have been left without any written revelation. Had God never intended to send His Son into the world, men would have been left without any other knowledge of the Law than what is naturally written in their hearts. For why should God give them additional light, and so increase their guilt, if He did not intend to offer them a way of escape from His wrath?

And since the Law was given for Christ's sake, that sinners, seeing in it the abounding magnitude of their offense, might be driven to His Atoning Blood, so its administration is committed to Him. He it was who spake to Moses in Mount Sinai, (Acts 7: 38,) and though designated as an "angel," he was no ordinary [illegible] but was the Angel of Jehovah's presence, ([illegible] 63: 9,) of whom God said, "*My name is in him*," (Exod. 23: 21,)—the Captain of the Lord's host, before whom it was no sin for Joshua to fall on his face to the earth and worship. (Josh. 5: 14.) It was his voice the Israelites were directed to obey, (Exod. 23: 21,) and between Him and the Father there was such a oneness, (John 10: 30, 38,) that their rebellion was considered as tempting and provoking the Most High God. (Ps. 78: 40, 56.)

The common idea, that the New Testament order of things is placed under the administration of Christ, while all before was under the administration of the Father, is not strictly correct. It is certain, that the Being who gave the Israelites the Law, and challenged their worship, was no other than the Creator of the world and the Dispenser of providence. It is equally certain, that Jesus Christ is both the Creator and the Preserver of all the things which he made. For not only were all things made by him, (John 1: 3, Col. 1: 16,) but he "upholds all things by the word of his power." (Heb. 1: 3.) And, that this last passage may not be construed as having reference to the power of his Father, (a construction which some *do* impose upon it, who reject the supreme divinity of Christ,) it is expressly declared, that "by him all things consist." (Col. 1: 17.) And though the Scriptures, in speaking of those interpositions of Providence which respect the material world, and the life of the different animals, are not accustomed to direct our attention particularly to that Person, by whom the divine power is exerted, they do intimate, that the particular economy of Providence, which respects the restoration of the human race, was administered *in all ages* by that Person, by whose manifestation it was accomplished. Hence, almost every Christian who admits the pre-existence of Jesus, holds that he who in the fullness of time was made flesh, appeared to the patriarchs, gave the law from Mount Sinai, spake by the prophets, and maintained the whole of that intercourse with mankind which is recorded in the Old Testament as preparatory to the coming of the Messiah.

Such being the divine constitution, it is clear, that the moral government of the world is, in some degree, modified by the mediation of Jesus Christ. For though Christianity is a republication of Natural Religion, we must guard against the mistake that it is *merely* such a republication. It does not merely *ascertain* for us, and *establish with certainty*, the doctrines and duties which may be investigated by the light of reason, but it *commands* these doctrines and duties with an authority corresponding with the mediatorial dignity of Him to whom all power and government are committed. Moreover, it develops doctrines concerning the Son and the Spirit, and their offices in the salvation of men, of which Natural Religion did not give any intimation; and there are duties resulting from the interposition of Christ, which could not possibly exist till the knowledge of that interposition was communicated to man. Hence, the government of the world, as modified by the mediation of Christ, implies such a distribution of rewards and punishments, at the Last Day, as will vindicate the authority with which He is invested. For this reason, "the Father judgeth no man, but hath committed all judgment to the Son, that all men should honor the Son even as they honor the Father." (John 5: 22, 23.)

To the retributions of the Last Day, when the Son (not the Father) shall execute judgment, the miraculous resurrection of the body is necessary. For one very important respect, in which the condition of man has been modified by the mediation of Christ, is his reprieve from the punishment threatened for his transgression. The execution of the penalty is stayed for a season. Judgment is made to linger, and damnation to slumber, that man in the mean time may be put upon a new probation. But no part of the finally executed punishment consists in natural death; for, according to the original constitution under which man was placed, natural death, or the separation of soul and body, was not threatened, and could not have taken place. The punishment threatened was evil to the whole man, as made up of soul and body. The whole man was to be punished, and not one part only, while the other is taken down and annihilated. Man is capable of suffering intensely in his mind; he is also capable of suffering unspeakable evil or pain in his body. But if part of the punishment consist in natural death, (which is the annihilation of the body, or its complete insensibility to suffering,) then it is not an evil, but a negative good, that is threatened, which is contrary to the notion of punishment. Separation of body and soul would be, not punishment, but rather a mitigation of punishment, because, however intense might be the sufferings of the soul, they would not be so great as those of soul and body united. And under that constitution under which the threatening was made, there was no provision for a reunion, if the separation once took place; nor was it, indeed, possible that there should be a reunion, if the separation was intended as a punishment. It is evident, therefore, that natural death, or the separation of soul and body, could not have taken place at all, had men been punished for disobedience according to the threatening.

Why then is natural death inflicted, if it is not intended (in part at least) as the punishment of transgression? It was introduced under a new dispensation of grace, and to answer important ends respecting it; and when this new dispensation is finished, the separation of soul and body will be ended, and men will be united to their bodies again. When each person's probation under the new dispensation is finished, the next thing is to render him invisible, or to place him in prison, as a criminal, (if finally impenitent,) waiting for the execution of the sentence against him at the Day of Judgment; and natural death is the method of rendering him invisible. But this dissolution of the body could not take place, unless man had sinned; nor then, if the threatening had been executed without remedy. Both these must take place, the sin of man, and redemption by a Mediator, in order that the separation of soul and body may be at all consistent with the nature of his accountability.

Annihilationists utter a sound sentiment, when they say that the death threatened to Adam was the death of the *whole man*, but they err most egregiously in supposing that the death threatened means entire extinction of being, and that natural death is the execution of the threatening. For if natural death is the execution of the threatening, then no one escapes, not even the believer in Christ. Every body suffers the penalty of the law, and remission of the penalty is a boon granted to none. They may say what they please about the resurrection, and subsequent immortality as the gift of Christ, it is clear that believers obtain no gift at all, according to their scheme, till after they have *died*—been *annihilated*—and so satisfied the law's penalty in their own persons; a scheme which makes the whole system of redemption a perfect farce! Besides, the absurdity of supposing that the same person can live a second time, after his existence has been absolutely destroyed—that is, of supposing that he can have, not two *modes* or *conditions* of existence, but two absolutely different and distinct existences—is so glaring, that none but those who have married themselves to folly, with a determination never to be divorced, would seek to defend such a contradiction.

As we have seen, the constitution under which man was first placed did not recognize natural death—the separation of soul and body—nor did it admit of it. The death with which he was threatened, was endless punishment, in his whole person, soul and body—a separation from all natural good and happiness unto all natural evil or misery. This is to die, in the highest and most proper sense. It is the original and proper meaning of the word death, and no other idea was affixed to it when the threatening was denounced to man. Adam unquestionably understood it in this sense, and could not have understood it of the dissolution of the body, inasmuch as the constitution under which such a dissolution is at all consistent with the divine government had not yet been introduced, nor the least intimation given that it would be introduced.

T. B. B.

Contributions of a New York Church.—In the afternoon of Sunday, April 15th, the children of the Sunday Schools connected with St. George's Episcopal Church in New York, were gathered in the splendid edifice; the pulpit was adorned with flowers, and the galleries were filled with spectators. The Pastor, Dr. Tyng, spoke to the children in a most interesting way on the life and character of Timothy, after which he received from the various classes their missionary contributions, which amounted in all to more than $1,800. This Sunday School commenced seven years ago with nine teachers and thirty-five scholars; it now numbers ninety-five teachers and over fifteen hundred scholars. Dr. Tyng stated, that during his connection of ten years with the church, more than $77,000 had passed through his hands from the congregation for religious purposes.

AFFAIRS IN CHINA.

Extracts from a letter of Eld. Solomon Carpenter to the Executive Board of the Seventh-day Baptist Missionary Society.

We have still to dwell upon the sad condition of Shanghae besieged. The Insurgents, who have held the city so long, and are able, if they can obtain supplies, to hold it for an indefinite time, against all the efforts to retake it by the Imperialists, now find themselves in a bad case, and there is very recent and reliable proof, that they would be glad to relieve themselves from their unpleasant situation, if they could. But the probability is, that they cannot, and that both they and the unfortunate people who are within the walls must meet death, either in battle and conflagration, or in the form (more horrible if possible) of starvation. It is really sad to think of their case, especially that of the unoffending people, who have already suffered so much from fear and anxiety. But justice and judgment are the habitation of His throne whose kingdom ruleth over all.

Since we last wrote, there has been some sharp fighting but a little way from our house, and some random shots have told us that our position was not without danger. The 25th of last month (December) was a day of great excitement. The Imperialists were out in great numbers, not apparently for battle, but seemed to be waiting to catch a prey, should it come in their way. At about eleven o'clock A. M., while we happened to be standing on our verandah, with our faces towards the city, our attention was caught by an immense column of smoke rising suddenly and to a great height in the air. After considerable of an interval, a dull, heavy report, simultaneously with a jar of the house, reached us. The report was succeeded or prolonged by a great rattling, which, although the scene was more than a mile distant, by means of a favoring breeze, was distinctly audible, and resembled the falling of a great quantity of earth and brick upon a great number of tile roofs. And this was doubtless the fact. A great breach was at that moment made in the city wall, and it only remained to see how the Imperialists would use their opportunity. Immediately there was a great shouting throughout the rebel hosts, somewhat resembling the voice of many waters, and a united rush to the breach. The rapid report of firearms which then ensued told of the work which was going on, and placed our minds upon the pivot of uncertainty as to whether that was the day of Imperial success and of the downfall of the rebels. The contest, however, was not long, and the rebels were left masters of the city still.

But in the failure of the Imperial hosts to retake the city, the French have stepped in to try what western arms can do, and perhaps, by performing an act of great public benefit, to win upon the affections of the Chinese, and turn it to the glory of their nation, and in favor of the Roman Catholic religion. For a long time it was currently reported, that they were anxious for a provocation from the rebels, so that they might find a justifiable reason for going to war with them. Such a provocation at length they fancied they had found—(others thought differently)—and hostilities commenced. From one step it has progressed to another, until it has become a serious affair to them. Three Sabbath days, instead of reasoning with them in their temples, they have dealt out to them bomb-shells, cannon balls, bullets, and even bayonets. And on the last occasion, they lost nine men and several more wounded. These failures and losses constitute another chapter of Sabbath accidents, with which to balance the account of Sunday accidents so much vaunted in the papers. They have, however, entered the city only once, and their failure is said to be owing to wrong information as to the breadth of the wall at that place. They supposed it was twenty feet, and would allow the use of several cannon, whereas it was scarcely five feet, and would hardly admit of a howitzer. It is said they will make another attempt before the close of the present week.

I send you a map of Shanghae and vicinity, in order to show that blame cannot be attributed to me for selecting an unsafe site for our dwelling within the "race course." If the events of last April did not afford a guaranty that it was the intention of the foreign powers to afford protection to the whole extent of the concession, I should be at a loss to know what acts could do it. But since that time new plenipotentiaries have been here, and a new policy prevails. All the region to the west of the inner line of defense (which runs through the "old race course") is given up to the Imperialists, and they can come there to build batteries, encampments, to skirmish, and what not. It has been only within a few weeks that the practical inconvenience to us has been felt. On the 4th inst. (January) I made a representation of our circumstances to our Consul, who directed me to abandon the house as unsafe. Had his counsels prevailed, the Imperialists would not have been allowed to occupy any ground within the outer line of the foreign concession. But as he stood alone, he could not prevent them. But he has done himself honor in that he has, by an unyielding determination, obtained from the Chinese authorities funds enough to pay for seven American houses (in case they shall be destroyed,) among which are Bro. Wardner's and mine. His has been partly destroyed, and he will receive the cost of it immediately. [A note says the money was already paid.] Two of the others have been recently burned down, leaving the walls standing, and the others, except mine, have been more or less injured. If mine should not be injured, I shall not receive pay for it. But all of us are to receive something for our inconvenience. Our family is snugly quartered in a little burgalow belonging to Jas. Mac Donald, and Bro. W.'s in the house of Mr. Wright, a mutual friend of us both. Our effects are all, or nearly all, removed from the house we have thus reluctantly abandoned. This is the fourth time I have removed the whole of our effects since we first settled in the city. Besides which, I have made two partial removals. It is not desirable to be obliged to spend so much time in merely taking care of ourselves. But it seems to be our only alternative, unless we abandon the field, which we should be very loth to do.

Since but little time and opportunity has been left me for strictly missionary work, I have but little on that head at present to report, beyond my somewhat irregular labor at the language of the country. Before we were all entirely excluded from the city by the French, I used to continue my visits to the widow and fatherless, and others in affliction, shut up within the walls. And it afforded me some satisfaction, while witnessing their anxiety for their temporal safety, to be able to commend to them their only Rock of Defense against all the evils that affect and dangers that threaten them. And especially so as there was evidence of affliction being a means of humbling the natural pride of the heart, and of breaking up its carnal security.

On the 23d of September, Sabbath, I visited Widow Chung, also her mother Annah and sister Nyung-ee, who reside in another part of the city. Widow Chung was sick, and worse probably than I was aware of. She appeared more than usually affected when speaking of her daughter Ne-May, and her daughter in law and grandson, the wife and child of my former teacher, whom she had not seen for many months, and probably began to feel that she should see them no more. She solemnly besought me to look upon the face of teacher Chung, and then extend my guardianship over his widow and fatherless child. This was no more than I might have expected under the circumstances, and I should have thought less of it, had it not been for her faltering voice, and the big tears that coursed her face as she spake. These bespoke tender feelings and strong affections. And as such a state of heart appeared favorable, I was delighted with so good an opportunity to commend to her warmest regard the precious Saviour. With considerable earnestness, she then professed her belief in the gospel, which from time to time I have endeavored to preach to her. It was the first time, I think, that in my presence she ever yielded any thing more than a polite assent to the message of salvation.

The next Sabbath I visited her again. As usual, she appeared very glad to see me. But her health was still more impaired. She again professed faith in Christ, and said, with considerable emotion, that He was her comfort in her affliction. This she avowed in the presence of the only surviving brother of her husband, who is Confucianist enough to be an infidel, and who labored to turn the conversation to other and more agreeable topics. There were two other aged ladies present, one of whom, so far as I know, listened for the first time to the word of life. I then repaired to our house on the Brilliant Clothing Street, and near the Fish Market Bridge, where I had an interesting conversation, for the first time, with two men and their wives, natives of Ur Hway province. They were sojourners in Shanghae when it fell into the hands of its present masters. Latterly they had obtained refuge in my house, and were professed inquirers. They listened with respectful attention, and appeared solemn and thoughtful. They also willingly knelt with me in prayer to the Author of their being.

The next Sabbath, Oct. 7, in company with Bro. Wardner, I paid my last visit to Widow Chung, little thinking, however, it would be the last. She was more feeble, but able to sit up in her couch and converse. We closed the interview with prayer for her, she still professing her belief in Christ; and expecting to see her again, we repaired to our house, and conversed and prayed with the two families there.

The next Sabbath, Bro. W. and I went into the city, and first to the house of Widow Chung; and what was our surprise when the first thing that met our eye in the reception room was her coffin. She died, suddenly and unexpectedly, four days previous. Whether she truly believed in and loved the Saviour is known only to Him who seeth not as man seeth.

All that we know of the movements of the Tae Ping Wang party for some time past has come to us through the distorted medium of the Pekin Gazettes. These represent the Imperial forces as gaining ground. But my impression is, that sooner or later they will be obliged to succumb to the superior skill of Tae Ping Wang.

In addition to providing for my own household, the acquisition of the Mandarin or general language of the country, by which one can be understood in any part of the Empire by a portion at least of the inhabitants, I consider to be my chief business at present. We have a pleasant understanding and acquaintance with our new neighbors within the race course, and some of them were quite sad at the thought of our coming away. But none of them manifest, as yet, any taste for the glad tidings of salvation.

But I will resume my journal. On the 21st of Oct., Mrs. C. went with me into the city. Widow Chung's mother, Annah, the blind woman of whom you have often heard, is so far advanced in age and second childhood, that it is difficult to know whether or not she be a true believer. She was quite overwhelmed with the loss of her daughter, and with the other trouble of being shut up in a besieged city, with the prospect of starvation before her. Under these circumstances, it was impossible to draw her attention steadily to contemplate the more spiritual things of the kingdom of heaven. Her daughter Nyang-ee also seemed to be so much occupied with her present griefs, that there was about as little success in attempting to get her fixed attention. I think, if a disciple of Christ had been able to work a miracle, and save them from their perilous condition, perhaps she would feel so much gratitude that she could appreciate the power of Jesus to save from the greater evils of sin and perdition.

On the 4th of Nov., I saw a man from Lee-oo, a hundred lee distant, who came to Shanghae to seek foreign medical aid for a disease of the heart. He has the reputation of being a man of benevolent disposition; and he himself (sincerely I think) supposed that he was really a good man; and it was a puzzle to him that a man possessed of a good heart should be afflicted with a disease located in that organ. Here is materialism with a witness.

I visited the city about every Sabbath up to the 2d of Dec., and on the 8th of Dec., Sixth day, I went in for the last time. Since that time foreigners, unless having a special passport, have been debarred from the city by the French.

The two families occupying our house professed to like the doctrine, both men and women, and I regret the necessity of ceasing my labors with them. The prospect they now have before them is such that if they enjoy peace of mind which is any thing more than a stoical indifference, it must be something resulting from faith in Christ. May their heavenly Father be gracious to them.

THE FRENCH AT SHANGHAE.

Under date of Shanghae, Jan. 18th, 1855, a correspondent of the New York *Tribune* gives the following account of the operations of the French around Shanghae, China:—

In my last communication, I think, I stated that the French Admiral was protecting the Imperialists in building a wall intended to cut off the rebels' communication with the foreign precincts. As was expected by many, it brought the French into collision with the rebels. December the 9th, 1854, they went beyond their wall to guard men in pulling down a mud breastwork thrown up by the rebels. Here they got into a very serious difficulty, having several of their men killed and wounded. This kindled the Admiral's wrath exceedingly. More men were immediately landed, and he commenced firing on the city, both from land and water. Without any respect for the gods, he sadly battered two temples on the city wall, and burnt the third with shell. No other damage was done, as they did not then attempt to set the city on fire. Waiting till the 13th of the month, the Admiral again attacked the rebels and took a mud battery outside of the east gate. After spiking the guns, the French returned to their ships. On the 30th of December, the French and Imperialists made a combined attack, which lasted for several hours; but accomplished nothing. The French threw shells rapidly into the city, but could not succeed in firing it—there being so little wood about Chinese houses. One of their concussion shells lodged in the tower of the Baptist Church without burning. The rebels had been previously told, that if the French attempted to shell the city, they could burn it up in a few hours, and so most foreigners thought, and many trembled for the fate of the thousands within the walls. To the surprise of every one, the battle ended without any fearful results. The spell was now broken. The rebels laughed at shells, and said, if the Americans and English would only remain neutral, they did not fear the French. This, of course, nettled the latter, who determined to give the city a demonstration of their power. By the 6th inst., they had their battery prepared, and commenced early in the morning to make a breach in the wall, which they soon accomplished. They then, 250 strong, bravely entered this breach, but with the loss of their First Lieutenant and Ensign—the rebels firing from the houses and concealed batteries. The first object of the French was to get possession of the north gate, just above the breach, and let in their allies—the Imperialists. It is said the latter rushed in, and some, supposing the city then taken, thought only of plunder, to which they gave themselves with all diligence. Others, hastening on through the narrow streets in quest of the rebels, suddenly found themselves cut off by persons concealed in the houses closing and fastening gates behind them. In the mean time, the rebels were collecting from all parts of the city, and fell upon them with such violence that they retreated in confusion to the wall where the French were stationed. The French held their position for some time; but finally, finding their allies useless, and their ammunition nearly exhausted, they retired with 9 killed and 36 wounded—a very serious loss out of 250 men. The Imperialists, it is thought, lost several hundred. The French are very much chagrined at their want of success, and will use every effort they can to retrieve their reputation. At present, they satisfy themselves by remaining behind their breastworks, and firing at the rebels as they pass beyond them to get into the western part of the foreign precincts, where they purchase vegetables, &c.

Unostentatious Benevolence.—On Sunday, April 22d, among the contributions at the Church of the Holy Communion to the funds of St. Luke's Hospital, New York, was a roll of five one thousand dollar bills. They were dropped so quietly into the plate, that not even the gentleman who received them knew from whom they came. The giver is to be envied less for his ability to spare such a sum, than for the disposition which led him to bestow it on such a cause in such a way.

Death of a Venerable Missionary.—Rev. David Poor, D. D., aged 65 years, and who had been 35 years a Missionary of the American Board, died in Jaffna, Ceylon, on the 3d of February, 1855. The *Morning Star*, published at Jaffna, Feb. 22d, gives the following particulars of his last hours:—

"On the morning of Thursday, Feb. 1st, Mr. Poor attended the funeral of Mary Moody, a member of his church whom he much esteemed, and who had died the night previous of cholera. Before attending the funeral, in writing to a brother missionary in the town of Jaffna, he, speaking of Mrs. Moody's death, concluded his note with the following words, which are very striking when viewed in connection with his own death so soon after: 'We are sorely afflicted this morning. We regarded her (Mrs. Moody) as a gem of great value. The Lord of the harvest seems to be gathering in the choicest fruit.'

"Late in the afternoon of Thursday, Mr. Poor visited a house in the village, where one of the teachers of the Oodooville Female Boarding-school was then sick of cholera. He conversed and prayed with the sick person, and remarked, that at the present time 'God was gathering in the wheat with the tares,' and expressed the hope, that though they might not meet again on earth, they should at last in heaven. This was Mr. Poor's last missionary and pastoral visit—the last visit of thirty-five years of direct labor among the heathen—and was the last time he prayed in a native house; for the next morning he found himself in the grasp of cholera, that, to nearly all, most dread messenger of the king of terrors. It was not so, however, to him, for Christ had removed the sting of death. Before day-light of the morning of Feb. 2d, and before Mrs. Poor was aware of his being ill, he held quite a long conversation with her on various matters, but with an evident design to prepare her mind for the scenes he doubtless felt were before her. Among other things he quoted those truthful and beautiful lines of Dr. Young:—

> "'The spider's most attenuated thread
> Is cord, is cable to man's tender tie
> On earthly bliss: it breaks at every breeze.'

"One of his expressions in his sickness, which is well worthy of remembrance, was made when alluding to the text of his last sermon, he said, 'The righteous,' and then pausing for a moment, he added, 'the ABOMINABLE—in Christ Jesus.' His last sermon was upon the text in Proverbs 14: 32: 'The wicked is driven away in his wickedness, but the righteous hath hope in his death.' It was preached the Sabbath before he died, and was with special reference to the prevalence of sickness and death. Mr. Poor's last hours, dying expressions, and final exit from earth, are a most fitting commentary on the last clause of the verse."

Baptist Missions.—The Executive Committee of the American Baptist Missionary Union have issued a circular and appeal based upon the following facts:—

1. The gross income of the Union for the financial year ending the 31st March, has fallen $30,600 below its expenditures for the year. $65,000 were needed in March, and less than $34,000 were received. The debt existing March 31, 1854, was thereby doubled.

2. This excess of expenditure above receipts has not been owing to unforeseen exigencies. By direction of the Board, at its annual meeting in May last, $155,000 was made the basis of the year's expenditure, including the debt of the previous year. That amount has not been exceeded. The deficit is in consequence of withholding contributions.

3. The deficit of $30,600 must be made up at once and fully, or the missions of the Union will be reduced to want and sore disaster. Care has been taken throughout the year just closed, to grade expenditures on the lowest scale compatible with the regular prosecution of the work in hand. But in doing this, even, a debt has been incurred of more than $30,000 additional to that of previous years. And, if adjusted to the existing scale of operations, the first remittances of the year on which we are entering will increase the debt by thousands more. The Committee consider themselves to be *not at liberty* to add thus to the liabilities of the Missionary Union. The only alternative is to restrict the monthly remittances within the monthly income *realized*. Unless, therefore, the deficit is made good, and the income largely increased, and that immediately, there must be *from this time* a large and most injurious withholding of remittances, besides the relinquishment of one or more of the missions.

Methodist Missions.—At a late meeting of the New England Methodist Conference, held at Chelsea, a statement was made of the operations of the Missionary Society, showing that the receipts from the churches in 1854, were $245,000. This sum was expended mainly in the following appropriations; Foreign German Missions, $23,470 23; Oregon and California, $3,779 46; Liberia Mission, $37,233 38; China Mission, $8,136 20; New Mexico Mission, $1,095 85; Buenos Ayres Mission, $2,376 55; Domestic Missions, $143,866 68. The appropriations for the current year amount to $260,000, which the Board at New York hope to receive, notwithstanding the pressure in the money market.

The Liquor Law in New York.—Mayor Wood of New York has written another letter on the Liquor question. He says that for his duties as Mayor, the Corporation Counsel is his guide; while for his guide as a Magistrate, he depends upon the District Attorney. Under the advice of these officers, Mr. Wood concludes, that we shall be entirely without laws to restrain or regulate the sale of Liquor from the 1st of May to the 4th of July, except the statute prohibiting sales on Sunday; and for this the utmost fine will be $2 50 for a whole day's work. The Mayor, therefore, calls upon all good citizens to put themselves upon their best behavior during these two months, that we may show the world how little we really need a prohibitory law.

Congratulatory Temperance Meeting.—On the evening of April 26th, a congratulatory meeting of the friends of temperance was held at the Metropolitan Theatre, New York. Wm. E. Dodge presided, and addresses were delivered by Prof. Mattison, Rev. Henry Ward Beecher, Wm. H. Burleigh, Rev. Drs. Peck and Tyng, and Rev. T. L. Cuyler. The audience was very large and much enthusiasm in the good cause was manifested.

RELIGIOUS INTELLIGENCE.

A correspondent of the *Independent*, writing from Foxboro, Mass., says: During the past five months, there has been a remarkable attention to religion. So general an interest has not been known in this town for about forty years. Including those who have expressed hope in connection with the Baptist church, there are probably between seventy-five and a hundred who give evidence that they have found Christ. Numerous family altars have been erected. Some of our most wealthy and enterprising business men have found the pearl of great price, and have begun to lay up treasure in heaven. This is the Lord's doing, and is marvelous in our eyes.

A correspondent of the *Independent* states that the Rev. David Williams, pastor of a Congregational church in Wales, has lately entered into the sixty-second year of his pastorate, and his health and vigor promise additional years of effective service. His predecessor, Rev. Isaac Price, was pastor for fifty years, preceded by the Rev. Thomas Magans, whose ministry numbered fifty years. Three pastors in one hundred and sixty-two years!

A gentleman from Aurora, Ill., says that there has been quite a general attention to the subject of religion there during the past two months, and a large number of hopeful conversions. From 70 to 80 have joined the Methodist church "on probation," from 50 to 60 have united with the Baptists, and about twenty with the Congregationalists.

Protestantism in France has sustained a great loss in the death of Rev. Alphonse La Harpe, of Bordeaux. M. La Harpe was the founder of the Free Evangelical Church at Bordeaux, and had preached there some fifteen years. He was son-in-law of Dr. Malan, of Geneva, and was thirty-nine years old.

The Presbytery of Chicago at a late meeting resolved to found a Presbyterial Collegiate Institute in Marengo, and to make the effort to raise $35,000 towards its endowment, provided the citizens of that place would raise $9,000 of that sum.

The annual meetings of the American Baptist Publication Society, and of the American Baptist Missionary Union, are to be held this year at Chicago, commencing on Friday, May 11.

Russian Christening.—There are three queer peculiarities about a Russian baptism of an infant. A new book from that country tells us:—

"It is a curious thing that, among the Russians, the father and mother of an infant not only cannot stand as sponsors to it, but they are not allowed to be present at its baptism. The godfather and godmother, by answering for the child, become related to it, and to each other, and a lady and gentleman who have stood as sponsors to the same child are not allowed to marry each other. The form of christening differs materially from that of the Protestant Church. The priest takes the child, which is quite naked, and holding it by the head, so that his thumb and finger stop the orifices of the ears, he dips it thrice into the water; he cuts off a small portion of the hair, which he twists up with a little wax from the tapers, and throws it into the font; then, anointing the baby's breast, hands and feet with the holy oil, and making the sign of the cross with the same on the forehead, he concludes by a prayer and benediction."

Juvenile Books.—We are indebted to John E. Potter, of Philadelphia, for a series of six Juvenile Books, plentifully illustrated, neatly printed, and bound in a uniform and tasty style. They are known as "Uncle William's Series for Little Folks;" and include "Christmas at Home, or good Children always Happy"—"Winter Evenings, or the Snow Man and the Sleigh Ride"—"Rainy Days, or the Freshet and Squire Walter's Grist"—"Summer Mornings, or the Young Haymakers"—"The Squirrel Hunt, or a Walk in the Country"—"The Dog Days, or Dennis O'Flaggerty."

Terrible Calamity.—We have a heart-rending tale from Dantzic, to the effect that the breaking up and floating down of the ice on the Vistula, which has been so often the source of great damage to the surrounding low lands, has this spring taken place with such terrible violence as to surpass any thing of the kind within the last fifty years. The strong dykes, constructed at an immense cost along the banks of the river, have been swept away in many places by the infuriated element, and four hundred square miles of the most fertile plains, the best wheat-producing district in the world, are now covered by water, and have the appearance of a lake. One hundred human corpses had already been picked up near a single place, (Tiegenhoff) when the above report was sent off. The loss of life and property must have been terrible. The scenes of misery, anguish, and sorrow, so suddenly created by this awful calamity, beggar description, and the depth of the existing distress can be fully fathomed only by persons actually present or intimately acquainted with the peculiarities of the country. A fine tract of land, richly endowed by nature, containing many a happy home, many thriving villages and substantial farm houses, great numbers of valuable cattle, has, at one fell swoop, been altered to a mass of water, covering all under its cold surface, like one vast grave.

Libel Suit.—The case of Wm. T. Dove vs. J. H. McBlair, which had been on trial for some days before the Circuit Court at Washington, has terminated. The libel of which Mr. Dove complained, wss the circulation by Mr. McBlair, during the municipal election canvass of 1852, at which time the plaintiff was a candidate for Alderman, of a report that Mr. Dove was tainted with African blood. The Jury returned a verdict for $10,000, this sum being the full amount of damages claimed. The plaintiff directed that the judgment be entered to the use of Richard Wallach, Esq., trustee, to apply the proceeds to the payment of the costs and expenses of the suit, and the residue to be divided between the two Orphan Asylums (the Protestant and Catholic) of the City of Washington.

The Utica *Observer* says that Mrs. Emeline Barringer died suddenly in Syracuse, N. Y., on the 20th of April, and was buried by Coroner Saul of that city. Her property, now in the hands of the Coroner, will be surrendered to her brother on application.

European News.

One week later news from Europe has come to hand since our last.

The Ninth Conference was held at Vienna on the afternoon of the 8th, and lasted but one hour. The Russian Plenipotentiaries had not received their instructions. Drouyn de l'Huys and Ali Pasha were present. Nothing whatever is known as to the chances of agreement, nor is it known when the next meeting will be held.

Nothing important had been received from Sevastopol up to April 8th. The positions of both armies were unchanged. Night skirmishes on a small scale continued. The weather was fine and dry. An armistice of three hours had been allowed to bury the dead. The Allies report themselves ready to open a general bombardment of the city.

The Russian organs say that the women, children, and the sick, are being sent out of Sevastopol into the interior of the Crimea.

Gen. Canrobert's dispatch estimates the loss on the night of March 22d—Russians, 700 killed, 1,500 wounded; French loss, 200 killed, 400 wounded.

The propriety of raising the seige of Sevastopol, is freely and favorably talked of.

The French-hired-steamer Edinburg, and two ships in tow, all loaded with French horses, were lost off Baltschick.

St. Petersburg advices are altogether indefinite as regards politics. They, however, reiterate that Russia will not make concessions. The cholera continues its ravages in St. Petersburg—on the 29th there were 200 deaths.

Napoleon and Empress Eugenie would reach London, Monday, the 16th, and stay one week with the Queen. The tone of the British public is that of extravagant adulation in regard to the event, and it is very different to that with which Napoleon was treated some years since.

The Pope has had a narrow escape with his life, from the accidental falling of a beam. Two Cardinals were injured. Particulars not to hand.

The ship Robert, bound to New Orleans, had put back to Liverpool, in a damaged condition, having come in collision off Holyhead with the steamer North Carolina, from Philadelphia for Liverpool. The steamer sunk in about ten minutes, but no lives were lost.

The Massachusetts Liquor-Bill.

The prohibitory liquor-bill—having been approved by the Governor—has become a law, and will go into effect on the 20th of May. The main provision of the bill is as follows:—

"If any person, by himself, his clerk, servant or agent, shall, directly or indirectly, or on any pretense, or by any device, sell, or, in consideration of the purchase of any other property, give to any other person any spirituous or intoxicating liquor, or any mixed liquor, part of which is spirituous or intoxicating, in violation of the provisions of this act, he shall, on being convicted of one such violation of the provisions of this act, pay ten dollars and the costs of prosecution, and be imprisoned in the House of Correction not less than twenty nor more than thirty days;—on being convicted of a second such violation thereof, either at the same or another term of the court, or on the same complaint or indictment which charges the first such violation of this act, or on another, he shall pay twenty dollars and the costs of prosecution, and shall be imprisoned in the House of Correction not less than thirty nor more than sixty days; on being convicted of a third, and any subsequent such violation of this act, either at the same or a different term of the court, or on the same complaint or indictment which charges the first and second, or any violation or violations of this act, or on another complaint or indictment, he shall pay fifty dollars and the costs of prosecution, and shall be imprisoned in the House of Correction not less than three nor more than six months;—and if any clerk, servant or agent, or any other person, in the employment or on the premises of another, shall violate the provisions of this section, he shall be held equally guilty with the principal, and on conviction, shall suffer the same punishment."

Pro-Slavery Chivalry.

The office of the *Industrial Luminary*, a paper published at Parkville, Mo., was broken open recently, and its contents destroyed, by a pro-slavery mob. The following resolutions, adopted before proceeding to the work, show what a chivalrous set of fellows took part in the proceedings:—

Resolved, 1. That the Parkville *Industrial Luminary* is a nuisance, which has been endured too long, and should now be abated.

2. That the editors, to wit, G. S. Park and W. J. Patterson, are traitors to the State and County in which they live, and should be dealt with as such.

3. That we meet here again on this day three weeks, and if we find G. S. Park or W. J. Patterson in this town then, or at any subsequent time, we will throw them into the Missouri River; and if they go to Kansas to reside, we pledge our honor as men, to follow and hang them wherever we can take them.

4. That at the suggestion of our Parkville friends, we will attend to some other Free-soilers not far off.

5. That we will suffer no person belonging to the Northern Methodist Church, to preach in Platte county after this date, under penalty of tar and feathers for the first offense, and a hemp rope for the second.

6. That we earnestly call on our sister Counties throughout the State to rise in their might and clean themselves of Free Soilism.

7. That our peace, our property, and our safety require us, at this time, to do our duty.

8. That we request every Pro-slavery paper in Missouri and Kansas to publish the above resolutions.

The press was then shouldered, with a cap drawn over its head, and labeled "Boston Aid," the crowd following in regular order; it was marched through town nearly to the upper landing, and there, with three hearty cheers, it was deposited in the tomb of "all the Capulets," to wit the Missouri River.

Slavery Rampant.—A dispatch dated St. Louis, April 21, says that on the Saturday previous, 200 citizens of Platte County, Mo., assembled at Parksville and attacked the office of the *Luminary*, charged with Free-Soil proclivities, destroyed the fixtures, and threw the press into the Missouri River. The editor would have been tarred and feathered, had he not been fortunately absent. Resolutions were passed declaring the *Luminary* a nuisance, and its editors traitors, &c., and an intention to throw them into the river if found in the place within three weeks, and to follow them if they went to Kansas. Free-Soilers were denounced, and it was decided by the meeting that no Methodist preacher should preach in the county, on pain of being tarred and feathered for the first offense and hanged for the second.

California News.—The California Mails of March 31st were received in New York on the 25th of April by the steamer George Law. The specie on freight by this steamer amounted to $772,011. In San Francisco, all branches of trade were in a state of great depression, but the accounts from the mines continue to be of a favorable character. The Legislature was still in session, but was expected to adjourn about the middle of April. Considerable excitement has been occasioned in San Francisco by the arrival of dispatches from the United States Minister at San Juan del Sud to Commodore Dulany, requesting that a Government vessel should be sent to that station, for the protection of the American residents and the redress of various outrages on our national flag. The provinces on the Isthmus have been formed into a separate State by the Congress of New Granada. It will contain about 200,000 inhabitants, and is to be called the State of Panama.

Steamboat Explosion.—The Detroit *Free Press* of April 21st, says that the propeller Oregon left that city early the day previous, for the St. Clair River, carrying, in addition to her own crew, the crews of the brig N. M. Standard and schooner Flying Cloud, which vessels wintered above. The total number of persons on board was 25. At about 15 minutes before 7 o'clock, when near the head of Belle Isle and close to the Canada shore, her boiler exploded with a tremendous noise, scattering death and destruction all around. The after part of the vessel was blown completely off, and sunk almost instantaneously. Nine men were killed immediately, and several others were wounded, some quite seriously. Those of the crew saved clung to the bow of the vessel, and were taken off by small boats. The cause of the accident is supposed to have been a defect in the boiler.

SUMMARY.

On Friday morning, April 20, at 8 o'clock A. M., a serious occurrence took place at Addison, on the western division of the New York and Erie Railroad, by which two lives were lost, and a large amount of property was destroyed, in consequence of a freshet in the stream at that place. Six mill-dams gave way, and the water came pouring down in an irresistible flood, carrying with it an avalanche of saw-logs, timber, earth and rubbish upon the ground below. Several houses were carried away. In one of them were an Irish woman and child, who were drowned. The fine residence of Col. Jones was moved from its foundations and very much damaged.

The Sheriff of Livingston County has offered a reward of $200 for the body of Mortimer Loomis, of Avon, in case he is dead. He has been absent since the 19th March. The Genesee *Democrat* says that great excitement prevails in Avon, in consequence of his sudden and mysterious disappearance. Several public meetings have been held, and searches made. Mr. Loomis had some money on his person, and it is feared there has been foul play in this matter.

A dispatch dated Chicago, Saturday, April 21, 1855, says: A small procession of Germans and Irish, mostly intoxicated, passed through the streets, this forenoon, preceded by a drum and fife, on their way to Court-House-square, where a crowd immediately collected. The Police interfered to stop the proceedings, when a general fight ensued, during which, one man was killed and five or six wounded. The disturbance grew out of the license question. The principals were arrested, and the excitement ceased.

The Lawrence (Kansas) *Herald of Freedom*, says that the entire cost of a journey from Boston to Kansas city, Missouri, including incidental expenses, cannot fall short of $35. The cost from Kansas city to Lawrence, distant fifty miles, is dependent at present entirely on circumstances. There are no regular means of communication, and will not be until the boats commence running on the Kansas river, when uniform prices will probably be established.

Martin Van Buren, Jr., died at Paris on Tuesday, March 20. The deceased had for a long time been wasting under the blight of consumption, but his death was so sudden as to surprise even those friends who had despaired of his recovery. He had seated himself at the dinner table, when his head fell forward on his breast, and he expired without a word, without a groan.

For some time past depredations have been committed on the Post Office in Portland, Me. The Post Office Agent having got track of the depredators, succeeded, on the 12th ult., in arresting a boy in the very act. The boy disclosed his accomplice, and the two are under arrest, to take their trial before the United States Court to be held at Bangor in June next.

For some time past money has been missed from letters mailed at Martinsburg, Va., and suspicion was of course directed against some of the employees of the Post Office. Within a few days past the agent of the Post Office Department has succeeded in detecting the guilty party, a youth of some thirteen years of age, to whom letters were confided, to be deposited in the Post Office. The youth was not connected with the Post Office.

Seamen are so much in demand for the United States Navy, that the head of that department has offered, in addition to the present liberal pay, a bounty of twenty dollars to all competent seamen who will enlist within the next sixty days, for three years' service.

Recently a young man died in Cambridge, leaving a wife and a child in reduced circumstances. While removing the furniture, an insurance policy on the life of her husband for $2,600 was found, on which the cash has been raised.

Louis Kossuth announces, by advertisement, that he has formed a permanent engagement with the London *Atlas*, and solicits subscriptions for that (weekly) paper.

A correspondent at Terre Haute, Ind., writes of a movement going forward in that State for the settlement of Kansas by freemen. Seven citizens of Vigo County, all in comfortable circumstances, have just started for the new Territory, impelled solely by the desire to take part in the pending struggle, and more are soon to follow, and that County is but a specimen of the entire State. Illinois, we are told, is also resolved to do her part in the great work; from these two States from two to three thousand emigrants may be counted on this year, and from Ohio thousands are also to be expected.

The high price of every thing eatable, is a general subject of remark. Corn and flour were never known to be so high as they are now, taking the country through. In New York, last week, the best flour was $13 50 per barrel, and pototoes $2 per bushel at wholesale. The common price of beef was 16 to 20 cents a pound, and choice steaks sold for 25 to 37½ cents a pound. The only cheap article of food is sugar, and that can be bought for a less price per pound than flour.

The Navy Department having officially given up the sloop-of-war Albany, and published the names of officers promoted, April 18, 1855, in consequence forces on our minds the painful conclusion, that she has been lost at sea, and that her officers and crew have been consigned to a watery grave, without leaving a single one to recount their last words, and without the consolation of the presence of relatives to attend them in their last moments.

The number of applications for letters-patent which annually pour into the Patent office, have, of late, considerably increased. In 1838, the Office issued about five hundred patents. The annual issue was about the same down to 1849, when it rose to a thousand. At that rate it remained till 1854, when it reached eighteen hundred; and probably more than two thousand patents will bear the date of 1855, as already five hundred have been issued during the first quarter. Thus far, over twelve thousand patents have appeared since 1836.

By an arrival at Boston, we have some interesting news from Liberia. One of the acts of the Legislature at its last session was the adoption of a stringent prohibitory liquor law. Laws were also enacted for the encouragement of Agriculture, for the employment and relief of the poor, and for establishing a uniform currency. Pretty well for a race incapable of self-government.

The *Evening Post* is informed that an extra session of the Legislature has been determined on by Governor Clarke, to be held in September. The 9th, says the *Post*, is the day fixed upon. The pretext given is that the State may be re-districted according to the new census which is to be taken in June, so that the next Legislature may be chosen under the new apportionment.

Accounts from Hamburg of the 3d April mention the arrival of the Danish brig Juno, Capt. Bohn, from Laguna, with the remains of the Countess Rossi, better known by her maiden name of Henriette Sontag, who, it will be remembered, died of cholera while making a professional tour in Mexico.

The crew of the United States storeship Supply, under Lieut. D. D. Porter, are to be shipped with the distinct agreement that no grog is to be served during the cruise. They will commute their liquid into metal at the rate of sixpence a day. Lieut. Porter feels confident, from long experience, that the absence of rum is promotive of discipline on board.

We learn from the Woonsocket *Patriot*, that a commodious and elegant school-house has just been erected at Blackstone, at a cost of $15,000, which is paid by the Blackstone Manufacturing Company, and that the same Company, with a corresponding liberality, has undertaken the entire support of a first-class school.

At an auction-sale in Charleston, S. C., by Mr. T. A. Whitney, of the negroes of an assigned estate, sixteen of them, one a child, brought $16,970, or an average of about $1060. They were mostly carpenters and family servants. One, a superior carpenter and plumber, 26 years of age, commanded $2,150.

We are informed, (says the Albany *Argus*,) that in removing a quantity of rubbish from the garret of the house lately occupied by Mrs. Van Rensselaer, deceased, there was found the original charter of the city of Albany, granted by Queen Anne, through the then Governor of the State, Col. James Dongan.

The *Asheville Spectator* (North Carolina) says that the Grand Jury of Buncombe County, at the late term of its Superior Court, under a charge from Judge Sanders, made a presentment against the order commonly styled Know Nothings, for conspiracy!

The Elmira people are making great calculations for the State Agricultural Fair which is to be held there next fall. They evidently intend to do their part to produce one of the best Fairs the State Society has had for several years.

The New Haven Steamboat Company have built a new steamboat, called the Elm City, to take the place of the Traveler, now running between New York and the City of Elms. This boat, though not quite so costly as some of the recently constructed Sound steamers, will be as staunch and comfortable as any afloat.

The New York *Journal of Commerce* says, that notwithstanding the prediction that house rents would fall, it has yet to hear of the first instance where any reduction has been made, except on large or "fashionable" dwellings; while in many cases rents have been raised.

The entire liabilities of the estate of Daniel Webster, at his death, were about $140,000. His farm in Franklin, N. H., which was lately sold for $15,000, together with his Marshfield and other property, would probably yield twenty-five cents on the dollar.

A passenger-train went over the Cleveland and Toledo Railroad, the other day, drawn by three locomotives, and containing twenty-seven cars of the largest capacity, carrying over sixteen hundred passengers.

The long-lost manuscript history of the Plymouth Colony, written by Governor Bradford, has been discovered in England, and a copy of it will soon be received in this country.

The Grand Jury in session at Whitehall, N. C., have found a true bill against a man named Thompson for starving two children to death.

The *Westerly Echo and Pawcatuck Advertiser* says that on the 19th April, Samuel J. Lucas, a little son of Mr. Samuel Lucas, was drowned at Potter Hill, aged three years and sixteen days. He had been playing about with other children near the river, and was missed about dusk. Search was immediately commenced by the parents and those in the vicinity, and about 8 o'clock in the evening he was found in the mouth of Mile Brook, near the residence of Mr. Lucas, with life extinct.

Three steamers arrived at Kansas City, April 16, loaded down with settlers for Kansas. There is a long and severe drouth, and pork and grain are nearly exhausted, and residents do not know where to obtain supplies. Freights have been high. On the 15th the mercury stood at 88° at noon, with high winds and clouds of dust—no rain.

A dispatch dated Boston, Friday, April 27, 1855, says: In searching the passengers' luggage on board the Africa yesterday, one of the passengers' trunks was found to contain about 1,000 letters, which were seized and taken to the Custom House. They are said to be very valuable, inclosing drafts, &c., for Boston and New York houses. The box belonged to the agent of a well-known Express Company.

A dispatch dated Rochester, Monday, April 23, 1855, says: As the locomotive was backing down the track in Canandaigua Village, this afternoon, it ran over and instantly killed J. L. Hall, Esq., a lawyer, severing his head from his body. Judge Phelps, and another person, standing on the track, were also seriously injured, the former so severely that his life is despaired of.

The Massachusetts Senate, by a vote of 27 to 11, adopted the resolutions for the removal of Judge Loring from the office of Judge of Probate. Gov. Gardner, it is said, will undoubtedly acquiesce. So that question may be considered settled. Such is the reward of slave-catching.

Land Warrants are in good demand, and worth $160 to 165—parts in proportion. When the new ones are issued under the act of the late Congress, it is probable the price will decline somewhat. There will, however, be no supply from this source for some time.

A man by the name of Muir, said to be worth $100,000, and the richest man in Ripley county, Indiana, was recently sentenced by the Circuit Court in that county to the penitentiary for two years, for forgery of a note for $25.

There are 277 females who pay a tax of $6,000 and upwards in Boston. Mrs. H. K. Hunt, who protested, on the ground that it was taxation without representation, pays $308 10.

The Wisconsin Legislature, during its recent session, by a decided majority, repealed the law abolishing the penalty of death in case of conviction for murder or other capital crime.

Private letters from Ceylon mention the death by cholera of the Rev. Daniel Poor, a venerable Missionary of the American Board. He died February 2. The cholera was raging with much fatality at Ceylon.

Resolutions have passed the Pennsylvania House of Representatives in favor of the removal of the seat of Government to Philadelphia.

The telegraph wires are soon to be extended from Boston to Cape Cod, touching the principal seaports on that coast.

Twenty-nine tons of turnips were a part of the cargo of a ship lately arrived at New York from Scotland!

An autograph letter of George Washington was recently sold at auction, in London, for £5.

New York Markets—April 30, 1855.

Ashes—Pearls $5 25; Pots 5 87.

Flour and Meal—Flour, 9 62 a 10 06 for common to choice State, 10 25 a 10 56 for Indiana and Ohio, 11 25 a 13 00 for extra Genesee. Rye Flour 6 50 a 8 25. Corn Meal 5 12 for Jersey.

Grain—Wheat 2 39 for white Southern. Barley 1 38. Rye 1 50. Oats 77 a 80c. for Jersey, 81 a 87c. for State. Corn 1 12 a 1 16.

Provisions—Pork 14 50 for prime, 17 50 for new mess. Beef 8 00 a 9 00 for country prime, 9 75 a 12 00 for country mess. Lard 10 a 11¼c. Butter, 11 a 14c. for old Ohio, 24 a 28c. for new State. Cheese 10 a 12c.

Seeds—Clover 10½c. Timothy 4 00 for reaped. Flaxseed 1 85 a 1 90 for 56 lbs.

MARRIED,

In Brookfield, April 8th, by Eld. L. M. Cottrell, Mr. Henry F. Jones, of Hartwick, Otsego Co., to Miss A. Malvina Welch, of Brookfield.

DIED,

In Jackson, Shelby Co., O., on the morning of April 17th, in the 38th year of her age, Mrs. Lois S. Maxson, wife of Jacob D. Maxson. Sister Maxson embraced religion in early life, and became a member of a Baptist church in Michigan; thence she removed her standing to Quincy, Logan Co., Ohio. When called to change sentiments and practices with respect to the Sabbath, severe was the struggle to overcome the impressions and prejudices of former years; but as duty was made plain before her, she cheerfully yielded to its requirements, and by a devoted life, in death leaves behind her the consolation to her friends that she has gone to enjoy the rewards of the righteous.

In Hopkinton, R. I., on the 24th of April, 1855, Mrs. Nancy Clarke, wife of Hon. Job B. Clarke, aged 80 years. The deceased was a member of the 1st Seventh-day Baptist Church of Hopkinton, and through a long career of piety greatly endeared herself to her Christian brethren, and a very large circle of relatives and friends. Her last sickness was borne with that Christian resignation which indicated the maturity and strength of her faith in Christ. To *her* death had lost its sting, and for her 'to *die* was gain." C. M. L.

The Eastern Association.

THE Nineteenth Annual Meeting of the Seventh-day Baptist Eastern Association will be held with the Church at Pawcatuck, R. I., commencing on Fifth-day, May 24, 1855, at 10 o'clock A. M. Walter B. Gillett is appointed to preach the Introductory Discourse; James Bailey, alternate.

GEO. B. UTTER, Rec. Sec.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.

Alfred Academy,

At Alfred Center, Allegany Co., N. Y.

THE attention of the public is respectfully invited to the educational facilities of this Seminary:

1. The location is one of the *healthiest* in the world; in a community offering none of the usual inducements of youthful dissipation; easy of access by railroad; and in telegraphic communication with all parts of the country.

2. Young ladies and gentlemen occupy separate edifices, and enjoy, in the families of the Professors, the supervision of well-ordered *Christian Homes*. The health, morals, and manners of students are all looked after with parental solicitude.

3. The courses of instruction, embracing ten departments, with an experienced Professor or Teacher at the head of each, are thorough, extensive, and eminently practical. Young men wishing to study *Analytical* and *Agricultural Chemistry*, will find here every desirable aid for doing so to any extent. Classes in *Surveying* and *Civil Engineering* have daily field practice, under the directions of the Professor, with the most approved instruments. *Teachers'* Classes are carefully drilled in every branch of school-room duties. The *graduation course* for young ladies is adapted to fit them for the responsibilities of *American Women*. In the department of instrumental music, the pianos used are of the finest quality, and kept in perfect order. The Seminary employs no second grade teachers, but the *elementary* and higher classes receive alike the instructions of the *same* Professors.

4. The edifice containing the recitation, library, and society rooms, is one of the largest, most commodious, and best furnished school structures in Western New York.

The next term opens the 28th of March, and closes July 4th, 1855. The expenses are very moderate. For further particulars, address Rev. N. V. Hull, or W. C. Kenyon.

Feb. 24th, 1855.

Bruce's New York Type Foundry,

ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.

All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.

Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.

The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.

Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Carol:

A COLLECTION OF ORIGINAL AND SELECTED MUSIC AND HYMNS, for the use of Sabbath-Schools, Social Religious Meetings, and Families. Compiled by Lucius Crandall. Published by the Seventh-day Baptist Publishing Society, No. 9 Spruce-st., New York.

"The Carol" consists of 128 octavo pages, and is got up in the neatest style of the art. It is sold at 35 cents per copy. The money should in all cases accompany the order. Address Geo. B. Utter, General Agent.

The following extracts from the Preface will give an idea of the scope and design of the work:—

This book is designed principally for Sabbath Schools. Variety has been aimed at, as both pleasing and beneficial. By accompanying each tune with one or more hymns, suitable to be sung in the same music, it has been intended to furnish a body of Hymns, adapted to the general wants of Sabbath Schools, and also to special occasions; such as the sickness of teachers or scholars, funerals, and anniversaries. A number of pieces suitable for social and public worship, together with a few Temperance Songs, have been inserted.

About a dozen tunes appear for the first time in this work. A few of these will be found not well adapted to be sung by Sabbath-Schools, as they are too heavy for young voices, having been composed for the choice poetry set to them, some of which had not been previously provided with music—such are Barbauld and Calvary.

A number of airs, the authors of which were not known to the compiler, have been harmonized for this work.

How many imperfections and errors may be found in this little book, we will not pretend to say; but place it before the public, being confident that it contains a variety of such pieces as persons will like to sing, and from which they will receive salutary impressions. We are perfectly aware that much of the music in this book differs in its character from what is usually included in the term "Sacred Music," and we intended it should; for, in our opinion, the varieties of music included under this head are altogether too few. Indeed, there is a burdensome monotony in the music commonly used for religious purposes. A stereotyped notion as to what is suitable to be sung in church, in connection with the non-sentimental spirit of the age, (which shows itself in the almost entire disuse of minor music,) results in the monotony to which we refer. We are happy to believe, however, that this evil is distinctly felt, and that musicians are beginning to employ a greater diversity of styles of music, in their collections for religious purposes. Airs having a wide range upon the staff, have been preferred, mostly, as being more agreeable, and more easily committed to memory, and also as affording the best exercises in reading music, and training the voice. We shall be glad if this book is found to meet the wants of those for whom it has been prepared, and in any degree diminish the evil alluded to. Whether the work is adapted to that end, others will judge for themselves.

Miscellaneous.

A Youthful Wanderer.

From the Albany Evening Journal, April 16.

We find, on Capt. Sayles's return of the First District, the following narrative given by a lodger last evening, named James Elder, aged 18 years, in his own words:—

"I was born in Newry, County Down, Ireland. I am the youngest of three children. When about four years of age my father, who was a plumber and gas-fitter by trade, with a view of bettering his condition, moved with his family to the City of Edinburgh, Scotland, where he resided about six years. Thence we all emigrated to this country, landing in New York, where we resided six months, my father working all that time at his trade. We then moved to Philadelphia. My father was engaged in business for himself in that city some four years, and up to the time of his death, which happened two and a half years ago. He left his family in good circumstances, and I suppose they are yet comfortably situated. Before my father's death, I was apprenticed to the book-binding business, but about five months after his death, thought that I was something of a man, and capable of making a living for myself.

"I left home without the knowledge of any of my friends, and shipped on board the bark Maria, coasting between Philadelphia and Boston. I remained on her about six months. I then shipped as deck-boy on a steamer plying between Philadelphia and New York, and remained on her about a year. I then went on a steamer that run from Boston to Bangor, Me. At the end of three months I left that berth, and went to New York in one of the Fall River steamers. At the end of four weeks I went to Boston, and shipped on board the brig Alida, bound to the West Indies, with a cargo of mercandize. We accomplished the passage in seventeen days. We unloaded, and took in a cargo of logwood, rum and molasses for Boston. We left port, (the name of which I do not distinctly recollect,) I think, on the 5th of March last. When six days at sea, the stove in the cabin capsized, and before the fire could be put out, it communicated with the rum-locker. The spirits exploded—blowing out a portion of the vessel's stern.

"The flames spread so rapidly that the crew, consisting of seven men and two boys, were obliged to take to the small boats, of which the brig carried two. I got into the boat with the Captain and three others. The mate and the remainder of the crew took the other boat. We took with us, for both boats' crews, a barrel of salt beef, three barrels of biscuit, and a barrel of water, and the Captain took his compass with him. We were then 600 miles from the nearest land—the West India Isles. We immediately headed for land, both boats keeping together, and we pulled incessantly at our oars for six days and six nights, eating our provisions raw, for the want of fire to cook them. At the end of that time the crews of both boats, excepting the captain and myself, became sick, their limbs horribly swollen, and their bodies covered with sores. It was a deplorable sight. Our boats were now allowed to drift about at the mercy of the waves.

"We espied two vessels in the distance, to both of which we made signals until they faded from our view. Our hopes, which at the sight of them had been buoyed up, took their flight when we could no longer see them, and we sank down in bitter despair. It was then that I began to think of the friends and home that I had abandoned, and the admonitions of my kind mother. I resolved, if spared this time, to mend my course in the future. On the morning of the sixteenth day after we left our ship, our drooping spirits were again raised at the sight of a vessel. With all our remaining strength, we made signals of distress. We were discovered, and taken on the vessel, which proved to be the steamer Black Warrior, from Havana, and bound for New York. We were treated kindly by the officers and crew of the steamer, and in three days landed in New York. This was on the 30th of March last, I think. Three of our crew went to the Hospital; the remainder had friends in New York, who cared for them.

"I found a refuge in the Sailor's Home, where I stopped one week, and then left for Albany, with but 35 cents in my pocket. I traveled the whole distance on foot, sleeping in barns, to save my money for bread. I arrived in Greenbush on Saturday, at 4 P. M., without a cent in my possession. I went on the ferry-boat, and when on the Albany side, the ferryman asked me for my ferriage. I told him my circumstances, but he said he could not help them, and took me back to the Greenbush side. I was then obliged to walk to Troy, and cross the bridge, which I did, and arrived in this city this (Sunday) evening. I do not like to beg. I have suffered considerable for one of my age, but I think, if I profit by my past experience, I will be made a better man. A little adversity tends to sharpen one's wits. I will not go home until I am better off than I am now. I think I will succeed in becoming a man yet. I am strong, and willing to work."

Capt. Sayles says that Elder received a comfortable support at the Station-House, and before he left, a small purse was made up for him, when he went on his way with a light and thankful heart. He is a lad of remarkable intelligence, and his narrative was given in a fresh, clear, and intelligible style, which impressed its truth upon his auditors.

Carrots.

Carrots were the subject of conversation at a recent meeting of the Farmer's Club connected with the American Institute, New York.

Mr. White of Staten Island, said that his ancestors were much in the habit of using carrots for food in England, and he does now, and finds them very nutricious. He also feeds horses with carrots, and finds them very cheap feed. He can make it a very profitable crop.

Mr. Leo works a horse in this city, and buys carrots at $2 50 a barrel, as a cheap feed—cheaper than oats or corn, and keeping his horse healthy.

Dr. Gardner thinks carrots used freely in soups will prevent indigestion. Soups, as usually eaten here, are a great cause of dyspepsia, because so rich, and carrots are too nutricious for weak stomachs. For those who labor in the open air they may be good.

Prof. Mapes thinks Dr. G. is mistaken—that it is some other quality in the soup that makes it indigestible. The carrot seems to correct rather than increase the difficulty. Nearly all physicians concur in this opinion as to the advantage of using carrots for human and animal food.

Solon Robinson said the poor of this City are paying $2 50 or $3 a bushel for potatoes, while they do not contain more nutriment than carrots, at a good deal less than half the price. The reason is, that it is fashionable to eat one and not the other. Carrots are good, cooked in various ways, but seldom used, except for soup. There is another value of carrots that ought to be known. They are the most healing vegetable that grows. Grate or cut a carrot fine, and stew it in lard until all the substance is cooked out, and then strain it, and you have a salve or ointment of the very best kind for all sorts of old sores of man or beast. It is excellent for sore backs of horses. The value of the carrot for curative purposes ought to be universally known.

From the Lafayette (Ind.) Journal.

An Obituary with a Moral for the Times.

Professor Alexander Kennedy, a well-known lecturer on Elocution, was found dead in Alton, Illinois, a few days since. His death was the result of exposure and long dissipation.

Professor K. was a native of Ireland, and belonged to a highly respectable family. He was educated at the University of Dublin, and occupied for many years the chair of Belles Lettres in Belfast College. His unfortunate habits compelled him to resign his position, and he came to this country. Here he gave his attention entirely to Elocution, in the mastery of which, according to the testimony of Macready and the elder Vandenhoff, he was in his better days without a superior. For a short time he was connected with the Western Reserve College at Hudson, Ohio, as a teacher in this department of education. He subsequently became a traveling lecturer, and, giving himself up to constant dissipation, rapidly declined into a complete vagabond. There is not a jail in this State or in Kentucky in which he had not at sometime been an inmate. We first met with him about three years since at Madison. It was in one of his sober periods, and we were delighted with his professional skill, his intelligence, and the polished suavity of his manners. What was our surprise and pain, one morning, after witnessing one of his brilliant entertainments of the previous evening, to see him in the chain gang, engaged with spade and pick, as a scavenger on the principal thoroughfare of the city!

The last time we met with him was in Cincinnati—a complete wreck, his head grown prematurely gray, his nervous system utterly prostrated, his voice, the finest in its depth and compass that we ever heard from human lips, completely shattered and ruined. The other day the police reports of the St. Louis papers, mentioned that a man had appeared the morning before in the cage of prisoners, at the Recorder's Court, in that city, shirtless, bare-headed, and bare-footed, with scarcely clothing sufficient to keep him from freezing, and exhibiting in his bloated visage the unmistakable signs of the irreclaimable sot, who gave his name as Professor Alexander Kennedy! To hear of his dying on the street, then, has occasioned us no surprise. He has gone down, with all his talents, accomplishments, and promise, to a drunkard's grave, affording, in the melancholy example of his life and fate, an argument for a prohibitory liquor law, which alone outweighs all the sophistries of its opponents.

A Mode of Improving Bread.

Translated for the N. Y. Tribune, by Prof. Liebig.

It is known that the vegetable gluten of the various kinds of grain undergoes a change when moist; in a fresh condition it is soft, elastic, and insoluble in water, but in contact with water it loses these properties. If kept a few days under water, its volume is gradually increased until it dissolves, forming a thick mucilaginous fluid, which will no longer form a dough with starch. The ability of flour to form dough is essentially lessened by the property of vegetable gluten to hold water, and to place it in the state, for example, in which it is contained in animal tissues, in meat and in coagulated white of egg, in which the absorbed water does not moisten dry bodies. The gluten of grain, in flour not recently ground, undergoes a change similar to that which it suffers when in a wet state, for the flour absorbs moisture from the air—being, in a very high degree, a water-absorbing substance; gradually the property of the flour of forming dough is lessened, and the quality of the bread made therefrom injured. It is only by artificial drying and keeping from the air that this deterioration is prevented. In rye flour this change occurs as soon, perhaps sooner, than in wheat flour.

About twenty-four years ago the Belgian bakers commenced the use of a remedy, by means of which bread equal to that made from the freshest, best flour, was manufactured from flour which, by itself, would give only damp, heavy bread. This remedy consisted of an addition of alum, or of sulphate of copper, to the flour.

The effect of both these substances in the preparation of bread rests upon the fact that when warm, they form a chemical combination with the gluten, (previously made soluble in water, and changed thereby,) which restores to it all its lost properties; it is again insoluble, and capable of holding water.

The relations of vegetable gluten to caseine, with which it has so many properties in common, induced me to make some experiments, whose object was to replace both of the substances (sulphate of copper and alum) so deleterious to health and to the nutritious properties of bread, by some substance having the same effect, (as regards the gluten,) but devoid of injurious qualities.

This substance is pure cold-saturated lime-water. If the lime-water be mixed with the flour intended for dough, and then the yeast or leaven added thereto, fermentation progresses in the same manner as in the absence of lime-water. If at proper time more flour be added to the "risen," or fermented dough, and the whole formed into loaves, and baked as usual, a sweet, beautiful, fine-grained, elastic bread is obtained, of exquisite taste, which is preferred by all who have eaten it any length of time, to any other.

The proportion of flour to lime-water is 19 : 5; that is, for 100 lbs. of flour, take 26 to 27 lbs. or pints of lime-water. This quantity of lime-water does not suffice for making the bread, and of course common water must be added, as much as is requisite.*

As the sour taste of bread is lost, much more salt may be used to give it a palatable quality.

As to the amount of lime in the bread, 1 lb. of lime is sufficient for 600 lbs. of lime-water. In bread prepared as above, there is nearly the same amount of lime as is found in an equal weight of leguminous seeds—(peas and beans.)

It may yet be established as a physiological truth, by investigation and experiment, that the flour of the cereal grains is wanting in the property of complete nutrition, and from what we know thereof, the cause would seem to lie in its deficiency in the lime necessary for the formation of the bones. The cereal grains contain phosphoric acid in abundance, but they contain far less lime than the leguminous seeds. This fact may explain many of the phenomena of diseases observed among children in the country, or in prisons, if the food consists principally of bread; and in this connection the use of lime-water by physicians merits attention.

The amount of bread produced from a given quantity of flour, is probably increased in consequence of an increased water-compound. From 19 lbs. of flour, without lime-water, seldom more than 24½ lbs. of bread were obtained in my house; the same quantity of flour, baked with 5 lbs. of lime-water, gave 26 lbs. 6 oz. to 26 lbs. 10 oz. of good, well baked bread. Now, since according to Heeren's determinations, the same quantity of flour gives only 25 lbs. 1 3-5 oz., the increase of weight, in consequence of the use of lime-water, appears to me indubitable.

*As many persons may not be familiar with the process of preparing lime-water, a recipe for the same is added: Take four ounces of lime and one gallon of distilled water. First, pour a little of the water upon the lime, to slake it; then add the remainder of the water and stir well together; cover the vessel immediately, and set it aside for three hours. Keep the solution, together with the undissolved lime, in stopped glass bottles, and pour off the clear liquid when it is wanted for use. Water free from saline or other obvious impurity may be employed in this process without distilling. [Trans.

My Husband.

My husband is a very strange man. To think how he should have grown so provoked about such a little matter as that scarlet scarf. Well, there's no use trying to drive him, I've settled that in my mind. But he can be coaxed—can't he though?—and from this time henceforth, shan't I know how to manage him? Still, there's no denying, Mr. Adams is a very strange man.

You see, it was this morning at breakfast, I said to him, "Henry, I must have one of those ten dollar scarfs at Stuart's. They are perfectly charming, and will correspond so nicely with my maroon velvet cloak. I want to go out this morning and get one, before they are all gone."

"Ten dollars don't grow on every bush, Adeline; and just now times are pretty hard, you know," he answered, in a dry, careless kind of tone, which irritated me greatly. Besides that, I knew he could afford to get me the scarf just as well as not, only perhaps my manner of requesting it did not quite suit his lordship.

"Gentlemen who can afford to buy satin vests at ten dollars apiece, can have no motive but penuriousness for objecting to give their wives as much for a scarf," I retorted, as I glanced at the money which a few moments before he had laid by the side of my plate, requesting me to procure one for him; he always trusts my taste in these matters. I spoke angrily. I should have been sorry for it the next moment, if he had not answered,

"You will then attribute it to my penuriousness, I suppose, when I tell you I cannot let you have another ten dollars to-day!"

"Well, then, I will take this and get me the scarf. You can do without your vest this fall," and I took up the bills and left the room, for he did not answer me.

"I need it, and I must have it," I soliloquized, as I washed my tear-swollen eyes, and adjusted my hair for a walk down Broadway, but all the while there was a still small voice in my heart, whispering, "Don't do it; go and buy the vest for your husband," and at last—would you believe it?—that inner voice triumphed. I went down to the tailor's, selected the vest, and brought it home.

"Here it is, Henry. I selected the color which I thought would suit you best. Isn't it rich?" I said, as I unfolded the vest after dinner, for somehow my pride was all gone. I had felt so much happier ever since I had resolved to forego the scarf.

He did not answer me, but there was such a look of tenderness filling his dark, handsome eyes, as his lips dropped to my forehead, that it was as much as I could do to keep from crying outright.

But I haven't told you the cream of the story yet. To-night, when he came home to supper, he threw a little bundle into my lap. Wondering greatly what it could be, I opened it, and there, would you believe it, was the scarlet scarf, the very one I set my heart on at Stuart's, yesterday.

"Oh! Henry," I said, looking up and trying to thank him, but my lips trembled, and then the tears dashed over my eyelashes, and he drew my head to his heart, and smoothed down my curls, and murmured the old loving words in my ear, while I cried there a long time; but O, my tears were such sweet ones.

He is a strange man, my husband, but he is a noble one, too, and his heart is in the right place, after all, only it's a little hard to find it sometimes, and it seems to me my heart never said it so deeply as it does to-night. God bless him!

Labor and its Right.

We often hear the remark, that a man has a right to a living, in which the implication is very strong, that if he does not earn it himself, he may claim it of somebody else who has earned it. A man has only the right to such of the productions of labor as he himself has created by his own industry. He has no right to a living independent of his duty to earn that living for himself by his labor. Every man has the means of earning himself a living, in a physical and mental power with which he is endowed. He should use those means, so as to command a living by making his labor useful to others. Society is under no obligation to find a man employment in such pursuits only as he desires, or finds convenient to follow.

The object of all labor is to satisfy some existing want. If society does not want particular kinds of labor, it is under no obligation to purchase them, and the individual should turn his labor to such productions as society does need, and cannot do without. This, fortunately for the mass of mankind, is found in tilling the soil, and in this country particularly is such labor always remunerative. The world may dispense partially with clothing, but it cannot do without food, and the man who produces, wheat, corn, potatoes, and pork, is always sure of finding somebody who will pay him for their production. This kind of labor, too, is not liable to the fluctuations of other employments. The more food there is produced, the better it is for mankind, and the whole world is a market for the production.

A Bit of Romance.

From the Cleveland Leader.

Five or six years ago, a rich Louisiana planter died, leaving an only heir, a daughter, who was not quite seventeen years old. She, together with her fortune, was placed in the charge of a guardian, who was distantly related to the family. Her fortune, and her remarkable beauty, attracted the attention of many suitors, among whom was an accomplished young man from St. Louis, whose only wealth was his profession. His handsome person and fascinating manners won the lady's affections, and, without the knowledge of her guardian, they were privately married.

Shortly afterward they moved to St. Louis, where they lived together happily for a time, and a bright future seemed to be before them. At the expiration of a year, the lady having attained her majority, they returned to New Orleans to claim her fortune and live in the splendid family mansion They were coldly received by the occupant, who deliberately informed them that the estate had passed into other hands. They at once applied to the law for redress, and going through the protracted formalities of two or three fruitless suits, they were left penniless, and obliged to abandon the case. Friendless and dispirited, they returned to St. Louis, where the husband, like many other husbands, tried to drown the remembrance of his disappointment in the fatal cup. His wife entreated and admonished in vain. A separation was the consequence, and the husband became more reckless and dissipated than ever. Driven at last to desperation, the wife applied for a divorce, obtained it, and retired to a convent. This restored the wretched man to his senses; he abandoned his former associates, returned to the paths of virtue, and became an industrious and respectable citizen.

A few months ago, the lady received a letter from the son of her former guardian, informing her of his father's death, of his inheritance of the estate, and of his determination to make full restoration, closing with an appeal to her to forgive his misguided parent, and to come to New Orleans and enjoy her fortune. She at once complied with the generous request; and all her inheritance, together with the accumulated interest, was restored to her.

Now comes the strangest part of this most extraordinary affair. The young man offered her his hand in marriage, and plead with all the earnestness of impassioned love. He reminded her of all their childish attachment, of his deep anguish when she became the wife of another, of the long years of his silent sorrow. All these remembrances came up before her mind, and gratitude plead eloquently in his favor; but at last the wife triumphed over the woman. She thanked him, and gave him her simple blessing; told him that she had loved but one, and could never love another; and entreated him to take back all her fortune, and permit her to return to the convent. Finding her resolution unalterable, the young man consented, on condition that she would postpone her return one month. He immediately wrote to the former husband, who was ignorant of what had transpired, offering him a first-rate situation, on condition that he would come immediately. The letter was signed by the principal of a well-known firm, who was apprised of every circumstance in the case. As soon as the letter came to hand, the overjoyed recipient took passage for New Orleans. He presented himself at the place designated in the letter, and at once made himself known by showing his credentials. He was conducted to the residence of the generous heir, where, he was informed, the writer of the letter waited to receive him. His name was announced, and he was conducted into an elegant parlor, and there, alone, he met the woman whom he had neglected and dishonored—the woman who had been forced to leave him, but who would not quite give him up.

A few days afterward, the city newspapers announced the marriage of Mr. —— and Mrs. ——. The estate was restored to the lawful owners, and the reconciled couple, made wiser and better by adversity, are now living happily together.

It is good to turn sometimes from the cares and turmoils of politics, and contemplate human nature rising up from the depths of misery and despair, casting aside selfishness, and reaching that standard of purity and happiness which so few attain.

American Monuments.

The monuments erected in America exceed in height those of the Old World. Thus, there is not a column, either ancient or modern, in Europe, so high as the Bunker Hill Monument. The highest column in Europe (202 feet high) is the one erected in London by Sir Christopher Wren, in commemoration of the great fire in 1666. Pompey's Pillar is only 90 feet in height, and Trajan's but 115. The highest monument in Paris is 137. The Alexander Column, in St. Petersburg, is 175 feet, 6 inches. The Nelson Column, in London, is 171 feet from the level of Trafalgar Square.

Bunker Hill Monument is 220 feet high. The proposed Brock Monument, at Queenstown, will be 185 feet high. The Washington Monument is now 150 feet high, and when completed will be about 500. It is found that the monument stands exactly in the middle of what was the "ten mile square." It is of such gigantic proportions, that either of the other monuments above named could be placed inside of it without much impeding the operations of the workmen, and when it is finished any two of the monuments of Europe could be stowed away within its walls without being noticed from the exterior.

Ornamental Trees.—The work of ornamenting New England with shade trees, on an extensive scale, has begun. Some five years ago the first ornamental tree association was formed at Chelsea. Since then others have been formed at East Boston, at South Boston, Haverhill, St. Albans, (Vt.,) etc., for the purpose of planting trees on every street of the several places. The result has been most happy. Take East Boston alone. Within three years 1250 forest trees have been planted, at an expense of about $4,000, or a little more than $3 each. The change in that part of the city is wonderful, and the rise of the property on some streets has been five per cent. through the trees alone.

Sub-Marine Explorations.

The bark Emily Banning, which left New York in December last, with three of the Nautilus Sub-Marine Co.'s machines on board, bound on a pearl-fishing voyage, is now engaged in exploring the wreck of the frigate San Pedro, on the coast of Venezuela. This frigate, supposed to have on board some two to three million dollars, was blown up at the Island of Margarita, in 1815. Her stern being blown out, the treasure was scattered upon the surrounding sand. Some three hundred thousand dollars have heretofore been taken up, but owing to the inefficiency of the machinery employed, operations were suspended. The Company fitting out the Emily Banning ordered her to stop there, and the trial descent of the *first* machine, sent down in 66 feet water, brought up one hundred dollars—thirty-two dollars being found within the first area covered by the machine, before moving. Other articles, as copper, &c., were brought up at the same time. The captain, finding the advantage of continuing the work, immediately left for the seat of Government, to secure the necessary privilege, which was granted. Letters have been received from on board, during the absence of the captain, which represent the operators as "shoveling dollars." It is the intention of the Company to blow the fragments of the ship to pieces, securing the copper, guns, shot, &c. The captain writes: "The bells are all they are said to be." One of the engineers writes: "I wish you could look into the bell when we are down on the bottom with our spades, digging for the almighty dollar. We can look out of the windows of the bell and see the fish looking in at us. We can take the bottom up in the bell, and get out on the sand, and pick up the bell, and run all around where we like." Two months, it is anticipated, will be sufficient to take up every vestige of the San Pedro; and the captain reports he has another vessel near him in the same depth of water, 66 feet, with $50,000 on board in specie, and another with $15,000, both of which he will take up before proceeding on his voyage. [Jour. Com.

The Strawberry Bed.

Many of our readers are no doubt watching with some solicitude for our March and April strawberry culture. It is exceedingly simple. On the old fruit beds, go through with the hoes immediately and thin out to eight or ten inches, leaving all the vines to rot on the ground. When kept in drills, work the ground with the hoe, and cover all the intervening spaces with leaves, or partially decomposed straw. The last of this month the vines will show plenty of bloom. Now note whether your plants are staminate or pistilliate. Frequent frosts will kill the pollen or the impregnating blossoms, which keeps the crop back. A strawberry bed may be in bloom, and the inexperienced look for a crop of fruit from it, when, if he examines the centre of the blossom, he will find the pollen, instead of being yellow, black; there will be no fruit from that blossoming. It takes a pretty heavy frost to kill the young fruit that is already formed; but if the pollen be destroyed, there is no chance to form any fruit until another blossoming. As soon as the weather becomes dry, water the plants, for the sake of the blossom and fruit; the water must come in the form of rain, from an engine or watering pot. Runners will hardly show themselves on bearing plants; should they do so, take them off as fast as they appear. [Farmer's Banner.

A Touching Incident.—A lady relates to us the following: As she was passing along Eighth-st, N. Y., recently, she saw a delicate looking young woman coming out from a basement, with a basket in her hand, containing a few articles of needlework, which it seems she was trying to sell from door to door. She was in tears, and was heard to exclaim in a low voice, "Must I starve!" The lady accosted her kindly, and perceived she was the very picture of distress. Though tidy and rather genteel in appearance, yet wearing a countenance that told but too well she was famishing for food. She said, in substance, that she was married, had one child, was English, and heretofore had lived comfortably, her husband having had good employment; but now he had none; starvation was staring them in the face. She had resorted to the needle to keep them alive, and had made those little articles, and was trying to sell them; but with poor success. None could tell the distress she felt in being repulsed, or in being cheapened down in her prices. One lady, in a carriage, had offered her ten cents for a piece of work, the materials of which were worth eighteen pence. She looked the lady in the face, she said, while her heart sunk within her. She entered one house, where a table was set with food. She longed for some of it, and hoped it would be offered her, but it was not; she ventured to ask for some, but was refused, (by the domestics, no doubt.) She had read and heard of sufferings, but never dreamed they were such realities as she found them. The lady narrating this, gave the poor woman some change, but took nothing from her basket to diminish her little stock of goods.

A Fortune in Waiting for Some One.—The Quincy *Herald* says a "snug little fortune" of $100,000 can be obtained by the legal heirs whenever they may call for it—at least so they are informed by Daniel Stout, of Rock River. Ill. It appears it was left by John Stout, of South Carolina, previous to the war of the Revolution, to his brother, St. Leger Stout, and his sister, Nancy Stout, then of New Jersey, but subsequently of Virginia, somewhere in the neighborhood of Tygent's Valley, where they resided for many years, and where they died. Nancy Stout, during her lifetime, married a man named Hart, and St. Leger a female named Barklow. As these parties never made a demand for the money, it is said to be now awaiting the order of their heirs, who can address Daniel Stout, Rock River, Ill., on the subject.

Lord Lindsay states that in the course of his wanderings amid the pyramids of Egypt, he stumbled on a mummy, proved by its hieroglyphics to be at least 2000 years of age. On examining the mummy after it was unwrapped, he found in one of its closed hands a tuberous or bulbous root. He was interested in the question how long vegetable life could last, and he therefore took the tuberous root from the mummy's hand, planted it in a sunny soil, allowed the rains and dews of heaven to descend upon it, and in the course of a few weeks, to his astonishment and joy, the root burst forth and bloomed into a beauteous dahlia.

New York and Erie Railroad.

On and after Monday, Nov. 20, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.
Price 25 Cents per Box. Five Boxes for $1 00.
Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

The Sabbath Recorder.

THE JEWISH AND THE CHRISTIAN SABBATH.

We have often had occasion to refer to the most remarkable distinction made by our first-day brethren between the character of the institutions observed by us respectively as weekly Sabbaths. And now again we refer to it, in view of an article in a recent number of the *New York Chaonicle*, (copied below,) which has the following sentence: "It includes only those who keep Saturday, or the *Jewish* Sabbath, rather than Sunday, or the *Christian* Sabbath, called Seventh-day Baptists," &c. We will not complain of the distinction which our neghbor draws between the Sabbaths which in the observance distinguish us, but we suggest the propriety of calling things by their right names. If we must have such a distinction as *Jewish* for the seventh day, let us have *Pagan* or *Papal* prefixed to Sunday, to denote its origin; then we shall have the Jewish Sabbath and the Pagan Sabbath, and we insist that the one is as consistent as the other; for it is just as true that first-day Christians observe the Pagan Sunday (Dies Solis) as their Sabbath, as that the seventh-day Christians observe the Jewish seventh-day Sabbath; and the stigma would be practically no more severe in reference to the editors of the *Chronicle*, should we say of them, that they observe the Pagan Sunday, than that which is sought to be inflicted upon us by the use of the term Jewish Sabbath.

We have often complained of the injury so commonly inflicted upon our cause by the use of the descriptive epithet referred to. We say descriptive, because we are aware that the use of it is sometimes sought to be justified from an alledged necessity, as though an intelligible distinction could not be expressed without the terms *Jewish* and *Christian*. But something is nevertheless involved in this distinction, which it would be well to look at for a moment.

We are to understand, of course, that there is nothing Jewish in the Sunday festival. Well, then, are we to infer that it is all Christian? Let us look at it in this light. To be purely Christian, it must be an institution of the Christian church. It must have been made for the church, adapted to the wants of the church, to the principles of the church, and not to heathens, or unbelievers, or the profane; for if its sphere be extended beyond the limits of the church, it may apply to all mankind, and then it ceases to be strictly Christian. It is claimed to be Christian by its observers, as the Lord's Supper is a Christian institution. If the claim be just, then only Christians may keep it, or if any others do presume to keep it, they only secure to themselves damnation, as in its kindred institution. What right, then, have ministers, or others, to charge unbelievers with the sin of Sabbath-breaking? For the Christian Sabbath is made for the church, as it is said, as a memorial of Christ's resurrection, and not for infidels, who have no part in the thing signified. Will it be insisted, then, that the Sunday is the Christian Sabbath?

Let us look again. Where is the law of a weekly Sabbath for the Christian church? Was it instituted by Christ? If so, where is the law to be found? Those who keep the "Christian" Sabbath must of course discard the claims of the Jewish seventh-day Sabbath, or they would not be consistent. The Jewish Sabbath is alluded to in the fourth commandment; it must not be honored by Christians, however, for then they would become Jewish. Again, if the seventh day be Jewish, and the first day be Christian, what day shall those have who are neither Jews nor Christians? If they have no law, then are they not transgressors; they can break no Sabbath, for to them there is no Sabbath law! Poor souls, why should they be so imposed upon as to be made to yield obedience to a law to which they are under no obligation? It would not be difficult to follow out this idea, and show the utter inconsistency of the Jewish and Christian Sabbath, for there is neither of them recognized in the Bible. There is but one weekly Sabbath, and that was made for man; it is man's Sabbath, and all men are under its penal force when violated, as well as its salutary influence when observed. The distinction of Jewish and Christian, then, has no more force law than the Mohammedan Friday. God's Sabbath is over all, and for all, and it was and is and ever will be *de facto* the seventh day, for so the law reads, and Christ himself said not a jot or tittle of the law shall fail. O. P. Q.

From the New York Chronicle.

Agricultural Missions.

The article on this subject, which we insert in our first page, is well worth a perusal. We have learned from it, with grateful surprise, that the sect among us which is "least of the thousands of Israel," has undertaken so good and great a work. It includes only those who keep Saturday, or the Jewish Sabbath, rather than Sunday, or the Christian Sabbath, called Seventh-day Baptists. We will not stay to contend with them "in meat, or in drink, or in respect of a holy day, or of the new moon, or of the Sabbath days," so long as we see them leading a phalanx into the great field of the world's evangelization. Their example in establishing a mission farm in Palestine, seems to have excited considerable attention in England and Scotland; and there also societies are springing up for the prosecution of the same work.

One thing to be urged in favor of this mode of propagation is its cheapness. After a farm is purchased and stocked, and suitable buildings are erected, the missionaries can support themselves. Besides, a class of active, zealous Christians, who have small gifts of public speaking can thus contribute in person to the work of evangelization. They can illustrate not only our improved modes of art and agriculture, but also the superior virtues of Christianity, and thus can do much towards winning the nations from barbarism. They can call in and conduct the labors of the poor natives to useful ends, and while they are teaching them how to improve their outward condition, they can raise them in character, and increase their virtue and piety. How much would be done, even by directing the muscular energies of a people into channels of outward improvement, and to the enjoyment of a greater amount of physical comfort! And when this process is conducted by Christian men, there is a moral certainty that the truth, as it is in Jesus, will exert a more decided influence, than by leaving it to make its way by simple proclamation or theoretical teaching.

We have lately offered some facts in illustration of the ancient modes of evangelization, as including schools for the young, provision for the sick and suffering, the translation of the Scriptures, and the diffusion of religious literature, and by a great variety of labors, in themselves as purely secular as the mission farm in Palestine.

We will add in this place a word in reference to the extraordinary success of the Jesuits in a past age. The religious orders of the Church of Rome, before their time, lived in seclusion from the active occupations of life, to give themselves to study, devotion, or preaching. Whereas, the Jesuits plunged into the channels of human activity, to make them all subsidiary to the one purpose of subordinating all men to the dominion of Rome. They were teachers, authors, diplomatists, farmers, merchants, any thing, every thing, that promised success in their calling. They took charge of academies, colleges, universities, religious houses, and of all similar duties requiring a fixed location. They were physicians, lawyers, ministers, plenipotentiaries, and even established and managed the Paraguay colony in South America. They were invested by the Court of Rome with a monopoly of trade in the countries where they had established their missions. Their commercial houses, under the conduct of the secular coadjutors, at one time lined the coast of Asia, Africa, Europe, and America. Though as individuals they were under the vow of poverty, yet, as a corporation, their wealth was enormous.

All these secular pursuits were accompanied by more attention to public preaching than any order in the Catholic Church. So great was their popularity, that the house where the Jesuit preached could not contain its hearers. Their style was plain, direct, and impassioned; and their thoughts, and modes of illustration, were adapted to common minds. Loyola, their founder, warned his followers against a too exquisite, ornate, and refined mode of speaking to the people. The secret of their success as preachers was the same with that to which Dr. Johnson ascribed the success of the Methodists of his time, speaking in common language to the common people, and the same with that of the evangelists of our age.

It was by such methods as these—uniting the spiritual with the secular, with unbending devotion to one object—that the Jesuits produced a counter-reformation in Europe, quite as remarkable as the Reformation itself. "The Protestant party," says Macaulay, "was vanquished and humbled. In France, so strong had been the Catholic reaction, that Henry IV. found it necessary to choose between his religion and his crown. In spite of his clear hereditary right, in spite of his eminent personal qualities, he saw that, unless he reconciled himself to the Church of Rome, he could not count on the fidelity even of those gallant gentlemen, whose impetuous valor had turned the tide of battle at Ivry. In Belgium, Poland, and Southern Germany, Catholicism had obtained a complete ascendant. The resistance in Bohemia was put down. The Palatinate was conquered. Upper and Lower Saxony were overwhelmed by Catholic invaders. The King of Denmark stood forth as the protector of the Reformed churches; he was defeated, driven out of the empire, and attacked in his own possessions. The armies of the House of Austria pressed on, subjugated Pamorania, and were stopped in their progress only by the ramparts of Stralsund."

The same laws obtain in one department as another. If the union of secular and spiritual instrumentalities in the cause of Rome was made so mighty, and so victorious, it can be made equally so in the cause of pure Christianity, and of the world's evangelization. All that is needed is the earnest, devoted, courageous, self-denying, and persevering efforts of the right kind of men. Under the influence of such men, and women, too, agriculture, schools, the mechanic arts, and all the means and agents of civilization, can be brought into the work of missions. We hope to see the time when emigration, instead of flowing so exclusively westward, shall take a contrary direction, and redeem those neglected lands, which were the seat of ancient empire. Egypt, Palestine, and the great plain of the Tigris and Euphrates, are just as susceptible of being raised to the highest degree of cultivation and populousness, by proper modes of agriculture, as in the days of Joseph or Herodotus.

It is a shame to Christians, that the love of lucre, or the desire of supplying our pressing bodily necessities, should be the sole or chief motive for emigration. Why not plant ourselves on the soil of Asia, Africa, or Europe, from a *religious* motive, that we may carry thither the influence of a pure Christianity, and recover to Christ those lands where His name was first proclaimed? It may be said of these secular instrumentalities in spreading the Gospel, as compared with preaching, "These ought ye to have done, and not to leave the other undone."

THE HIGHER LAW AND RIGHT OF PETITION.

When the laws of man have come in direct conflict with the laws of God, it has pleased the Most High, in some cases, to show the superiority of his laws over the laws of man, as in the case of Israel's going out of Egypt, (after petitioning the government of Egypt a number of times for their natural rights;) and in the case of Daniel in the den of lions, and the three Hebrews at the "firey furnace;" the imprisonment of the apostles, and the opening of the prison doors, and their deliverance by the angel, because the apostles said, "We ought to obey God rather than man."

There is to be another trial of the power and strength of the divine law and the human laws, which come in direct conflict with each other. I allude to the commandment of God which *requires "labor"* on the first day of the week, (Exod. 20: 9, Mark 2: 27, 28,) and to the "Sunday laws" of man, which forbid labor on the first day of the week. Now the strength of these two opposing laws must be tried; and the weaker will have to give place to the stronger one—the lower law to the higher law—for the *truth* in the end will have the victory.

And as Moses and Aaron had the right of *petition*, (with the judgments of God in their favor,) and continued petitioning the government until they were heard, so we also have the right of petition; and should we not continue to petition the government until we can be heard?

The first article of the amendments to the United States Constitution reads thus: "Congress shall make no law *respecting an establishment of religion*, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and petition the Government for a redress of grievances." Article sixth of the Constitution shows that "this constitution, and the laws, &c., shall be made the supreme law of the land; and the judges in every State shall be bound thereby, any thing in the constitution or laws of any State to the contrary notwithstanding," and that the National and State officers "shall be *bound*, by oath or affirmation, to *support this constitution*." Then, if both the National and State officers are bound to support this Constitution, it follows, that neither Congress, nor any of the State governments, can make laws "respecting an establishment of religion." They have *no more right to say a man shall not labor on the first day of the week*, than they have to *establish* the "immaculate conception" dogma, or "infant sprinkling," "image worship," the saints' "holy days," or the religion of Mahommed, or the religion of the Hindoos, or even of the book of Mormon. And if our Congress do not yet understand their duty to protect all in their equal rights, and against *any establishment of religion*, they should be reminded of their duty.

In giving the Postmaster General power to carry "the mail on all post roads *as often as he may think proper*," Congress has given him power to establish his own religion, (so far as the mail is concerned.) And now, where our mail used to come on the first day of the week, our letters have to be stopped entirely, on account of the Sunday laws. A county Judge (one of the oldest post masters in the county) said to the writer the other day, that "now when new contracts are made for carrying the mail, which is once in four years, they agree not to carry the mail on Sunday." This gives the Postmaster General power to stop the mail whenever he may think proper, and when he stops it everywhere on the first day of the week, he may then take another step in establishing his religion, and stop it on all the other holy days which the Pope may designate, &c., &c. We should therefore petition against all Sunday laws everywhere, because, wherever "Sunday laws" are established, a certain kind of religion is established, and the sacred Constitution violated. **

AMOS SUTTON, D. D.

This distinguished missionary at Cuttack, Orissa, died on the 17th of August, 1854. *The Oriental Baptist*, published at Calcutta, gives a sketch of his life, which is abridged by a correspondent of the *Watchman and Reflector*, as follows:—

Mr. Sutton was born at Sevenoaks, in the county of Kent, England, Jan. 21, 1802. His mother was a Christian, and from her, in his earlier years, he received religious instruction that made upon his mind a deep impression, and contributed, not only to preserve him from many a moral danger, but also to shape his future course. In his fourteenth year she was called to her rest, and he removed to a situation in London. His exposures in that great city were many, and such was the influence of circumstances that encompassed him, as at least to prevent the germination of the good seed which his mother had planted. At the age of twenty, he returned to his native place, and attended on the ministry of the Rev. J. Henham, a general Baptist. By the blessing of God, the truth reached his heart, and having believed, he was baptized and admitted to the church. Immediately, he commenced laboring for the good of others, dispensing bounty to the poor, teaching in the Sunday school, and preaching in the country villages. Soon his attention was turned to the claims of India, as a missionary field, and, after a year of theological study with the secretary of the mission, Rev. J. G. Pike, of Derby, he received an appointment, and was ordained at Derby, June 23, 1824. In the following August, he sailed for Calcutta, and the next spring found him at Cuttack, industriously studying the language, and preparing for his career of usefulness.

His first wife, Mrs. Charlotte Sutton, died very soon after his arrival at Cuttack. His second wife was the widow of the lamented Colman, who died in the service of the American Baptist Board, at Cox's Bazar, Chittagong, in the year 1822.

In 1832, as the result of abundant labors, his health failed, and he was compelled to leave the country. He sailed for England, by way of the United States, arriving in Boston in the spring of 1833. His labors here were productive of immense good, especially by awakening the Free-will Baptist churches to missionary efforts.

After visiting England, he returned to America, and in company with a large number of missionaries, sailed from Boston Sept. 22, 1835. With recruited strength, he devoted himself vigorously to his work, preaching, translating, &c. The products of his toil in the literary department are such as to do credit, not only to his industry, but also to his ability as an oriental scholar, and his piety as a Christian. His supervision of the interests of the mission was general, and he gave his attention more or less to every department.

In 1847 it again became necessary for him to quit his chosen field and his loved service. He returned to England, and, that he might have the needed quiet, he served a church in Leicester till early in the year 1850, when he came again to America, and was warmly welcomed by Christians of various denominations. In April, 1851, he was once more at Cuttack, and during the next three years accomplished a large amount of service.

Early in August last, he complained of some indisposition, but it was not until the 12th that a physician was called, who said his disease was bilious fever, then prevalent. Little apprehension of danger was felt till within a few hours of his death. His departure, though sudden, was peaceful. His words during his sickness were few. His life and labors were *his* testimony; survivors need no other to convince them that he was eminently a man of God.

He died at six in the morning. At five in the evening, his body was committed to the earth. The account of the funeral services is peculiarly touching, especially of the prayer offered by one of the native preachers, and of the last look taken by the bereaved widow, as she bade adieu to all that was mortal of her excellent husband. The respect shown to his memory by the residents, civil and military, and a large concourse of native Christians, was of the most marked and gratifying character

A PRISONER FOR HUMANITY.

The following letter comes to us, marked, in the *People's Journal*, published at Coudersport, Potter Co., Pa. It was written, we suppose, to the Seventh-day Baptist Church at Berlin, Marquette Co, Wisconsin, of which the writer is a member, and within the bounds of which a number of his relatives reside. If it does not make our readers detest more than ever the system of American slavery, and resolve to labor more earnestly than ever for its overthrow, we shall be mistaken. May its author enjoy in the solitude of his prison the comforting presence of Him who said, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

St. Joseph, Tensas Parish, }
Louisiana, Sept. 22, 1854. }

To the Berlin Church:

Dear and well-beloved Brethren and Sisters,—Allow me (perhaps for the last time) to address you by that endearing title. It is with feelings of the deepest melancholy that I improve this opportunity of acquainting you with my present situation and future prospects, and of begging an interest in your prayers. It has always been a satisfaction to me in my exile (on account of ill health) to think that I was remembered by you at the throne of grace. This being Sabbath evening, my heart yearns to be with you in your prayer-meeting; but as I cannot, my spirit shall be there, and I feel confident that you will pray for me, at least, sinner as I am, when you read this. I confess, brethren and sisters, that I have not at all times lived as a Christian should. When I turn my eyes within my heart, I can see nothing but wickedness; and yet I feel that the greatest sin of my life is the burying of the little talent God gave me. But I at length resolved, after years of toil to amass wealth, to return, like the prodigal son, and if possible dig up the buried talent. To this end I settled my business in Louisiana, and had been waiting two days (in consequence of contrary winds) to cross the Mississippi, intending as soon as possible to return North, offer myself to God, and the remainder of my days to His service. But as I left the house of a friend on the 19th, to go for my horse, which was in a pasture in the lower part of the town, I was met by a slave-hunter and his dogs. He immediately drew a revolver, threatening to fire at me if I stirred or made a noise. Others came, and I was marched off to the constable's office. The whole town was soon assembled, and the procession marched to the school-house, where I was informed by the magistrate, that I had been charged with aiding slaves to escape from their masters. After a brief examination, in which many witnesses were sworn, all of whom had seen me talking with, or known of my hiring negroes on Sundays or evenings, though this is a common practice for the people of this country; but the difference is, I am from the North. Written passes were found in their possession resembling my hand-writing—ink and paper like mine. With this kind of evidence I was committed to jail, no one daring to speak in my behalf but a petty lawyer from Mississippi. The citizens of Waterproof, fearing the evidence not sufficient to condemn me, formed themselves into a mob, threatening if I got clear that Lynch law should be called upon. Some said, Hang him; some, Shoot him; and some said, Give him a thousand lashes on the bare back. A native of Ireland was arraigned on a similar charge; but three days were given him to procure counsel. His trial goes off this morning. If he is cleared, he will be obliged to leave the country.

The cause of my being arrested, as stated by Mr. Perkins, the negro hunter, is: A man in Mississippi, having discovered a trail of runaways, sent for him to come with his dogs and catch them. He went, and caught them, after running them thirty or forty miles. Upon overtaking them, they all ran up the fence to get away from the dogs. He asked them who they belonged to. They gave him a fictitious name, at the same time presenting passes, which he read; but being a villain at heart, Perkins took them down one at a time, and set his dogs on them. The negroes, after being torn in a shocking manner, promised if he would desist they would tell the truth. The dogs being taken off, the negroes made the following confession: "We belong to Mr. Dunkin, of Louisiana, and the overseer, Huggins, whipped us nearly every night, because, being new hands, we could not pick cotton enough. We stood this as long as we could, and then ran away. We went to Mr. Davis's woodyard, and told him our complaint. He let us hide in the wood, and carried us bread and water until last Saturday night. He baked us some bread, gave one of us a pair of shoes, another a hat, another a shirt, a quilt for us to sleep under, some money, these passes, set us across the river in a canoe, one at a time, and told us to go towards sunrise." But getting entangled in the swamp, they were overtaken. Each negro, after being torn by the dogs the same way, confessed the same.

I was conducted on the 20th to this place, through a heavy rain, where I was loaded with irons, my feet being put in iron stocks, my hands coupled together with iron handcuffs, closely fitted, with a chain about three inches long. My handcuffs were taken off this morning to eat my breakfast, and have not been replaced; so I improve my time in writing to you. In this condition I await my trial. The Court sits the first Monday in October; but unless things look a little more favorable, I shall try to have it adjourned. My attorney, Thomas Farres, examined the papers and the testimony of the witnesses, yesterday, and remarked, that if it was for murder, or grand larceny, there might be hope; but as it is, it is doubtful.

Sabbath morning, September 23.—My heart yearns to be with you, but I cannot. On examining my heart, I find a sort of cold indifference pervading the whole soul. I fear my heart is not right in the sight of God. I read my Bible, yet it is with an abstract mind. My thoughts seem to be all bent on getting away from this place; for I cannot feel that I have done any thing worthy of imprisonment. My attorney says it will be a hard case, on account of prejudice existing against abolitionists here; if convicted, that I will not get off with seven years' imprisonment, he thinks.

And now, after hearing what I have written, I ask my brethren and sisters, in the fear of God, if a man should come to you, presenting a lacerated back, exposed to the rays of a southern summer's sun for want of a shirt, feet bleeding from having been torn by snags and briars, hungry and faint, whose crime was that he failed, after straining every nerve, to perform the labor appointed him—I ask, would you—could you—turn him away without assisting him? No, brethren, I think I know you too well—I think you would hand him a loaf of bread, part with some of your surplus clothing, or, if you had no surplus, buy some, as I did—help them across the river, point them to the star of Liberty, and bid them God speed. But either of these—even to give a piece of bread—subjects you to a prosecution, the penalty of which is not less than four nor more than seven years in the State Prison.

If you could be on the plantation near where I have lived, and at night, when the cotton is weighed, out of two hundred not less than twelve are whipped every night—O! could you hear the shrieks, cries, groans, prayers—yes, if you could see that victim on his knees praying with all the earnestness a man is capable of, to that brutal overseer, and promising to strain every nerve on the morrow to pick more cotton—it is enough to melt the heart of any one. Who can look on such scenes as these, and not be moved? Brethren, I cannot. And now what more can I say? Have I done wrong? Have I done more than any *man* ought to do? Dear brethren, I leave you to judge, and am willing to be governed by your decision. I wait with the greatest anxiety to hear from you, to know whether I shall receive your sympathies and prayers, or whether I have done wrong, and am considered a heathen. If the former, I can bear my affliction with fortitude; but if the latter, I feel that my life hangs by a slender thread—that my days are numbered. In the mean time, brethren, pray for me. Sisters, remember me in your prayers.

I would prefer the grave to slavery. Not all the gold in California could procure of me five years of slavery. I may get rid of these chains, but this depends on the skill of my attorney, or neglect of my opponents. I must cease, for the last paper in my possession is nearly covered over. And now, brethren, when you meet to pray for heathen lands, remember, O! remember our own country. Watch over the declining steps of my parents; 'tis the greatest boon I can ask, for I fear that this intelligence will bring the gray hairs of my loving father and affectionate mother near the grave. Comfort them with the thought that we may meet in heaven, and all be free.

I wait with the greatest anxiety to hear. My love to you all. Pardon Davis.

I would further add, that he had his trial and was sentenced *twenty years* in the State Prison of Louisiana, and is now at Baton Rouge serving out his time. His brother has been South endeavoring to obtain a reprieve, but could not. He carried a petition signed by his friends, another signed by the members of the Legislature and Senate of Wisconsin, (the State of which he was a resident,) also a private letter from the Governor of Wisconsin to the Governor of Louisiana; but it was all of no avail—his answer was No. Some of the members of the Legislature of Louisiana spoke to the Governor in his behalf, being somewhat acquainted with the brother that carried the petitions. But he said his *honor* as a Governor forbade his pardoning an abolitionist who had been meddling with their "free institutions," for such they call the institution of Slavery. Mr. Davis saw some of the victims of their free institutions (slaves) sold. He saw the tears of the mother for her child; he saw two fugitives who had been shot, and thus recaptured. All the regret expressed by the by-standers was that such a "likely nigger" should die, for he was worth $1500. He was allowed to see his brother every day while there, but his brother was not permitted to furnish him lights, that he might read evenings, nor send him the *Sabbath Recorder*, nor deliver some apples sent him by his brother's wife, &c. They did, however, allow some books, which were sent him, to be given him, and also a little pocket money, and some additional clothing. Pardon had not received a word of news from home, though many letters had been sent. Some were in the Post-office; others had gone to the dead letter office on account of the carelessness of the keepers. The only time allowed him to read is Sunday; and he is obliged to attend Catholic worship part of the day.

Emma J. Coe.

LOVE-LETTERS.

In the out-of-the-way parish of Anworth, in Scotland, there was standing not long since—and perhaps still standeth to this day—a quaint old rustic church. The swallows, during many a summer, built their nests in the crannies of its rude roof. Its weather-beaten walls were garnitured with moss, and festooned with creeping vines. The rusty key of that kirk door still hangs as a precious relic in the new College of Edinburgh. The old oaken pulpit is still preserved. And well it may be. For in that pulpit once stood a man, of whom it used to be said that he "is always praying, always preaching, always visiting the sick, always catechizing, and always studying." He it was who uttered that memorable saying to his beloved people, "My witness is above, that your heaven would be two heavens to me, and the salvation of you all as two salvations to me." That was the pulpit of *Samuel Rutherford*.

The savory discourses once preached in that hallowed place have, for the most part, perished long ago. But Rutherford's "LETTERS" will always live—an enduring memorial. They were written more than two centuries ago, but the smell of the myrrh has never departed. They are not historical letters. They contain no politics nor biography. They are not argumentative, like Pascal's. They are not descriptive, like Walpole's. They are *pure devotion*—a Christian heart's *love-letters*—the outflow of a sweet fountain that knew no intermission.

Cecil used to style Rutherford "one of his classics." Richard Baxter said, "Hold off the Bible, and such a book the world never saw!" This sounds extravagant to those who have never gone for themselves into this spiritual orchard, and plucked the luscious fruit, and never sat down at the banquet where

> "The purple clusters of God's vine
> Upon our mouths do crush their wine."

In reading the beautiful edition of these letters, (published by the Carters,) we draw our pencil beside many an exquisite passage. Here is one: "Welcome Jesus, in whatsoever way thou comest, if we can but get a sight of Thee. And sure I am that it is better to be sick, providing that Christ come to the bedside and draw aside the curtains, and say, '*Courage! I am thy salvation*,' than to be visited with lusty health and never to be visited of God." "His loved ones are most tried. The lintel-stones and pillars of His new Jerusalem suffer more knocks of God's hammer than the common side-wall stones." Sometimes his devout soul seems in a sort of delirium of holy love, as when in writing to Lady Kenmure he says, "Honorable lady, keep your first love. Hold the first match with that soul-delighting, lovely Bridegroom, our sweet, sweet Jesus, the Rose of Sharon, and the sweetest smelled rose in all His Father's garden. I would not exchange one smile of His lovely face for kingdoms. Let others take their silly, feckless heaven in *this* life. Put up your heart! Shout for joy! Your king is coming to fetch you to His Father's house." This passage sounds like the Songs of Solomon.

Rutherford was one of Scotland's bravest martyrs. Satan's minions harassed him with incessant persecution. He fell on evils days. At Aberdeen he was confined for two years, but "found Jesus sweet to him in that place." His works were once burned in Edinburgh by the hands of the common hangman. He was summoned before Parliament on a false charge of treason. But the summons came too late. He was on his dying bed, and calmly remarked that he had got another summons from a superior Judge, and sent this message: "I behove to answer my first summons; and ere your day arrive, I will be where few kings and great folks ever come."

On the 20th of March, 1661, Rutherford laid aside his earthy vesture to put on the wedding garment in his Saviour's presence. His last letters sound as if written from the pearly gateway. The closing words that issued from his lips were, "Glory, glory dwelleth in Immanuel's land!" The Parliament, on hearing that he was dying, voted that he should not die in the College of St. Andrews as a Professor. Lord Burleigh arose and said, "You cannot vote him out of heaven!"

"STATE OF THE DEAD."

We flatter ourselves, that what we have written on this subject will, at least, serve to provoke investigation. We expected to hear from the advocates of annihilation, and we have not been disappointed. But we must say, that they count largely on the liberality of our paper, if they expect that every crude and ill-digested thing, which to them may appear like argument, can find a place in its columns. We have before us, now, two communications, which may have been prompted by honest motives, for what we know, but which are so replete with incoherent reasoning, perversions of the Scripture, confusion of ideas, and other faults of composition, that it is not easy for us to conquer our inclination to throw them *under* the table till the day of conflagration. The writers would probably be offended if this course were taken; but really, we must have some regard for the feelings of our readers, (to say nothing of our own,) as well as for those of correspondents. And if persons will send us such pointless, unmeaning, and uninstructive articles, they must bear with us, if we exercise a little of our own independent judgment in regard to the disposition of what they send.

These communications have been on hand for some time, and but for the sake of giving our views, in an uninterrupted series of articles, of the connection of the Resurrection with the Awards of the Future Life, would have received an earlier notice. Though we think best not to lumber our columns with such productions, we shall do the writers the favor of noticing the material points they have presented.

One of them, after apologizing for the "smallness of his talent," and hinting his suspicion that "his communication will be looked upon by some with scorn," calls our attention to Mal. 4: 1—a text which Annihilationists make one of their main props, as if it were quite conclusive in their favor. The expression of "burning up the wicked so as to leave them neither root nor branch," does indeed denote that their destruction will be total, but the *nature* of the destruction is not represented as being annihilation. All that the text proves is, that the destruction of the wicked will be complete, whatever the nature of that destruction may be. To say that it is annihilation of being, is begging the question. It will be a "burning up," it is true, but if the burning is to be effected by material fire, it can reach no farther than to the destruction of the body; for, according to our Saviour's express words, there is something in man which survives any destruction which it is possible to bring upon the body. (Matt. 10: 28.), On the other hand, if this "burning up" is a figurative expression to set forth the terrible judgment with which the future life opens to the wicked, we must first know what *kind* of destruction the wicked will, in that state, be susceptible of, before we can determine whether "burning up" denotes their annihilation or not. Let it be proved that the soul of man is susceptible of such a destruction, and then it will be time enough to argue that the language of the text is designed to set forth such a catastrophe. The argument, otherwise, is such a begging of the question as a man of good sense ought to be ashamed of.

Another passage to which we are referred is 1 Tim. 6: 16. "Who only hath immortality." But who of all that acknowledge the soul's natural immortality ever pretended, that man is possessed of immortality in any such sense as God is? Man's immortality is *derived* from the Author of his being. God's immortality is *underived;* He possesses it *necessarily,* as an attribute which is inseparable from His self-existent nature. And this is the idea which the text is designed to convey, that God is the only being who possesses immortality as an *underived, self-existent,* and *necessary* attribute of his nature. An idea very similar is set forth in John 5: 26. "As the Father hath life in himself, so hath he given to the Son to have life in himself." The meaning of which is, that the life by which God lives is an *underived* life; he has it "*in himself,*" not in another. Man, on the other hand, has no life "in himself," he has it all in another, even in God—that is, it is wholly God's gift. So in the passage above; God has immortality "in himself," and not as the gift of another to Him. No other being, man or angel, so has it. And if God has immortality in this way, it is evident that He cannot die—that His being cannot possibly become extinct. For that which exists *necessarily,* exists *eternally.* For as there was no Power that gave Him his life, or immortality, so there is none that can take it away. It is not dependent on another for its continuance. On the other hand, man holds his immortality, because the Power that conferred it on him continues to uphold him in the possession of it. The advocates of the soul's natural immortality do not deny the *possibility* of annihilation; for that which is merely *derived* must, of necessity, become extinct, if the Power that gave it existence do not continue to uphold it. Hence we say, that man's immortality is so unlike God's, that he may be regarded as not possessing it. And God's immortality is so unlike man's—being *underived, independent,* and *necessary*—that He alone is said to have it. Yet, *as a gift from God,* every man does possess immortality, and with this fact the doctrine of the annihilationists is utterly at war.

It is sometimes asked, "If man is naturally immortal, why is immortality represented as that which it is his duty to seek after?" But the passage which is quoted to this purpose (Rom. 2: 7) contains no such idea. The term which is translated "immortality" is not *athanasia,* but *aphtharsia.* The first of these terms denotes *immunity from death,* and as applied to God in 1 Tim. 6: 16, signifies that He is eternally exempt from any and every principle of death, having "life in himself." He is the *living* God. But the second term denotes *incorruptibility.* The same term is employed in 1 Cor. 15: 42, where it describes the condition of the body at the Resurrection; also in 1 Pet. 1: 4, where it sets forth the nature of heaven. It is a term used to describe either the natural or the moral condition of a thing, and in the passage under consideration implies the condition of the people of God *as confirmed in moral perfection,* whereby they are incapable of being corrupted any more from the allegiance they owe to their Maker. (See 2 Cor. 11: 3.) This is what God's people are seeking after—a state of moral perfection, or absolute freedom from indwelling sin, so that what now has such a strong tendency to corrupt them, and in many sad instances prevails with them, shall have no farther power over them. This strong desire of their hearts is manifested by the groans that are wrung from them in their contests with "the body of this death," (Rom. 7: 24,) and by their efforts at "fleeing away from the CORRUPTION that is in the world through lust." (2 Pet. 1: 4.) As a reward for thus seeking after *incorruptibility,* God bestows upon them "eternal life."

A like misunderstanding exists in regard to the term "eternal life," annihilationists always speaking of it as if it imported nothing but *bare existence.* In this sense, it becomes, with them, the antithesis or direct opposite of that "death," which is the wages of sin. Hence, when their opponents teach that the soul is naturally immortal, and that the wicked, as well as the righteous, will continue to live to all eternity, their argument becomes a succession of changes rung upon this term. "*Eternal life in misery*" is a phrase they have coined for circulation among the unlearned and unstable, whom they expect, in this way, to delude into the notion that our doctrine involves an absurdity. As if eternal *existence* in misery meant *eternal life* in misery! Shame upon such puerility! Can it be possible, that men of understanding have read so superficially as not to have observed, that it is agreeable to a very common use of the word *life,* in Scripture, to understand it as signifying a state of excellent and happy existence? Accordingly, the life given to Adam, when God created him, was not bare existence, but a truly *happy* life—happy in perfect innocency, in the favor of his Maker, surrounded with the happy fruits and testimonies of His love—happy in a state of perfect righteousness. And when the epithet *eternal* is added to life, it signifies *confirmation* in holiness and the favor of God. When, therefore, it is said that "eternal life is the gift of God through Jesus Christ our Lord," the meaning is, that, when the believer has endured his probation under the gospel, he shall be confirmed in God's favor, in holiness and happiness, forever, without any possibility of falling into sin and ruin; and that this reward will be granted, not because he deserves it, but as a free gift from God through a Redeemer. Bare existence is no part of the reward promised; nevertheless, existence is implied, in order that the subject of the reward may be capable of receiving it.

The "death" which is "the wages of sin," is the direct opposite of eternal life—not eternal non-existence, but the eternal loss of an excellent and happy existence—the eternal loss of God's favor, and of the fruits and testimonies of His love. Nay, more; the death which is due to sin implies not merely the *loss* of happiness and of the Divine favor, but the suffering of positive misery and wretchedness. For the opposite of any positive good is not simply the *loss* of that good, but the suffering of some positive evil. Wherefore, as in the text (Rom. 6: 23,) death is opposed to life, and must be understood according to the nature of that life to which it is opposed, we must be careful of supposing that it means nothing more than the *loss* of eternal life; for the mere loss of it would not place the subject of punishment in a condition the direct opposite of eternal life.

We have not time to remark upon the other communication referred to, this week, but perhaps we shall notice it in our text. T. B. B.

IOWA SUNDAY LAW.—This young State is blessed with a Sunday law, which strikes us as a model for States which can not in conscience leave that day where the Bible and the Constitution leave it. The law enacts as follows:—

"That if any person be found on the first day of the week, commonly called Sabbath, engaging in any riot, fighting, or offering to fight, or hunting, shooting, carrying fire arms, fishing, horse racing, dancing, or in any manner disturbing any worshiping assembly, or private family, or in buying or selling property of any kind, or in any labor, (the works of necessity and charity only excepted,) every person so offending shall on conviction be fined in a sum not more than five dollars, nor less than one dollar, to be recovered before any Justice of the Peace in the county where such offence is committed; provided, nothing herein contained shall be construed to extend to those who conscientiously observe the seventh day of the week as the Sabbath, or to prevent persons traveling, or families emigrating from pursuing their journey, or keepers of toll-bridges, toll-gates, and ferrymen, from attending the same."

"THE STATE OF THE DEAD."

> "There is no death; what seems so is transition;
> This life of mortal breath
> Is but a suburb of the life Elysian,
> Whose portals we call death." *Longfellow.*

That the subject under consideration by Bro. Brown and myself is one of the first importance, nothing but stoic indifference can deny. Every gale from the shores of immortality is but the echo of loved voices thither gone. For

> "'Tis not all of life to live,
> Nor all of death to die."

Oh, Death! cries the yearning of humanity, as it buries its hopes beneath the clods of the valley—oh, Life! as they re-live on the shore of eternal fruition. The faintest whisper from spirit lands, must wake the harps of life anew, and "stir the divinity within us." The philosophy of a future state, then, as well as the faith of assurance of it, becomes the question of this life; and to ignore any inquiry concerning that life, is unworthy of those who expect there to dwell. For it cannot be, that the Father of our spirits, who has implanted in all his children the longings of immortality, has curtained that better land from us so that no eye can penetrate it, or has so deadened its songs that no ear can hear them. Nay, verily, for there have been scenes so intensely bright—there have been sounds so full and swelling—that it "was more than heaven could hold, and so down to earth the impetuous torrents ran." Admitting that Judaism saw through a glass but darkly, yet life and immortality have been brought to light by the gospel. Therefore, with the torch of reason, and the lamp of revelation, let us enter the portals of death, and pursue our inquiries amid the adumbrations of His temple.

As Bro. B. has so expounded the original points at issue, it becomes necessary to present the whole question now involved in a connected manner. I shall, therefore, arrange what I understand to be the ground he has taken, in the following propositions, in which also I wish to present some of the consequents of his views. Bro. B., then, has either assumed or argued—

1. The inherent or natural immortality of the soul;

2. Its consciousness during the intermediate state, from death to the resurrection of the body;

3. Its natural capacity for its being rewarded for virtue and punished for vice in a future state, according to the course of nature;

4. That the Creator does recompense his creatures in a future state according to the course of nature;

5. That the awards of a future state would not necessarily require a miracle in order to their accomplishment;

6. That as the annihilation theory would necessarily require a miracle in order that the award of a future state be carried out, that doctrine cannot be true;

7. That during the intermediate state, the soul is, from its natural capacity, in the enjoyment of heaven, and enduring the suffering of hell; therefore the great mass of mankind are recompensed for ages prior to the Judgment Day, and therefore prior to their being publicly sentenced;

8. That the body is a mass of matter merely, not a subject of sin or holiness, incapable of obeying or disobeying a law, and as unaccountable as the brute that perisheth;

9. That ages after the soul has entered on the awards of eternity, this mass of matter, which was incapable of sin or holiness, and as unaccountable as a brute, is to be raised up from its grave, the soul remanded from heaven and hell, and made to re-enter this resurrected body, then to be judged, and then to be remanded back to heaven or hell;

10. That this resurrection of the body is not ordered to render it possible for God to recompense his creatures, because he has given them a natural capacity of being rewarded or punished, but in order that soul and body be rewarded together;

11. That although God has given mankind a natural capacity of being rewarded in a future state for virtue, or punished for vice; and although God does recompense his creatures in that state according to the course of nature; and although, had man enjoyed nothing but Natural Religion, all men would have thus been recompensed according to the course of nature; yet, on account of the modifying influence of Revealed Religion, and especially the Mediatorial Government of Jesus Christ, there will be an additional recompense, both to the righteous and wicked;

12. That the whole of Revealed Religion is of a positive character; consequently neither it nor its sanction are according to the course of nature;

13. That Christ, though sinless, innocent, suffered the identical curse, or penalty proper of God's revealed law, and not something which was an equivalent; but the identical penalty which the rejector of revealed religion will finally suffer himself. Therefore the sufferings of Christ were not according to the course of nature;

14. That the punishment of the damned is of a different character prior to the day of judgment from what it will be after that day; that although the "stormy horrors of a guilty conscience must commence with them as soon as their connection with this world is broken," yet the proper penalty of the same does not begin to be endured, until the day of judgment. Therefore, prior to the day of judgment, sinners are only punished according to the course of nature, while afterwards they are to receive, in addition to the course of nature, the proper penalty of the violated law of Revealed Religion.

In the foregoing I have endeavored to give a fair exposition of the views entertained by Bro. B. If I have in any particular misrepresented his views, it is not intentional, and I shall be ready to correct the error when pointed out. I shall now proceed to remark upon and examine his views by the light of natural and revealed truth, in order, if possible, to get a correct knowledge upon the subjects under consideration; for I can assure all, that I am not writing for mere controversy, but to elminate (?) the truth—a pearl, which I trust God has awakened a strong desire after. And although I know by experience, that to search for truth as for hid treasure will subject one to the charge of fanatic, or changeling, and to embrace one's honest sentiment, obtained by diligent research and prayerful study, may farther subject him to the charges of scepticism and infidelity; yet he who, through fear of popular opinion, or ease-loving indulgence, is deterred therefrom, must be a slothful and wicked servant. Lord, open thou mine eyes, to understand the volumes of nature and revelation. S. S. G.

ANNIVERSARY STATISTICS.

Anniversary Week opened on Sunday evening last with discourses before several of the large benevolent societies. Rev. Richard S. Storrs preached before the American Home Missionary Society, Rev. E. L. Magoon before the American and Foreign Bible Society, Rev. Thomas DeWitt before the American and Foreign Christian Union, Rev. E. R. Macgregor before the Society for Meliorating the Condition of the Jews, and Rev. Stuart Robinson before the Presbyterian Board of Foreign Missions. As the doings of this last organization are not often placed before the public, we presume our readers will be glad to see the following abstract of its forthcoming (18th) Annual Report, which was read previous to the discourse of Mr. Robinson:

The Board acknowledge with gratitude to God their obligations for the distinguished favors that have been conferred upon every department of their work during the past year. The receipts from all sources, including a balance from last year of $1,267 52, were $184,074 17; expenditures, $175,705 10; leaving a general balance of $8,360 07. The advance in the receipts of the treasury, though small, is, nevertheless, an encouraging token of increasing interest in the missionary cause, and especially in connection with the pecuniary difficulties which have existed in the country during the greater part of the year, and also in connection with the fact that the Board has not had a single collecting agent employed among the churches during the year. A large number of our ministers have themselves presented this cause to their respective churches, and, in most cases, with the most happy results.

Publications.—The Board has continued to occupy the usual number of pages in *The Home and Foreign Record,* which has a circulation of something more than 16,000 copies. Of *The Foreign Missionary,* 20,000 copies of the newspaper, and 3,250 of the pamphlet edition, of thirty-two pages, have been printed and circulated. Various circular letters have been printed and circulated among the churches; and upon these and the Missionary Journals, the Committee have relied mainly to do their agency work.

Missionaries and Assistant-Missionaries sent out.—Six missionaries, (one of whom had been in this country on a visit,) and twenty-two male and female assistant-missionaries, making twenty-eight in all, have been sent out during the year.

Missions among the Indian Tribes.—The Board has seven missions among the Indian tribes, viz: among the Chippewas and Ottawas, of the State of Michigan; among the Omahas, of Nebraska; among the Iowas and Sacs, of Kansas Territory; among the Creeks, Seminoles, Chickasaws, and Choctaws, of the south-western Indian Territory. Measures have been adopted for the commencement of a new mission among the Otoes, of Kansas. Connected with these missions there are eleven stations and out-stations, and nearly as many more preaching-places; eight missionaries, sixty three male and female assistant-missionaries, and five native helpers; seven churches and two hundred and ten church members; eight boarding and two day schools, embracing two hundred and fifty pupils, in various stages of their education. The number of communicants in connection with these churches has been more than doubled during the past year. The schools have had a larger number of pupils, and better attendance than in former years; while most of the tribes, but especially those in the State of Michigan and in the south-western Territory, are making most encouraging progress in every department of civilization.

Missions in Africa.—The Board has two missions in Africa; one in Liberia, which operates upon the colored American emigrants and the natives of the country; and the other at the Island of Corisco, twelve or fifteen hundred miles to the south and east of Liberia, and nearly under the equator, which operates exclusively upon the aboriginal population of that island and the neighboring continent. In connection with these missions, there are six stations, six ordained ministers, three licentiate preachers, nine male and female assistant missionaries, of whom eight are white persons, and the remainder colored emigrants from this country; seven schools, one of which is a classical school, with about one hundred and fifty pupils; five churches, and about one hundred and fifty church members, being an increase of about thirty over the number last year. One small volume has just been printed in the language spoken by the Corisco people, and most of the missionary brethren there are engaged in the study of the language, and will soon be able to proclaim the unsearchable riches of Christ to thousands of the people around them in their own tongue.

Missions in India.—In India, the Board has four missions, viz., Lodiana, Furrukhabad, Agra, and Allahaba; thirteen stations and out-stations; twenty-six ordained missionaries, two of whom are natives of India; twenty three female assistant missionaries from this country; thirty-four native helpers; eleven churches, with 295 native communicants; four printing-presses, from which have been issued 8,000,000 of pages; thirty-six schools, several of which are high-schools, with upwards of 4,700 pupils. These statistics show an increase of two churches, 39 native converts, about 1,700 pupils, and 5,000,000 of printed pages over our last Annual Report. Some of the church members have finished their course, and have been enabled to triumph over the last enemy. There is still a loud call for more laborers in this field.

Mission to Siam.—In Siam there is one mission, connected with which there are two ordained missionaries, one licentiate preacher and physician, two assistant female missionaries, and one native helper; one boarding-school, with twenty-six pupils. The missionaries have sustained the usual religious services, and have devoted more time than usual to missionary tours in different parts of the country, and in some regions where the Gospel has never before been heard. One of the missionaries is still engaged in the work of translating the Scriptures into the Siamese. The Report contains brief notices of large evangelized communities, other than the Siamese, but who are accessible at Bangkok, and to whom the Gospel ought to be preached. Who will be the first to go and carry them the glad tidings of salvation?

China.—The Board has three missions in China, viz: at Canton, Ningpo and Shanghae, and a mission, also, to the Chinese in California. Connected with these missions there are fourteen ordained missionaries; two physicians; fifteen female missionary assistants; three native helpers; eight schools, with one hundred and seventy pupils; two printing presses, from which have issued upward of 4,000,000 of pages. The missionaries have been actively employed in the various duties of preaching, translating, teaching, distributing religious books and tracts; and those of the medical profession in the duties of the dispensaries, in addition to their other labors. China is still suffering from the dreadful evils of civil war. How long this strife is to continue is known only to God. It should be the earnest prayer of the friends of the Redeemer, that it may be overruled for the advancement of his kingdom among this unhappy people.

Mission in South America.—The only Mission that has been established in South America is at Buenos Ayres; and this, though of only one year's continuance, has already received very encouraging tokens of the Divine favor. Measures have been adopted for the commencement of another Mission at Bogota, the capital of the Republic of New Granada; and it is confidently hoped that both of these Missions may be reinforced at an early period, and prove a great blessing to the inhabitants of that country.

Missions to Papal Europe.—The Board has no missionaries in Europe under their immediate direction. Their appropriations have been made to Evangelical societies, which are known to be prosecuting the work of evangelization with zeal, energy and wisdom; and the results of their labors, especially in France and Italy, are most encouraging. The appropriations made by the Committee to these societies, including $4,827 88 contributed for the endowment of the theological seminary at La Tour, during the year has amounted to $12,613 98.

Mission to the Jews.—The Board has three missionaries among the Jews in this country, viz: In New York, Philadelphia and Baltimore; two ordained ministers, and one licentiate preacher. These Missionaries have free access to their brethren in all these places, and in many cases, it is believed, with happy results.

Summary.—The Board has under its direction, besides what is done for Papal Europe, twenty separate missions; 59 ordained missionaries; 5 licentiate preachers; 113 male and female assistant missionaries; 43 native helpers; 24 churches, and about 650 native communicants; 26 schools, and 6,596 pupils; 6 printing-presses, from which have been issued more than 12,000,000 of pages during the year. The Board conclude this statement with the earnest and heartfelt prayer, that this great work of spreading the Gospel among the nations of the earth may be continued and enlarged until all shall have heard of the salvation of Christ.

MODIFICATION OF THEOLOGICAL INSTRUCTION.—The Congregational Theological Seminary, to go into operation at Chicago next fall, will have some new features in it. It is thus described by one of the Directors:—

"There will be a study and lecture term, occupying two-thirds of the year, including vacations, and a reading term of one-third of the year, to be spent with pastors, receiving instruction in pastoral theology and the practical application of the knowledge obtained in both terms, and in gaining experience and an acquaintance with society and humanity in its various phases. While the regular course is to be thorough and full, there is also a special arrangement for a class of candidates for the ministry who have not had a college course. Their terms of study will be the same as those of the other class, and they will hear the same lectures; but instead of some branches attended to by the other class of students, they will receive instruction in necessary branches in which they may be deficient—as logic, rhetoric, &c."

INTOLERANCE IN TUSCANY.—A European letter-writer says that in Tuscany and in Piedmont, some acts of intolerence have again been perpetrated by the authorities. A poor man has been imprisoned in Florence for reading the Bible, and possessing two copies of it; and in Piedmont the trunks of English tourists are again regularly searched to see whether religious tracts or copies of the Scriptures are imported among the luggage. "It is the reaction of the Roman Catholic Church against the American Know Nothing movement. That movement drives the Roman clergy mad."

THE REVOLUTION IN CHINA.—A recent number of the *Friend of India* gives some extracts from the last manifesto of the insurgents, which tend to show that the religious aspect of the movement is more favorable than the former accounts represented. "At one blow," he says, "Tae-ping-wang abolishes the idolatrous and other superstitious rites observed at births and marriages; directs young people to attend daily services at church; commands the Sabbath to be kept, requiring the presence alike of old and young on that holy day."

AMERICAN HEBREW CHRISTIAN ASSOCIATION.—A meeting of converted Jews was recently held in this city, when, in view of the fact that several hundred Christianized Hebrews reside in the United States, it was—

Resolved, That we invite and urge our Christian Jewish brethren to meet in convention in the City of New York, on Thursday, the 10th of May, 1855, at 7 1–2 o'clock, P. M., at the Asbury Methodist Episcopal Church, in Norfolk-st., between Rivington and Stanton-sts., for the purpose of organizing an association to have for its object the promotion of the spiritual interests of its members, and the relief of those who, for professing Christianity, are suffering want and distress.

PROHIBITION IN NEW YORK.—On the 1st of May the Prohibitory Liquor Law of New York took effect, so far as to prohibit the granting of licenses for the sale of liquor, except for mechanical, chemical, or sacramental purposes. In this city, as expounded by the legal advisers of the Mayor and Corporation, the Law practically annuls itself, and simply abolishes all former restrictions on the pernicious traffic, without creating any new ones. In Brooklyn, on the other hand, and throughout the State generally, a different view prevails among the magistrates, and the provisions of the statute are to be enforced. It is to be desired that authoritative decisions on the disputed points should be obtained from the Courts; and we presume no time will be lost in having the question adjudicated.

RELIGIOUS INTELLIGENCE.

A letter from Florence, in the London *Christian Times,* says that "another Tuscan Protestant has been made to feel the vengeance of the Popish priests. Domenico Cecchetti was seized last Sunday morning at half past four, hurried away from his children to the prison of the Bargello, condemned without any trial, without any witnesses, by the Council of Prefecture, to a year's confinement in the Penitentiary, whither he was conveyed in chains the following morning, for having in his possession a Bible and two Testaments, and the avowal, when examined, that he considered Jesus Christ the sole head of the church."

The Massachusetts House of Representatives has concurred in the passage of the Senate bill concerning school-books. This bill makes it the duty of each town and city in the Commonwealth to purchase the school-books used by the pupils of the public-schools within their limits, subject to the direction of the several school committees. By this arrangement a common school education in the State becomes, in every particular, free and without cost to all classes of society—the purchase of the books being the only expense not heretofore sustained by the public.

The citizens of Jackson, Miss., have presented the widow of the late Rev. L. A. Lowry, who, with her four helpless children, was left in a dependent condition, with five hundred and fifty dollars in gold, as a token of their regard for her, and their estimate of the services of her late husband. The church, in addition to this, have voted to continue to her the salary of her husband, for the eight months of his unexpired year, which will make eight hundred dollars more, with the use of the parsonage for that time.

The President of Beloit College communicates to the Secretary of the Western College Society, the following gratifying intelligence: "We enjoyed during the last weeks of the term just closed a precious season of refreshing from the presence of the Lord. The spirit of God was among us with manifest power, quickening saints and converting sinners. There were among the students ten or twelve hopeful conversions. All departments were more or less affected, but the greater part of the converts were from the College classes. Among them are some of peculiar talent and promise."

Ebenezer Gaston, of Calhoun county, Miss., proposed, some time since, to three feeble Presbyterian churches in Tishamingo county, served by Rev. Ramsay Henderson, which were without houses of worship, that he would contribute two hundred and fifty dollars to each of them, on condition that they would raise the remainder necessary to erect a comfortable house for each congregation. They have accepted his liberal offer, and they are all now engaged in erecting churches.

It is said that an African Exploration Society has been formed in England, designed to promote the exploration and evangelization of Africa. The plan of the founders of the society is to establish an African school at Tunis, and thence to gradually extend their influence southward, endeavoring, by the circulation of Bibles, and by the co-operation of native agents and missionaries, to drive out the Mohammedan religion, and establish in its stead the religion of the Gospel.

One hundred years ago, the colored people constituted eight per cent. of the population of Boston; fifty years since, they were only four per cent., and now they are less than two per cent. It thus appears that the proportion of the colored people has been gradually diminishing. There is the most ample evidence that, during the last quarter of a century, the social condition of the colored people has been considerably improved.

One hundred persons were added to Rev. Dr. Hatfield's church, New York, on a late Sunday, making nearly one hundred and fifty who have professed Christ in his congregation since the work of revival commenced a few months ago. Dr. H. communicates the details of this very interesting revival to the Evangelist.

The City Councils of Baltimore have passed an ordinance, fixing a penalty of ten dollars upon any member of a band of instrumental music who plays in the streets of the city on the Sunday, except when the military are called out by the State or municipal authorities.

The New York *Recorder and Register* reports revivals at Marion, Yates, Lafargeville, Durhamville, Truxton, Schenectady, Elbridge, Weedsport, and Poughkeepsie, all in New York. In Truxton, fifty-four have been baptized, and "the revival in Homer has been a most glorious work."

The *Home and Foreign Record* announces, that the gentleman who last year gave five thousand dollars to assist in establishing and sustaining parochial schools, has made a similar offer for the year 1855.

General Intelligence.

European News.

The U. S. M. Steamer *Atlantic*, with nine days later news from Europe, arrived at New York on the 4th inst.

The all-absorbing facts in the news brought by the Atlantic, are the breaking off of the Vienna Conferences, and the partial if not total separation of Austria from the Allies. Russia had absolutely refused to assent to the limitation of her power in the Black Sea, but offered to permit the maintenance of a Turkish armament equal to her own on Black Sea waters, provided the fleet of no other nation have the right of *entrée*. France and England, after vainly insisting on the unconditional reduction of the Russian power, admitted that Russia's propositions were "worthy of consideration"—the more so that Austria had definitely refused to second the Western Powers in their "humiliating demands" on the Czar. Lord John Russell and Drouyn de l'Huys were at once ordered home, and only awaited the conclusion of the eleventh or final conference, after which they left.

From Sevastopol we have the news of eight days' bombardment of the place with five hundred guns. The damage does not seem to have much exceeded the power of the Russians to repair, night by night. There was nothing to indicate, either that the assault would soon take place, or that it would be successful when undertaken.

Persia is assembling an army, and is to form a great camp at Sultanieh, in the interest of Turkey and of the Allies.

There is a report, that during Napoleon's visit to England—where, with his wife, he had been for a week, and was received with extraordinary rejoicing—it was agreed that he should assume personal command of the Allied Army.

By this arrival we have the particulars of the accident to the Pope: The flooring of a room in the Convent of St. Agnes, where the Pope had assembled a number of guests, gave way and precipitated all the company into the apartment beneath. The Pope escaped with but slight injury. Cardinal Antonelli, Cardinal Patrizi, and Gen. de Montreal, received some hurts. A similar accident occurred (says history) to Pope Alexander VI.

A private letter gives an account of the trouble in Krajova, already announced by telegraph. An Austrian officer, on the 11th March, saw at a window a lady, whose beauty attracted him, and he forthwith entered the house, and demanded admittance to her apartment. The lady called for assistance to expel the intruder. Her husband came and addressed the Austrian: "What do you want here? I do not know you. You are not billetted in my house, and the lady you are insulting is my wife." Without a word, the Austrian drew his sword, and stabbed the husband to the heart. Much excitement ensued. Some of the bystanders went to lodge a complaint with the Police—others sent intelligence to the Turkish Commandant at Kalafat, who lost no time in sending to Krajova a battalion of infantry, and a squadron of cavalry and artillery. A crowd proceeded to the Austrian General to demand the arrest of the offender. The General's reply was brief, but to the point: "Go to the devil! I won't punish my soldiers for such fellows as you!" This brutal reply roused the indignation of the people. All the stores were closed, and the citizens assembled in the streets, crying "death to the Austrians! they are but one against four! We won't submit to be slaughtered like the people of Bucharest!" A general riot ensued, and the citizens, armed with sticks, iron bars and axes, attacked and put to death every Austrian they met. The Austrians, on their side, turned out and attacked the people, killing forty persons in the first charge. At this juncture the national gens d'armes, and the Rouman soldiers attacked the Austrians, and, after a fierce fight, drove them at the point of the bayonet out of the city, where they yet remain encamped in the fields. Official statements return 247 killed, on both sides. The excitement continues, and the citizens have not re-opened their stores. They demand justice, and are about to send a deputation to Constantinople to seek it from the Sultan.

California News.

Nine days later dates from California were received in New York on the 3d inst. The news is not important. Below will be found the principal items.

A letter dated Sacramento City, April 7th, says: The present is a time of fearful depression and uncertainty in our young State, unless I except the miners and their interests, which were never more prosperous. But while we have an abundance of gold, and increasing every day, individual confidence is almost entirely destroyed; the confidence extended so liberally for years by man toward his fellow has been completely shaken, and this deals the death-blow to a credit system that had become so general among our merchants.

There is no city in the world where the public mind is kept in such a constant state of excitement as in the city of San Francisco. Scarcely a week passes over that does not bring to light some vast scheme to plunder the public. One day the city is startled from its propriety by a rumor of the stupendous rascality of a Meiggs, or the impudence of some prying imitator of that valiant financier. The next day the corruption of the officials whom the people elected to take care of their interests is the absorbing topic of conversation.

A dispatch to the *Union*, from Sonora, under date of Monday, April 2, says: A general fight occurred last night at a fandango house, between a party of Americans and Mexicans. From thirty to forty shots were fired, and five or six men wounded, but none, it is thought, mortally.

John McCrackan, Esq., of San Francisco, has been appointed Commissioner, by Gov. Bigler, to the World's Fair at Paris. The State sends on by Mr. McCrackan a large collection of valuables, gold, quartz specimens, &c.

Mr. Butterfield, who is running a tunnel into Table Mountain, near Sonora, has given the editor of the *Herald* a description of a discovery made by his company in the course of their excavations. They had got their tunnel in a distance of three hundred feet. Here, one hundred and ten feet from the surface of the ground, they found the trunk of a pine tree, 22 inches in diameter, in a good state of preservation, and with its bark on. The sap appeared to be in a partial state of petrification, and the outside was charred, giving unmistakable evidence of the contact of fire at some period. Having cut out the portion of the tree found in the tunnel, the company have commenced sinking a shaft for the purpose of reaching the roots of the tree. There is but little doubt, that the formation surrounding this tree is a solid bed of lava, which, at some remote period, flowed into its present location, covering up trees, &c., (as this discovery shows,) in its progress.

A Marriage under Protest.

We find the following document, connected with the ceremony of the marriage of Lucy Stone, in the Boston *Traveler*:—

Miss Lucy Stone, the young lady who has frequently made her appearance upon the Anti-Slavery rostrums in this city, was married on May-Day, at "a farm house among the hills of West Brookfield," to Henry B. Blackwell, a leader in the Western Anti-Slavery movement. The marriage ceremony was performed by Mr. T. W. Higginson, of Worcester, the parties to the nuptials formally protesting against the laws of the Commonwealth concerning marriage. Mr. Higginson communicates the protest to the Worcester *Spy*:

PROTEST.

While we acknowledge our mutual affection, by publicly assuming the sacred relationship of husband and wife, yet in justice to ourselves and a great principle, we deem it a duty to declare, that this act on our part implies no sanction of, nor promise of voluntary obedience to, such of the present laws of marriage as refuse to recognize the wife as an independent rational being, while they confer upon the husband an injurious and unnatural superiority, investing him with legal powers which no honorable man would exercise, and which no man should possess.

We protest, especially, against the laws which give to the husband—

I. The custody of his wife's person.

II. The exclusive control and guardianship of their children.

III. The sole ownership of her personal, and use of her real estate, unless previously settled upon her, or placed in the hands of trustees, as in the case of minors, lunatics and idiots.

IV. The absolute right to the product of her industry.

V. Also against laws which give to the widower so much larger and more permanent an interest in the property of his deceased wife, than they give to the widow in that of her deceased husband.

VI. Finally, against the whole system by which "the legal existence of the wife is suspended during marriage," so that in most States she neither has a legal part in the choice of her residence, nor can she make a will, nor sue or be sued in her own name, nor inherit property.

We believe that personal independence and equal human rights can never be forfeited, except for crime; that marriage should be an equal and permanent partnership, and so recognized, by law; that until it is so recognized, married partners should provide against the radical injustice of present laws by every means in their power.

We believe that where domestic difficulties arise, no appeal should be made to legal tribunals under existing laws, but that all difficulties should be submitted to the equitable adjustment of arbitrators mutually chosen.

Thus reverencing law, we enter our earnest protest against rules and customs which are unworthy of the name, since they violate justice, the essence of all law.

(Signed) HENRY B. BLACKWELL,
LUCY STONE.

POTATOES.—The Albany *Atlas* says: The usual rush of Potatoes, for the New York market, by the steamboats leaving our wharves, is going on with much vigor. Farmers residing in this county, and those of adjoining counties, flock to the city with wagon-loads, and dispose of them readily at $3 62 1-2 per barrel, and $4 per barrel for Mercers to the dealers who put them in sacks, and forthwith ship them for New York. As to getting the present prices for potatoes we have no objection, but we fear that, as extravagant as the New York market is, and as confidently as people may rely on high prices there, some one will meet with heavy losses if they venture too far. We see it stated that fifty thousand bushels of potatoes are on their way to New York market from Nova Scotia, under the Reciprocity law. The crop of potatoes in Nova Scotia last year was very large. Free trade has within a few weeks opened this market to consumers, and the chances are that a liberal supply will come forward, under the present high prices.

FEARFUL POSITION.—A recent number of the *Montreal Gazette*, speaking of the moving of the ice from the St. Lawrence river, says that a few days before, twenty-three persons, including thirteen ladies and gentlemen, who wished to take the cars for Boston, and ten ferrymen, undertook to cross the river on foot. When about four hundred yards from the Montreal shore, a loud shouting from the land which they had quitted, and a sharp hissing sound, caused by the rapid upturning of the ice above them, warned them that a "shove" had commenced, and that the ice was moving down. They were in a very dangerous position, and immediately commenced making for the shore. Around them was a moving mass of jagged, rotten ice, and they were obliged to jump from one cake to another. Finally, all reached a place of safety, with the exception of one gentleman—Mr. Sanderson—who was brought ashore by the current upon a cake of ice, dead. Whether he was stunned or crushed by the concussion of the ice, or whether he was frightened to death, is not known.

A WESTERN FARMER.—A friend from Indiana informs us that he met Michael L. Sullivant, who sold his land on the Scioto last year, on his way to his new home in Illinois, with a force of 100 men and teams and tools sufficient to put in TEN THOUSAND acres of corn this spring. It will be remembered, that Mr. Sullivant was one of the largest farmers in the State of Ohio for many years. We have heard that he could ride in a direct course fifteen miles through his own corn-fields. We hope he will be equally successful in Illinois. The reason he gave for moving was that he wanted more room to expand his operations, and he found the Grand Prairie just suited to his notions of farming on a magnificent scale.

SWEDENBORGIAN FUNERAL.—Mrs. Mowatt Ritchie, of Richmond, Va., has recently lost an adopted daughter. The funeral services of the young lady, Miss Grey, were conducted in the Episcopal Church, but the outward observances were arranged after the Swedenborgian method. The coffin was borne into the church by six gentlemen with white crape tied around their arms with white ribbon. It was entirely covered with white merino; at the head and foot were wreaths of evergreen and white flowers, and in the center a boquet of the same, and a kind of drapery was looped up round the lids with evergreen and white blossoms. The hearse was drawn by white horses, and draped with white, instead of the usual array of black. Mrs. Mowatt Ritchie, as chief mourner, was clad entirely in white, and thus paid the last tokens of love to this otherwise friendless orphan girl, whose short life she had rendered comfortable and happy, and whose last moments were full of beautiful tranquillity. [Tribune.

RECENT DECISIONS OF THE COMMISSIONER OF PENSIONS.—In case of a person entitled to bounty land, under the late Act, being insane, the application must be made by the conservator or trustee appointed by the nearest competent judicial authority.

The rights of the widow of a deceased soldier are lost in a second marriage, but are revived again on the death of the second husband. If, however, there be minor children of the first husband living, they may claim in right of their father during the second marriage.

Under the act of 1850, only such were regarded as minors as were under twenty-one years of age at the time the warrant was issued. Under the present act, minority is reckoned prior to the 3d of March, 1855.

A power of attorney cannot be executed until after the warrant has been issued.

The only survivors of the beneficiaries embraced within the provisons of the act are widows and minor children.

In computing the time of service, in no case is mileage allowed.

A BABY STAKED AGAINST A DOLLAR.—We are informed, on good authority, says the Baltimore *Republican*, that the following circumstance really transpired on Saturday night, in a low house in Exeter-st.: A card party played for various stakes, until one of them, a woman, becoming, in her language, "dead broke," offered to stake her infant child against a dollar, upon the issue of another game. The proposition was agreed to by her opponent, who was a childless mother, and being favored by fortune, or misfortune, the conclusion of the game found her the winner of the babe, a bright, healthy male infant. The child, we learn, was delivered without a murmur to the winner; and we judge from the heartless conduct of the unnatural parent, that her offspring will find with its new custodian, a better home than the one from which it was ruthlessly staked and lost.

PROPERTY OF MADAME SONTAG.—During Madame Sontag's stay in the United States, she invested $20,000 in United States stocks in her own personal name. After her decease, administration upon this property as legal assets in the State of New York was granted to George Christ, of this city, the attorney of her husband, Count Rossi, who empowered him to collect any money due to him in any way, and to sell stocks standing in his name on the books of any company in the United States, and to receive the dividends. The Attorney-General of the United States has decided, however, that as the stocks were invested in the name of his wife, and not in his possession during her lifetime, they do not of necessity belong to him, and that his rights, if he has any, must be determined in Austria.

CUTTINGS OF THE PRUNE.—There have recently been imported from France the cuttings of several varieties of the prune, which have been distributed in Maine, New Hampshire, Vermont, Northern New York, Michigan, Wisconsin, Minnesota, and several points on the Allegany mountains, to be engrafted on the common plum-tree. Why these places have been selected is in consequence of the absence or comparatively few circulios in these regions. In most other parts of the United States this insect is a great bane to the plum trees, and often cuts off the entire crop. From the coolness of the climate in Maine, and almost entire absence of this insect, it is the opinion of good judges that, the State is capable of producing as ufficient quantity of prunes for the whole consumption of the Union.

NEGRO SUFFRAGE.—In the New York Legislature, on the resolve to strike out the restricting word *White* in the constitutional qualification for votes, the affirmative vote was 61 whigs and 5 democrats; against it, 22 democrats and 11 whigs; and absent, 14 whigs and 15 democrats. The whigs and Know Nothings united in this case, in pretty nearly a solid phalanx.

In 1846, the vote on the clause extending the franchise to colored citizens was against it in every county but two, Clinton and Oswego. New York city was heavy against it; and it was little thought then, that in eight years, only seven votes out of sixteen could be rallied against it.

A dispatch dated Syracuse, Monday, April 30, 1855, says: As the 6 o'clock accommodation train, from Rochester, over the old road, was coming into this city about 10 o'clock last night, it ran over a horse, throwing the last car from the track, and down an embankment twenty feet, smashing it to pieces. The car contained eight passengers, only one of whom escaped injury. M. O. Wilder, a lawyer of Canandaigua, was instantly killed, S. H. Ingersoll, of New York, was seriously injured, and Clinton Brainard, of New York, Wm. Hall and G. Farman, of Skeneateless, Charles Iseming and Joseph Lieb, of Syracuse, and Mr. Becker, a brakeman, were badly hurt.

True to her noble instincts on the side of Freedom, Massachusetts sends greeting to Kansas, and promises "material aid," if necessary, in driving out the banditti who have conquered the real settlers in that embryo State. Resolutions have been proposed in the House, calling upon the Governor of Missouri to restrain the border ruffians, should another raid be proposed, and calling upon President Pierce to protect the sovereignty of Kansas, at the same time pledging the whole force of the glorious old Commonwealth to aid the people of that or any other State or Territory whose constitutional rights may be invaded.

SUMMARY.

Lewis Sanders Noble, a soldier of the Revolution, and trooper in Marion's Legion, died on the 19th ult., in Clinch County, Georgia, at the advanced age of 104 years. The deceased had preserved and retained until within a few years the apparel and hat worn by him in battle, and which exhibited nineteen bullet-holes. He could never be prevailed upon to apply for a pension or bounty land, and when importuned upon the subject by his friends, the high-souled veteran became indignant. He died from the results of an accident, and in full possession of all his mental faculties.

There have recently arrived at the Patent Office some choice cuttings of the olive, selected, some months since, by the agent of the office in France; and they have been distributed in the Southern States bordering on the Atlantic and Gulf of Mexico. It is already well known, that this product has been cultivated in some parts of Florida and California for many years; and, doubtless, there are other sections of country uniting the conditions necessary for the growth and perfection of its roots.

The Legislature of Connecticut met on the 7th of May. Two important amendments to the Constitution, which were acted upon last year, are to be passed upon by the present Legislature. They are, the striking the word white out of the qualifications for suffrage, and the confinement of the privilege of voting to those who can read. Those amendments passed. This year, they must have a vote of two-thirds of both Houses in their favor before they can be presented to the people for their acceptance or rejection.

A dispatch dated Washington, Monday, April 30, 1855, says: The Administration is sorely perplexed about Kansas affairs. Secretary Davis, who is the ruling member of the Cabinet, takes sides with the Atchison party against Governor Reeder. President Pierce has spoken his mind freely in condemnation of the new working of squatter sovereignty, but it is believed that he will ultimately be influenced by Davis. Governor Reeder is hourly and anxiously expected at the Capital.

Several of the leading New York hotels have raised the price of board from $2 50 to $3 00 per day. Never before, since New York was New York, has the average price of beef cattle ranged so high as on the last market-day. The average rate per lb. paid for 137 head is given at 12½cts., and the estimated average weight at 7 cwt., which would make $87 50 per head. This will be readily understood when it is noticed that large numbers sold at over $100 each, and one whole drove at $140 a head.

The steamship Southerner, arrived last week from Charleston, brought among her freight, which consisted principally of cotton and rice, one hundred barrels of green peas, consigned to fruit dealers in New York. The price of peas at Charleston is $5 50 per barrel, while they are sold here at from $7 to $8 per bushel. New potatoes will probably be brought from Charleston in two or three weeks.

The Mayor of Boston has proclaimed that he has no discretionary power in the enforcement of the Prohibitory Liquor law; that the city authorities are bound to enforce it to the fullest extent; that the only appeal against its rigorous provisions is to the law-making power, the Legislature; consequently, all who are engaged in the traffic are requested to abandon it on or before the 20th inst., the day on which the amended law takes effect.

May 4th, a fire occurred in Amity-place, New York, by which a coach manufactory and other property, amounting to about $45,000, was destroyed. The high wind that prevailed at the time, carried flakes of fire and cinders over a mile distant from the scene of conflagration. These cinders falling upon the roofs of other buildings, caused five or six fires in different places.

A dispatch dated Washington, May 4, says: In the case of the United States vs. Booth, of Wisconsin, for a violation of the Fugitive Slave Law, a writ of error was obtained, returnable to the Supreme Court of the United States for the purpose of determining the question of the limit of the jurisdiction between the Courts of the State and those of the United States

A late number of an Ohio Journal contains the following:—"A letter from Warren, Trumbull County, dated April 12th, says: 'The present times are the worst we have ever known in this country. Cows and cattle are dying by the hundred; six hundred head have died within the three adjoining counties this winter, for want of food. The weather is still dry and cold.'"

Gov. Reeder, of Kansas, was at Easton, Pa., April 30th, where he was honored with a public reception, and made a speech, in which he most emphatically endorsed even the strongest accounts of the foray of Missourians into Kansas, which have been published in the Northern papers.

Letters from Sydney state that a vessel, name unknown, had been wrecked on Bampton Shoals, and 500 Chinese passengers and a portion of the crew were lost. The master and 8 men only were saved. These made for Cape Dennis, in a boat, and on landing were attacked by the natives, and 5 of them killed.

The Calcutta correspondent of the London *Times* states that a great effort will be made to establish a direct communication between Australia and England, across the Isthmus of Panama, as soon as the completion of the Panama Railroad is known in those distant regions.

Since the siege began, five of the seven Admirals of the Russian fleet in Sevastopol have died or been killed. Admirals Korniloff, Istomine and Metlin, were killed, Pamfiloff and Nichimoff died of camp diseases.

The St. Louis *Intelligencer* contains an article expressing a full belief in the existence of abundant gold deposits at the source of the Arkansas River, concerning which we have of late had rumors.

A bill has been introduced in the Massachusetts Legislature providing that, in criminal trials, the prisoner's counsel shall have the closing argument, instead of the prosecuting attorney.

The official Report of the City Inspector gives 493 as a total number of deaths in New York during the past week, viz: 93 men, 78 women, 172 boys, and 150 girls.

In Indianapolis three of the Methodist churches are erecting spacious "parsonages"—not, as is too often the case, mere wigwams, located in some obscure, unfindable place, but architectural structures, and where people "live and move." These houses will be a complete saving of from $750 to $850 annually in rents, to the resources of the churches.

A reason is given in the Sandwich Island papers for the King's hostility to the United States, which looks plausible. He was once refused permission to sit at the supper table with the other guests on board of one of the boats on Long Island Sound, when on his way from New York to Boston.

William T. Minor, Know Nothing, was chosen Governor of Connecticut, May 3d, by the Legislature. His Message is decidedly favorable to the existing Prohibitory Liquor Law, and denunciatory of foreign immigration.

The affairs of the Government Stock Bank of Michigan prove to be in a worse condition than was at first supposed. Not only overissue, but fraud in other respects, is developed. The public will probably soon be furnished with the facts in the case.

The vast extent of the United States is illustrated by the fact that while the inhabitants of New Orleans are feasting on strawberries, people at the Northern extremity have snow three feet in depth in their forests.

The Rev. Dr. Sprague, of Albany, has received a present of one of the chairs in possession of Napoleon I. at St. Helena. It was sent him by Dr. Bertram, a resident of St. Helena.

The principal hotels in New York have raised the price of board to three dollars a day. The reason assigned for this is the passage of the new liquor law, which deprives the hotels of one chief source of profit.

Mr. S. D. Carpenter, editor of the *Patriot*, Madison, Wis., has lately sold a small portion of his patent right for his excellent pump, for the sum of $49,000. He will probably realize treble that sum for his remaining interest.

In the British House of Commons, on the 30th of March last, there were four petitions, each numerously signed, presented by different members, against the sale of intoxicating liquors on Sunday.

One of the largest distilleries in Scotland, the Leith distillery, where 1,200,000 gallons of whisky used annually to be made, has just been converted into a flour mill.

A terrible conflagration occurred in Boston, April 27th, on and near the Battery Wharf. A number of ships were wholly and partially destroyed. Loss, $500,000.

The N. Y. *Tribune* of April 28, says: We are glad to be able to announce, as we do in our report of the market, a decline of 25 cents per bbl. in Flour.

New York Markets—May 7, 1855.

Ashes—Pots $5 87; Pearls 6 18.

Floar and Meal—Flour 10 00 a 10 18 for common to good State, 10 12 a 10 31 for Michigan, Indiana, and Ohio, 10 75 a 12 75 for extra Genesee. Rye Flour 6 50 a 8 37. Corn Meal 5 25 for Jersey.

Grain—Wheat 2 45 a 2 50 for mixed Western, 2 70 a 2 75 for white Genesee. Rye 1 55 a 1 62. Barley 1 25 a 1 35. Oats 74 a 76c. for Jersey, 79 a 84c. for State and Western. Corn 1 09 a 1 13. White Beans 2 25 a 2 75.

Provisions—Pork 14 50 for new prime, 17 50 for new mess. Beef, 8 50 a 9 12 for country prime, 10 00 a 10 25 for country mess. Lard 10 a 11½c. Butter, 22 a 25c. for State, 27 a 29c. for Orange County. Cheese 9 a 12c.

Hay—1 12 a 1 25 per 100 lbs.

Lumber—15 00 a 16 00 for Spruce and Pine.

Potatoes—3 00 a 3 25 per barrel for Red and Pinkeyes, 3 75 a 4 25 for Mercers and Carters.

Seeds—Clover 10 a 10½c. Timothy 4 00 per bushel for reaped. Rough Flaxseed 1 85 a 1 90 for 56 lbs.

Tallow—11½c.

DIED,

In Hartsville, April 11, 1855, ARMINDA, daughter of Wm. M. and Sophronia Potter, aged two years, six months, and five days.

April 15th, 1855, of pneumonia, MARY BURDICK, daughter of William and Sophronia Vincent, aged 1 year, 7 months, 15 days.

At West Union, Fayette Co., Iowa, April 18th, of hasty consumption, HANNAH SINCLEAR, wife of Daniel A. Sinclear, and daughter of Remembrance and Eleanor Lippincott, aged 19 years and 4 days. She was a dutiful child to her parents. She bore her afflictions three months with Christian fortitude, without murmur, and when she was about to leave this world, she called her friends to her, bade them farewell, and exhorted them to prepare to meet her in heaven. Thus she left this vain world with a glorious hope of life and an immortality at God's right hand. R. L.

At New Market, N. J., on the 26th ult., MARY F. RANDOLPH, widow of Barzillai F. Randolph, aged 80 years. For near half a century she had been a member of the Seventh-day Baptist Church. As she neared the point of separation from this world, her faith in the Redeemer was unshaken, and among her last words were these, *"I love my Saviour, and feel his presence now;"* and thus she passed away.

At the residence of his son, in Christiana, Wis., April 11th, 1855, JOSEPH STILLMAN, in the 73d year of his age. The deceased had for a number of years been afflicted with consumption, but evinced no signs of immediate danger till Sabbath morning previous to his death, when he was taken violently ill. From that time his sufferings were beyond description, until Fourth-day evening, when death closed the scene. He embraced religion in early life, and united with the Seventh-day Baptist Church at Berlin, N. Y. Removing thence to Lincklaen, Chenango Co., he united with the church in that vicinity. In 1831, he moved to Sharon, Pa, where he joined the first Seventh-day Baptist Church of Genesee, of which he remained a worthy member until death. During his last hours, he expressed unshaken confidence in the goodness and mercy of God.

In Plainfield, N. Y., on the 1st of April, Mrs. DORCAS SAUNDERS, widow of Stephen Saunders, aged 76 years. Mrs. S. was a member of the 1st Seventh-day Baptist Church in Brookfield, She had been from early life a consistent and devoted disciple of her Redeemer, whose supporting presence she enjoyed in her sickness and death.

In Leonardsville, N. Y, May 5th, SARAH ELIZABETH, daughter of Daniel and Lucy Hardin, aged two years and eleven months.

LETTERS.

The Eastern Association.

THE Nineteenth Annual Meeting of the Seventh-day Baptist Eastern Association will be held with the Church at Pawcatuck, R. I., commencing on Fifth-day, May 24, 1855, at 10 o'clock A. M. Walter B. Gillett is appointed to preach the Introductory Discourse; James Bailey, alternate.

GEO. B. UTTER, Rec. Sec.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON.—Inland route, without change of cars or detention, carrying the Eastern Mail.

The new steamer PLYMOUTH ROCK, Capt. Joel Stone, and C. VANDERBILT, Capt. W. H. Frazee, in connection with the Stonington and Providence and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from pier No. 1 N. R., (first wharf above Battery-place,) at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the Mail Train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The C. VANDERBILT, from New York—Monday, Wednesday, and Friday From Stonington—Tuesday, Thursday, and Saturday.

The PLYMOUTH ROCK, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

N. B.—Passengers, on arrival of the steamers at Stonington, proceed immediately by Mail Train to Providence, Boston, Taunton, and New Bedford; or by Accommodation Train from Stonington at 7.30 A.M.

A Baggage Master accompanies the Steamer and Train through each way.

Through tickets on Mondays, Wednesdays, and Fridays, for Nantucket, Holmes' Hole, and Wood's Hole, via New Bedford, connecting with the new steamer Eagle Wing.

For passage, berths, state-rooms, or freight, application may be made at pier No. 2 North River, or at the office, No. 10 Battery-place.

Bruce's New York Type Foundry,

ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.

All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.

Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.

The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.

Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.
Or, NOYES SPICER, Indianapolis, Ind.

The very Book that every body has been Wanting.

The Book for the Parlor, the Book for the Fireside, the Book for the Professor, and the Book for the Non-Professor.

THE RELIGIOUS DENOMINATIONS OF THE UNITED STATES: Their History, Doctrine, Government, and Statistics; with a Preliminary Sketch of Judaism, Paganism, and Mohammedanism. By Rev. JOSEPH BELCHER, D. D., Honorary Member of the Historical Societies of Pennsylvania and Wisconsin, author of "William Carey, a Biography," etc., etc., and "Editor of the Complete Works of Andrew Fuller," "Works of Robert Hall," etc., etc. Large octavo, 1024 pages, handsomely embellished by nearly two hundred engravings.

This invaluable work is rapidly finding its way among all classes of the American people. The clear, comprehensive, and impartial manner in which the learned author treats each and every denomination, is winning for him golden opinions from the highest authorities in the land. The innumerable lively tales and anecdotes of ministers, churches, and laymen, which he introduces with the articles of faith and all important statistical information, give to the work a life, vigor, and spirit truly delightful. One cannot sit down to it without being convinced that his subject is in the hands of a master, nor rise but with kindlier and more liberal feelings towards the great brotherhood of Christians, under whatever name they bear. Ours is a great, growing, and glorious country, and every family, and every young man, throughout its length and breadth, should have a copy as a text book of all its denominations. Wherever known, it is read, and wherever read, admired. Look at the following from among the very many notices received:

It embodies a vast amount of information relative to the origin, history, and missionary operations of the different religious denominations in this country, presented in a remarkably interesting and attractive manner.—*Rev. John Dowling, D. D., Author of "The History of Romanism," "Judson Offering," etc.*

This is a large and beautiful volume, and will find a cordial welcome in every family.—*Philadelphia Christian Chronicle.*

So far as concerns independence of vision, there can be no question, as Dr. Belcher surveys each sect with the same dispassionate impartiality.—*Epis. Recorder.*

This massive volume embraces a vast fund of information.—*Presbyterian.*

The work is sold by agents, and will furnish a large amount of interesting and valuable information to the families into which it may be received.—*New York Recorder and Register.*

In the account given of the denominations, he is fair, and generally allows them to speak for themselves, as to their history and institutions.—*New York Christian Advocate and Journal.*

It contains a mass of interesting facts and statistics.—*Norton's Literary Gazette.*

Judging from the work, it would be difficult to say what are the religious views of the Editor, so fairly, so dispassionately, so charitably, has he treated each and every sect.—*Philadelphia City Item.*

We presume it will be a standard work in thousands of libraries.—*Littell's Living Age.*

Sold only by agents, to whom certain districts are allotted. For particulars address the publisher,

JOHN E. POTTER,
15 Sansom-st., Philadelphia.
Or, NOYES SPICER, Indianapolis, Ind.

Miscellaneous.

From the American Agriculturist.

Cultivation of Indian Corn.

Its Value to the American Farmer.—With the exception of the grasses, including meadows and pasturage, Indian corn is by far the most important of any single product of the United States, agricultural or manufactured. The production of this for 1850, was returned by the United States Official Reports, as exceeding 592,000,000 bushels. The growth of that year must have been largely exceded since. If we assume the quantity raised in a favorable season as 600,000,000 bushels, and estimate it at 40 cents per bushel—which we think below its average price—the value of one year's crop of grain will reach the enormous sum of $240,000,000.

The Extent of its Cultivation.—There is no one object of agricultural attention so widely diffused throughout the Union as Indian corn, none so generally adapted to every climate and soil; and none which, on the whole, is so useful, and subserves so great a variety of purposes. It grows successfully from the shores of Lake Superior to the Gulf of Mexico, and from the Atlantic to the Pacific shores. Its maximum of production is immediately north of the Ohio river, in the States of Ohio, Indiana and Illinois; although some hundred of miles either north or south of this latitude, it is perhaps, one of the most profitable crops that can occupy the attention of the farmer.

Its Adaptability to Soil and Climate is unequaled by any other plant. Although a considerable and prolonged degree of heat is required to mature Indian corn, the clear, dry summer atmosphere of America is, almost anywhere south of 47° north latitude, suited to ripening it. Its flexibility of character enables it speedily to conform to the new circumstances under which it may be placed. On removing the seed from the middle to the northern States, an immediate change takes place, which is increased by every subsequent move to a higher latitude. There we have the stalk diminished to a mere dwarf, not exceeding three to four and a half-feet in height; bearing one or two diminutive ears of rounded grains, deeply imbedded in the cob, and ripening in a little more than sixty days after planting. The same seed, when removed to our southern latitudes, shoot up with stalwart growth, frequently reaching from 15 to 18 feet, and bearing a heavy ear, of large diameter, and loaded with long indented kernels, but slightly attached to the cob.

Its Uses.—Corn has formed no inconsiderable portion of the food of men and animals, from the first settlement of America to the present time. No one article of human food has been made to assume so great a variety of combinations, nor has been presented in so many and so attractive dishes, in every one of which it is highly relishable and perfectly wholesome. The aborigines justly celebrated their green corn feasts, typifying as they do the most important and cherished of their earthly gifts. At a later period of the year, with a small pouch of the ripened, roasted grains, they pursue their enterprizes of hunting and of war, for hundreds of miles through the trackless wilderness, with no other sustenance.

Every domestic animal and fowl is fond of this grain, and eat it with equal voracity, whether green or ripened, raw or cooked; and we much doubt if there is any other food that will produce, when fed to a man or animals, a greater amount of flesh and fat, at the same cost of raising, than corn.

Indian corn is made to subserve other purposes than those of food. It is extensively manufactured into starch; it has sometimes been converted into oil, and molasses; and from no other article is drawn a tithe of the alcohol consumed in the United States, which is furnished by Indian corn. The detestable use that is made of the greater portion of this last product, evinces the ingenuity of man, in perverting to the vilest purposes, the best gifts of a benignant Providence.

As Forage.—Indian corn has of late years become an important element. We question if any of the grasses or clovers or vetches, can be made to yield a more abundant or profitable crop of green or dried food. The growth is certain, when judiciously sown, its yield large, and the stalks are nutritious and greedily devoured by all the herbivorous animals.

The Soil for Indian Corn should always be friable, rich, and well drained. It is not essential, however, whether it be a light sand or a tolerably heavy clay, if the former be sufficiently adhesive, and the latter porous or thoroughly underdrained. A dry soil is required to make an early and sure growth, and a strong soil is necessary for a heavy growth.

Preparation of the Soil.—Deep plowing is the best safeguard against drouth, and is essential to a large corn crop. If the soil is not deep enough to justify deep plowing one must be contented with a smaller yield, unless you add largely of appropriate manures. A rich sod or growth of clover, when turned under, furnishes an excellent food for the growth of Indian corn. Whatever manures are used, should be plowed in, and thoroughly incorporated with the soil. By distributing them through it, the roots have a steady support during the entire growth of the corn; when, if placed in the hill, they would give an early and undue growth of stalk, which would not be sustained later in the season, and thus leave the grain only partially filled and shrunken. If the soil be stiff or cloddy, the harrow should be used till the ground is thoroughly mellow; and if this proves inefficient, bring in the heavy field-roller to pulverize the intractable clods.

Manures Best Suited to Corn.—Scarcely any fertilizer comes amiss to the corn-field. Whatever its origin, whether vegetable, animal or mineral, it is generally acceptable to corn; no matter if fresh or decomposed, mixed or simple, all is greedily devoured by this voracious feeder. You can hardly put on too much manure for corn, nor is there any crop that better repays its application.

Kinds of Seeds.—There are numerous varieties of corn in use in every section of the country; and these varieties are gradually changing by the different modes of cultivation and selection, from the change of seasons, and other circumstances by which they may be surrounded. The best seed is always that which is found to yield with the greatest abundance and certainty, on any given field. There is more of oil in some as in the rice and pop corn; a greater proportion of gluten in others. But these differences in their relative composition are nearly immaterial for the general purposes of feeding, and either may be most appropriately raised, according as it is found to yield the greatest quantity of shelled pounds of grain per acre.

Weight of Seed.—Regard should be paid to the weight per bushel, as there is sometimes a difference of 15 or 20 per cent. in the weight of equal bulks. The standard weight is 56 pounds; but most sound, northern corn exceeds this, and in some instances has been known to weigh 64 pounds per bushel; while most of southern falls below 54 pounds. The season has much to do with weight, a very dry summer, like the last, giving a lighter grain than ordinary seasons; while a wet or cold summer gives a kernel that shrinks much more in curing. We purchased a large quantity of choice northern white flint corn this winter, and found that it fell below the legal standard of weight, when, heretofore, the same kind of corn we have had from the same fields, for several previous years, has invariably exceeded the standard weight.

Selecting Seed.—Corn is greatly improved from year to year, by carefully selecting such ears as are longest, soundest, best filled, and most abundant on a single stalk. These should be carefully set apart before the stalks are cut, and allowed to ripen fully while standing in the field, without cutting the stalk either at the top or bottom, or trimming the leaves. The only justification for deviating from this rule is, when there is danger of frost; then the whole stalk should be cut at the root, and stooked out till properly cured. In planting, the small end of the ear should be rejected for seed. Some very careful farmers also throw by the irregular kernels near the butt, but this we deem superfluous nicety. When kept dry, cool and free from air, the vitality of the seed, like wheat, may be deemed almost illimitable.

Preparing the Seed.—Many soak the seed in a solution of saltpetre for 24 hours before planting; others use urine, weak ley, brine, &c. A good steep is ½ lb. of saltpetre, 2 qts. of salt, 3 qts. of soft soap, added to 3 gallons of rain water. After soaking at blood-heat for 15 to 40 hours, roll in plaster and plant before the seed becomes dry. But when thus prepared, care must be used to deposit it in moist ground or the incipient germ, which has started by the soaking, will be arrested and killed. While some have perceived no benefit from this practice, others have found great advantage in the more early and rapid growth of the plant. It has this certain benefit where crows and squirrels abound, it prevents the destruction of the seed by these marauders, as the taste of three or four of these pickled kernels suffices to drive them from the seed. Another pretty efficient preventive to these depredations, is to pour a pint of boiling tar diluted in water over a bushel of seed corn placed in a barrel, stirring the corn very briskly till every grain becomes coated with the tar.

Time of Planting.—This must depend on the season, the soil, and the climate. When danger from nipping frost is no longer to be anticipated, and the ground is dry and warm, corn may be planted. The most economical way of doing this, is by the seed-planter. This is drawn by a horse and furrows the land, drops the seed in any required quantity and at regular distances, and covers and rolls it at a single operation, getting over eight to twelve acres per day, according to the distance of the rows, and all is accomplished much more evenly than is usually done by hand. The use of this labor-saving implement, does not leave the hills in such accurate squares, as when the ground is furrows at right angles, and the seed dropped by hand. But this is not of material consequence, when the harrow is used in subsequent cultivation. If the ground is light, and especially, if either sandy or abounding in clods, the field-roller should be used to level and compact the surface.

Distance of Planting.—A usual distance for northern or smaller corn is, in squares, of three to four feet, with three or four stalks in each hill. Light soils and larger corn require a greater distance.

Cultivating.—We have known a large field, and that not the best corn-land, to produce at the rate of seventy bushels per acre without the use of a hoe. Most people defer the cultivation too long. This gives the weeds a start, and requires much more labor to exptirpate them than if commenced earlier. By starting the harrow lengthwise of the rows as soon as the plants show themselves above ground, the weeds will be pretty effectually eradicated, the soil kept loose, and the plants will grow apace. There should be sufficient grain planted, that you can afford to lose some plants by the harrow-teeth. The remaining ones, if somewhat disturbed in their nest, will thrive all the better for this rough usage. The cultivator may be subsequently and frequently used between the rows; and if weeds get into the hills, the hand may be used for their removal. No plowing is necessary, unless the plants have been so long neglected, as to have permitted the weeds so large a growth as to require turning under. We believe in one deep and thorough plowing, with the sward or stubble plow, to be followed by the subsoil plow if necessary. Subsequent to this, the only stirring of the earth is required at the surface to keep it light and rough, so as to radiate and imbibe heat readily, and as a necessary consequence, to absorb deeply of atmospheric moisture. The plow, or deeply-working with any instrument, after the roots have struck out—which is very early in the life of plants—checks the growth, and is a positive injury. We are no advocates for hilling corn, unless in a stiff and moist soil; all sandy and light land should be cultivated entirely level. When the corn begins to shade the ground so as to check the growth of weeds, it may be safely left to itself.

Topping Corn was once almost universally in vogue, but is now generally discontinued. It is much better to cut it up by the roots; bind and place it in stacks when the corn has become glazed, or there is any danger of frost, or the stalks are required for fodder.

Preserving the Stalks.—Many leave the stalks standing in the field and turn their cattle upon them to eat and trample in the mud as they choose. This waste can only be justified where there is more than can be eaten with economical management, and the labor of housing and preparing is greater than their value when properly fed. Nowhere at the north can this slovenly method be justified. Wherever hay commands six or eight dollars per tun, cornstalks are worth taking care of, and this has been the case almost everywhere in the United States during the last year or two. The stalks should be left in stooks till thoroughly dried, (and they require a great deal of drying, which is slowly accomplished at the season of the year when they are cured,) then placed securely in stacks or under sheds. Stacks should be made on a foundation of poles or timbers, and with large poles in the center to continue to the top. This will insure a current of air that effectually prevents injury, though the stalks may be put up somewhat uncured. Long exposure to the elements, wastes the nutritive and more relishable portions of the stalk, and when thus neglected, less will be eaten and this will not yield as much nutriment.

Using Stalks for Fodder.—They are generally fed by throwing on the ground uncut, but this is a wasteful practice, and it is seldom that they are half consumed unless the cattle are kept at the point of starvation. By cutting and crushing into small pieces with some of the best stalk-cutters, then moistened and sprinkled with chaff, meal, &c., all the stalks, leaves and tops will be greedily eaten; and thus fed they will keep anything but hard-working animals in excellent condition. The most observing northern farmers estimate the value of cornstalks for fodder, to be greater than the entire cost of raising the crop, thus leaving the grain a clear profit.

For Soiling, Indian corn has become an important article of cultivation of late years. We are confident it will soon become an indispensable staple, where much summer and winter forage is required. The growth is rapid and certain, the yield enormous, and the stalks and leaves are unsurpassed for producing a large flow of rich milk. It is equally useful when fed to all animals, as a substitute for clover or the grasses. When these fail, from a dry season or other cause, a crop of cornstalks is invaluable. The corn may be sown in drills, at the rate of one and a half or two bushels of seed per acre in a rich soil, throughout the season of vegetation. Two crops may be grown on the same field when early sown. Keep the soil loose, and the weeds down till the young plants get a start, when they will take care of themselves. The stalks may be cut and fed green, or cured and put by for winter feeding.

An Armistice at Sebastopol.

Correspondence of the London Times.

Before Sebastopol, Monday, March 26, 1855.

Early on Saturday morning a flag of truce was sent in by the Allies, with a proposition to the Russians for an armistice to bury the dead, which were lying in numbers—five or six Russians to every Frenchman and Englishman—in front of the Round Tower and Mamelon, and, after some delay, an answer in the affirmative was returned, and it was arranged that two hours should be granted for collecting and carrying away the dead on both sides. The news spread through the camps, and the races, which the Chasseurs d'Afrique had got up in excellent style, were much shorn of their attractions by the opportunity afforded to us of meeting our enemies on neutral ground. All the ravines leading to the front trenches were crowded with officers hastening on horse and foot down to the scene of so much hard fighting. The crests of the hills and the slopes in front of the batteries were covered with men, and they dotted the deadly interval between the batteries, which had been before occupied alone by thousands of tuns of shot and fragments of shell discharged by French and English and Russians during this protracted siege. The day was beautifully bright and warm. White flags waved gently in the faint spring-breeze above the embrasures of our batteries, and from the Round Tower and Mamelon. Not a soul had been visible in front of the lines an instant before the emblems of peace were run up to the flagstaffs, and a sullen gun from the Mamelon, and a burst of smoke from Gordon's batteries had but a short time previously heralded the armistice. The instant the flags were hoisted, friend and foe swarmed out of the embrasures. The Riflemen of the Allies and of the enemy rose from their lairs in the rifle pits and sauntered toward each other to behold their grim handiwork. The whole of the space between the Russian lines and our own was filled with groups of unarmed soldiery. Passing down by the Middle Picket Ravine, which is now occupied by the French, and which runs down in front of the Light Division camp I came out upon the advanced French trench, within a few hundred yards of the Mamelon. The sight was strange beyond description. French, English, and Russian officers were walking about saluting each other courteously as they passed, and occasionally entering into conversation, and a constant interchange of little civilities, such as offering and receiving cigar-lights, was going on in each little group. Some of the Russian officers were evidently men of high rank and breeding. Their polished manners contrasted remarkably with their plain, and rather coarse clothing. They wore, with few exceptions, the invariable long, gray coat over their uniforms. The French officers were all *en grande tenue*, and offered a striking contrast to many of our own officers, who were dressed *à la Balaklava*, and wore uncouth head-dresses, cat-skin coats, and nondescript paletots. Many of the Russians looked remarkably like English gentlemen in "style" of face and bearing. One tall, fine-looking old man, with a long gray beard and strangely shaped cap was pointed out to us as Hetman of the Cossacks in the Crimea, but it did not appear as if there were many men of very high military rank present. The Russians were rather grave and reserved, but they seemed to fraternize with the French better than with ourselves, and the men certainly got on better with our Allies than with the few privates of our own regiments who were down toward the front. But while all this civility was going on we were walking among the dead, over blood-stained ground, covered with evidences of a recent fight. Broken muskets, bayonets, cartouch-boxes, caps, fragments of clothing, straps and belts, pieces of shell little pools of clotted blood, shot—round and grape—shattered gabions and sandbags, were visible around us on every side, and through the midst of the crowd stalked a solemn procession of soldiers bearing their departed comrades to their long home. I counted 77 litters borne past me in 15 minutes—each filled with a dead enemy. The contortions of the slain were horrible, and recalled the memories of the fields of Alma and Inkermann. Some few French were lying far in advance toward the Mamelon and Round Tower among the gabions belonging to the French advanced trenches, which the Russians had broken down. They had evidently been slain in pursuit of the enemy. The Russians appeared to treat their dead with great respect. The soldiers I saw were white-faced and seemed ill-fed, though many of them had powerful frames, square shoulders, and broad chests. All their dead who fell within and near our lines were stripped of boots and stockings. The cleanliness of their feet, and in most cases, of their coarse linen shirts, was remarkable. Several sailors of the "equipages" of the fleet of Sebastopol were killed in the attack. They were generally muscular, fine, stout fellows, with rough, soldierly faces. The Russians carried off all the dead which lay outside our lines to the town, passing down between the Mamelon and the Round Tower. In the midst of all this stern evidence of war, a certain amount of lively conversation began to spring up, in which the Russian officers indulged in a little badinage. Some of them asked our officers "when we were coming in to take the place," others "when we thought of going away?" Some congratulated us upon the excellent opportunity we had of getting a good look at Sebastopol, as the chance of a nearer view, except on similar occasions, was not, in their opinion very probable. One officer asked a private confidentially in English how many men we sent into the trenches? "Begorra, only 7,000 a night, and a wake covering party of 10,000," was the ready reply. The officer laughed and turned away. At one time a Russian with a litter stopped by a dead body, and put it into the litter. He looked round for a comrade to help him. A Zouave at once advanced with much grace and lifted it, to the infinite amusement of the bystanders; but the joke was not long-lived, as a Russian brusquely came up and helped to carry off his dead comrade. In the town we could see large bodies of soldiery in the streets, assembled at the corners and in the public places. Probably they were ordered out to make a show of their strength. The Russians denied that Prince Menchikoff was dead, but they admitted that Admiral Isturmin was killed. He was one of the principal officers engaged in the destruction of the Turkish fleet at Sinope, and the Czar had rewarded him by giving him an order of St. George, of higher distinction than that worn by Prince Menchikoff, and of a class which is generally accorded only to successful Generals who have conducted an army and closed a triumphant campaign. A distinguished looking man, who complained that he was likely to be deprived of his cruise in his yacht this year by the war, was pointed out to us as Prince Bariatinski. Owing to some misunderstanding or other, a little fusilade began among the riflemen on the left during the armistice and disturbed our attention for a moment, but it was soon terminated. Gen. Bosquet and several officers of rank of the allied army visited the trenches during the armistice, and staff officers were present on both sides to see that the men did not go out of bounds. The armistice was over about 3 o'clock. Scarcely had the white flag disappeared behind the parapet of the Mamelon before a round shot from the sailors' battery went slap through one of the embrasures of the Russian work, and dashed up a great pillar of earth inside. The Russians at once replied, and the noise of cannon soon reëchoed through the ravines. It was curious to observe the masses of shot and shell in the ravines which had been fired by the enemy at our men on their way to and from the trenches. It was impossible for them to see us, but they poured their shot and shell right into the path from the Round Tower, the Mamelon, and the ships.

Turning out Stock Early

Most farmers greatly injure their pastures by turning their stock out upon them too early. They ought to wait till the ground has become so firm and compact that the cattle will not poach it; and the grass should be sufficiently high to give them a good bite, without being obliged to gnaw down to the roots. Woodland pastures are the only exception to this rule. On these it is no matter how early stock is turned. The grass here is not so valuable as on open lands, and the leaves still upon the ground of the previous year's forest growth, are generally sufficient to prevent its being poached; besides it is necessary to turn out early in such pastures, in order to give the stock the benefit of the browse.

When the early grass is eaten off too soon, it leaves the roots exposed to spring frosts; and if dry weather follows, the pasture will scarcely recover all summer. But let the grass get a good thick start, and then if not over stocked, it will keep growing till late in autumn, unless the season happens to be very dry.

Sufficient attention is not paid to our pastures. They ought to be harrowed every spring with a fine sharp-tooth harrow, all the manure droppings beat fine, grass seed sown over all bare or thin spots. After this a heavy roller may advantageously follow.

Spread salt over weedy or bushy places, after cutting them off, and the stock after this will gnaw the herbage so closely as to prevent the future growth of the weeds, &c. The following year such spots should be well harrowed, and grass seed sown thickly over them. It would be well to keep the stock off of them until the grass has well set, when they may be turned on again.

Good pastures pay as large an interest as meadow or mowing lands, and equally good care should be taken of them.

Mowing lands should never be pastured in the spring; the hay crop suffers sadly if they are. [Am. Agriculturist.

Presence of Mind.

The San Francisco *Herald* narrates the following incident of the explosion of the steamboat Jenny Lind:—

"We have said not a man stood; but there was one alone escaped unhurt. This was Mr. James Tobin, late of the firm of Tobin & Duncan. He was standing near the hatchway, leading to the cabin, and talking to Mr. Shelton, when he felt the tremor. Familiar with such accidents on the Mississippi River, and knowing what it portended even before he heard the explosion, and simultaneously with the gushing up of the steam, with extraordinary presence of mind, he jerked apart the fastening around his neck of a heavy cloak he had on, threw it entirely over his head, wrapped it and his hands in the folds, and prostrated himself to the deck. The furious volume of steam rushed over and around him, but he lay with his hands clasped over his mouth and held his breath. Even through the thick folds of his cloak, low down on the deck, half a minute after the explosion, the air was painfully hot. In a little more than a minute, he raised his cloak to see if he could breathe—found it still too hot, and covered himself up again. In two minutes, he uncovered, completely unhurt; he had not even been singed. His cloak was burnt, and almost dropped to pieces Beside him lay poor Shelton, to whom he had just been talking, fearfully scalded, externally and internally; and now, poor fellow, dying. He was the only man of the whole crowd who rose up. His escape under Providence is due to his presence of mind alone."

From the Portland Transcript.

Perseverance.

We do not know who is the author of this sweet little poem, containing so excellent a moral, but any one might not only be willing to have written it, but really proud to claim its paternity. It is full of simplicity, and illustrates a noble truth. We have seen it several times floating, an unregarded waif, through columns where the beautiful and indifferent mingle indiscriminately; and anything is considered poetry that jingles in consecutive or alternate lines, and every line of which commenced with a capital letter. We rescue it from any such oblivion, even at the risk of repeating a twice told tale. The moral is one that should be treasured, and it could not be illustrated more faithfully, or more sweetly:

A swallow in the spring
Came to our granary, and 'neath the eaves
Essayed to make a nest, and there did bring
Wet mud, and straw, and leaves.

Day after day she toiled
With patient art, but ere her work was crown'd
Some sad mishap the tiny fabric spoiled,
And dashed it to the ground.

She found the ruin wrought;
But not cast down, forth from the place she flew,
And with her mate fresh earth and grasses brought,
And built her nest anew.

But scarcely had she placed
The last soft feather on its ample floor,
When wicked hand or chance again laid waste,
And wrought the ruin o'er.

But still her heart she kept,
And toiled again—and last night, hearing calls,
I looked, and lo! three little swallows slept
Within its earth-made walls.

What truth is here, oh! man;
Hath hope been smitten in its early dawn?
Have clouds o'ercast thy purpose, trust, or plan?
HAVE FAITH AND STRUGGLE ON!

Growth of Western Towns.—The rapid growth of Western towns under the influence of Railroad facilities, has seldom been more markedly exhibited than in the case of West Urbana, a village in Champaigne County, 129 miles south of Chicago, on the Chicago Branch of the Illinois Central Railroad. One year ago this place contained but one building, a freight-house belonging to the Company. Eight months ago there were five houses. Now, according to a letter dated April 4, there are at least one hundred houses, and four or five hundred inhabitants, and it was estimated that nearly three hundred other buildings, of all kinds, were being erected and to be erected during the spring. Included in the buildings are two large hotels, six stores, a large furniture wareroom, four or five lumber-yards, and a large warehouse for forwarding purposes. A Presbyterian Church and large school house are nearly finished, the school-house costing some $4,000. The village is incorporated, and a Post-Office established. And all this has been accomplished in eight months.

Failure of the Ericsson Invention.—A correspondent of the Boston *Journal* writes from this city as follows:—

"The Ericsson experiment is at an end. The invention is conceded to be a failure, and poor Ericsson is a ruined man. He has spent all his fortune in building his caloric ship and in the experiments he has made on the vessel. He has done more, he has spent all his wife's fortune, which was great, and she, too, is beggared. But the worst of all is, that it has led to such recrimination and alienation that they have separated, never to be united again, perhaps. Had he been successful, his name would have been enrolled with that of Columbus, Newton, Fulton, and other men of illustrious renown. But he has failed; he has lost his all; he has introduced ruin into a once loving and happy home; and the world coldly looks on, and says, 'I told you so.'"

Painting Debtors.—A Chinaman in Sacramento street, San Francisco, was observed with one side of his face painted sky-blue, presenting a most ludicrous and grotesque appearance in contrast with the dirty yellow of the other side. A gentleman passing, stopped him, and asked the reason of his painting himself so singularly. The Chinaman, in broken English, told him it had been done by a creditor whom he was unable to pay. When asked why he did not wash it off, he replied, "So long no payee money, so long no washee off," and passed on, apparently resigned to the punishment the custom of his country imposed upon him. If proprietors of newspapers should resort to this practice, what a spectacle would their delinquent subscribers present!

Wooden Clocks Statistics.—Connecticut is "the land of wooden clocks," from the fact that she is more extensively engaged in the manufacture of clocks than any other State in the country. She has $1,000,000 invested, employs 1279 workmen, and manufactures 794,000 clocks each year. Bristol has 14 factories, employs 440 hands, and produces 201,000 finished clocks annually; Plymouth has 3 factories, 175 hands, and manufactures 70,000 clocks; Ansonia has 2 factories, 140 operatives, and makes 102,000 clocks; Winsted manufactures 30,000 clocks, has 1 factory, and employs 40 hands; while Southampton, with 2 factories and 45 hands, makes 40,000; and New Haven, with 3 factories, and 405 hands, annually produces 374,000 clocks. One of the New Haven factories is owned by Chauncy Jerome, late Mayor, and pays out nearly $10,000 per month in wages.

Scandal.—A disposition to scandal is a compound of malignity and simulation. It never urges an opinion with the bold consciousness of truth, but deals in a monotonous jargon of half-sentences, conveying its ambiguities by emphasis. Its propagators lay a mighty stress upon the "May be's," and "I'll say no more," "Let us hope not," "They do say," and "Time will show;" thus confirming the evil they affect to deplore, more under the semblance of pity and prudential caution, than they possibly could in any shape, short of demonstration. Observe the greatest reserve with persons of this description; they are the hyenas of society, perpetually prowling over reputation, which is their prey; lamenting, and at the same time enjoying, the ruin they create. [Dr. Kitto.

There are 10,000 street gas lamps in New York, which burn 30,000 feet of gas per hour, or 430,000 feet per night. The cost of one night's burning is $14,005.

New York and Erie Railroad.

On and after Monday, Nov. 20, and until further further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Buffalo Express at 7 A. M. for Buffalo.

Dunkirk Express at 7 A. M. for Dunkirk.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Rockland Passenger at 2.30 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Otisville and intermediate stations.

Night Express at 5 P. M. for Dunkirk and Buffalo.

Emigrant at 5 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5 P. M.

These Express Trains connect at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland Cincinnati, Toledo, Detroit, Chicago, &c.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

Did space permit, we could give many hundred certificates from all parts where the Pills have been used, but evidence even more convincing than the experience of eminent public men, is found in their effects upon trial.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass. Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

FOOTPRINTS OF JEHOVAH IN THE AGES OF REVELATION—NO. 9.

The Weekly Division of Time a Divine Appointment.

Nothing can be more apparent than this: "The cosmogony of Moses is designed to subserve a moral or religious purpose." He who disregards this consideration, and treats it only as a historical or philosophical treatise, is sure to err. The beginning of creation, even choas itself, is ascribed to God's almighty power; and every step of the work, as related by him, is plainly marked with design to prepare the world for the residence of intellectual and accountable creatures. The alternations of day and night, and the special notation of time on each successive evening until a full week is completed, could have no bearing whatever upon the physical laws by which creation is governed. No one indulges so absurd a theory as to suppose that the diurnal and hebdomadal division of time was made to subserve the purposes of geological, vegetable, or animal formations.

We may admire the variety and beauty of the alternating seasons and their changing temperatures, and the adaptation of animal and vegetable functions to their influences, but these functions and influences are as independent of the divisions of time, as their forms are of the science of geometry. Squares and circles, triangles and parallelograms, trapeziums, and polygons, existed before the Egyptians practiced mensuration, and would have continued if Archimides had never written. And nature is equally unaffected in the tropics, the temperate and the frigid zones, by the division of time into days and weeks. The geological theory of making the Mosaic account tally with seven thousand years of anteadamite formations, is an infidel invention to get rid of the moral claims of the Sabbath of Jehovah. No geologist that I have known of, pretends to seven, or to six, distinct geological formations, answering to the six days preädamite existence of the world. Nothing in the seasons of the year, nothing in the laws of nature, answers to the weekly division of time; and yet it is indisputably as old as the annals of the world, and continuous with the successive and enlarging history of man. No age of the world can be found without it; its revelation, therefore, in the oldest annals in existence, is proof of its primitive existence, and the Mosaic account of its origin bears the plain foot-prints of Jehovah, the divine founder thereof. The institution of the Sabbath stands the monumental evidence of the truth of Mosaic cosmogony, against all the assaults of scepticism and science. It is the first great connecting link between creation and redemption; on its claims, as the oldest and most venerable institution given to man, rests the whole fabric of the absolute government of God over man. Abandon it, and man is every where, either the creature of superstition, or a speculating theorist, afloat over all the voids of a bewildering imagination. Receive it, and the history of the world and of man is luminous with the teachings of Jehovah, and hopeful with the beamings of divine condescension and love. Its effect is alike in the governments and religions of the world. Without the Sabbath, man deifies his fellow man, and falls down a craven serf at the foot of a human despot, or talks of giving up original rights for the advantages of human association, and then labors to revolutionize all order to the changing phases of ambition and lust. Receive the Sabbath, and you receive the revelations of the Creator; *and in that man has no original rights!* Start on your feet, readers, and look around. Where is the creature that is above or independent of his Creator? Or did the Creator fling the world out at random, as the school-boy starts the snow-ball down hill, to crumble and dissolve, or accumulate force, as it may happen? Nay verily, in wisdom hath he made all things, and man at the head of this lower world, that he may obey and honor the God that made him and it; and with the history of this holy revelation is the history of divine teachings, requiring every where the universal homage of man to his Creator. Neither possessions, nor power, nor science, nor religion, are original with man; all are of God. The use of the earth, the dominion of the lower creation, as fishes, fowls, and animals, and the use of the fruits that grow, are restricted, regulated GRANTS FROM GOD TO MAN; and his time is alloted to him in the same manner; revelation makes him every where accountable. Nature in its creation was adapted to this end, and instruction was given to complete the design. The vast variety and beauty and order of the works of God are suited to the enlargement of intellect, but the first development of it is always by intelligent tuition. Without the sign manual instruction, what were the deaf and dumb above idiocy? Without an instructor, what would Adam have been above the animal creation around him? God was his instructor. Egypt is frequently called the cradle of the arts and sciences. Nay! Armenia more probably. At least, it was in Eden. Egypt may now have the oldest monuments of human art, but the cradle of the sciences was in Eden. There language was first given. "GOD SAID, *Let there be light.* God CALLED the light day, and the darkness he CALLED NIGHT. And the evening and the morning were the *first* day." And thus this revelation proceeds to the notation and enumeration of seven days, and the works thereof. This is sometimes called the golden number, and sometimes the sacred number, among ancient nations. Why? Because the first given, and divinely given. In the cosmogony of Moses there is the first vocabulary, the first enumeration, the first grants, the first prohibitions, the first law, the first institutions, the first sanctifications, and the first warnings. Here, then, is the fountain head of history, language, numeration, and natural and moral science, originating in a divine plan, and developed in divine teaching. The plan and the narrative seem to me equally designed and adapted to make the great moral purpose of Jehovah apparent. Each successive day is marked by distinct creations; and the close of each day is noted by a special notation; at the close of the sixth day creation is pronounced complete; and yet the day following is added to the series, with the same distinctness in occupancy and enumeration, but with a specialty above all the others, as an integral part of an arrangement for a great moral purpose. It is thus that the Sabbath stands a great monumental evidence of the divine institution of religion, and the truth of that revelation which gives us the history of creation and providence by the hand of Jehovah. Is it not apparent, that this is what Jehovah means when he says to Israel, "It is a sign between me and you, throughout your generations, that ye may know that I AM THE LORD that doth sanctify you?" Was it not equally so to Adam, and to as many of his posterity as observe and keep it?

S. D.

THE ANNIVERSARIES.

American Seamen's Friend Society.

The 27th Anniversary of this Society was held on May 7, in the Broadway Tabernacle. Addresses were delivered by Rev. Mr. Jones, Rev. O. G. Hedstrom, Rev. A. Peters, Rev. J. H. Towne, Capt. Hudson of the U. S. Navy, and Rev. B. J. Bettleheim. The following abstract of the forthcoming Annual Report was read:—

The operations of the American Seamen's Friend Society are both foreign and domestic. Its chaplains and missionaries are stationed in the Sandwich Islands, New Granada, Chili, the West Indies, France, Denmark, Sweden, New Brunswick, and the Bay of Mobile; besides, its concerted action with auxiliary and local societies at home and abroad, bears extensively on the social and moral improvement of seamen.

The number of boarders at its Sailors' Home in this City the past year has been 3,800, and during the thirteen years of its existence 43,856. Of the last year's boarders 98 were shipwrecked and destitute, who received aid in board and clothing to the amount of $389, besides various articles for their comfort, whose pecuniary value is not estimated in this statement. This Institution, under the Superintendence of Capt. Tracy, has never been more useful than at present.

The Colored Sailors' Home, also under the direction of the Society, Mr. Albro Lyon, Superintendent, continues to be very useful. The number of its boarders, from Sept. 22, 1851, to Feb. 1, 1855, is 1,573; of whom 161 were shipwrecked and destitute, and for whose relief, in addition to former aid, the Society has recently appropriated $400.

The receipts of the Society for the year ending May 1, without including large amounts raised and expended by auxiliaries, have been $22,845, and the expenditures $22,816.

The Report alludes to the allegation considered and answered one year ago, that there has been no improvement among seamen, and assigns four causes for this mistaken impression:

1. Within the last five years, some 1,500 energetic seamen have left American vessels for the gold mines in Australia, and probably twice that number to dig gold in California.

2. Many excellent Northern seamen, Swedes, Danes, &c., who served in American vessels for higher wages than they could get elsewhere, have been drawn off to the Eastern war.

3. Many of the best men on the sea have lately left it for a home on the land; prompted, some by better prospects of a pecuniary livelihood, and some that they may enjoy social and religious blessings which they can not have on the sea.

4. Combined with these causes producing a great scarcity of seamen, the tunnage of American vessels has increased 75 per cent. within the last ten years, and called for a corresponding increase of sailors; so that in order to man the vessels, there has been a necessity for shipping many incompetent, worthless, and wicked specimens of humanity.

But these causes, so far from staying the progress of improvement among seamen, are only the eddies and counter-currents which abrade the banks, while the river rolls on to make glad the city of God.

After giving a detailed account of labors for the benefit of seamen, abroad and at home; speaking of libraries and good books for them; of their Magazine; of their Banks for Savings—one of which, at No. 78 Wall-st., has now deposited to their credit two and a quarter millions of dollars, and has received from seagoing men exclusively, for the last ten months an average of $28,000 per month; of the provision for the burial of their dead; of a naval and mercantile apprenticeship system, and of the inland sailors, the Report presents a summary review of the year. From this, two things are increasingly obvious:

1. That labor for the elevation and salvation of seamen is eminently a work of faith.

2. That it is a work of most encouraging fruits.

These are exhibited in the following threefold aspects, viz:

1. In their improved temperate and provident habits.

First in the world in the tunnage of her mercantile marine, America has been first to set the example of abolishing therefrom the daily spirit rations. On shore, comparatively few drunken sailors are now seen, where scores staggered a few years ago. And as to their earnings, an appeal is made to their comfortable clothing; to their comforted friends at home; to the large numbers who have signed and keep the Temperance Pledge—The Marine Temperance Society of New York now numbers nearly 29,000 members—and to the large amount deposited by them in Banks for Savings, to determine whether they are squandered as formerly.

Blessings—blessings untold and lasting are anticipated for seamen visiting this port, from the faithful execution of the Prohibitory Liquor Law.

2. In their increased desire to procure and distribute Bibles and good books.

The literature of the sea is improving, as well as its men; and through them evangelical truth is carried into countries inaccessible in any other way.

But most of all its improvements seen—

3. In the frequency and number of seamen converted to God.

Under each of these aspects the Report contains facts and statements demonstrating the progress and hopefulness of this work.

American and Foreign Christian Union.

This organization is engaged for the most part in labors to benefit Roman Catholics. Its receipts last year were $75,805 57, and its expenses fell short of that sum by $241 88.

In the department of Missions the Board have employed, with much encouragement, laborers in thirteen States—among German, French, Spanish, Polish, Italian and Irish residents, native or immigrant. For details they refer to the Annual Report itself.

They have also instituted a plan of popular lectures for the benefit of Romanists, and have been much encouraged in the effort. They also invited a number of distinguished ministers of the gospel to deliver a series of sermons in the city of New York, during the last winter, on topics more or less intimately connected with the doctrines and practices of the Romish Church. Ten able lectures or discourses were delivered; and the Board hope to be able to continue the series next winter.

The Romish Church in this country at the commencement of 1855 may be stated to embrace 7 Archbishops, 33 Bishops, 1,704 Priests, 1,824 Churches, 21 incorporated and 5 unincorporated Colleges, (having 2,662 students,) 31 Theological Seminaries, (with 500 students,) and 117 Female Academies. The entire nominal Papal population can hardly be less than 3,250,000 at this time.

The Society has aided the French Canadian Society to the amount of $1,000 during the year, which sum supported six laborers in the field.

It has one Missionary in Hayti and two in South America.

In Ireland the Board have three Missionaries, including the Rev. Alexander King; a part of the year they had five.

In Sweden the excellent Auhfelt and Rosenius continue to labor with much success for the Society

In Belgium the Society has now four missionaries.

In France the Board give to the "Evangelical" and "Central Protestant" Societies the means of employing eighteen or twenty missionaries of various classes.

In Piedmont the Table of the Waldenses employ five missionary laborers at the expense of the Society.

The Rev. Edward D. G. Prime has taken the place, as chaplain, of the Rev. Charles W. Baird, whose health compelled him to return to this country.

The Rev. Mr. Dudas, a converted Hungarian priest, was employed last year among his countrymen and other Romanists in Constantinople and its vicinity, at the expense of the Society.

The entire number of missionaries of all classes supported by the Society last year was 108, of whom 62 were in the home field and 46 in the foreign.

American Baptist Historical Society.

This Society held its Second Anniversary in the First Baptist Church, Brooklyn, on the evening of May 7th, when the Annual Report was read, and an address was delivered by Rev. William R. Williams, D. D. The following abstract of the Report we copy from one of the daily papers:—

In order to extend the operations of the Society, the curators have added to the list of corresponding members a number of intelligent gentlemen, both in Europe and America, and we trust that with their co-operation and that of our brethren at large, much of the fugitive Baptist literature of past days, and the mass of standard literature of the present, may be gathered together, and placed in one common storehouse of preservation. We are perfectly assured that this can be accomplished if our ministers and churches give our Society some of their leisure time and much of their prayers. Among the donations of the past year are several very rare and valuable manuscripts. One of these is a volume of fifty-seven pages from the pen of the Rev. Morgan Edwards, the learned and indefatigable historian. Its title is "Materials toward a History of the Baptist Churches of Delaware State. Vol. III." As far as we can learn, this volume was never published, and as there is no other history of the early Delaware Baptists, and most of the churches mentioned in this volume have become extinct, or exist only in name, its value is very great. The volume is without any date, but was probably written in 1791, about four years before Mr. Edwards' death. The donation was made by the Rev. Dr. Benedict, of Pawtucket. The family of the late Wm. M. Fahnestock, M. D., of Bordentown, N. J., have given us several rare manuscript volumes in the German, dated as early as 1746 and 1762, written and used by the brethren of the German Seventh-day Baptist Church, at their Monastery in Ephrata, Lancaster Co., Pa. The same family have also presented us with a set of Communion Service, carved out of solid wood, likewise used by the Seventh-day brethren at Ephrata. At our last anniversary Dr. Fahnestock himself presented us, through our Chairman, Dr. Belcher, with a fine portrait of the Rev. Dr. Stoughton. The Report went on to announce the publication of Dr. Peck's "Memories of the Rev. Jas. Clark," who was the first man to preach the Gospel west of the Mississippi, and that the Rev. Dr. Brown had contributed to the Society "A Sketch of the residence of Hansard Knollys in America." The ensuing year it is expected that President Malcom, of Lewisburg, will prepare a biographical sketch of the Rev. Dr. Stoughton; and the Recording Secretary of the Society has promised a memoir of the Rev. Ebenezer Kinnersley, who was ~~the~~ associate of Dr. Franklin in most ~~of his~~ early discoveries in electricity. It is with deep regret that we record the death of Dr. Fahnestock, once one of our most zealous members. He was in full communion with the Seventh-day Baptists, to whose periodicals he was a frequent contributor of valuable historical papers. At the time of his death he had just completed a History of the German Seventh day Baptist Church in America. The Report concluded by noticing the organization of the New York Baptist Historical Society, and dwelt upon the importance of preserving the historical records of the Baptists.

COLONEL HENRY RUTGERS.

This remarkable man had laid early in life the foundation of his characteristic liberality. Like the son of Isaac and heir of Abraham, he promised to the Lord a portion of the substance with which it should please the Creator and Redeemer, in subsequent life, to provide him. This was done upon one of the most interesting occasions conceivable, while under arms for the independence of his country. It was in the year 1777 that he was called to leave his native city, in discharge of his duty to that cause which he piously and patriotically espoused. His father and mother were far advanced in years, and Henry was the only surviving son. He bore a commission in the army, and was under orders to proceed with his regiment. Mounted upon his horse, he reached the division lines which separated his father's estate from the Delancey possessions. The spot is worthy of recollection; and this notice of it may perhaps remind the citizen and the stranger of the transaction of which it was then the theater and the witness. It was at that time in the remote suburbs of the city of which it is now a part, being in the district bounded by Division, Rutgers, and Jefferson streets and the East river.

Halting his horse, he turned around on the extensive domain, and the happy abode which he had forsaken for the chances of war, without knowing whether he should ever again behold his home. He asked himself the question, What would I give for a peaceful return to enjoy my patrimony; and how much of it, in case of such an issue, would I willingly bestow upon public and pious purposes, to glorify my God in promoting the welfare of my fellow men? Jacob's vow occurred to his recollection; and he thought he should not be less liberal than the Patriarch was at Bethel. Henry Rutgers devoted the *fourth* of his future income. He returned in peace to enjoy the freedom which he had assisted in securing to his country, and he long lived to verify, by his munificence to every pious and benevolent enterprise, the resolution which he had then formed. On his own estate he saw, before his death, the Rutgers and Market street churches, Free school No. 2, Fayette street school, and other public institutions, the site of which is his donation, and which, besides other extensive endowments throughout the city and the land, he contributed liberally to erect and maintain. [Life of McLeod.

PRAYER AND REFLECTION.—An hour of solitude passed in sincere and earnest prayer, or the conflict over a single passion or "subtle *bosom* sin," will teach us more of thought, will more effectually awaken the *faculty*, and form the habit of reflection, than a year's study in the school without them.

A reflecting mind is not a flower that grows wild, or comes up of its own accord. The difficulty is indeed greater than many, who mistake quick recollection for thought, are disposed to admit; but how much less it would be, had we not been born and bred in a Christian and Protestant land, very few of us are sufficiently aware. Truly may we, and thankfully ought we to exclaim with the Psalmist, "The entrance of thy word *giveth* light; giveth understanding even to the simple." [Coleridge.

HE ALMOST SUCCEEDED.—"In what?" In giving a portion of his large property to the cause of God. "Why did he not quite succeed?" Because he did not begin soon enough. "Was his property gone before he had time to give a portion of it to the Lord?" No, the property is all there yet. "What, then, was the matter? Pray explain yourself." Well, the case was simply this: Brother C—— was wealthy, loved the church, and intended to leave it a handsome legacy. He made his will, inserting the requisite provision, and laid it by for a few days for further reflection; was taken sick, and died unexpectedly, and the will was never signed. Thus Christ lost what was his due, and Bro. C—— failed *forever* to do his duty.

THE WORLD BETTER FOR IT.

If men cared less for wealth and fame,
And less for battle-fields and glory;
If, with human hearts, a name
Seemed better than in song and story;
If men, instead of nursing pride,
Would learn to hate it and abhor it;
If more relied
On Love to guide;
The world would be the better for it.

If men dealt less in stocks and lands,
And more in bonds and deeds fraternal:
If Love's work had more willing hands
To link this world to the supernal;
If men stored up Love's oil and wine,
And on bruised human hearts would pour it;
If "yours" and "mine"
Would once combine;
The world would be the better for it.

If more would act the play of Life,
And fewer spoil it in rehearsal;
If Bigotry would sheath its knife
'Till Good became more universal;
If Custom, gray with ages grown,
Had fewer blind men to adore it:
If Talent shone
In Truth alone;
The world would be the better for it.

If men were wise in little things—
Affecting less in all their dealings;
If hearts had fewer rusted strings
To isolate their kindly feelings;
If men, when Wrong beats down the Right,
Would strike together and restore it;
If Right made Might
In every fight;
The world would be the better for it.

FUNERAL OF A BUDDHIST PRIEST.

A young priest—a mere boy—came running breathless one morning into the house where I was staying, and called out to my host, also a priest, "Come with me, make haste, for Tang-a is dying." We hastened to the adjoining house, which was the abode of the sick man, but found that the king of terrors had been before us, and the priest was dead. By this time about a dozen persons were collected, who were all gazing intently on the countenance of the dead man. After allowing a few minutes to elapse, orders were given to have the body washed and dressed, and removed from the bed to a small room with an open front, which was situated on the opposite side of the little court. Mosquito curtains were then hung around the bed on which the body was placed, a lamp and some candles were lighted, as well as some sticks of incense, and these were kept burning day and night. For three days the body lay in state, during which time, at stated intervals, four or five priests, decked in yellow robes, chanted their peculiar service. On the third day I was told that the coffin was ready, and, on expressing a wish to see it, was led into an adjoining temple. "Are there two priests dead?" said I, on observing another coffin in the same place. "No," said one, "but that second coffin belongs to the priest who lived with the deceased, and it will remain here until it is needed."

On the evening of this day, when I returned from my labors amongst the hills, I called in again to see what was going on, and now a very different scene presented itself. And here I must endeavor to describe the form of the premises, in order that this scene may be better understood. The little house or temple consisted of a center and two wings, the wings being built at right angles with the center, and forming with it three sides of a square, a high wall connecting the two wings, and so a little court or Chinese garden was formed, very small in extent. A square table was placed inside the central hall or temple, one in front of it, and one in front of each of the two wings. Each of these tables was covered with good things—such as rice, vegetables, fruits, cakes and other delicacies, all the produce of the vegetable kingdom, and intended as a feast for Buddha, whom these people worship. This offering differed from others which I had often seen in the public streets and in private houses, in having no animal food in any of the dishes. The Buddhist priesthood profess an abhorrence of taking away animal life or of eating animal food, and hence no food of the kind was observed on any of the tables now before me. On two strings, which were hung diagonally across the court, from the central temple to each end of the front wall, were hung numerous small paper dresses cut in Chinese fashion, and on the ground were large quantities of paper made up in the form and painted the color of the ingots of Sycee silver common in circulation. The clothes and silver were intended as an offering to Buddha, and was certainly a cheap way of giving away valuable presents. A rude painting of Buddha was hung up in the center of the court, in front of which incense was burning; and these, with many other objects of minor note, completed the picture which was presented to my view. "Is not this very fine?" said the priest to me; "have you any exhibitions of this kind in your country? You must pay a visit in the evening, when all will be lighted up with candles, and when the scene will be more grand and imposing." I promised to return in the evening, and took my leave.

About eight o'clock at night an old priest came to inform me that all was lighted up, that the ceremonies were about to begin, and kindly asked me to accompany him. On our entrance, the whole court was blazing with the light of many candles, the air was filled with incense, and the scene altogether had an extraordinary and imposing effect. A priest dressed in a rich scarlet robe, and having a sort of star-shaped crown on his head, with four others of an inferior order, were marching up and down the court, and bowing lowly before the images of the gods. At last they entered the central hall, and took their seats at two tables. The high-priest, if I may call him so, occupied the head of the room, and had his chair and table placed on a higher level than the others, who were exactly in front of him. A servant now placed a cup of tea before each of them, and the service began. The high-priest uttered a few sentences in a half-singing tone, making at the same time a great many motions with his fingers as he placed and replaced a number of grains of rice on the table before him. Two little boys, dressed in deep mourning (white,) were engaged in prostrating themselves many times, before the table at which the high-priest sat; and, as a singular contrast to all this seeming devotion, a number of Chinese were sitting smoking on each side, and looking on as if there was a play or some other kind of like amusement. The other priests had now joined in the chant, which was something slow, and at other times quick and loud, but generally in a melancholy tone, like all Chinese music.

A priest, who was sitting at my elbow, now whispered in my ear that Buddha himself was about to appear. "You will not see him, nor shall I, nor any one in the place except the high-priest, who is clothed in the scarlet robe, and has a star-shaped crown on his head; he will see him." Some one outside now fired three rockets, and at once every sound was hushed; one might have heard a pin drop on the ground; and the priest at my elbow whispered, "Buddha comes." "Prostrate yourselves; ah! pull your caps off," said one to the young priests in white, already noticed. The boys immediately took off their little white caps, and bent lowly on the straw cushions placed in front of the various altars, and knocked their heads many times on the ground. At this particular moment, the whole scene was one of the strangest it had ever been my lot to witness, and although I knew it was nothing else than delusion and idolatry, I must confess that it produced an almost superstitious effect on my feelings. "And is Buddha now here in the midst of us?" I asked the gentleman at my elbow. "Yes, he is," he said; "the high-priest sees him, although he is not visible to any one besides." Things remained in this state for a minute or two, and then the leader of the ceremonies commenced once more to chant in that drawling tone I have already noticed, to make various gyrations with his hands, placing and replacing the rice grains, and the others joined in as before. My old friend, the priest, who had brought me in to see these ceremonies, now presented himself, and told me that I had seen all that was worth seeing, that the services were nearly over, and that it was very late, and time to go home. On our way to our quarters, he informed me the funeral would take place early next morning, just before sunrise, and that if I wished to attend he would call me at the proper time.

Early in the twilight of next morning, and just before the sun's rays had tinged the peaks of the highest mountains, I was awakened by the loud report of fire-works. Dressing hastily, I hurried down to the house where the scene of the preceding evening had been acted, and found myself among the last of the sorrowful procession. Looking into the court and hall, I found that the sacrifices had been entirely removed, the tables were bare, not a morsel of any kind remained, and it seemed as if the gods had been satisfied with their repast. The silver ingots, too, and the numerous gaudily painted dresses which had been presented as an offering, were smouldering in a corner of the court, having been consumed by holy fire.

As the funeral procession proceeded slowly down, inside the covered pathway adjoining the temple, the large bell tolled in slow and measured tones, rockets were fired now and then, and numerous priests joined in as we went along. Having reached the last temple of the range, the body was deposited on two stools in front of the huge images, and, China-like, before proceeding further, all went home to breakfast. This important business finished, the assembly met again in the temple and performed a short service, while the coolies were busily employed in adjusting the ropes by which they carried the coffin. All being ready, two men went outside the temple and fired three rockets, and then the procession started. First went two boys, carrying small flags on bamboo poles, then came two men beating brass gongs, and then came the chief mourner, dressed in white, and carrying on a small table two candles which were burning, some incense, and the monumental tablet. After the chief mourner came the coffin, followed by the young priests of the house to which the deceased belonged, also clad in white, then the servants and undertaker, and last of all, a long train of priests. I stood on one side side of the lake, in front of the temple, in order to get a good view of the procession as it winded round the other. It was a beautiful October morning; the sun was now peeping over the eastern mountains, behind the monastery, and shedding a flood of light on water, shrubs, and trees, while every leaf sparkled with drops of dew. In such a scene this long and striking procession had a most imposing effect. The boys with their flags, the chief mourner moving slowly along with his candles burning in the clear daylight, the long line of priests with their shaven heads and flowing garments, the lake in front, and the hills covered with trees and brushwood behind, were at once presented to my view. As we passed a bridge, a little way from the temple, a man belonging to the family of the deceased, and who carried a basket containing *cash*—a Chinese coin—presented a number of the followers with a small sum, which they received with apparent reluctance.

Most of the persons followed the bier but a short distance from the temple; but the chief mourner, the intimate friends, and servants, with a band of music, followed the body to its last resting-place. The spot selected was a retired and beautiful one, on the lower side of a richly wooded hill. Here, without further ceremonies than the firing of some rockets, we left the coffin on the surface of the ground, to be covered with thatch or brickwork at a future opportunity. [Athenæum.

GLORY TO CHRIST.—A friend called to tell Dr. Owen that he had put to press his "Meditations on the Glory of Christ." There was a momentary gleam in his languid eye as he answered, "I am glad to hear it; but O, brother Paine! the long wished-for day is come at last, in which I shall see that glory in another manner than I have ever done, or was capable of doing, in this world." A few hours of silence followed, and that glory to him was revealed. Another, whose anticipations of heaven have been already cited in part, as he was drawing still nearer Canaan, exclaimed, "More praise yet, O help me to praise God; I have now nothing else to do!"

"STATE OF THE DEAD."

The other correspondent to whom we alluded last week, taking his lesson from those who, for the sake of sustaining a foregone conclusion, quote Scripture out of its proper connection, shows himself a ready scholar in this line. "Dead men, in the light of revealed truth from God, know not any thing," he says, and tries to make Solomon bear him out in this assertion. But in the passage quoted (Eccles. 9: 5,) Solomon sets forth no such doctrine. In the next verse, the words, "neither have they any more a portion forever in any thing that is done under the sun," show conclusively, that the unconsciousness, or want of knowledge, which the wise man predicts of the dead, has respect only to *the things of this life*. It is an abuse of the passage to make it teach any thing more.

He also quotes Ps. 115: 17. "The dead praise not the Lord," &c. Careful examination of the context shows, however, that what the Psalmist means is, that the dead no more praise God for *blessings which are enjoyed on earth*, their participation in such things having ceased. He that made heaven and earth "has given the earth to the children of men." (Verse 16.) Here they enjoy His favors—food, raiment, increase of substance, (verse 14)—and here they are called upon to acknowledge His hand in these blessings instead of (like the heathen) trusting in idols of silver and gold (v. 4—8) for them. It is *on earth*, and for blessings *enjoyed on earth*, that God's people are called upon to praise Him in such a way that the heathen shall have no occasion to say, "Where is now their God?" (Verse 2.) When they die, they will have no farther opportunity to praise God in this way. They can no more bear testimony against the idolatry of the heathen.

Next comes Eccles. 7: 2. "It is better to go to the house of mourning than to the house feasting; for that is the end of all men, and the living will lay it to his heart." The object of our correspondent is to prove that death is, literally, the *end* of a person—*the termination of his existence*. We wonder if he really thinks the passage proves any such thing? The doctrine which the text asserts is simply this—that death is the common *destiny* of all men. "It is appointed unto men once to die." (Heb. 9: 27.) Death is the termination of their earthly career, not of their being. The word "end" simply denotes the *ultimate condition* at which the living arrive; but that this condition is annihilation, needs to be proved, before the text will serve the purpose of those who advocate this doctrine.

We had said, "If a person's existence comes to a full end when he dies, then the person that comes up in the resurrection is not the same conscious being that once merited reward or punishment"—in reply to which our correspondent *insinuates*, that we might as well have not used the word "full," and then professes to find in God's omnipotence sufficient power "to bring a man, a whole man, all that constitutes him a man, to an end—to cause his whole existence to cease, and then bring him into existence, (call it what you please,) and raise him in the resurrection, the same conscious being that he was before, and reward him according to his works." Now we suppose that God's omnipotence is adequate to the performance of any thing which is not inconsistent with the moral perfection of his nature. We read that it is impossible for Him to lie, (Heb. 6: 18,) and it is His glory, certainly, that He cannot. It would be inconsistent with the moral rectitude of His nature. But would not the performance of a contradiction, (we ask it reverently,) be the performance of a lie? Yet, as we are compelled to view the matter, the absolute annihilation of a *person's* existence, or of *any thing's* existence, and the bringing of it into existence again as the same identical person or thing, is a contradiction. God, undoubtedly, has power to bring into existence a person who shall *exactly resemble* the one who has been destroyed, but with what justice, or truth, could he be said to be the *same* person? God might, if He chose, utterly annihilate the world and all that are in it, and He might bring into existence, afterward, a world exactly like it, peopled with a race of beings exactly resembling those on the earth now; He might create another Adam and Eve, place them in the garden of Eden, as at first, leave them to fall into sin, drive them out of the garden, cause them to bring forth another Cain and another Abel, and leave Cain to murder Abel again; He might bring on another flood for the wickedness of men, and save Noah and his family in an ark of gopher-wood again; He might raise up another Abram, whose life and history should exactly resemble the patriarch of old; He might have another Israel, and an Egypt and a Pharaoh to give them bondage; in short, at the end of some five or six thousand years from its creation, the history of the world might be found to be precisely like that of the world that now is. But notwithstanding this exact resemblance, who would venture to pronounce it the *same* world that had existed before? Indeed, all the power of Omnipotence could not constitute it the same. It would simply be *like* the one that had gone out of existence.

It is surprising that the advocates of annihilation do not see the difficulty that encumbers their scheme. Likeness, even to the most exact resemblance, is not sameness—it is not identity. The identity of a person, or thing, in any two successive periods, consists in the continued, undying existence, through these periods, of that in which the *essence* of the person or thing resides. Much that is adventitious, much that is appendant to the person or thing may perish, be lost entirely, and never be restored; yet if there is some undying principle in which the essence of the person or thing's existence resides, that *same* person or thing may be said to exist in the two successive periods supposed. On no other principle can a person existing in the future state be said to be the same person that once existed here on earth. Indeed, the whole question concerning our existence in a future world, or at any time subsequent to the period of our returning to the dust, whether to be confirmed in life and happiness forever, or to be at last destroyed out of being, resolves itself into the question of our *immortality*. If there is not some undying principle, or substance, in which the essence of our personality resides, that continues to live on between death and the resurrection—if we die, in the sense of going out of existence absolutely, it is certain that *we* can never live again, though others that *resemble* us may, if God so will.

T. B. B.

REVIVAL AT DE RUYTER.

Readers of the *Recorder* doubtless rejoice at the announcement of a refreshing in any part of our beloved Zion. With this view I have felt, for some time, that it might be duty to declare to them what the Lord has done and is doing among us. I have, however, waited, thinking that a more instructive report could be given from a stand-point further on, than from a simple announcement of an awakening in the early part of the work. For this purpose it may be proper to say, that for years there has existed, with the churches in this vicinity, an arrangement to hold in the respective localities what we termed "*Quarterly Meetings.*" These have at times proved seasons of special blessing; but of late less of interest seemed to cluster around them, and, perhaps owing to a want of proper zeal or tact on the part of those of us who were expected to give character to the meetings, they seemed gradually to be sliding down to seasons of Sabbath rides, instead of three days of religious festival. With this view, some seemed to think it wise to suspend the arrangement, while others thought it better to bring them up to the original design, and to look in earnest to the Lord for a blessing.

At our regular Sabbath meeting previous to the quarterly meeting at Scott, it was agreed to invite the churches to meet with us again at about the usual time in February. From that hour some were looking forward with deep interest to the approaching festival. By night and by day, in secret, in the family circle, in the social prayer, and in the sanctuary, the breathing sigh went up from praying hearts, that the Lord would prepare us to meet Him in His courts. As now appears, some non-professors were looking forward to that period as the harvest time for their souls. So deep, so fixed, was the purpose, and so fervent the prayer, to be prepared for the season, that in one instance, at least, the individual joyfully met the Lord in the way, weeks before the quarterly meeting. Others, though endeavoring to drive the subject from their thoughts, seemed to have an abiding impression that a crisis was at hand. Thus matters stood with us, and with those of the sister churches who were making arrangements to meet with us. The first-day churches of the place were invited to meet with us, and in a kind and fraternal spirit they accepted the invitation; and to our joy also brother Joshua Clarke came to participate with us in the festival.

During the quarterly meeting, as such, the preaching was arranged with a view to bring out the ministering talent of our own denomination that was present, and to afford all an opportunity in prayer and conference to give vent to their burdened hearts. The Lord's Supper was administered on the Sabbath, and fraternal ties seemed strengthened. At the close of the quarterly meeting, Providence seemed to indicate the continuance of the effort, and the leadings of the Spirit to mark brother Clarke as one to bear an important part in the work. Meetings were continued each evening for two weeks, opening usually with a season of prayer, followed by a sermon, Elder Clarke preaching each evening. One day in each week was observed as a day of fasting and prayer, that God would deepen and carry forward his work. These were precious days, when, more than ever before, we could realize what David meant when he sung, "A day in thy courts is better than a thousand." This we usually explain by saying, "better than a thousand elsewhere," or "a thousand in sin and vanity;" but here the calm radiance and glory, the beauty and blessedness, seemed such, that we could say it was better than a thousand—any thing you please to name or imagine. It was "heaven begun below." During the whole series there was nothing of what is usually denominated *excitement*. The preaching was mild and persuasive. "Christ crucified," constantly in the foreground, was emphatically, "the way and the truth and the life." The second Sabbath in March being the last which brother Clarke designed to be with us, he baptized nine willing believers. First-day evening he preached his closing discourse to a crowded assembly; and though he labored under embarrassment from a severe irritation of the throat and lungs, his words seemed to tell well on the hearts of his audience. This brought us to a critical juncture of the work; and how to carry it by, without loss of interest, was an inquiry of great solicitude and fervent prayer. Some seemed to think we ought to continue the meetings on, uninterruptedly, but other counsels prevailed. Meetings were held in social circles and border neighborhoods, with good effect, so that little sensible check was apparent to the precious interest so graciously begun. Meetings at the church were interspersed as occasion seemed to demand. Since that time nearly every Sabbath, except when away on exchanges, we have been called to wait on those desirous to be "buried with Christ by baptism." At Lincklean there was also a call for baptism and the Lord's Supper to be administered. Thirty-six have united with our church at DeRuyter by baptism, a few of whom are recent converts to the Sabbath. Two have united with the First-day Baptist church, and perhaps some with the other churches. In the northeast part of the town, quite a number have embraced religion, who have not united with either of the village churches, and there are a number still among us who seem to be standing at the door, purposing soon to enter.

The school in the Institute has shared largely in this work, and many who came seeking only the light of science, so successfully imparted here, will return, we trust, with the lamp of heavenly radiance lighted up in their souls, to cheer the hearts of parents, and to bless the churches from whose bosoms they have come.

In looking over the ground, and tracing the marks of change, we are led with thanksgiving to exclaim, "What hath God wrought!" But in looking over the church, and seeing what is yet to be attained in high spiritual character, and in beholding the multitudes still in the "broad road," we feel that what we have received is only as the few drops before a full shower that is needed.

In looking forward to the meeting of our Association, our prayer goes out with trembling anxiety, that the visit of our brethren at that time may be *to us* and *them* as the latter rain, to perfect the glorious harvest. Lord grant it, for thy Son's sake. Amen.

J. R. IRISH.

PRESTON, May 8, 1855.

THE REVIVAL IN SCOTT.

SCOTT, N. Y., May 10th, 1855.

To the Editors of the Sabbath Recorder:—

The following additional facts concerning the revival here, I send you, since it is thought that they can not be altogether uninteresting or without cheer to the readers of the *Recorder*.

Since the termination of the series of meetings, conducted conjointly by our beloved pastor and Eld. Scott, the interest has seemed to glow steadily among all, and especially among the young, under the influence of the assemblies held from house to house for prayer and conference. The whole number of persons who have united with the church by baptism is twenty. Five others have joined us under other circumstances. Rev. J. P. Hunting, one of these, formerly a Baptist, while enjoying with us the glad season, became awakened regarding the claims of the Lord's Sabbath, and has, we rejoice to say, embraced the truth, not only in belief, but in practice. He has already won our esteem and love, both for his wisdom and the fervor of his piety. We heartily welcome him among us, and shall ever pray that his heart may be stout, and his hand strong, to war in the contest of truth against error. God, in love and power, has verily been with us. In Him alone would we rejoice, and to the name of His Son beloved be all our praise.

Yours in Christ, J. B. C.

THE NEW LIQUOR LAW.—In New York City, the question has been much discussed of late, whether a penalty can be imposed for selling liquor without a license between the 1st of May and the 1st of July. A case in point came up in the Court of General Sessions last week. Patrick Boylan was arraigned for selling liquor without a license on the 7th of May, and pleaded guilty of the charge. The Judge, after a lengthy argument, came to the following conclusion: "That the provisions of the act of April, 1855, so far as that act prescribes penalties and the manner of their enforcement in the City and County of New York, operate as a repeal of all acts relating to the regulation of and penalties for the sale of liquor (except so far as regards the sale on Sunday,) that were in existence at the time of its passage, and operate as an absolute repeal of the same; and that no penalty can be imposed for selling liquor without license at the present time, as the fourth section of the act is in operation until the 4th day of July next." The defendant was therefore discharged.

"THE MEMORIAL."—At the late meeting of the Board of Managers of the Publishing Society, it was stated, that the editors of the *Memorial* had not of late found time to prepare copy for the work. It was therefore voted to suspend its publication for a while, until they are more at leisure. Meanwhile those indebted for the work should see that such indebtedness is canceled. Those who have paid in advance for volume four will receive it when issued, which we hope will be at no distant day.

THE SCHOOL LAW IN ILLINOIS.—A letter from Eld. Samuel Davison, of Farmington, Ill., says: "It may be gratifying to our friends to know, that the Legislature of Illinois granted our petition last winter, and so altered the School Law that all school meetings are now required to be held on the second day of the week, instead of the seventh, as they were heretofore."

THE ANNIVERSARIES.

The American Baptist Home Mission Society

This Society held its 23d Anniversary in the Baptist meeting-house in Pierrepont st., Brooklyn, on the 9th inst.

From the Treasurer's Report, presented on the occasion, it appears that the receipts during the past year were $64,346 33, while the expenses were a trifle less than that sum. The Report of the Board showed that 70 life members and 578 members were added to the Society last year, and that the total membership is 3,877. A contingent fund of $25,000 was recommended; to assist feeble churches in erecting meeting houses; $4,466 66 had been raised. The Society owes $9,991 29 on loans, and $7,330 81 deficiency in the treasury.

At the last annual meeting of the Society, a Committee was appointed to prepare a statement relative to the Society's occupying rooms in the new building of the American and Foreign Bible Society. Their report showed that the Society's office had been moved into the new building, and that they had received a lease for 21 years free of rent. It also stated, that five members of the Board had positively refused to enter the new rooms, and resolved to organize as a separate Society, for which purpose they would hold a meeting during the present month. The question of continuing to occupy the present rooms, in view of its probably resulting in the organization of a new society, was fully discussed, and finally a committee was appointed to collect funds for the erection of a building for the use of the Home Mission Society alone.

The following is the resolution adopted by the Society in relation to removal:—

Resolved, That this Society will remove its place of business to another location, the property of which shall be vested in this society, and that the following shall be the method and conditions for the attainment of this result, viz—Ebenezer Cauldwell, Thomas Thomas, J. B. Durbrow, John M. Ferrier, Wm. G. Dugan and Geo. Gault, are hereby constituted and appointed a Committee, with power to solicit and receive donations and subscriptions, without expense to the Treasury of the Society, for the purchase or erection of a suitable building, and to purchase or erect the same. The location of said rooms is to be south of Canal street. Whenever rooms are so furnished to this society, the Executive Board are hereby authorized and instructed to remove from the present location and to enter upon the possession and use of the same."

American and Foreign Bible Society.

From the Annual Report presented to this Society, it appears that the total receipts of the year amounted to $15,000 more than any previous year save last; but $19,000 of that amount being applicable to the building fund, the net amount received for the current work of the Society was $5,000 less than usual. Receipts from legacies had been much smaller than usual; also from auxiliaries. The enlarged amount of donations of Scriptures by direct individual grant from the parent Society, amounting to over 18,000 copies, showed a wide field of utility—not theoretical, but practical. Where it could be done, the persons receiving the Bible were made to pay for it, or to pay as much as they were able, it being considered, that in that way they would value it more highly. The increased proportion of life-members and directors was very gratifying. The receipts from churches and individuals had been the largest source of income. Much attention had been given to the Canadian French, both in supplying them with the Scriptures and enabling them to read them. Much success had been met, and a growing disposition was found among these people to study God's Word. In New Mexico, also, there had been three colporteurs appointed, who were generously supplied with Bibles and Tracts in Spanish; still the demand was greater than the supply. The eyes of the Board were also turned with deep interest to Mexico herself, and it was resolved to supply her with the Scriptures as soon as possible. New Granada, too, now more interesting to Americans as the seat of that line by which they travel from ocean to ocean, has attracted much attention; and more especially now that she has broken with the Pope of Rome. Already the Society's first adventure of a few hundred Bibles and Testaments is on its way to that country, together with some Spanish tracts and primers. Hayti, too, has been succored; and the Chinese in California have been already approached by a faithful missionary of the Society. Germany, France and Central Europe, Calcutta and Orissa, have also received aid as well as the Oriental Missions. The report dwelt on the vast importance of China, containing many millions of human beings, all reading the same tongue, and all hurrying with us to the judgment seat of the Lord, whose Son commanded, 1,800 years ago, that the Gospel should be preached to them. The Rev. Mr. Goddard had nearly completed the translation of the Pentateuch into Chinese when he was summoned to meet his Master. The evangelization of China is the great question of the present age. The summary recapitulations of appropriations for all these foreign fields and languages, including cost of Bibles and Testaments sent, is a total of $23,500 thus divided, viz: in America, $3,090; in Europe, $14,859; and in Asia, $5,544. The report concluded with a review of the progress of the Society from its commencement 18 years ago. It had received $700,000, and sent forth more than a million and a quarter of copies of God's word, having published or helped to publish the Bible in thirty or forty different languages.

The Report of the Building Committee, appointed in 1852, was read. The report showed that the Society have a building completed in Nassau-street, N. Y. The original cost was over $50,000; the present building cost over $100,000; apartments are given, according to agreement with the original subscribers, to sister denominational Societies; but other apartments and offices are rented at about $12,000 a year.

American Female Guardian Society.

The 21st Annual Meeting of this Society was held on the 8th, at the Home. Of the Annual Report we make the following abstract:—

The Publishing Department reports an average of 21,000 copies of the *Advocate and Guardian*, issued semi-monthly. Other publications: 1,000 copies of "Letters to a Young Christian;" 500 copies of Walks of Usefulness;" 1,000 Annual Reports; 500 copies of "Saw Up and Saw Down," and 1,000 copies of By-Laws. Three thousand new subscribers have been received, and 126 life members; part payment, 50.

The whole number of children received in the Home for the Friendless since July, 1847, is 1,891; whole number of adults, 4,771—total, 6,662. Number of children admitted from May 1, 1854, to April 30, 1855, 230; readmitted, 64—total, 294. Dismissed to Home, 166; redismissed, 40; dismissed to Juvenile Asylums and other City Institutions, 14; deceased, 13; remaining in Institution, 90. Adults admitted from May 1, 1854, to April 30, 1855, 586; dismissed to service places, 422. Whole number of adults and children received during the year, 680. A large proportion of the children sent out from the Institution have been adopted into worthy families, where they enjoy the privileges that may fit them for a sphere of usefulness in after life. For *all* the best management has been made that seemed practicable, and the letters on file representing the condition of those who have gone from the Home, numbering, as seen from the records, between one and two thousand, show that the contrast between their present and former condition is very great.

The Home Industrial School, now located at No. 654 Sixth-av., has been well sustained during the year, and has brought within its influence about 400 vagrant girls, who, from various circumstances, the claims of dissolute parents, &c., were not properly the recipients of the charity of the Home. The average daily attendance is over 100. An efficient teacher, monitor, and matron, are employed, and in addition to their labors about sixty ladies voluntarily render their services; each lady having her own class and hour one or more days in the week. Much good is resulting from this Department.

In the Register and Visiting Departments, applicants for homes and employment as registered, 660; persons applying for donations, 539; supplied, 203. The Visiting Committee and Managers have visited several thousand out-door applicants for aid, and distributed in the aggregate 8,836 pieces of bedding, wearing apparel, &c., where they have reason to believe the gifts might prove a stimulus to industry and virtue, mitigate calamity or relieve distress. The aid received from auxiliary societies, juvenile circles, and other friends, has furnished the supplies, without which much less would have been accomplished. Through this agency has been received 641 barrels and boxes of clothing, bedding, provisions, fruit, &c.

A change has been made in the financial year of the Society, closing its accounts December 31, instead of April 30. This change is made as a matter of convenience, the current expenses in the publication office closing with the year. The finances are in a healthy condition. The Treasurer's report shows that the amount received from May, 1854, to Dec., 1854, was $10,869 60; disbursements, $10,637 51; balance in hand, $232 09.

American and Foreign Anti-Slavery Society.

The Annual Report of this Society, after enumerating the results of labor in past years, says that a large portion of the Society and of the Committee are now impressed with the belief that more direct efforts should be made than heretofore for the abolition of Slavery in the United States; that the sinfulness, illegality and unconstitutionality of human slavery should be inculcated. The establishment of a new Society, called the "Abolition Society of New York City and Vicinity," was favorably referred to; the object of which was stated to be, "to secure the immediate and unconditional abolition of American Slavery." The report further states, that the only hope of the peaceful abolition of Slavery seems to rest in the adoption of such principles, with corresponding action by the people of this country. In the extension and prevalence of these principles the expectation is that the most accursed system of iniquity that now disgraces this country and insults the living God, in the persons of poor oppressed slaves, will be brought to an end.

The following were declared as the sentiments of the New Abolition Society:—

1. Slaveholding is sinful, illegal, and unconstitutional. It has no right to be in the Church or in the State. It is to be excluded from the former as a scandal, and prohibited by the latter as a crime. It is not sanctioned by the Bible or the Constitution, but is condemned by both.

2. It is the duty of the Federal Government, in all its departments, to suppress slaveholding throughout the United States.

3. It is the duty of the several State Governments to sustain the Federal Government in this measure, to protect their citizens, and all who touch their soil, from seizures by kidnappers or slaveholders, under the Fugitive Slave bill or otherwise; to make all attempts at the execution of that unconstitutional and atrocious act a penal offense; and to extend the right of suffrage and eligibility to office to all their citizens, irrespective of race or complexion.

4. It is the duty of the citizens, at the ballot box, to provide State and National Administrations that will make these measures paramount objects of their activity; to secure a Judiciary that will execute justice; to vote for such candidates for office, and for such only, as are tried friends of the enslaved and publicly known to be earnestly engaged in promoting these measures.

5. It is the duty of Christians to hold no Church relations that involve religious fellowship or ecclesiastical connection with slaveholders. It is also their duty to sustain no Missionary Society, having publicity with slaveholding, nor any Tract Society, or other religious publishing Society, that does not expose and rebuke the heinous sin of slaveholding, in common with other sins.

The American Anti-Slavery Society.

The anniversary of this Society was held at the Metropolitan Theater on the 9th inst.

The Treasurer reported the receipts of the Societies and its Auxiliaries for the year from May 1, 1854, to May 1, 1855, $35,466 69; expenditures $29,673 60; leaving a balance to new account of $5,793 09.

The President, Wm. Lloyd Garrison, read a series of resolutions, upon which addresses were delivered by himself, Rev. Antoinette L. Brown, Theodore Parker, Wendell Phillips, and others. The following are the resolutions:—

Resolved, That of all systems of despotism existing in the world, American Slavery is the most merciless to its victims, the most impious in its assumptions, the most murderous in its spirit, the most demoralizing in its influences, the most hideous in its features, and the most calamitous in its operations.

Resolved, That its immediate and unconditional abolition is the primary and paramount duty of this nation, before which all other questions fade into insignificance, all other issues are as dust in the balance.

Resolved, That for the continuance and extension of Slavery on our soil the American church and clergy—with honorable but rare exceptions—are preëminently guilty; and that they have thrown over it the mantle of Christianity, declared it to be in accordance with the will and word of God, branded the Anti-Slavery movement as infidel in its spirit and object, and admitted to the communion table such as make merchandize of human bodies and immortal souls.

Resolved, That such a church is, in the graphic language of Scripture, "a cage of unclean birds and the synagogue of Satan;" and that such religious teachers are "wolves in sheep's clothing," "watchmen that are blind," "shepherds that cannot understand, that all look to their own way, every one for his gain from his quarter."

Resolved, That, in the language of Patrick Henry, "It is a duty we owe the purity of our religion to show that it is at variance with that law which warrants Slavery."

Theodore Parker closed his address with the following "platform" or declaration of principles:—

I. Abolish Slavery in the District of Columbia and in all the territories under the immediate jurisdiction of the United States, and repeal the Fugitive Slave Act.

II. Abolish the American Slave trade on the sea and make that also piracy.

III. Declare that hereafter no Slave State shall ever be admitted into the Union. [Loud applause.]

IV. Declare that no man who is at present or prospectively an owner of Slaves, shall hold any office under the Federal Government.

V. Reconstruct the whole judicial system for the Supreme and District Courts, so as to have no other Justices than those who will carry out the great American idea of justice to all.

VI. Then declare at a day certain and fixed when Slavery shall cease in any State or that State shall cease to be a member of this Union.

The American Tract Society.

This Society held its 30th Anniversary on the 9th inst., at the Broadway Tabernacle.

The Treasurer's Report states that the receipts for the past year were—in donations, including $13,302 42 in legacies, $147,298 13; for sales, including periodicals, $265,875 73; total, $413,173 86. Expenditures, for publishing books and periodicals, $225,030 12; for colportage, $105,113 31; cash remitted to foreign and pagan lands, $16,000; total expenditures, $419,227 34.

The Annual Report says that the periodical department has become one of the most considerable of the means of usefulness employed by the institution. About one-third of the whole amount of truth issued from its presses is in the form of newspapers in English and German for young and old. The monthly circulation of the *American Messenger* is 200,000 copies; of the *Botschafter* 27,000, and of the *Child's Paper* 300,000—the whole number printed during the year having been 6,480,000, or more than 100th part of the entire periodical circulation in the United States, containing an amount of matter equal to 1,300,000 12mo. volumes of 200 pages each. The number of these periodicals printed since their commencement has been 30,600,000 copies.

The gratuitous distribution of publications has been larger than in any previous year, amounting, in 6,600 distinct grants, including gratuitous to life-members and directors, to nearly 78,000,000 pages, of the value of about $52,000. They have gone to the various foreign missionary stations of the world, to Mexico, Central and South America, and in a dozen languages to Protestant and Papal Europe. Eight and a half millions of pages have been placed on more than a thousand packets and steamers sailing from this City for foreign ports, and on the craft navigating our lakes, rivers and canals. Literary, humane and criminal institutions have received two millions of pages, and Mission Sunday-Schools another million. Ten thousand pastors and missionaries have each received a copy of the volume on the Divine Law of Beneficence, postage paid. But the most direct and perhaps the most useful channels for gratuitous circulation consist of the large corps of colporteurs in the Society's immediate service. Through them about 45,000,000 of pages, of the value of $30,000, have made their way to the homes of the destitute and the erring.

The number of colporteurs for the whole or part of the year has been 659, of whom 104 were students of theology, connected with 31 institutions, and 126 were employed among the German, Dutch, French, Irish, Spanish, Welsh and Norwegian population. Ninety-one additional colporteurs have been recently commissioned, or have failed to report seasonably. The whole number in commission April 1, was 473.

The number of families visited during the year has been 639,000—70,000 families more than in any preceding year, making an aggregate of about 4,500,000 reached by colportage since the beginning of the enterprise. With about one half the families the colporteurs had personal religious conversation or prayer, beside holding or addressing nearly 13,000 public meetings or prayer meetings in destitute neighborhoods. The number of books sold by colporteurs has been 542,000, and the total circulation of books since the Society was formed has been 10,400,000.

Nearly 148,000 volumes have been circulated by colporteurs gratuitously in not far from as many households.

The facts of the statistical tables furnish an impressive illustration of the necessity of such a scheme of evangelization as colportage. No less than 51,000 families were found destitute of a single religious book except the Bible, and more than 36,000 had not that sacred volume. More than 83,000 households (or about one-seventh of the whole) were habitual absentees from the evangelical sanctuary—practical heathens in a Christian land—while 64,000 families were adherents of Papacy.

American Home Missionary Society.

The number of ministers of the Gospel in the service of the Society in twenty-seven different States and Territories during the year has been 1,032; of the whole number

528 have been the pastors or stated supplies of single congregations, 328 have ministered to two or three congregations each, and 176 have extended their labors over still wider fields. Ten missionaries have preached to congregations of colored people, and sixty in foreign languages, nineteen to Welsh and thirty-four to German congregations, and seven to congregations of Norwegians, Swedes, Swiss, Frenchmen, and Hollanders. The number of congregations and missionary stations supplied, in whole or in part, is 2,124. The aggregate of ministerial labor performed is equal to 815 years. The number of pupils in Sunday-Schools is 64,800. There have been added to the churches, 5,634, viz: 2,948 on profession, and 2,686 by letter; 48 missionaries make mention in their reports of revivals of religion in their congregations, and 366 missionaries report 2,434 hopeful conversions. 66 churches have been organized by the missionaries during the year, and forty that had been dependent have assumed the support of their own ministry. 61 houses of worship have been completed, 38 repaired, and 52 others are in process of erection. 89 young men in connection with the missionary churches are in preparation for the Gospel ministry. The receipts for the year amount to $180,136 69, and the payments to $177,717 34, leaving $12,488 74 still due to missionaries for labor performed, toward canceling which and meeting the further claims on commissions not yet expired—amounting in all to $96,518 40—there is a balance in the Treasury of $16,804 31—the greater part of it received in payment of legacies near the close of the year. The financial embarrassments of the country have checked the progress which was anticipated at the opening of the year. The aggregate of receipts is less by $11,072 38 than the last year. The greater part of the difference, however—$8,474 40—is in the amount received from the payment of legacies, the regular contributions of the churches being but $2,597 58 less than the year preceding. The number of missionaries is less by 15, and the years of labor by 55; the additions to the churches by 391, and the number of congregations supplied by 16. The diminished amount of labor, however, is chiefly in the older States, where the necessity for missionary aid becomes less, year by year, as in our frontier settlements it increases. This transfer of laborers from the older settlements to the new, has this year increased by seven the number in the Western States and Territories and on the Pacific coast. In one new Territory—Kansas—missions have been established; other missions in important localities have been reënforced and strengthened; the work in California has been prosecuted with vigor and success, and was never more encouraging in all its aspects than at the present time.

The American Bible Society.

Henry Fisher, Esq., Assistant Treasurer, read an abstract from the Treasurer's Report:

The balance on hand last year was $2,209 50; the receipts for the year, $412,504 98; the expenditures for the year, $413,676 37; balance on hand, $1,338 11.

The Rev. Dr. Brigham, one of the Secretaries, read the Managers' Report. The following is an abstract:

Sixty-eight new Auxiliaries have been recognized.

Ninety-two Life Directors and Life Members have been added.

The receipts of the year amount to $346,811 57—much less than those of the previous year.

The number of Bibles printed during the year amounts to 275,400, and of Testaments, 626,000; making a total of 901,400.

The number of volumes issued is 749,896. The number issued since the organization of the Society is 10,653,647.

Grants of Bibles and Testaments have been made, as in former years, to Auxiliary Societies, to other benevolent institutions, and to individuals for gratuitous distribution.

The number of Agents at present employed in the domestic field is thirty-five, including two on the Pacific coast.

New Books.—During the year a new German octavo Bible, also a Testament and Psalms, have been published from an improved edition of Kanstein. A Spanish New Testament from the Greek; also a Welsh and English Testament, in parallel columns, and an English octavo small pica Bible without references. An imperial quarto Bible, designed to be the standard book of the Society, is now in press, and will be ready for delivery in a few months. A royal octavo Bible with references is also in course of manufacture. A Portuguese New Testament, translated from the Greek, is ordered to be printed; also a new diamond reference Bible.

Library.—A new catalogue of its books is prepared and is about to be issued.

Grants of Money.—The remittances abroad the past year have been much less than usual, owing to the diminished receipts and the great demands for making new books and other home purposes. It is the design of the Board to make further remittances early in the coming year. But while the payments of money for printing the Scriptures in foreign countries have been less than usual, the expenditure for making new books at home and in foreign agencies has been greater.

The American Board.

The American Board of Commissioners for Foreign Missions held a meeting in New York during "anniversary week," at which Theodore Frelinghuysen presided, and addresses were delivered by Rev. E. Burger of the Satara Mission, India; Rev. Mr. Mills, of the Ceylon Mission; Rev. J. S. Lord, and Dr. Parker. Rev. Dr. Pomeroy, one of the Secretaries, gave a brief statement of the condition of the Board:—

Since the annual meeting in September last, four missionaries have been removed from their scene of labor—Drs. Poor and Scudder, and Mr. Hume and Mr. Benjamin; six missionaries and six assistant-missionaries have been sent out since October; more than a dozen are under preparation; and the prospect of a supply was never more encouraging. The receipts in April were $32,436; the receipts for the nine months from 1st August to 1st May were $213,683; being about $500 more than for the corresponding months last year. For May, June and July, $400,000 per month will be necessary. Had it not been for the heavy pressure on the money market, much better results would have been obtained this year. One fact of special interest in the missions in Western Asia is becoming more and more apparent namely, the Mohammedan mind is being slowly but surely reached by the Word of God; many have been made ready to converse on the truth; and in several stations many have given signs of readiness to embrace it. Whether the death-penalty which is declared for apostacy from Mohammedanism, will be enforced, remains to be seen. Two missionaries from India are likely to be present at the meeting of the Board next September.

New York Sunday-School Union.

The Annual Report of this institution shows that the whole number of pupils was 33,801, of teachers 4,254. Whole number volumes in Sunday-School Libraries, 52,221. Several new Mission Schools have been established, something over 10,000 children have been brought into the schools by direct visitation. Something also has been done in Brooklyn. The whole amount raised was $19,375, of which about one-third came from the schools themselves. It was estimated that 80,000 children in this city were without religious instruction of any kind, either Protestant or Catholic. The 52,000 volumes in the Libraries were of every variety calculated to interest the young; they were not confined to strictly religious subjects. The report dwells with exultation upon the number of conversions, and closes with the hope that the Union may continue to progress as it had done.

Baptist Free Mission Society.

The Eleventh Anniversary of this Society was held in New York on the 10th inst. The President of the Society, Rev. Hiram Hutchings, of Charlestown, presided. The Rev. Sereno Howe, of Lowell, Mass., acted as Secretary.

The Secretary read the annual report, a long document, setting forth the labors of the Society during the last year. From this it appears that this Society is an offshoot of the regular missionary Society of the Baptist church, basing itself upon an uncompromising hostility to slavery. The Society sends its missionaries all through the South, and to St. Domingo, to war against slavery, and teach the Gospel to the negro.

After reading the above report, the committees were appointed. The Committee on the Time, Place and Preachers for the next annual meeting, reported immediately after their appointment, as follows: The next meeting to be held in Norristown, Pennsylvania, on the third Wednesday of May next. The preachers to be Rev. Mr. Kenyon and Rev. Mr. Hiram Hutchings, of Mass.

Mr. George Curtis, of Utica, N. Y. read the Treasurer's report, from which we take the following: Total receipts during the past year, $7,533 08; total expenses during the past year, $4,356 97; balance, $3,176 11.

LIBERIA.—A meeting of the colored citizens of Brooklyn (Eastern District) was held a few evenings since in the Rev. S. S. Jocelyn's Church, corner of Eleventh and South Third-sts., for the purpose of hearing reports from L. H. Nelson and others who have recently returned from Liberia, Africa. The following is an abstract:—

The place is very much neglected, so far as agriculture is concerned, owing to the extreme heat and sickness. The African fever is very prevalent, and its duration is from six to eighteen months. Persons attacked with the fever are first seized with a severe chill, then a burning fever, followed by perspiration, the marrow of the bones becomes softened, and a general lassitude of the whole system follows.

The emigrants from this country, those that are surviving, are doing well, and are principally engaged in manufacturing sugar and molasses and raising cotton. The labor is principally done by the natives, who carry lumber, bricks, stone, sand, and other materials, upon their heads, sometimes a distance of several miles.

About 10,000 persons have emigrated to Liberia during the last fifteen years, and the present population is about 1,500 all told.

Mr. Nelson recommends persons emigrating there to have some means in order to support themselves after assistance from the Colonization Society ceases, which is at the expiration of six months, as but few of them recover from the fever in that time.

The Slave-Drivers in Kansas.

The magnitude of the villainy contemplated by the slaveholders in the subjugation of Kansas is being gradually disclosed. The following extract from the Mobile *Register* conveys the most distinct acknowledgment of the design of the slave power to take possession of that Territory, and to declare a bloody war upon all who dare oppose its conquest, that we have seen:—

"As much as we abhor mob law, we say with our hand on our heart, that we rejoice that the Missourians have shown, by something stronger than paper protests and wordy resolutions, a purpose to resist the steady and long continued efforts of fanatical scoundrels to invade their rights and to jeopard their domestic, social and political safety. The time has gone by for mincing matters. These men are our enemies. They would rejoice to see the fagot applied to our dwellings and the knife to our throats. They should be dealt with as such, and if war results, let it come. If this is not a fighting question, none ever appealed to the most sacred sympathies of the human bosom. . . . . . We trust that the Missourians will continue the good fight they have begun, and if need be call on their brethren in the South for help to put down by force of arms the infernal schemes hatched in Northern hot-beds of Abolition for their injury. The question is obliged to come to the arbitrament of blows, and Kansas is as good a battle-ground as any other. There is no other way to deal with people who have taken leave of reason, who refuse to listen to the considerations of humanity, and who trample on the word of God and the Constitution of their country in their insane efforts to compass their diabolical ends."

Quite harmonious with the above are the resolutions which, as the telegraph informs us, have just been adopted at a mass-meeting at Weston, Mo. They are as follows:—

"That self-defense requires the expulsion of every person bringing into reproach negro slavery; that robbers and traitors have no right to the protection of the law; that they ratify the proceedings at the Parkville riot; that they approve of the resolutions in regard to Methodists, and add thereto all ministers preaching prejudicial to Slavery; that they have no arguments against abolition papers but the Missouri river, bonfire and hemp rope; that they pledge themselves to go to Kansas and help to expel those corrupting the slaves; that they call a grand mass-meeting at Parkville, on the 5th inst." [Tribute.

European News.

Five days later news from Europe has been received, the substance of which will be found below.

The bombardment of Sevastopol continued, without material progress toward reducing the town. There is a rumor that the Allies had suspended their fire, but the story wants confirmation. It is stated that there was a severe passage between the French and Russians at a sortie on the 14th, the hottest fight since Inkermann. Another sortie, on the 18th, was promptly repulsed. The French say that they have made some important advances near the Malakoff tower, while Prince Gorchakoff says the fire of the Allies was slacking up; that he had destroyed some of their advanced works, and that the Russian losses were diminishing. The Grand Dukes Michael and Nicholas have gone to the Crimea. Menchikoff is not dead.

Prussia appears to be siding with Austria in favor of Russia.

From Japan, we hear of the ratification of the Treaty with the United States, which took place at Simoda on the 21st of February.

The Chinese insurgents have left Shanghae.

The opening of the Universal Exhibition at Paris had been postponed to the 10th or 15th of May.

The clipper ship Great Republic has been chartered by the French Government for the conveyance of troops.

California News.

The California steamer *Illinois*, with the mails and treasure from San Francisco to April 17, arrived at New York May 13th.

The accounts from California are interesting, but beyond the usual budget, which has been but too common of late, of untoward advices of dull trade, over crowded markets, and financial embarrassment, they are not important.

The mail packet, on the present trip, on the Pacific side—the *Golden Age*—was wrecked 216 miles above Panama, by running on a shelving rock, near the shore, while attempting to avoid a similar danger before known to the charts of the coast. No loss of life or treasure occurred. The *Golden Age* was in command of Capt. Watkins, formerly of the ill-fated *San Francisco*. Misfortune appears to follow this gallant seaman, but, in this instance, the singular good luck of preserving order under the most trying circumstances, among his seven hundred passengers, and the good judgment of knowing how to so manage and direct his crew as to avoid all appearance of panic on board, attended him. The condition of the vessel, at one time, was most perilous for the lives of all on board. A bright moonlight, however, favored the officers, and the extreme danger was soon over. The steamer's heavy complement of passengers and their early rescue were further favored by the success which attended the small boats sent out to intercept the *John L. Stephens*, bound up the coast. One of the boats was fallen in with by the *J. L. S.* next day—the sailors taken on board, and the *Golden Age* relieved in about forty-eight hours from the time of the accident. The *Stephens* had on board nearly seven hundred passengers of her own, bound for San Francisco. The transfer of all on board the wrecked steamer made a total living freight, including the two crews, of nearly sixteen hundred souls. These were on board the single vessel from twenty-one to twenty-four hours on their return to Panama. The portion bound to the Atlantic States were all safely landed on the Isthmus, and the *Stephens* again set sail for San Francisco.

The steamer Golden Age, wrecked on her way down the Pacific, two hundred miles above Panama, will, it is stated, probably be raised, and the damage fully repaired. She was the property of the Pacific Mail Company, and is understood to have been insured.

Harvey O. Weed and wife have recovered two thousand dollars damages against the Panama Railroad Company for detention on the Isthmus, whereby they contracted Panama fever. The Jury declared in effect that the plaintiffs had suffered from being wilfully and needlessly detained.

The news from Kern River is of the same nature as the accounts received before. The diggings are by no means so rich as at first represented to be.

During the week that the steamer sailed, there arrived at San Francisco eighteen first-class clipper vessels, heavily laden with the produce and manufactures of the Eastern States and Europe, embracing almost every article of necessity and luxury known to civilization—brown sheeting and Brussels lace, corn brooms, provisions, cowhide boots and kid gloves, and in fact, everything for use or ornament that may be known to the Yankee nation—from a steam engine to a baby's rattle—all with full cargoes of assorted merchandise, which are to add to the already overstocked market a supply sufficient for a year's consumption at least.

Shipwreck, Suffering, and Death.

Capt. Button, of bark Clara Windsor, arrived at New York, May 7th, from Port-au-Prince, reports on the outward passage, March 19, lat. 32°, lon. 66° 38′, a fresh breeze from S.S.W., saw a wreck to leeward with two men standing on the bow and waving their hats; hove to and got out a boat, and succeeded in taking them off. The wreck proved to be the bark John Clark, Capt. McRay, hence for Jacmel. The men stated that they were all that were left out of seven men that sailed in the above schooner from New York on the 3d day of March bound to Jacmel; that on the 7th March, 9 P. M., a squall struck the schooner from W.N.W., and threw her on her beam-ends, and it was an hour before they succeeded in cutting away the weather-rigging, when the mainmast and foremast went close by the deck; then she righted; but the hatches had burst, and she was full of water. They were left without food or water, but on the next day obtained a keg of crackers that were wet with salt water, after which they got a bucket of vinegar, some shark-liver oil, and some camphene. The latter made them stupid and feel as if they were on fire. The fifth day after the catastrophe, the captain, mate, steward, and two men, died, and they, the two remaining men, had nothing to eat for eight days previous to being taken off. Those that died went crazy previous to death. They say they saw two different vessels, one of which, a fishing schooner, came close to them, so that they could see the man at the helm, and they hallooed to them, but in vain.

Destruction of the Anti-Slavery Press.

In the Lawrence (Kansas) *Herald of Freedom* of the 21st of April the destruction of the press and office of the Parkville *Luminary* forms the subject of the "leader." After relating the facts of the case, it says:—

"We congratulate our friends on this happy termination of their business for the present in Missouri. A wider field, and one of greater usefulness, is opened for them by the hands of their enemies, and they will of course enter into its possession. The name of Cassius M. Clay was comparatively unknown to fame, until the mobbing of his press, while confined to a bed of sickness, and delirious with a burning fever. Since then he stands out in bold relief, and will be remembered with pride by every true American, while his enemies are forgotten or covered with disgrace. The murdered Lovejoy—who would not rather inherit his name than that of the proudest warrior of ancient or modern times? It gathers lustre with age, and is enrolled with the martyrs of Freedom.

"Our friends of the *Luminary*, whose light has been measurably obscured by the darkness which surrounded them, have suddenly emitted an effulgence which lights up the Union, and attracts all eyes in that direction.

"Since Parkville has signalized herself by participating in the destruction of the public press, we hope every settler in Kansas Territory will seek another locality to purchase supplies. Let no person patronize a community where the press is enslaved. Franklin absolutely refused to lodge in a place over night where the graveyard fence was neglected or broken down; and free men should refuse, upon the same principle, to patronize those who are unwilling their action should be scanned by the Argus eye of the press, and to prevent which they resort to its destruction."

The *Herald* contains also the article which the *Luminary* printed, and which so excited the indignation of the Missouri mob. After giving an account of the election, the editor went on to say:—

"We have occupied conservative and national ground, promptly opposing the measures and men who have brought on this crisis. Will the President meet it? Surely, he cannot longer follow counsels from among Abolitionists and Nullifiers? The country demands that sound, firm, energetic men, have the direction of public affairs, who will impress and enforce justice and law. There is virtually no law in Kansas, and no security for life and property, save in the sense of honor and justice cherished by every true pioneer. This may save the country from bloodshed; but the Government is held up to ridicule and contempt, and its authority disregarded; Judges of Elections have been displaced, and others appointed; the polls have, in some instances, been guarded with pistols and bowie knifes; and some of those elected are going to the Governor, swearing that if he does not give a certificate of election immediately, they will 'cut his throat from ear to ear!' Is the flag of our country to be no longer a protection? or are individuals, or companies of men, to declare, WE WILL! and it MUST be so, without regard to law? Is this what the authors of the Nebraska-Kansas bill meant by Squatter Sovereignty?"

For publishing such suggestions and queries as these, the office of the *Luminary* was destroyed, and its publishers driven out of the town. Slavery cannot bear discussion.

SUMMARY.

A dispatch dated Detroit, Monday, May 7, 1855, says: On Saturday seven thousand dollars, in five and ten dollars on the Peninsular Bank of this city, were stolen from the Bank. The notes were new, and never had been issued, and were all countersigned by S. M. Holmes, State Treasurer, and numbered one thousand and one to thirteen hundred, and dated April 1, 1855. [The next day all of the money except $600 was found in the yard of the Cashier's residence, where it had been thrown by the robbers.]

John S. Orr, alias the "Angel Gabriel," seems to have met with a rather poor reception on his return to his native country after his visit to the United States, where he remained long enough to disgust his friends by his inflammatory harangues. It appears from the London *News*, that he has just been sentenced to prison for sixty days at Greenock, Scotland, for creating a breach of the peace, by holding forth on Sundays in the streets, after being cautioned by the authorities.

The telegraph reports the loss of the ship Living Age, on the Pratas Shoal. She was bound from Shanghae to this port with a valuable cargo, and was a fine vessel of about 800 tuns, built in Medford in 1848; owned by Messrs. Appleton of Boston: the ship valued at, say $40,000; value of freight, $25,000; value of cargo, $400,000; insured in Wall-st. for nearly $250,000; in Boston, $200,000.

A dispatch dated Independence, (Mo.) Wednesday, May 9, says: Letters from Leavenworth, Kansas, announce the arrival there of the Salt Lake mail. The Sioux Indians had driven off the mules from the mail station at Devil's Gate; also all the animals belonging to the traders. The people of Sweet Water had quitted their settlement for safety All is quiet this side of Fort Leavenworth, but the Indians are making threats.

A dispatch dated Rochester, Tuesday, May 8, 1855, says:—The powder-mills situated about five miles from this city exploded at 6 o'clock this evening, killing five men. The shocks, three in number, were distinctly felt here. This is the fourth time these mills have been blown up within five years. The buildings around them were blown to atoms.

The celebrated Brook Farm, in West Roxbury, formerly occupied by a party of socialists, and latterly by the City of Roxbury as a pauper establishment, was sold at auction recently. It cost the city $34,000, and brought $20,997.

A dispatch dated Cincinnati, Friday, May 11, 1855, says: A locomotive attached to a freight train on the Jeffersonville Railway exploded near Seymour, Indiana, this morning, killing instantly the Engineer and four others. The locomotive was completely blown to pieces.

People who think that there is no flour "out West," are not posted up. At Milwaukee there are 80,000 barrels of flour and 550,000 bushels of wheat, bound for the East as soon as the lake opens. The shipments at Milwaukee will double those of last year.

A dispatch dated St. Louis, Thursday, May 10, 1855, says: Daily accounts continue to record the ravages of cholera among the emigrants on the Upper Mississippi boats, which are generally crowded with passengers beyond their capacity. An unusual fatality attends the disease.

A letter from the western part of Kansas Territory, dated the evening of the 3d, states that cholera had appeared in a malignant form, thirteen deaths having occurred in twenty-four hours. It is also represented to be as bad or worse in Kansas city.

The ship Great Republic has been taken up at Liverpool by the French Government, for transport service, at 17 shillings a month per ton. She measures 3,500 tons, so that the charter will yield nearly $15,000 a month, or $500 a day.

The Treasurer of New Jersey will soon redeem the notes of the Merchants' Bank, Bridgeton, N. J., probably at par, and the Wheat Growers' Bank at some 97 cents on the dollar.

A dispatch dated Providence, Friday, May 11, 1855, says: John S. Harris, Esq., long a prominent politician of his city, was killed this afternoon in Cranston, by being struck by the locomotive of the Hartford Railroad.

The price of potatoes is evidently on the wane, and all housekeepers will rejoice that the odious monopoly, which has reigned for some time, will speedily be broken up.

The ship canal at the Saute, connecting Lakes Huron and Superior by navigable water, was ready to pass vessels on the 18th April. It was commenced in June, 1853.

The overissue of the Government Stock Bank of Ann Arbor is now $56,000, and the dividend is to be withheld for the present to endeavor to trace the fraud.

They have funny names for newspapers out in Iowa. The three daily papers published at Keokuk are called respectively: *The Gate City, The Morning Glory, and The Keokuk Nip-and-Tuck.*

The decision of the Massachusetts House of Representatives in the case of Joseph Hiss is at last on record—Mr. Hiss having been expelled by a vote of 127 to 15.

New York Markets—May 14, 1855.

Ashes—Pots $5 87; Pearls 6 25.

Flour and Meal—Flour 10 50 for State, 10 50 a 10 75 for Michigan, Indiana, and Ohio, 11 00 a 13 00 for extra Genesee. Rye Flour 7 00 a 8 50. Jersey Meal 3 25.

Grain—In wheat there is not much doing; a lot of white Canadian sold for 2 66. Rye 1 75 a 1 80. Barley 1 20 a 1 25. Oats 65 a 76c. for Southern, 73 a 77c. for Jersey, 78 a 84c. for State. Corn 1 17 for Western mixed, 1 19 for round yellow.

Provisions—Pork 14 50 for new prime, 17 75 for new mess. Beef 8 50 a 9 00 for country prime, 10 00 a 12 25 for country mess. Lard 10 a 10½c. Butter 18 a 21c. for new Ohio, 20 a 24c. for new State. Cheese 9 a 12c.

Potatoes—2 75 a 3 25 per bbl. for common red and white, 3 50 a 4 37 for Carters and Mercers.

MARRIED,

In Clarkville, N. Y., on the 2d inst., by Eld. J. Clark, Mr. CHARLES W. CRANDALL to Miss FRANCES L DENNISON, both of the above place.

April 3, 1855, by Eld. V. Hull, Rev. NATHAN HARRIS, of Fulton, to DEBORAH CARR, of Milton, Rock Co., Wis.

In Brookfield, N. Y., on the 6th inst., by Eld. W. B. Maxson, Mr. KILBURN CRANDALL to Miss ELIZA SEARLE, both of Brookfield.

At Quiet Dell, Va., May 1st, by Eld. S. D. Davis, of Lost Creek, Mr. WM. F. RANDOLPH, of Green Brier Run, to Miss RACHEL BOND, of the former place.
R. P. F.

DIED,

In North Stonington, Conn., April 7th, 1855, of consumption, MARY ADELIA, wife of William Boffington, and daughter of Ephraim and Mary Stillman, aged 29 years, 11 months, and 7 days. The deceased bade adieu to husband, children, and friends, with that serene resignation which the religion of Jesus alone can bestow, and went peacefully to the arms of that dearer friend, her Saviour. E. S.

In Plainfield, N. Y., April 23d, of chronic disease of the head, Miss ESTHER WHITFORD, aged 53 years. Sister Whitford professed religion in early life, and united with the 1st Seventh-day Baptist church in Brookfield, of which she remained a consistent member, until death terminated her pilgrimage. She endured her suffering, though severe, for almost two years, with Christian fortitude and patience, and in death she left her friends the hope that her sufferings are over.

In Verona, N. Y., on the morning of May 5th, 1855, Mr. CLARK SATTERLEE, in the 79th year of age. The deceased was a brother of the venerable Eld. William Satterlee, of Berlin, N. Y., and was about ten years his junior. His death occurred 8 months and 5 days subsequent to that of his companion. Though he had never made a public profession of religion, he has left a satisfactory evidence to his family and friends, that their loss is his infinite gain, and that he will be one of those who shall have "part in the first resurrection," on whom "the second death hath no power." D. P. C.

In Milton, Rock Co., Wis., May 4th, 1855, of consumption, FRANCIS H. HAGANY, aged 49 years, 5 months, and 1 day. Bro. Hagany was a member of the Seventh-day Baptist church of Hayfield, Pa. His Christian course of conduct won to him the confidence and respect of all who knew him. He had made God his refuge, and found him a present help in time of need. He died with full hope of a blissful immortality beyond the grave. V. H.

LETTERS.

Wm. B. Maxson, James R. Irish, C. M. Lewis, J. B. Clarke, C. C. Church, Wm. Wylie, Varnum Hull, Stephen Burdick, M. B. Hawkins, Gideon Hoxsey, Joshua Clarke, C. Whitford, D. C. Burdick, A. C. Burdick, James Maxson, J. L. Spencer, Samuel Clarke.

RECEIPTS.

FOR THE SABBATH RECORDER:

S Clarke, South Portsmouth, R I	$2 00	to vol. 12	No. 52
W H Dawley, Rockville, R I	2 00	11	52

MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
BELA SAWYER, Sup't. JOHN S. SAVERY, Proprietor.

The Eastern Association.

THE Nineteenth Annual Meeting of the Seventh-day Baptist Eastern Association will be held with the Church at Pawcatuck, R. I., commencing on Fifth-day, May 24, 1855, at 10 o'clock A. M. Walter B. Gillett is appointed to preach the Introductory Discourse; James Bailey, alternate.

☞ The Executive Committee of the Association will meet on the morning of Fifth-day, May 24th, at 8 o'clock, in the conference room.

GEO. B. UTTER, Rec. Sec.

Central Railroad Company of New Jersey.

NEW YORK, SOMERVILLE, EASTON, &c. *Spring Arrangements*, commencing April 2, 1855: Leave New York for Easton by steamers RED JACKET and WYOMING, from Pier No. 2 North River, at 8 A. M., 1 and 4 P. M. For Somerville, (way,) at 5.30 P. M.

The above trains connect at Elizabethtown with trains on the New Jersey Railroad, which leave New York from foot of Courtlandt-st. at 8 A. M., 1, 4 and 5 P. M.

Returning—leave Phillipsburg (opposite Easton) at 6 and 9.45 A. M. and 3 P. M.; Somerville (way) at 6 A. M.

New York and Elizabethport.

Leave New York at 8 and 10 A. M., 1, 4 and 5 P. M.
Leave Elizabethport at 7.15 and 9.10 A. M., 1, 3.15 and 6 P. M. JOHN O. STERNS, Superintendent.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON.—Inland route, without change of cars or detention, carrying the Eastern Mail.

The new steamer PLYMOUTH ROCK, Capt. Joel Stone, and C. VANDERBILT, Capt. W. H. Frazee, in connection with the Stonington and Providence and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from pier No. 1 N. R., (first wharf above Battery-place,) at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the Mail Train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The C. VANDERBILT, from New York—Monday, Wednesday, and Friday From Stonington—Tuesday, Thursday, and Saturday.

The PLYMOUTH ROCK, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

N. B.—Passengers, on arrival of the steamers at Stonington, proceed immediately by Mail Train to Providence, Boston, Taunton, and New Bedford; or by Accommodation Train from Stonington at 7.30 A.M.

A Baggage Master accompanies the Steamer and Train through each way.

Through tickets on Mondays, Wednesdays, and Fridays, for Nantucket, Holmes' Hole, and Wood's Hole, via New Bedford, connecting with the new steamer Eagle Wing.

For passage, berths, state-rooms, or freight, application may be made at pier No. 2 North River, or at the office, No. 10 Battery-place.

Bruce's New York Type Foundry,

ESTABLISHED 1813, has now on hand, ready for immediate delivery, in fonts to suit purchasers,
100,000 lbs. Roman Type of new cut,
50,000 lbs. Fancy Type,
10,000 lbs. Scripts of various styles,
5,000 lbs. Germans,
5,000 lbs. Ornaments in great variety,
5,000 lbs. Borders,
30,000 feet Brass and Type Metal Rules, and all the novelties in the business.

All the above Types are cast by steam power, of the new composition of metal peculiar to this foundry, and which is certainly superior to any ever used before in any part of the world. The unequaled rapidity in the process of casting, enables me to sell these more durable types at the price of ordinary types, either on credit or for cash.

Presses, Wood Type, and all other printing Materials, except Paper and Cards, (which have no fixed quality or price,) furnished at manufacturers' prices.

The latest Specimen Book of the Foundry is freely given to all printing offices, on the receipt of fifty cents to prepay the postage.

Address, GEORGE BRUCE,
Feb. 12, 1855. 13 Chambers-st., New York.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.
Or, NOYES SPICER, Indianapolis, Ind.

The very Book that every body has been Wanting.

The Book for the Parlor, the Book for the Fireside, the Book for the Professor, and the Book for the Non-Professor.

THE RELIGIOUS DENOMINATIONS OF THE UNITED STATES: Their History, Doctrine, Government, and Statistics; with a Preliminary Sketch of Judaism, Paganism, and Mohammedanism. By Rev. JOSEPH BELCHER, D D., Honorary Member of the Historical Societies of Pennsylvania and Wisconsin, author of "William Carey, a Biography," etc., etc., and "Editor of the Complete Works of Andrew Fuller," "Works of Robert Hall," etc , etc. Large octavo, 1024 pages, handsomely embellished by nearly two hundred engravings.

This invaluable work is rapidly finding its way among all classes of the American people. The clear, comprehensive, and impartial manner in which the learned author treats each and every denomination, is winning for him golden opinions from the highest authorities in the land. The innumerable lively tales and anecdotes of ministers, churches, and laymen, which he introduces with the articles of faith and all important statistical information, give to the work a life, vigor, and spirit truly delightful. One cannot sit down to it without being convinced that his subject is in the hands of a master, nor rise but with kindlier and more liberal feelings towards the great brotherhood of Christians, under whatever name they bear. Ours is a great, growing, and glorious country, and every family, and every young man, throughout its length and breadth, should have a copy as a text book of all its denominations. Wherever known, it is read, and wherever read, admired. Look at the following from among the very many notices received:

It embodies a vast amount of information relative to the origin, history, and missionary operations of the different religious denominations in this country, presented in a remarkably interesting and attractive manner.—*Rev. John Dowling, D. D., Author of "The History of Romanism," "Judson Offering," etc.*

This is a large and beautiful volume, and will find a cordial welcome in every family.—*Philadelphia Christian Chronicle.*

So far as concerns independence of vision, there can be no question, as Dr. Belcher surveys each sect with the same dispassionate impartiality.—*Epis. Recorder.*

This massive volume embraces a vast fund of information.—*Presbyterian.*

The work is sold by agents, and will furnish a large amount of interesting and valuable information to the families into which it may be received.—*New York Recorder and Register.*

In the account given of the denominations, he is fair, and generally allows them to speak for themselves, as to their history and institutions.—*New York Christian Advocate and Journal.*

It contains a mass of interesting facts and statistics.—*Norton's Literary Gazette.*

Judging from the work, it would be difficult to say what are the religious views of the Editor, so fairly, so dispassionately, so charitably, has he treated each and every sect.—*Philadelphia City News.*

We presume it will be a standard work in thousands of libraries.—*Littell's Living Age.*

Sold only by agents, to whom certain districts are allotted. For particulars address the publisher,

JOHN E. POTTER,
15 Sansom-st., Philadelphia.
Or, NOYES SPICER, Indianapolis, Ind.

Miscellaneous.

The Great Work at Niagara Falls.

The suspension bridge across the Niagara river was completed on the 18th ult., on which day its powers were put to the test by the crossing of a train, consisting of a locomotive, tender, and twenty-two heavily laden freight cars, the weight of which was three hundred and fifty tons. Not the slightest vibration in the structure was perceptible. The work was projected by and constructed under the supervision of A. Roebling, Esq., who is a Prussian by birth, but has resided many years in this country. The following particulars are given in the N. Y. *Times*:—

Crossing the Niagara River at a hight of two hundred and forty-five feet from its surface, commanding on one side a full view of that mighty waterfall, the wonder of the world; and on the other a partial one of the renowned whirlpool, whose fearful eddies defy the approach of the boldest navigator, and most fearless adventurer, the suspension bridge presents one of the most imposing sights the eye ever rested on.

Viewed from a distance, its elevation and its great length, as it stretches over the river in an unbroken span of eight hundred and twenty feet, give to it a fragile appearence; but a near approach reveals its enormous strength. It is supported by four wire cables, which are carried over four stone towers; the ends of these cables being strongly anchored and firmly secured in a solid bank of masonry, into which they are sunk from twenty-five to thirty feet.

The hight of the two towers on the Canada side is 78 feet, while that of those on the American side is 88 feet. The diameter of each of the four great cables is 10 inches, and they each contain 3,640 wires; in the four, there are, consequently, 14,560 wires. The weight of the superstructure is 750 tons; that of the supporting strength of the cable is 7000 tons, while their ultimate strength is 12,400 tons.

From each of these cables there hang, in nearly a vertical direction, and at a distance of about four feet apart, smaller wire cables of about one and a half inches in diameter. By these the superstructure is suspended; and one of the most interesting features in this portion of the work is, that it forms a double bridge; for, directly under, and sixteen feet below the platform on which the track of the railroad is laid, is another platform forming a bridge for foot passengers and for vehicles of all descriptions. This is connected with the upper platform, or railroad bridge, by a truss work of wood and iron, of extraordinary strength. A few feet of each end of the lower or carriage bridge rest on stone abutments. It is braced in every possible manner, and so completely stayed by heavy lateral cables, attached to the under side, secured in the cliffs and in the rocks at their base, near the edge and on each side of the river, that the most furious winter gales do not cause the slightest perceptible vibration. The railroad bridge is crossed by a single track, on both sides of which is sufficient space for foot passengers to pass. It is laid with four parallel rails, so arranged of to form an equal number of guages, which is a novel and valuable arrangement, as it is thus made available to the locomotives and cars of roads having guages of various widths.

Of its kind and as a work of art it is unequalled. It is the only railroad suspension bridge in the world now completed. It is, moreover, a double suspension bridge. The celebrated bridge at Frysburg, in Switzerland is beautiful, but it is a carriage bridge only. Stephenson's famous Brittania Railway Bridge is a stupendous work, but that, too, is a single one, and built on piers, between which the greatest span is but four hundred and sixty feet. Of all the splendid structures of ancient or modern times which have excited the wonder and admiration of the world, we know of none which, for combination of natural position, scientific projection, great span, massive strength, finished mechanical skill, vast utility, and beneficience of purpose, can compare with Roebling's great International Highway. Though not a castle in Spain, it is a Gibralter in the air.

May.

May, on the farm, is crowded with important duties, and unless they are thoroughly discharged, will show a neglect through all the summer operations. "Drive your business, and let not your business drive you," is a good old adage, and has more force than many are disposed to allow it. Always to be able to hoe a crop, for instance, at the moment it needs it, is a matter of considerable importance, saves labor and time, and undoubtedly increases the crop beyond what it would have been had the weeds luxuriated a few days longer. This is especially the case in harvesting the grain and grass crops—a delay of a day or two sometimes sadly affecting the quality of either. It is just as important for the farmer to be prompt, and improve the favorable moment in his affairs, as it is for the smith "to strike while the iron is hot," the mariner to spread his sails to the favorable breeze, or the merchant to purchase when goods are low. When plans are judiciously laid, so that each particular duty may be performed at the proper time, the work of the farm will go on pleasantly and profitably, and afford a satisfaction unknown to those who labor without system, and seldom employ the head in conducting their affairs.

Trees.—If it was not done in April, make an experiment with one old apple tree; graft, if it needs it; dig, manure and pulverize the soil about it; if mossy and bark-bound, scrape it, and wash it with soap and water; do this twice the coming summer, and once each succeeding spring until the grafts come into bearing, keeping an account of expenses. This will test the matter, whether it is best to work over old trees. Wash your trees with soap-suds, if not already done this spring.

Grafting.—It is better done in April or early in May before hot suns prevail. Where what are called suckers come after the tree is grafted, do not cut them off until October—then cut off about half their length and allow them to grow the next year. Instead of diminishing, they will increase the growth of the young grafts, as their leaves will elaborate the sap, and keep up a healthy action of the tree.

Planting Corn.—Plow deep, spread the manure liberally, and cultivate it in three or four inches deep, pulverize thoroughly, and then if you desire to try specific manure, add a little superphosphate, bone dust, or guano to the hill, always remembering that the guano must not come in contact with the young germs of the corn. This will give it an early start, and get the ground covered and the plants ready for the hot suns of July.

Plowing.—All crops, even the grass crops, depend greatly upon the manner in which this work has been done. Deep plowing is an antidote against drouth A light porous soil admits the air—the air is loaded with moisture, penetrates the light soil until it gets down where it is cool, and there the moisture is condensed, taken up by the light particles of earth, and held in reverse for the roots of the plants. So if you plow deep and pulverize well, there is a perpetual watering going on, be the surface ever so dry.

Worms in Corn-Stalks.—This worm, says the New England *Farmer*, is a great pest to the farmer, and, although the complaints of its ravages are not so long and loud as those made against the cut-worm, yet it is none the less destructive to the interests of the corn-grower. As no article in any of the agricultural journals relating to its history has met my eye, and finding but few people conversant with its habits, you will pardon me for giving the results of my own observation.

[illegible] color, when matured to full size, which is from one inch and one-eighth to one inch and one quarter in length, is a bright red and slate color, interspersed with white. It deposits its eggs both on the corn and on the dry stover, and it is probable that but few kernels of corn germinate but what have one or more of these enter its germ. It is seldom that the stalk is wholly destroyed, but it will have a yellow, sickly appearance for a long time after its appearance above ground, until it shows the tassel, the top of which is generally covered by the worm's chips, besides the last or top leaves being perforated with numerous small holes. Some fields are injured in the above manner more than fifty per cent.

The remedy for this devastator is very simple, being merely to plant the corn near the surface of the ground, and be sure and not hill up any at the first hoeing. I have never seen corn dropped in the bottom of the furrow, or covered very deep, but what was more or less affected by its operations; and, by the way, I have never seen any thing that would stop the ravages of the cut-worm so effectually, as to pull the dirt entirely away from its roots, as the worm cannot or will not work much above ground.

Any one who has made much observation on this subject, will remember that worms always work the most destructively just after the corn has been hoed. When corn has been favorably started, it grows faster than the worm gains strength, and will throw it out previous to the appearance of the tassel, the worm being then about one-half or three-fourths of an inch long. I have counted, in once crossing a field at this stage of the corn's growth, as many as thirty or forty just coming into daylight.

Retiring from the Ministry.

We were very much struck, on visiting a Methodist Conference a few months since, at the large proportion of young men in the ranks of its itinerant ministry. The fact may probably be accounted for, in part, by the following statement, which we take from an article written by one of their ministers, who asserts that he has been an itinerant for more than twenty years:—

"The unnecessary privations and sufferings of our preachers, even in the service of old and wealthy societies, is now operating to thin out and reduce our ministerial ranks. Many are absolutely driven out by poverty; many are disgusted by the cold indifference of the church they serve, and retire in disaffection; many being worn out personally, or having families in feebleness, are compelled to leave. And what is more—and alarmingly common—the very best portion of our ministry, with expensive or feeble families, are finding sufficient excuse to accept what are being continually offered to them—presidencies, professorships, principalships, editorships, agencies, etc."

The process here described is not confined entirely to the Methodist Church. Other denominations are feeling its influence. Any Church which does not provide an adequate support for its ministers and their families, is drying up its own life's blood by the process; and it will see and feel the effect when it is probably too late to remedy the evil. An unsupported ministry must necessarily become a secular one, and to that degree an inefficient one. At the time when men are prepared, by their age and experience, to become efficient, they find their families growing so upon their hands that they must turn aside from their direct work to procure a support for them; and thus the Church is deprived of their labors and loses far more than she gains by the process of starving them. [Presb Her.

Animated Clocks.

In China the inhabitants of the provinces turn their cats to a most useful purpose, if we may believe the following story, which is related by M. Hue, in his travels in China:

"One day, when we went to pay a visit to some families of Chinese Christian peasants, we met, near a farm, a young lad, who was taking a buffalo to graze along our path. We asked him, carelessly, as we passed, whether it was yet noon. The child raised his head to look at the sun, but it was hidden behind thick clouds, and he could read no answer there. 'The sky is so cloudy,' said he 'but wait a moment;' and with these words he ran towards the farm, and came back a few minutes afterwards with a cat in his arms. 'Look here,' said he, 'it is not noon yet;' and he showed us the cat's eyes, by pushing up the lids with his hands. We looked at the child with surprise, but it was evidently in earnest; and the cat, though astonished, and not much pleased with the experiment made upon her eyes, behaved with the most exemplary complaisance. 'Very well,' said we, 'thank you,' and he then let go the cat, who made her escape pretty quickly, and we continued our route. To say the truth, we had not at all understood the proceeding; but we did not wish to question the little pagan, lest he should find out that we were Europeans by birth. As soon as ever we reached the farm, however, we made haste to ask our Christians whether they could tell the clock by looking into a cat's eyes. They seemed surprised at the question; but as there was no danger in confessing to them our ignorance of the properties of the cat's eyes, we related what had just taken place. That was all that was necessary; our complaisant neophytes immediately gave chase to all the cats in the neighborhood. They brought us three or four, and explained in what manner they might be used for watches. They pointed out that the pupils of their eyes went on constantly growing narrower until twelve o'clock, when they became a fine line, as thin as a hair, drawn perpendicularly across the eye, and that after twelve the dilation recommenced. When we had attentively examined the eyes of all the cats at our disposal, we concluded that it was past noon, as all the eyes perfectly agreed upon the point. We have had some hesitation in speaking of this Chinese discovery, as it may, doubtless, tend to injure the clock making trade, and interfere with the sale of watches; but all considerations must give way to the spirit of progress. All important discoveries tend in the first instance to insure private interests, and we hope, nevertheless, that watches will continue to be made, because among the number of persons who may wish to know the hour, there will, most likely, be some who will not give themselves the trouble to run after the cat, or who may fear some danger to their own eyes from a too close examination of her's.

Advantages of Manuring.

In the columns of the London *Times*, we find a statement of the results of some experiments, made by a distinguished agriculturist on the application of manure to wheat. In the center of a fifty acre field, one acre was left without manure; all the rest of the field receiving 2 cwt. of Peruvian guano per acre in autumn, at the time the seed was sown. The produce of the acre undressed was tested against that of the adjoining one, which had received Peruvian guano, and the result was that one acre with guano yielded 32 bushels of 63 lbs. per bushel, while the acre without manure yielded 25½ bushels of 60 lbs. to the bushel. The difference in money value amounted to £2 12s. 7d., or about $13; while the cost of 2 cwt. of gnano in 1853, when applied, was £1, or about $5. There was in this case, then, a profit of $8 from every acre to which the guano was applied, or $400 if the whole fifty acres had been manured. There was also a superior quality of wheat produced on the manured portion, as shown by the weight per bushel; and this additional advantage also, that the wheat on the manured portion was a week earlier in ripening than the other.

A second experiment is related, which was made to test the value of nitrate of soda and common salt, as a top dressing to wheat in spring. A whole field, save one acre in the center, was top dressed in April with 1 cwt. of nitrate of soda and 1 cwt. of salt per acre, given in two applications at the interval of two weeks. The result in this case was also extremely profitable. One acre, with nitrate of soda and salt, yielded 42 bushels, worth £13 13s.; while the acre without manure yielded only 30 bushels, worth £9 15s. The difference between the two acres tested, was greater in this than in the former case. The difference in money value was nearly $15, while the 1 cwt. of nitrate of soda, and the 1 cwt. of salt, together cost only $5. The profit per acre, in this case, was nearly ten dollars.

These experiments are not singular, or beyond ordinary in their results. They only corroborate hundreds of others made in this country, and in Great Britain. But they are well entitled to attention, as they may serve to fix upon many minds the impression that farmers possess the power of greatly increasing both the produce and the profit of their crops. Independently of the consideration of profit, the results of the above experiments are interesting. Here are two substances, the application of which, in certain known quantities, give an increase, which may be stated, on an average, of nearly one-fourth to the natural produce.

Money and Credit.

The *Post* has the following, in view of the past and present in money matters:—

Just now money is abundant. There is an indisposition to buy on credit; or even to buy anything more than will serve for the purposes of the day. The trader buys no more than will be enough to keep his regular customers supplied—the customer buys only enough for the passing hour. It is settling time and comparatively few notes are passed. How regular would be the flow of things if this were the common practice always! How surely is it the pathway of individual honor, and in the long run, of individual independence! How many aching hearts would be saved if there were no wild dreams of sudden wealth; if mining, timbering, land buying, and other wild goose schemes never tempted the farmer from the plow, the merchant from his store, the mechanic from his shop, and professional men from their pursuits! This, however, (such is human nature,) can hardly be expected when prices come to their level. When but yesterday's astounding developments in stock gambling are forgotten, things will again go up; everybody will be ready to buy some thing; the buyer will be tempted by the long credits—the bane of trade—tendered by the seller. Then credit will again be piled up, our mometary system aiding in raising the pile; and then, when it is top-heavy—when there is heard the command 'PAY UP' uttered, nobody knows *by whom*—to *be* uttered nobody knows *when*—our monetary system helps to tip it over. When this is the case there comes what is termed a commercial revulsion. The wise will steer clear of long and large credit.

A Huge Pile of Serpents.

Baron Humboldt says: "In the savannahs of Izacubo, Guiana, I saw the most wonderful and terrible spectacle that can be seen; and although it be not uncommon to the natives, no traveler has ever mentioned it. We were ten men on horse-back, two of whom took the lead, in order to sound the passages, while I preferred to skirt the great forests. One of the men who formed the vanguard returned at full gallop and called to me, 'Here, Sir, come and see serpents in a pile.' He pointed to something elevated in the middle of the savannah or swamp, which appeared like a bundle of arms. One of my company said, This is certainly one of the assemblies of serpents which heap themselves on each other after a violent tempest. I have heard of these, but never saw any; let us proceed cautiously, and not go too near them. When we were within twenty paces of it, the terror of our horses prevented our approaching nearer, to which none of us inclined. On a sudden the pyramid mass became agitated; a horrid hissing issued from it, thousands of serpents rolled spirally on each other, and shot forth out of the circle their envenomed darts and fiery eyes to us. I own I was the first to draw back, but when I saw this formidable phalanx remain at its post, and appear to be more disposed to defend itself than to attack us, I rode around in order to view its order of battle, which faced the enemy on every side. I then thought what could be the design of this assemblage; and I concluded that this species of serpent dreaded some colossal enemy, which might be the great serpent or cayman, and they unite themselves after seeing the enemy, so as to resist the enemy in a mass."

Selection of Apples.

In grafting or planting an orchard, it is of the utmost importance to obtain the best varieties under cultivation, those which are productive, the fruit of the first quality, and the trees hardy, and vigorous growers. In selecting, we should approach as near as possible to this standard, although there are but few varieties that unite all these qualities. Varieties are so numerous at the present day, that recommending a selection for cultivation is rather perplexing and difficult. There are many kinds which rank as first-rate, though there is a difference of opinion with regard to some of them; this is not surprising, as tastes differ. An apple which one might pronounce first rate, another, perhaps, would call second rate; yet there are kinds with respect to which nearly all are agreed, and which are universally known as first quality; these should be extensively propagated. Having been engaged in grafting many years, I have had an opportunity to learn something by experience and observation of many varieties. Although my knowledge of the subject is limited, compared with many others, I propose to name a few varieties for cultivation, having been familiar with them all for years, and found them, all things considered, among the best. I can, with confidence recommend tha following list, nearly all of which may be found described in Cole's fruit book:—

Early Williams,
Am. Red Juneating,
Gravenstein,
Shirley, or Foundling,
Spice Sweet,
Hubbardston Nonsuch,
Willis Russet,
Minister,
Mother,
Baldwin,

Early Bough,
Leland Pippin,
Porter,
Superb Sweet,
Danvers Wint. Sweet,
R. I. Greening,
Roxbury Russet,
Seaver Sweet,
Jewett's Red,
Priest Sweeting.

[Am. Agriculturist.

A Capacious Carpet-Bag.

Meanness occasionally meets with a shock that is a lesson to all concerned, especially to the victim. On the Cleveland cars, a day or two since, coming to Buffalo, was a stalwart man, going to New York to buy goods. He was not what might be called a stingy or close man, but he was one who, when there was a cent due him that swindling might deprive him of, would sacrifice a $50 bill to save the copper. Our friend had started from Cleveland without any breakfast, and when Erie "hove" in sight, he gathered himself up for a general skirmish for any and all kinds of provisions. He had a carpet-bag with him, and going into the dining-room at Erie, he deposited his carpet-bag on one chair, while he took another by its side. He was lost for about ten minutes—perfectly oblivious to anything, save that he had a blessed consciousness of something rapidly and agreeably filling up his "inwards." About this time, the landlord came round, and stopping by our friend's chair, ejaculated, "Dollar, Sir." "A dollar?" responded the eating-man—"a dollar—thought you only charged fifty cents a meal for one—eh?" "That's true," said *meanness*, "but I count your carpet-bag one, since it occupies a seat." (The table was far from being crowded.) Our friend expostulated, but the landlord insisted, and the dollar was reluctantly brought forth. The landlord passed on. Our friend deliberately arose, and opening his carpet-bag, full to its wide mouth, discoursed unto it, saying; "Carpet-bag—it seems you're an individual—a human individual, since you eat—at least I've paid for you, and now you must eat"—upon which he seized everything eatable within his reach, nuts, raisins, apples, cakes, and pies, and amid the roars of the bystanders, the delight of his brother passengers, and the discomfiture of the landlord, phlegmatically went and took his seat in the cars. He said he had provisions enough to last him to New York, after a bountiful supply had been served out in the cars. There was at least $8 worth in the bag—upon which the landlord realized nothing in the way of profit. So much for meanness. [Buffalo Repub.

How to Sleep.

For the enjoyment of a sound and healthy sleep, Hufeland gives the following directions:—

1. The place where one sleeps must be quiet and obscure. The less our senses are acted upon by external impressions, the more perfectly can the soul rest. One may see from this how improper the custom is of having a candle burning in one's bed chamber during the night.

2. People ought always to reflect that their bed chamber is a place in which they pass a great part of their lives; at least they do not remain in any place so long in the same situation. It is of the utmost importance, therefore, that this place should contain pure, sound air. A sleeping apartment must, consequently, be roomy and high, neither inhabited nor heated during the day; and the windows ought always to be kept open except in the night time.

3. One should eat little, and only cold food for supper, and always some hours before going to bed.

4. When in bed, one should lie not in a forced or constrained posture, but almost horizontally, the head excepted, which ought to be a little raised. Nothing is more prejudicial to health than to lie in bed half setting. The body then forms an angle, circulation in the stomach is checked, and the spine is always very much compressed. By this custom, one of the principal ends of sleep, a free and uninterrupted circulation of the blood is defeated, and in infancy and youth, deformity and crookedness are often the consequences.

5. All the cares and burdens of the day must be laid aside with one's clothes; none of them must be carried to bed with us; and in this respect, one by custom may obtain very great power over their thoughts. I am acquainted with no practice more destructive than that of studying in bed, and of reading till one falls asleep. By this means the soul is put into great activity, at a period when every thing conspires to allow it perfect rest; and it is natural that the ideas thus excited should wander and float through the brain during the whole night. It is not enough to sleep physically; man must sleep also spiritually. Such a disturbed sleep is as insufficient as its opposite—that is, when your spiritual part sleeps, but not your corporeal; such, for example, as sleep in a jolting carriage on a journey.

6. One circumstance, in particular, I must not here omit to mention. Many believe that it is entirely the same if one sleeps these seven hours either in the day or in the night time. People give themselves up, therefore, at night as long as they think proper, either to study or pleasure, and imagine that they make every thing even when they sleep in the forenoon those hours which they sat up after midnight. But I must request every one, who regards his health, to beware of so deceiving an error. It is certainly not the same, whether one sleeps seven hours by day or by night; and two hours sound sleep before midnight are of more benefit to the body than four hours in the day.

Forest Trees.

The white pine, which grows best between the 43d and 47th parallels of latitude, is as our readers are aware, the most valuable tree in our country. It is estimated that nine-tenths of the houses in our Northern States, with the exception of those in our great cities, are constructed of wood, and the great mass of these are of white pine. Its lightness, softness and durability render it invaluable for building purposes. The white pine has been introduced into England; but it does not flourish there as in its native climate.

Next in value to the white pine comes the white oak, which is so largely used for ship building. The English variety of white oak is thought by many to be heavier, stronger, and more durable than that of America, and its cultivation has been already introduced in our Northern and middle States. There are in this vicinity some fine specimens of more than twenty years' growth. The timber generally selected for ship building is what is called the pasture oak, which growing in fields aloof from forests, derives more of the genial influences of the sun and air, and more nutriment from the soil, than those which are of a more neighborly character.

In felling timber, it is customary among our farmers to cut the tree in the winter season, when it is supposed to contain the smallest quantity of sap, and may consequently be seasoned the more easily. Mr. Gray, in referring to this practice, endorses the arguments of the late Colonel Pickering, who opposed it on the ground that trees are not actually devoid of sap in the winter, but that it exists in abundance, though greatly thickened by the cold; consequently, it is much more difficult to expel than in the summer, when in a more liquid form; and, therefore, all trees should be felled in the summer time.

Next to the pines and oaks, the sugar maple is one of the most useful as well as beautiful trees in our country. In the season of 1853–4 the amount of sugar made in the United States was not far from five hundred and forty million pounds, worth probably more than thirty million dollars. [Boston Daily Journal.

The Desert of Sahara.

The Sahara is by no means the monotonous sea of sand which we commonly figure to ourselves. Its surface is varied by many natural features, but none of sufficient magnitude to constitute distinct districts. "The desert is habitable, *fafi*, or uninhabitable *khlca*; bushy, *haitia*, or wooded, *ghaba*; stony, *serir*, or covered with enormous rocks, *warr*. If it forms an elevated plateau, it is called *djebel*, in opposition to the maritime plain, *sahel*." But everywhere it has the same climate, the same absence of rain, the same fierce vicissitudes of heat and cold, the same fearful simoon, or *khamsin*, rendering life scarcely supportable in the spring, until the violent etesians from the Mediterranean drive it back in summer and autumn, refreshing the desert with their cold, but powerless to bring with them their moisture, which remains precipitated on the summits of the Atlas.

The population is, of course, grouped in the "oases," around the scanty springs of water which here and there come to the surface. What resorvoirs supply these slender and yet never-failing sources, in a region where, on a surface nearly as large as Europe, no moisture whatever falls in ordinary seasons? The question is a curious one. Richardson is the only traveler (so far as we remember) who refers it to the extraordinary deluge of rain which falls in particular spots, at intervals often of nine or ten seasons. He mentions one case where such a phenomenon followed fifty rainless years, and which he conceives was sufficient to store the subterranean receptacles for the wants of another similar period.

The toils and danger of Sahara traveling, and the strange phenomena of the desert, are familiar to us from many well-known narratives. A French author effects greatly to depreciate them and to attribute much of the popular notions on this subject to the imagination of travelers. [Edin. Review.

Home-Made Guano.—S. B. Halliday, of Providence, R. I., has a process by which he can convert the fish which swarm our coasts every season, into an article like guano, at less than half the cost of the Peruvian article, and Prof. Hare, of Philadelphia, thinks equally valuable. Mr. Halliday says:—

"I am able to say very confidently that this product can be afforded at $25 per tun and pay the manufacturers more than 50 per cent. The oil (according to Drs. Jackson and Hare,) being almost valueless for fertilizing purposes, it is first taken from the fish, and they are then converted into Guano. The first cost of the fish is about $2 per tun, and containing nearly 3 per cent. of oil, the oil will pay for the fish and nearly for the labor in manufacturing. By my own experiments I thoroughly demonstrated the rendering of fish into a guano. I then consulted Dr. Hare, of Philadelphia, who, I ascertained, had experimented extensively and successfully. I obtained from him his processes, and have received considerable instruction from him on the subject. I have also consulted Dr. Jackson more recently These gentlemen, and all with whom I have consulted, agree as to the great value of this fertilizer."

Among the acts of the Massachusetts Legislature is one for debarring students the privilege of running up an account for drink or food, (including confectionery,) and for carriage hire. Inn-holders, confectioners, stable keepers, etc., are forbidden to give credit to any student of any educational institution in the State, whatever his or her age or character may be.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12¼ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.

Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. SANDS, retail by RUSHTON, CLARK & Co., and by all Druggists, everywhere.

The Sabbath Recorder,
PUBLISHED WEEKLY
By the Seventh-day Baptist Publishing Society,
AT
NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

GEOLOGY AND THE BIBLE.—NO. 1.

The Mosaic Account of Creation not Repudiated by Geologists.

Since this deeply interesting subject was introduced into the *Recorder*, it has pleased the great Disposer of events to remove to the spirit land our dear brother who introduced it. Dr. F. was a noble and generous man; and however widely we may have differed from him in opinion on the subject under consideration, we feel no less regret on account of his sudden departure. We always admired his bold and independent mode of thought, and his unhesitating manner of assailing whatever he believed to be opposed to truth. His generosity was unbounded, and his oft-bestowed hospitality will long be remembered by the many who have partaken it. May we all, like him, abound in generous deeds, and like him be prepared for our change.

In the *Recorder* of Nov. 16th, is an article from the pen of brother Lucius Crandall, in which he expresses the wish that the subject of Geology and the Bible may be more fully discussed; and by way of helping the matter along, proposes the publication in the *Recorder* of an article from the pen of D. N. Lord. He proposes this, in the first place, because he thinks the subject deserves attention, and next, because he thinks the article is able and argumentative, and lastly, because he wishes that "the advocates of the geological theory may have an opportunity to engage with a controversialist of sufficient ability to make a victory over him an object as an achievement in favor of their system." It is to be presumed, that brother Crandall does not mean to insinuate that any such motive has actuated those who have thus far engaged in this controversy. The writer of the present article has no desire to achieve a victory over any body, but is simply desirous to know and promulgate the truth, and is entirely willing that those who contend for victory alone may have their reward. With this view, it is immaterial who may be his opponent. I hailed the publication of Mr. Lord's article in the *Recorder* with pleasure, and consequently saw its prohibition with regret; first, because I was anxious that the readers of the *Recorder* should have the advantage of a fair and able argument against the geological theory; and, secondly, because I thought it a little unfair in Mr. L. to prohibit it, seeing that it had already been published to the world through his own periodical. I had prepared a review of that article, which I intended to offer for publication in the *Recorder;* but since Mr. L. is unwilling that the *article itself* should be published, I suppose he would not *relish* a review of it; so I shall retain my manuscript, and complete what I have to say on the subject entirely irrespective of what has been already written. And I hope that since brother Crandall has expressed his dissatisfaction with the "*geological theory*," and his anxiety to have the subject further discussed, he may find time to show, by his own able pen, wherein the *theory*, as it is called, is at fault.

In the treatment of this subject, it is of the utmost importance to keep clear of false issues, and hold the mind to the real and only point at issue in the contest. Mr. Lord's great blunder consists in begging the real question at issue, and dragging in an issue which *geologists have never made, and will never accept.* He labors to show, what nobody will deny, that the whole Bible stands or falls with the first chapter of Genesis; and begging the entire question whether science corroborates or denies this chapter, he proceeds to state the question thus: "The question is, whether Christianity is credible and true, or whether it is convicted of falsehood by the material works of the Creator." Geologists would be the last of all men to accept such an issue; for they, of all men, are the most firm believers in the harmony of God's works with his word. I can hardly forbear to quote from the writings of the most scientific men to show how utterly the true issue is misrepresented by the above statement of the question, and how utterly futile the attempt to force them into antagonism with God's written word. Volumes might be quoted, but I must let the pen of a few utter the sentiments of the many.

President *Hitchcock*, who is the standard author on Geology in this country, and whose work has received the commendation of the ablest scholars in Europe, says, in a most able and comprehensive work, entitled "*Religion of Geology*," page 499: "Rightly understood, and fairly interpreted, there is not a single scientific truth that does not harmoniously accord with revealed as well as natural religion; and yet, by superficial minds, almost every one of these principles has, at one time or another, been regarded as in collision with religion, and especially with revelation. One after another have these apparent discrepancies melted away before the clear light of further examination. And yet, up to the present day, not a few, closing their eyes against the lessons of experience, still fancy that the responses of science are not in unison with those from revelation. But this is a sentiment which finds no place with the profound and unprejudiced philosopher, for he sees too much harmony between the works and the word of God to doubt the identity of their origin. He knows it to be a sad perversion of scientific truth, to use it for the discredit of religion. He knows that the inspiration of the Almighty breathed the same spirit into science as into religion; and if they utter discordant tones, it must be because one or the other has been forced to speak in an unnatural dialect."

Dr. Chalmers—"We have heard that the study of natural science disposes to infidelity; but we feel persuaded that it is a danger associated only with a *slight* and *partial*, *never* with a *deep* and *adequate* and *comprehensive view* of its principles."

Sir John Herschel—"Nothing can be more unfounded, than the objection of persons of narrow minds, that the study of the sciences leads to scoff at revealed religion. Its natural effect on every well-constituted mind, *is and must be the direct contrary*." Speaking of Geology in particular, Sir John says, "There cannot be two truths in contradiction to one another; and a man must have a mind fitted neither for scientific nor religious truth, whose religion can be disturbed by Geology, or whose Geology can be distorted from its character of an inductive science by a determination to accommodate its results to preconceived interpretations of the Mosaic cosmogony."

McCosh—"We have often mourned over the attempts made to set the works of God against the word of God, and thereby excite, propagate and perpetuate jealousies, fitted to separate parties that ought to live in closest union. Let not science and religion be reckoned opposing citadels, frowning defiance on each other, and their troops brandishing their armor in hostile attitude. Science has a foundation, and so has religion; let them unite their foundations; and the basis will be the broader, and they will be two compartments of one great fabric reared to the glory of God. Let one be the outer, and the other the inner court. In the one, let all look and admire and adore; and in the other, let those who have faith kneel, and pray, and praise. Let one be the sanctuary where human learning may present its richest incense, as an offering to God, and the other the holiest of all, separated from it by a veil now rent in twain, and in which, on a blood sprinkled mercy seat, we pour out the love of a reconciled heart, and hear the oracles of the living God."

Surely, such men will hardly accept the issue which Mr. Lord drags forth to view. I am not at all unaware, that in the early developments of Geology, some persons of infidel predilections seized upon isolated facts, and by hasty and unwarranted inductions, fancied they had found wherewith to assail the Scriptures; but their scepticism was in spite of the science, and not by virtue of it. Against such Mr. Lord may hurl his hottest thunderbolts, and have the satisfaction of finding that they had long before been demolished by such geologists as Hitchcock, Pye Smith, Hugh Miller, Chalmers, and others, who have turned the *truths* of Geology against infidelity with annihilating effect. *Such men*, with *such weapons* as the pious geologist has at hand, combined with a *true interpretation* of the Mosaic account of creation, are the most fatal foes that infidelity has ever encountered. But there is a foe over which it may well enough boast of triumph; and that foe is the theologian who discards the light which science throws upon religion, but tenaciously adheres to his ill-timed and inadequate interpretations of Scripture. Let us at this point, then, endeavor to clearly understand what this theory is which is charged with contravening the inspired record, and to understand also exactly what the sacred record is which this theory is said to contravene, for it is only by a careful comparison of both records, that we can decide whether they agree or disagree.

The discoveries of Geology develop indubitable evidences of the vast antiquity of the earth—an antiquity reaching immeasurably beyond the period of the *Adamic* creation. These discoveries are corroborative of the Mosaic account of the *Adamic creation*, including the creation of man and the existing races of plants and animals, while at the same time they indicate that the earth had been in existence long anterior to the date of this transaction, and that numerous races of plants and animals had lived and died on its surface before man and his cotemporaries were placed upon it. *This is the geological theory.* The facts on which it is predicated are as numerous and unmistakable, and the inductions by which it is arrived at as logical and meaning, as those on which any scientific truth whatever is predicated. I shall endeavor to show in the course of the investigation.

Now let us turn to the Mosaic account, and see if it as clearly denies this great age of the earth as Geology affirms it. I am ready to admit, that if I find this, I shall yield the point; and while I must admit the existence of the geological facts, must also admit that some false induction has been made from those facts. These facts are so numerous, and the inductions *seem* so unerring, that the Mosaic declaration to the contrary must be *unmistakably* clear and *unambiguous*, to be accepted as contradictory of the geological theory. Is this the case? Does the Mosaic account of creation unmistakably affirm that the earth is only six thousand years old? Is its language capable of no other construction without palpable violence to its meaning? If it shall appear that the Mosaic account will bear either construction without violence to established laws of interpretation, my point is gained, for I shall then have a right to the weight of the geological facts, in determining which interpretation to adopt, and the one which affirms the great age of the earth must predominate, unless extraneous testimony from some *other* source can be produced to offset against that furnished by Geology, which no one, I believe, has ever claimed.

Now my opinion is, that we find nothing whatever in the Mosaic record of creation, or in any other part of the Bible, to contradict the evidence which Geology furnishes of the great age of the earth. My opinion is further, that if we carefully examine that record, without the least aid from the light of geological science, but simply with reference to its own internal characteristics, we shall find even there evidence of the great age of the world—evidence so plain that the most learned and devout Christians have adopted that view centuries before Geology, as a science, had an existence.

Before proceeding to examine the Mosaic account of creation, it may be not amiss to quote the opinions of some of those learned divines who have expounded this subject prior to the existence of Geology, and we may thus be aided to give an unbiased decision ourselves. Among ancient commentators who adopted this view of the subject, independent of all knowledge of geological facts, I may quote Justin Martyr and Gregory Nazianzen. Basil, Cæsarius, and Origen, are still more explicit. Augustine, Theodoret, and Episcopius affirmed the same thing. In more modern times, this view has been advocated by such learned men as Calvin, Bishop Patrick, and Dr. David Jennings, all of whom wrote prior to the developments of Geology. I wish here to quote the language of some of the most learned philologists and divines who have ever undertaken to expound the Scriptures, all agreeing that nothing in the first chapter of Genesis forbids the theory of the great age of the earth.

Bishop Horsley—"The interval between the production of the matter of the chaos and the formation of light, is undescribed and unknown."

Dœderlin—"By the phrase 'in the beginning' (Gen. 1st) the time is declared when something began to be. But when God produced this remarkable work, Moses does not precisely define."

Sharon Turner—"We do not know, and we have no means of knowing, at what point of the ever-flowing eternity, the creation of our earth began. All that we can learn from revelation is, that nearly six thousand years have passed since our *first parents* began to be."

Dr. Wiseman—"The words in the text (Gen. 1: 2) do not merely express a momentary pause between the first fiat of creation and the production of light, for the participial form of the verb, whereby the spirit of God, the creative energy, is represented as brooding over the abyss, and communicating to it the productive virtue, naturally expresses a continuous, and not a passing action."

Bishop Gleig—"When the universe was created, or how long the solar system remained in a chaotic state, are vain inquiries, to which no answer can be given."

Dr. Chalmers—"The detailed history of creation, in the first chapter of Genesis, begins at the middle of the second verse; and what precedes might be understood as an introductory sentence, by which we are most appositely told, both that God created all things in the beginning, and that afterwards—by what interval of time is not specified—the earth lapsed into a chaos, from the darkness and disorder of which the present state of things was made to arise. Between the initial act and the details of Genesis, the world, for aught we know, might have been the theater of many revolutions, the traces of which Geology may still investigate."

Dr. Pye Smith—"A philological survey of the initial sections of the Bible, brings out the following results—1st. That the first sentence of the Bible is a simple, independent, all-comprehending axiom, to this effect, that matter ..... had a beginning; that that beginning took place by the all-powerful will of one Being, the self-existent, independent and infinite in all perfection, and that the date of that beginning is not made known. 2d. That at a recent epoch, our planet was brought into a state of disorganization or ruin from a former condition. 3d. That it pleased the Almighty out of that state of ruin to adjust the surface of the earth to its existing condition, this last extending through six natural days." "I am forming," continues Dr. S., "no hypothesis in Geology; I only plead that the ground is clear, and that the Scriptures interpose no bar to observation and reasoning upon the mineralogical constitution of the earth, and the remains of organized creatures which its strata disclose. If investigation should lead us to attribute to the earth, and to the other planets and astral spheres, an antiquity which millions, or ten thousand millions of years might fail to represent, *the divine record forbids not their deduction.*"

Dr. Daniel King—"Our best expositors of Scripture seem to be now pretty generally agreed, that the opening verse in Genesis has no necessary connection with the verses which follow. They think it may be understood as making a separate and independent statement regarding the creation proper, and that the phrase 'in the beginning' may be expressive of an indefinitely remote antiquity. On this principle the Bible in the first instance recognizes the great age of the earth, and tells us of the great changes it underwent at a period long subsequent, in order to render it a fit abode for the family of man. The work of the six days was not, according to this view, a creation in the strict sense of the term, but a renovation or remodeling of preëxisting materials."

Dr. Pond—"That a very long period—how long no being but God can tell—intervened between the creation of the world and the commencement of the six days work recorded in the following verses of the first chapter of Genesis, there can, I think, be no reasonable doubt."

Dr. Harris—"My firm persuasion is, that the first verse of Genesis was designed, by the divine Spirit, to announce the absolute organization of the material of the universe by the Almighty Creator, and that it is so understood in other parts of holy writ; that, passing by an indefinite interval, the second verse describes the state of our planet immediately prior to the Adamic creation, and that the third verse begins the account of the six days work."

I need not extend these quotations. Men more competent to understand the true meaning of the Mosaic record could not be quoted, although the list might be greatly extended. With such testimony, surely second-rate theologians may well moderate their confidence a little, when they prefer the charge of infidelity against those who affirm that the Mosaic account does not fix the date of the creating fiat. If the Mosaic account be capable of such a construction as the above-quoted writers have put upon it, where is the oft alledged contravention of the Scriptures? Now, that such is the true, and *only* true import of the Scripture account of creation, I do most firmly believe. These men must have had something on which to ground such opinions, and many of them wrote before Geology had developed any of the internal evidences of the great age of the earth. I believe they based their opinions on the evidence which lies in the *account itself.*

Let us examine for ourselves the account of the creation and the subsequent six days work recorded in Genesis, and see if this conclusion is not legitimate—that there was an interval between the act which originated matter and the first of the six days work which culminated in the creation of man and the present races of plants and animals. The proposition simply affirms, that there was an interval, and concedes that the inspired account neither asserts its brevity nor denies its length. Its approximate duration, at least, is supposed to be indicated in indelible characters elsewhere, in the crust of the globe itself. The scriptural record is simply but significantly indicative of an interval. Gen. 1: 1—"In the beginning God created the heavens and the earth." No one, certainly, will claim that the phrase "in the beginning" at all fixes the date of the creating fiat which originated the matter of the universe. It simply asserts that *when* matter first *began to be*, God was the cause of its beginning to be. That beginning might have been six millions of years ago, as well as six thousand, for aught that this verse contains. The term here translated "created" is *bara* in the original, and means the absolute egression of a thing from nonentity to entity—the causing to be that which before was not. (See Dr. Clark's Commentary on Genesis, 1st chapter.) This sublime statement is fitting to stand at the head of God's own account of his wonderful works. The second verse states the new and interesting fact, that at some time subsequent to this creating of the matter of the earth, "the earth was without form and void," i. e. waste and desolate, in confusion and disorder, (Dr. Clark.) "And the Spirit of God moved upon the face of the waters." The term here translated "*moved*," is in the Hebrew text "*merachepheth*," *was brooding*, and signifies continuous action, and of necessity continuous time. All the time, then, during which the "*ruah*" Spirit of God "was brooding over the face of the waters" must have intervened between the creating fiat and the first of the six days work which followed; and for aught that we know, a vast period might have elapsed after the creation of matter before the Spirit began its brooding. Now let it be observed, that this brooding of the Spirit of God over the waste and desolate earth was to *prepare it for the event to follow*, viz., the fitting it for the abode of man. That event began with the first day's work, recorded in the third verse—"And God said, Let there be light, and there was light." Now the description of the condition of the earth, in the second verse, makes it impossible for the event of the *third verse* to be identical with the event of the *first verse*, for that description implies intervening time. The original creation of matter, then, was not a part of the six days work, so that it stands unidentified in time with those days works. *They* might have occurred only six thousand years ago, but *it* might have occurred six hundred thousand years ago, for aught that the Mosaic account affirms.

But further light may be thrown on this point by examining the force of the Hebrew particle *vaw* (and,) which introduces the third verse, and connects it to the second. The English reader often errs in supposing that because this conjunction "and" connects the third to the preceding verses, the event of the third verse must therefore be identical in time with that of the first verse. But the *English* conjunction even does not imply that, but may connect events separated by wide intervals of time. In the Hebrew, *vaw* (and) often has the force of *but*, and in this place should have the force of "*but afterwards.*" Dr. Dathe, a cautious and judicious critic, translates this particle thus, "*But afterwards.*" Rosenmuller translates it in the same way. Dr. Harris says, "This appears to be the true sense of the original. The connecting particle at the beginning of the second verse leaves the question of time entirely open." Dr. Pye Smith says, "This continuative use of the particle *vaw* forms one of the most marked peculiarities of the Hebrew idiom, and comprehends every variety of mode in which one train of thought may be appended to another." Thus it appears, that the passages not only allow, but expressly teach, that a period intervened between the first act of creation and the six days work. This is all that Geology affirms. Where, then, is the conflict?

But a still more critical examination of these initial passages of Genesis, will throw still additional light on this point. At the third verse a new form of expression is introduced, indicating that a new work is begun, and consequently the work of the first verse is not included. That work, then, and the condition of the earth described in the second verse, must have been anterior to the first day. Again, Harris says, "In some old editions of the English Bible, where there is no division into verses, you actually find a break at the end of what is now the second verse; and in Luther's Bible (Wittemberg, 1557) you have this break, and in addition the figure (1) placed against the third verse, as the beginning of the account of the creation on the first day.

Such are some of the reasons for my belief that the Mosaic account does not fix the date of the creating fiat which brought the earth into being, and such doubtless are the reasons which influenced those men whom I have quoted to adopt this view. These reasons are entirely independent of geological facts or inductions. But when these facts appear, they so completely corroborate this view, that to my mind it has all the force of demonstrated truth. So far, then, from finding any collision of Geology and the Bible, we find them in perfect harmony, Geology affirming, and the Bible at least not denying, the great antiquity of the earth.

Before proceeding to present the geological facts and principles which indicate the vast age of the earth, it may be proper to notice the most important objection that is raised to the view I have taken of the Mosaic account of creation. This objection is found in the language of the fourth commandment—"In six days the Lord made heaven and earth, the sea, and all that in them is, and rested on the seventh," &c. This text is thought to affirm that the entire creating work which God performed was performed in the six days described in the first chapter of Genesis, and consequently, that the age of the earth is determined by the date of those six days' work. I think a careful and critical examination of this text will show this impression to be incorrect. In the first place, it is to be observed, that the term here translated "made" is not the same term *(bara)* translated "*created*" in the first verse of Genesis, but is *awsaw*, which means, very often, to fashion, to form, to arrange preëxisting material. This is indeed the ordinary sense of the term "*made*"—as when I say of the mechanic, he made a wagon, or a sleigh. Here no one certainly will understand me to affirm that my neighbor *created* the material out of which he *made* the wagon, but simply that he *fashioned* that material so that it became a wagon. Now this is all that is affirmed in this text, and it is all that *need be affirmed*, for the Sabbath here instituted has reference *only* to the six days of labor and the seventh day of rest described in Genesis, and not to the original *creation* of matter. It would be not only *unnecessary*, then, but *unphilosophical*, to include among the *reasons* for the Sabbath, an event with which the Sabbath had not the remotest connection. Again, it is a well-established principle of interpretation, that when a writer describes an event in more than one place, the briefer statement is to be explained by the more extended one; e. g., in the second chapter of Genesis we have the following brief account of the six days' work described at length in the first chapter—"These are the generations of the heavens and the earth, when they were created, *in the day* that the Lord made the earth and heavens." Now, if this were the only record of the event, the conclusion would be fair, that it occurred in a *single day;* but "the *briefer* account must be explained by the *most extended*," and thus it appears that the event required *six days*, instead of *one*. So it is with the text under consideration. It is only an *incidental allusion* to an event which is fully described in the first chapter of Genesis. We have seen, on a careful examination of that chapter, that the original act of creation is not included in the six days work, and find this conclusion corroborated by the facts of Geology. It certainly, then, can be doing no violence to this text to construe it in accordance with this extended account thus corroborated, and most especially is this true since, as we have shown, the word translated *made* in the text does of *itself* more legitimately convey this idea than any other. This view is sustained by the best authority. I will only quote the words of Dr. Harris, whom I consider among the most learned and competent of living writers. He says, "The principal objection to this view is derived from Exod. 2: 11, wherein, as the reason for observing the Sabbath, the entire and complete work of creation is supposed to be described as carried on and ended in six days; to which it should be sufficient to reply, that so much of the creative process is there referred to—*and only so much*—as related to the law of the Sabbath, namely, the six days of the *Adamic creation.* But, secondly, the same rule which leads one objector to rely on Ex. 20: 11, as a proof that the entire creation was comprised in six Adamic days, would justify another in insisting that it was completed in one day, because it is said, Gen. 2: 4, "These are the generations of the heavens and earth," in their being created, in the *day* of Jehovah God's making the earth and heavens, the obvious meaning of the original being, at the time of their creation. And thirdly, it is a violation of a sound rule of interpretation, to infer the meaning of an author from a condensed sentence, introduced incidentally, instead of deriving it from his more direct, connected and ample statement of the same subject. Now the full and formal treatment of creation occupies the whole of the first chapter of Genesis. To affirm, without proof, that the verse in Exodus condenses the whole chapter, is to beg the very question at issue. That the chapter includes all the verse relates to, I admit. But it includes more. It affirms, for example, in the second verse, the significant fact, that there was a period when "the earth was without form and void;" respecting this the verse in Exodus is silent; while in the first verse the chapter affirms that at some period *prior* to that state of chaos—in the beginning—God orginated the material of the universe. The question is whether, according to a critical and correct rendering of the text, that period was not prior to the six days of the Adamic creation."

Such I believe to be the true explanation of the Mosaic record. It does not at all conflict with the theory of the great age of the earth, but, when fairly interpreted, leads the reader to suspect that such is the fact, and it has led many learned and devout readers to suspect, and to affirm, that the earth is hoary with age. But it is only necessary for my argument to show that the Mosaic record does not *contradict* such a theory. After having arrived at the conclusion that it does not, I feel at liberty now to examine the *rocks*, and if I find there evidences of the great age of the earth, I can embrace them most unhesitatingly, as the voice of God speaking through his works, feeling a most happifying consciousness, that his *word* does not contradict his *works.*

To the rocks, then, let us repair. D. E. M.

INDUSTRY.—All exertion is in itself delightful, and active amusement seldom tires. Helvetius owns that he could hardly listen to a concert for two hours, though he could play on an instrument all day long. In all pursuits, efforts, it must not be forgotten, are as indispensable as desires. The globe is not to be circumnavigated by one wind. We should never do nothing. "It is better to wear out than rust out," says Bishop Cumberland. "There will be time enough for repose in the grave," said Arnaud to Nicole. In truth, the proper rest for man is change of occupation.

For the Sabbath Recorder.

NO GOD.

"The fool hath said in his heart there is no God."

No God! look on the humblest flower
That gems the verdant sod;
Its perfect form and matchless hue
Will tell thee there's a God.

No God! no God! O sceptic, turn
Thy unbelieving eyes
To where the sun, with dazzling light,
Burns in the azure skies;

Or gaze upon the kindling West,
Brilliant with hues of even,
And mark each brightly glittering star,
That gems night's deep blue heaven;

Or listen while the viewless wind
Sings its low, pleasant song,
As through the stately forest trees
It gently steals along.

And mark the whirlwind's fearful power,
As in its furious wrath,
It rushes onward in its might,
With ruin in its path.

Look on the snowy, floating clouds,
That veil the bright blue sky,
Or listen while the wintry storm
Goes shrieking wildly by.

Look where the towering mountain rears
Its stately, snow-crowned head;
Or gaze far down the gloomy chasm,
Where sunlight ne'er is shed.

Watch the bright, surging, glancing streams,
In their glad beauty leap;
And noble rivers, broad and strong,
To the vast ocean sweep.

And look on man, whose restless soul
For more than earth still yearns;
Who ever from this fleeting life,
To the dim future turns;

And search into thy spirit's depths,
Thy secret, inmost soul,
Which, though thy lips deny a God,
And spurn at his control,

Still tells thee, with a "still small voice,"
A faint, but thrilling tone,
That over earth and heaven reigns
A great Eternal One;

And all, from the most lowly flower,
Whose beauty decks the sod,
Up to the countless, circling worlds,
Will tell thee there's a God! SARAH.

SHILOH, N. J., 1855.

RELIGIOUS DENOMINATIONS.

We often hear it said, that if there were fewer religious denominations in the United States, there would be sufficient church accommodations for every body. The argument is a particular favorite with a certain class of persons, when they are solicited to subscribe for the erection of houses of worship; but in face of this round assertion, there are in the entire country, with its population of twenty-six millions, church accommodations for only fourteen millions. Allowing three millions for children too young to go to church, it follows that one-third of the entire population have no church to go to, even if they were disposed.

The number of religious sects in the United States is twenty, without counting the Chinese Budhists in California, or sundry minor Christian denominations. The whole number of edifices of worship is about thirty-six thousand, capable of accommodating, as we have seen, fourteen millions of people. The total value of the church property held by these twenty denominations, is nearly ninety millions of dollars, in exact numbers, $86,416,639. The average value of each church and its appurtenances is twenty four hundred dollars. These facts, which are derived from official tables for the census, explode another false notion, which is, that there is too much luxury and wealth in American churches.

The most numerous sect in the United States is the Methodist, the second the Baptist, and the third the Presbyterian. The first has church accommodations for over four millions of worshipers; in other words, the Methodists have houses of worship for one-sixth of the entire population. The Baptists have accommodations for more than three millions, and the Presbyterians for more than two. The fourth sect, in the extent of its accommodations, is the Congregational, the fifth the Episcopalian, and the sixth the Roman Catholic. The number of churches belonging to the three leading denominations does not always follow this proportion, however. The Methodists, for example, while they can accommodate but twice as many worshipers as the Presbyterians, have three times as many churches. The Roman Catholics, though sixth on the list as regards accommodations, stand seventh in the number of their churches. Of the principal sects, that which has the smallest edifices for worship is the Methodist, and those which have the largest are the Unitarians and Dutch Reformed. The smallest denomination is the Swedenborgian, and the next the Mennonite. There are no less than fifty-two Tunker churches, and thirty five thousand worshipers. The Friends have accommodations for about three hundred thousand, or but little more than one-hundreth of the entire population of the United States.

The richest denomination is the Methodist, which is set down in the census tables at $14,636,671. The next is the Presbyterian, which is rated at $14,369,889. The Episcopal, which in number of churches stands fifth, ranks third for its church property—being estimated at $11,261,970. The fourth is the Baptist, $10,931,382; the fifth the Roman Catholic, $8,973,838; and the sixth the Congregational, $7,973,962. Of these various sects, the two which sympathize most in doctrine are the Congregationalists and Presbyterians—both adhering to the Westminster Catechism, and differing only in their form of government, the one being republican, the other democratic. Together, these two sects have over 6,000 churches, can seat nearly 3,000,000 of worshipers, and hold church property to the value of more than 22,000,000.

The sect whose average value of property ranks highest is the Unitarian. Next comes the Dutch Reformed, and next the Jewish. The Swedenborgians, Roman Catholics, and Episcopalians follow in the order named. Of the leading denominations the Methodists stand the lowest on the list, and the Baptists next, while the Presbyterians and Congregationalists hold a middle place. [Phil. Ledger.

"STATE OF THE DEAD."

The writer of the communication on which we passed some strictures last week, inquires, "What is mind without well organized matter, or organs through which to operate? Or, suppose these organs to become inactive, as in sleep, or to lie dormant, as they do in death, how much knowledge have persons, in such a state, of what is going on at the time they are in such a state?"

In these questions are disclosed the principle of the philosophy on which annihilation is based. It is, that *mind* is nothing more than a peculiar modification of *matter*. Matter, not spirit, is the substance in which the mind inheres. It follows, of course, that when the material organization, in which the mind inheres, is dissolved, the mind or thinking principle itself has no farther existence. The philosophy of the infidel, out and out! Infidels uniformly make this the turning point of their controversy with Christians. For if they can prove, satisfactorily to themselves, that the mind becomes extinct when the material organization with which it is connected suffers dissolution, the doctrine of a future state becomes divested of reality, sound reasoning assuring them, that if there existence is once ended, there is no possibility of punishment subsequently. Hence we hear them, from time to time, endeavoring to prove that man dies, literally, like a brute. And it is a sad thing for Christianity, when its professed disciples begin to talk in the same strain.

We do not suppose that "the mind without well organized matter, or organs through which to operate," can hold any intercourse with *this* world. Man begins to live on earth. His whole probation is passed here. As long as he remains here, his mind gains knowledge, and operates upon the world, only through the medium of the material organization with which he is furnished. But annihilationists must not beg the question at issue by assuming that this material organization is necessary to the mind's intercourse with *another* world. If they cannot conceive of the mind as *a bare power of thought*, and as capable of subsisting in another world *bodiless* and *formless*—if they must assign to it, in their imagination, *shape*, *contour*, and *locality*—we do not care to have any particular dispute with them; they are welcome to indulge their fancy. Indeed, we do not suppose ourselves that the mind, or soul, is pure intellection isolated from all connection with any kind of substratum. Thought is an attribute, and there must be some kind of substance in which this attribute inheres. But we do protest against their supposition, which regards the power of thought as inhering in a *material organization*, or something which, being composed of parts, is therefore dissoluble to the entire destruction of the power of thought which inheres in it. The substratum in which thought inheres cannot be other than a simple, uncompounded substance, not subject to dissolution or decay, though of its nature we are profoundly ignorant. We can neither detect nor define it. It may not be able to put forth its powers, in another world, and hold intercourse with and gain a knowledge of that world, without some kind of *medium* by and through which to operate. But *if* a medium be necessary, it will not have to be *waited for*; it will be ready the moment that "our earthly house of this tabernacle is dissolved."

Our correspondent quotes 1 Cor. 15: 16—19, and reasons upon it on this wise:—"Here Paul makes all hope of a future life to depend upon the truth of the resurrection, without which all they that have died have perished, and all who die afterwards must perish—that preaching, faith, and hope, are all vain without the resurrection. But if the souls of the righteous, at death, go immediately into heaven, into a conscious, glorified, happy state, preaching would not be vain; faith would not be vain, nor hope, even if there never were to be any resurrection."

This reasoning is very loose. In the passage referred to, Paul bases the hope, not of a future life simply, but of *eternal* life—such a future as the righteous enjoy—upon the fact, not of the resurrection generally, but of *Christ's* resurrection. And true it is, that if *Christ* be not raised, "preaching, faith, and hope are all vain." Not that there would be no future *existence*, but that there would be no future *glory* to hope for, to long after, to labor for. "If the souls of the righteous, at death, could pass immediately into heaven," *whether Christ had died and risen from the dead, or not*, THEN faith and hope would not be vain, even if their bodies should never be raised. Why does our correspondent slip, so glibly, over the sole premise upon which the Apostle rests his conclusion? Besides, if Christ had not risen from the dead, there would be no righteous persons to go to heaven, inasmuch as no person can attain to righteousness in any way but by faith in Him who has gone to the Father. Every person would be destitute of the righteousness that justifies, and would therefore, at death, pass, not into a "glorified, happy state," but into a state "where their worm dieth not, and the fire is not quenched."

We do not know that there is any thing else in our correspondent's article which requires to be particularly noticed. It is true, there are several points stated in a loose way, but they have already been answered in what we have written on this subject, as well as in what we have said to Bro. Griswold concerning the Awards of the Future. It is not necessary that we go over the same reasoning again. In conclusion, we have only to say, that the conviction increases with us, that the doctrine of man's utter annihilation is a dangerous doctrine, at war with the Bible, with sound reason, and with the higher aspirations of our nature. We regret, exceedingly, that any of our people have been ensnared into the belief of it. T. B. B.

"STATE OF THE DEAD"—NO. 2.

In entering on an exposition of my views of the subject under consideration by Bro. Brown and myself, it will be remembered, that in an article of Feb. 15th, Bro. B. showed the inconsistency, if not the utter fallacy, of the theory of the materialist, or annihilationist, because it involved the necessity of a miracle in order to a just and equitable award of mankind in a future state. Bro. B. assumed the improbability that the divine government would be so arranged as to require a miracle in order to its execution, while he argued the contrary, from the fact that "mankind had a natural capacity of being recompensed according to the course of nature." He said, "If man possessed a *natural* capacity of being rewarded or punished according to his works, then it would not require, in any case, a miracle to bring him into a state where he would be recompensed;" and then he adds, "We know, from experience, that man has a natural capacity of being rewarded for virtue, and punished for vice;" and farther on he says, "This is the way in which the Creator recompenses his creatures, *according to the course of nature*."

From the above it will be seen, that Bro. B. objects to the annihilationist theory, on the ground of its requiring a *miracle* to execute the divine government; yet, after having urged this objection as militating against his opponent's theory, if not annihilating it, Bro. B. assumes such a theory of a future resurrection as of necessity necessitates a miracle the most stupendous, admitting, at the same time, that such a miraculous resurrection "is ordered, not to render it possible for God to recompense his creatures, but in order that soul and body may be rewarded together."

In some remarks of mine, (March 22,) I said, that it seemed to me that his views were antagonistic to each other, and that one or the other of them must be given up. In several subsequent articles, Bro. B. has elaborated his views more fully, and perhaps to the conviction of all, except myself, that no discrepancy exists between his first and his subsequent articles. For although, April 12th, Bro. B. says, "We (he) were not aware that there was any thing in our remarks on this subject formerly, implying a belief that neither saint nor sinner receives *any other* recompense in the future world than what is strictly according to the course of nature," yet I cannot divest myself of the impression, that his language did most emphatically imply, that he believed that the awards of the future state were strictly according to the course of nature. And, April 12th, Bro. B. admits, that if the only system of religion enjoined on us were natural religion, such would be the fact; but that revealed religion, being a positive institution, does so modify the divine government as to require recompense additional to the course of nature. I am not about to discuss that point at present, but will hereafter. What I wish here to show is, that to my understanding, Bro. B., instead of relieving himself from what I suggested as antagonistic in his first article, has involved himself in another dilemma. Bro. B., in the first place, assumed, that as man's natural capacity was fully adequate to the awards of the future state according to the course of nature, a miracle in no case would be necessary to bring man into a state where he could be recompensed; and then he assumes that a miracle would be necessary in the case of the resurrection, in order to the awards of at least some portion of the future state. Now, if a miracle is not necessary in any case to bring mankind into a state where they can be recompensed, how can a miracle be necessary to bring any part of the man into a state where it can be recompensed? If God can, and does, recompense his creatures without a miracle, from the fact that at their creation he made to inhere in them a natural capacity for evolving their own just and equitable recompense without a miracle, is it probable that he will ever work a miracle in order to their recompense? In fact, Bro. B. expressly affirms, that even his miraculous resurrection is not ordered to render it possible for God to recompense his creatures, but in order that the soul and body may be rewarded together. According to this theory, God recompenses man, or his soul, which is the real man, without a miracle, and yet does not recompense (the whole of) man without a miracle; and, farther, that the resurrection is not necessary to recompense man, and yet the resurrection is necessary to recompense man. I know that Bro. B. applies the resurrection to the body; but what is the body but a material adjunct to the man, not necessary to his existence—a mere instrument the man has used, incapable of sin or holiness, and no more accountable than a brute, and its resurrection not at all necessary to the awards of the soul, according to Bro. B.'s theory. And yet Bro. B. supposes that the divine government, which precludes a miracle in any case in order to bring man into a retributive state, does nevertheless involve a miraculous resurrection of this mass of matter, in order to the full execution of its recompenses. Hence another apparent inconsistency in Bro. B.'s theory, viz., it represents God as inflicting punishment upon a mere mass of characterless, unaccountable matter, not in order thereby to reach the soul—the real man—for that man or creature has an inherent natural capacity of being recompensed according to the course of nature.

But again, Bro. B. assumed that God recompensed his creatures according to the course of nature; and yet, in his sequel, concludes that God will not fully recompense them according to the course of nature, but that some positive infliction of a penal nature will be superadded because of Revealed Religion, which would not have been the case if mankind had enjoyed only natural religion. Thus his theory must, I think, involve two separate places of punishment in the future state—one for the rejecters of only Revealed Religion, and another for the rejecters of both Natural and Revealed Religion. Thus a part of mankind will be awarded in the future state according to the course of nature, and another part according to the course of nature and something more.

Again, this theory assumes, that mankind are recompensed in the future state for ages prior to the day of judgment, consequently prior to their being sentenced; and that mankind, prior to the day of judgment, have as adequate capacity for heaven or hell as afterward; and that, although the dead are either in heaven or hell prior to the day of judgment, they will be only in that place after the day of judgment, and therefore, should the body never be raised, mankind could and would be recompensed in the full fruition of heaven or hell without it. Again, that during the intermediate state, mankind, the dead, have no bodily form, hence no shape or form; and yet this formless man or creature is enjoying heaven or suffering hell, from his natural capacity, or according to the course of nature; that Revealed Religion is either not according to the course of nature, or is something additional to the course of nature, consequently not a natural religion. S. S. G.

HUMANITY.

Justice is cold. Friendship is often partial or selfish. Humanity, the love of mankind, is genial and unselfish. He that loves father, mother, brother, sister, or friend, does well, though limiting his sympathies and kindly offices to these is selfish; but he who loves man as man, goes out of the selfish circle, and obeys the higher impulses of his nature.

That we should feel an earnest interest in all that pertains to the general good of our race, and that we should act according to that spirit, is taught us every where, if we will but listen to those teachings. Man as an individual may simply exist, but most that makes life desirable flows from society. Communities and nations, agriculture and commerce, science and art—all advance from the lowest savage life towards the perfection of the highest civilization only through society. Thus come honor, wealth, influence, comfort. Now, as each of us is receiving advantages more than we can estimate, we ought to give back our share for the general good, and we shall surely find our reward in the new life that flows from the little we may do. Every thing that ministers to want, that brings comfort and cheerfulness—whatever secures justice and peace, or adds to mental culture, science, art, education, or religion—goes so far towards making life answer its great ends.

Each individual should bring his gift to this common store-house. The gift may be knowledge, talent, wealth, influence, or perhaps an earnest spirit to labor. One may accumulate property for the purpose of building churches and schools, sending the gospel to the heathen, for feeding the hungry, clothing the naked, and for educating those who, though poor, have souls susceptible of the highest cultivation, and the "poor have ye always with you." The suffering of the great or of a large number, always calls an earnest responsive throb from the heart of humanity; yet there may be more true benevolence in administering to the wants of some unknown outcast—giving a few dollars to the needy, a kind word or look to the erring, than in giving thousands with the tide of public feeling and applause.

Angels minister to the humblest of earth's inhabitants, happy in what to selfish hearts would be a humiliating ministry. It is not that God needed our aid to take care of the poor, for he might have made all the elements of human life as free as air or water, but then some of the noblest traits of Christian character would have been left uncultivated. Within the reach of our charity, if not in our immediate neighborhood, are ever to be found the penniless, the homeless, the friendless, the widowed, the fatherless, the sick. Objects of charity swarm from loathsome garrets, hovels of drunkenness, damp polluted cellars. In some cities, scarcely can we turn a street without meeting the gaunt, starved, half-naked child of poverty. Houses of charity are full—prisons, even, scarcely have room for more. The subjects of crime or misfortune were once innocent—perchance many are now—and with right influences, many of these yet may sing songs of redeeming grace around the throne of God. Every item given to suffering humanity, though but the widow's mite, may aid in lessening the amount of misery—every effort may lessen crime—raise and strengthen the sinking, struggling heart of honest toil. With a heart to work for humanity, especial facilities are granted for doing good in the many and varied operations and organizations of the day.

The rewards of benevolence are many and great, both temporal and spiritual. The pages of Scripture are full of promises of reward to the benevolent. If the Bible is the book from which we take our faith and practice—if it is the oracle of God—if it is the living fountain-head of all that is pure and good—if it is the ultimate appeal by which our deeds must be judged—then happy is he who heeds these sacred precepts. But here we have not precept alone. Here is an example of unsurpassed benevolence. The Son of God descends from the right hand of his Father, takes upon him man's low estate, and dies for his enemies. What man has thus loved his brother? Now, so long as we believe Christ to be the mediator between God and man—so long as His cross is the light of our hopes—so long as we look to Him as our Prince and Saviour—so long will He be the pattern after which our lives are to be molded, and the true Christian will study his great pattern. He knows that the cattle upon a thousand hills are the Lord's, that whatever is lent Him is to be given as by a good steward.

The truly benevolent will be blessed and thrive in this world, unless life's higher ends require a suspension of this rule. It is written in God's book of Providences, as well as Revelation. There are those who commenced life poor—that gave away more than others gathered—yet always prospered, truly verifying, that there is that scattereth and yet increaseth. Thus is liberality repaid, first in earthly coin, and then in the coin current in heaven. The benevolent man always makes sunshine wherever he goes. Kindness, compassion, and liberality, win the affections of all. Such gain irresistibly upon our hearts. We cherish them as friends, delight in them as companions. It is in the power of each individual to make the little world in which he moves cold and bleak by selfishness and ill will; or, by love and charity, to make it the sweet abode of tenderness and joy. If we are truly happy in spirit, is it because the grass grows greener, or the sky is bluer, the meadows spotted with flowers, the air fuller with the sweet breath of evening, the night brighter with stars? No, not so much these as that the obligations imposed upon us by our spiritual relationships have been fulfilled in the spirit of true benevolence. Though nothing human is perfect, yet practical philanthropy is one of the brightest points of human attainment. It makes our spirits happy, and tends to make our world a sunny one. Angels rejoice over the beauty of deeds of charity.

How glorious will be the time when each shall seek, not his own, but another's good—when the sun of universal love shall shed its beauty over the whole earth—when each fireside shall be the home of the homeless, and each man the friend and aid of his fellow. Go on, then, thou earnest laborer in the world's great harvest field, with peace and joy reigning in the quietude of thy soul. Not long wilt thou have to tread life's rugged pathway. Thou wilt grow weary, by and by, and *rest*. Work then whilst thou mayest, and

"So may'st thou live, that every hour
May die as dies the gentle flower,
A self-reviving thing of power;
That every thought, and every deed,
May hold within itself the seed
Of future good and future meed."

**

AFFAIRS IN SHANGHAE, CHINA.

A letter from Eld. Solomon Carpenter, Seventh-day Baptist missionary at Shanghae, China, dated March 8th, gives the fullest we have seen of the evacuation of Shanghae by the rebels. It occurred on the 18th of April, and was followed by the cruelty usual in such cases. At the time of writing, Mr. Carpenter had taken possession again of the new house from which he was driven by the imperialists; and his co-adjutor, Mr. Wardner, whose house was destroyed, had moved into the dwelling connected with the Seventh-day Baptist Chapel in the city. The following extracts are of general interest:—

SHANGHAE, March 8th, 1855.

DEAR BRETHREN,—On the 18th of last month, (April,) on rising in the morning, I observed the city in flames, and readily conjectured the cause. As there was no noise of battle, I saw at once that the rebels had set the town on fire, and abandoned the place. Soon I saw some of the imperial banners on the walls, and walking to the American guard station, I found about sixty of the rebels. They had come over the canal in the night, were having their heads shaved, and were soon sent off to look out for themselves. They said that four of the head men, and many of their followers, had gone out at the west gate, but did not know where they had gone. It has since been ascertained, however, that some of them have sailed for Hong Kong. Since that time the imperialists have been busy in hunting out the remaining ones, and putting them to death, the details of which are sufficiently horrible. Many of the unfortunate fellows have been led past our place (three hundred feet distant from our house) to the place of execution. Some we have met as their captors were leading them away, and the appearance of one of them I think I shall never forget. I could hardly imagine that so much horror and despair could show itself in the human countenance.

The fire in the city destroyed nearly one third of it. Including the suburbs, about one half of the city has been destroyed during the siege.

The imperialists claim to have taken the city. But the truth seems evidently to be, that the main body of the rebels walked out before the imperialists went in. The next day I went in, in company with Bro. Wardner. We saw the imperialists put a chain on the neck of an old man (probably not a rebel) who had not yet got shaved. I requested of the officers in attendance his release, stating my conviction of his innocence. It was immediately done. Otherwise probably he would have lost his head. We saw coffins opened, and the dead exposed. We counted about sixteen bodies, some badly burned, some headless, and some with the heart taken out. In a few days a great many heads were hung up on the city wall as a warning. But to this day it is not known to what place the main body of the rebels have gone. People are beginning slowly to get back into the city. But it will require years for it to assume its wonted appearance.

One thing must be mentioned here to show how we have been favored. The fire that occurred in the city many months since, as I informed you, came close to our house on the south and west. But the fire that raged on the day the city was evacuated came nearer still on the north; and, considering that the eaves of one of the wings of our house hung just over an old house that was burned, it is really marvelous that ours did not take fire. The two families belonging to Ur Hway province, who were in our house at the time, were greatly alarmed, and, as they say, they went into the chapel and knelt down and prayed to Jesus to save them, and the escape of our house from the flames they attribute to these means. The honor they ascribe to Jesus. They profess to believe on him. But we must wait before we can place much reliance on such professions.

The population of Shanghae, scattered and peeled, the ties of domestic relations having been in many instances sundered, families scattered and in distress—these all now require the active sympathies of Christians, and afford some advantage to the missionary. By showing them that we feel on the same points that affect them, they may perhaps in some measure appreciate our kindness in bringing to them the message of life.

Our families are in usual health.

ANNIVERSARIES.

Central American Education Society.

The anniversary services of this Society were held on Sunday evening, May 13, at the Church of the Puritans, Union-square, N. Y., the sermon being by the Rev. George L. Prentiss, D. D.

From the Report of the Secretary, we learn that the whole number of candidates for the Christian ministry aided by the Society during the year ending April 30, 1855, is 92. This is an advance of 15 upon the total reported at the last annual meeting. The Education Society of Western New York, which is the only one of the auxiliaries from which the annual returns have been received, reports 18 beneficiaries aided during the year—an increase of six. The aggregate number, therefore, of beneficiaries is 110—21 more than were aided during the preceding year. Of these 110 young men, 3 belong to the Congregational Church, 60 to the Presbyterian, and others to the several different communions, while of some we do not know their ecclesiastical connections. The number of beneficiaries under the patronage of the parent Society at the beginning of the new year—May 1, 1855—is 69, and they are connected with eight different institutions of learning. The Western Society reports its present number of candidates as 12, all of whom are members of Hamilton College. The total number of young men upon the rolls, therefore, is 81 more than were under patronage a year ago.

The Treasurer has received during the year from collections in churches and individual donations, $3,925 49; Loans to former beneficiaries returned, $265 73; Legacies, $131 62; Total of receipts from all sources, $4,322 89. Balance in the Treasury at the opening of the year, $4,142 93; making the total amount in the Treasury during the year ending April 3, 1855, $8,465. The expenditures during the same period have been as follows: Amount appropriated to beneficiaries, $6,197 00; salary of Corresponding Secretary, incidental expenses, office rent, printing, &c., $1,379 69; Total disbursements, $7,566 69; leaving a balance of $899 16.

American Sunday-School Union.

The Thirty-first Anniversary of this Institution was held at Philadelphia, May 15, 1855.

From the exhibit made on the occasion, it appears that the principal receipts and expenditures for the year were as follows:

Receipts, $248,604 75, of which $55,198 82 were donations, and $8,230 40 legacies; $182,493 25 for sales and in payment of debts, &c.; loans received, $948 20; donations for the new building, $1,729; balance from last year, $4,064 39.

Expenditures—Salaries and expenses of three hundred and twenty-four Missionaries and sixteen Agents, and donations of books to destitute Sunday-Schools, &c., $72,727 04; for stereotype plates, $3,922 88; copyrights and editing, $1,171 32; engravings, $4,254 43; paper, $51,465 81; printing, $18,010 34; binding, $60,494 54; Bibles and Testaments bought and miscellaneous books purchased to fill orders, $11,195 59; interest on loans, $3,020 28; salaries of Secretary, Superintendent of book-store, book-keeper, salesman, clerks and laborers, $13,662 01; maps and coloring, $193 60; custom house charges, freight, boxes, postage, &c., $3,801 38; advertising, stationery, fuel, lights, &c., $1,622 64; taxes, insurance, &c., $1,163 66; shelving, painting and glazing, carpets, &c., $1,899 82; miscellaneous items, $1,170 24; loans paid, $600; paid for supervision of building operations and for rebuilding stereotype vault, $753 20. Balance cash on hand, $299 90.

The Society is now indebted for paper, binding, &c., $54,894 60, which, added to loans bearing interest, $37,330 29, exhibits a total indebtedness of $92,224 89. The amount of stock of paper and books is $134,703 28.

Sunday-School Missionaries.—Three hundred and twenty four of these laborers have been employed for various periods of time, in twenty-four different States and Territories These Sunday School Missionaries have established 2,440 new schools, containing 16,623 teachers and 97,954 scholars. They have also visited and revived 3,463 other schools, containing 24,896 teachers and 157,755 scholars. Altogether embracing 5,903 schools, 41,519 teachers and 255,709 scholars. They have distributed by sale, $39,722 34, and in donations, $6,966 51 worth of religious books, chiefly for children and youth.

The Missionary labors of the Society are entirely distinct from the publishing department. Indeed, the latter is quite subordinate to the former. As a Missionary institution the Society has two chief objects: 1. To open new Sunday-Schools in neighborhoods and settlements where they would not otherwise be established; visiting and reviving old Sunday-Schools; and 2. To supply them with books for carrying on the schools successfully when thus begun.

Gratuitous distributions of books, tracts, &c., have been made (including $2,476 13, the details of which are not reported,) to the value of $20,734 87, and these, with the charges to the donation account specified in the general report of receipts and expenditures, make the amount expended in missionary and agency labors, and donations in books during the year ending March 1, 1855, $72,727 04.

Publishing Department—The value of publications put into circulation during the past year $186,034 20. The number of new publications is 32, of which 24 are for libraries.

The Society now publishes a complete library for Sunday-Schools, containing 812 volumes, and 3 selections from the general library of 100 volumes each for $10, and 75 volumes for $5, besides a large variety of elementary books, cards, hymn books, &c.

The Sunday-School Journal and Youth's Penny Gazette are published as formerly; and in order to increase the usefulness of the latter, and to bring it within the reach of all, the price of subscription has been reduced to *ten cents* per annum, where 100 copies and over are taken.

To the Editors of the Sabbath Recorder:—

Very unexpectedly, I saw in the *Recorder* of May 10th, a publication respecting Bro. Pardon Davis. I feel that an explanation of its appearance is due his relatives, whose prerogative it was to give it publicity. At the earnest request of his friends in Hartsville, (his native place,) I received a copy of the letter addressed to the Berlin church, with a distinct understanding that it was not to be published in any periodical. After it had been read in the Hartsville, Alfred, and Independence churches, with the same understanding—that it was not to be published, and for reasons well understood by his friends—a person in Pennsylvania requested a copy, that it might be referred to as a matter of fact in a certain instance. From the last named place it has been published, without the consent or approbation of myself, or any one particularly connected with the circumstances.

EMMA J. TODD.

ROMAN CATHOLIC CHURCH PROPERTY.—In the Legislature of New York, last winter, while the bill in relation to church property was under discussion, Senator Brooks stated that John Hughes, Roman Catholic Aschbishop, held the legal title to church and other property valued at nearly five millions of dollars. The Archbishop denied the statement, and offered, in case Mr. Brooks would prove it, to give two million dollars to establish a public library in New York. Out of this statement and denial a long newspaper controversy has grown, in the course of which the Archbishop has shown a good deal of temper, and the Senator has brought out a great many facts, some of which are rather startling. Whether the Senator has made out five million dollars worth of property held by the Archbishop in his own individual right, we are not able to say; but he has made it clear, that for years past this prelate has been busily at work getting into his own possession the titles to property used by the Roman Cotholics for church and cemetery purposes, and that in this way he has come to wield a power dangerous alike to his own humility and the independence of the churches, and entirely inconsistent with the spirit of our republican institutions.

JEWISH HOSPITAL.—The first Jewish Hospital in the United States was consecrated on the 17th inst. It is located on 28th-st., New York, between the 7th and 8th avenues—a plain brick building, four stories high above the basement, 50 feet wide and 95 feet deep, with a wing 40 feet deep for offices and private patients. The total cost of building and site was $30,000, of which $20,000 was a gift from the late Judah Touro, and the balance was contributed by wealthy Jews of New York. The basement of the building contains the refectory, wash-room, and similar offices. A marble tablet to the memory of Judah Touro has been placed in the wall of the office on the first floor. In the walls of the Synagogue on the second floor of the wing four large tablets, being the names of the patrons of the Institution, have been placed. There are four large hospital wards running the entire length of the building, which, together with several smaller wards, will accommodate 150 patients The wards are very lofty and well ventilated, and the building throughout appears to have been constructed with every regard for the health and comfort of those who may occupy it.

The ceremonies of consecration drew together a large assemblage of Hebrews of both sexes, and the occasion altogether was one of great interest. The services were commenced by prayer from the Rev. J. J. Lyons. The Committee then brought in the five sacred scrolls of the Law to the door of the Synagogue, where standing under a canopy they said, "Open unto us the gates of righteousness; we will enter therein and praise the Lord." The doors of the Synagogue were opened, and the bearers entered in procession with the scrolls—the Rev. L. Strenberger and the choir chanting, "How goodly are thy tents, O Jacob! thy tabernacles, O Israel!" The procession proceeded to the ark, while the Reader and the choir sang in Hebrew, "Blessed is he who cometh in the name of the Lord; we bless ye from the house of the Lord." At the conclusion, the procession made the circuit of the Synagogue seven times, during each circuit the Reader and choir chanting a Hebrew psalm. After the psalm a special prayer was said for the prosperity of the Hospital. The ark was then opened and a prayer offered for those in authority, followed by the hallelujah.

Bishop Meade, of Virginia, speaks of the immense disproportion between the number of male and female professors of religion in the Episcopal churches, it being often double, triple, and quadruple in the case of females over the males. He says he has administered the rite of confirmation to thirty persons, only one of whom was a male, and has often done it to a smaller number, when there was not one male. The Bishop expresses the fear, that the disproportion between the professors of the two sexes, is but a just representation of the difference in religious character.

RELIGIOUS INTELLIGENCE.

A New Medal—to commemorate the day when liquor-selling shall cease to be a lawful act in the State of New York—has been struck, and can be had of A. Scovill, Agent, Albany, at $2 50 per hundred. It is of white metal of the size of a Spanish quarter, and three times as thick. On one side, inclosed in a wreath, are the words—"To commemorate the passage of the Prohibitory law." On the other side, around the edge—"State of New York, July 4, 1855." In the center, "No REPEAL," with a reversed goblet underneath, indicative that the toper's glass has at length been emptied by law; and surmounted by a rising sun, emblematical that light is spreading.

The Board of Aldermen and the Common Council of Salem, Mass., have unanimously passed resolutions accepting the munificent bequest of the late Miss Caroline Plummer, consisting of about $23,000, to be appropriated to the founding of a farm school of reform for the boys of the city of Salem. The resolutions also pledge the city to aid in the accomplishment of the work by appropriating such sums of money as may be necessary for that object, and authorize the Mayor and Aldermen to appoint trustees to carry the design into effect, and to apply to the Legislature for an act of incorporation for said school.

Bishop Whitehouse has issued a private circular to the clergy and vestries of the Episcopal Church in the Diocese of Illinois, to the effect that he intends to retire from his present position. Among other reasons for this step, he gives as one, that he is not adapted to the present social and moral condition of the West. The matter will go before the House of Bishops for their acceptance, and it is generally understood that the Diocese will interpose no obstacles to the contemplated resignation of the Bishop.

Rev. Dr. Dwight has resigned the pastoral charge of the Dutch Reformed church, Brooklyn, L. I., with which he has been connected for twenty-two years. In a farewell sermon preached on the 29th ult., he mentioned that during his pastorate he had received into the church 301 persons, married 140 couples, and preached between 1,800 and 1,900 sermons. At his settlement, he was accustomed to preach seven sermons a week. Seven new churches have been formed, wholly or in part by members dismissed from his church.

A visitor at Shelburne Falls, Mass., says that the first Sunday of this month was a day of peculiar interest to the Baptist church in that place. Five promising youths, connected with the Academy, were baptized, and thirty-two other candidates, previously baptized, received the hand of fellowship. A precious work of grace has been in progress for several months, of which these are, in part, the fruits. About 60, have indulged hope of pardon, and the interest still continues.

The Plymouth (Mass.) *Rock* says: The revival which has been going on in our churches for five or six weeks past, still continues; about one hundred and twenty converts having been made at the "Church of the Pilgrimage," and a large number at the Baptist, beside many more among the other religious denominations. Plymouth is getting to be a religious, and we trust it will be a Christian community.

The income of the British and Foreign Bible Society for last year was £125,000, being £8,000 over the receipts of the previous year. Since the formation of the society four millions pounds sterling have been expended. During the past year 1,367,538 copies of the Scriptures have been distributed, and since it commenced distribution nearly twenty-nine millions of copies of the Scriptures in one hundred different languages have been sent forth.

The four Boards of the Presbyterian Church acknowledge the following sums as received during the month of March: Board of Domestic Missions, $11,496, and for Church Extension, $368; Board of Education, $3,107; Board of Foreign Missions, $19,144; of which, $566 is for the Waldenses, and $5,901 from donations in India for 1853-4; and Board of Publication, $3,816. Total, $37,933 51.

The Northern Methodists, who have so long kept studiously silent on the subject of Slavery, are beginning to speak out. The Conferences now or recently in session at Troy and at Sing Sing have with very great unanimity adopted resolutions denouncing American Slavery as a political, social and moral curse, and promising to work, in a lawful and Christian manner, for its extinction.

A correspondent of the N. Y. *Observer* writes: "An interesting work of grace has been enjoyed in the Congregational church at Whitney's Point, Broome county, N. Y., during the past winter, as the result of which forty persons united with it at its last communion on the 1st inst., about half of whom are heads of families.

The Second Baptist church of Bangor, Me., is enjoying a precious work of grace. Since the beginning of the year the Divine Spirit has been present with converting power, and about eighty persons cherish hope that they have been born again, and the end is not yet. Forty-four have been already baptized.

The receipts of the British Wesleyan Methodist Missionary Society for the year ending December 31st, 1854, amount to £111,048. The payments for the year amount also to the same sum, reducing the debt to £15,721, which last year was £19,501.

A Baptist church has been organized at Bloomington, on Wakarusa river, Kansas, the first in the new territory. So says a correspondent of the *Western Watchman* who assisted in the good work.

AYER'S PECTORAL AND PILLS.—Few are aware how frequently Publishers are compelled to insert among their advertisements, statements which they can neither sanction or believe.

A pleasant exception to this disagreeable necessity are the advertisements of Dr. J. C. Ayer's Cherry Pectoral and Pills, which will be found in our columns. We have published for him before, and always with the feeling that in so doing we in no wise lend ourselves to deceive or mislead the public, for we have had indisputable proof that his words are strictly true, with abundant reason to believe that his medicines will do all they promise, and all that can be reasonably expected from any medicine. His Cherry Pectoral is too well known in this community to need any commendation from us, and his Pills we are credibly informed are not inferior to his Pectoral. [Providence Mirror, R. I.

European News.

By the U. S. M. Steamer Baltic, seven days later news from Europe was received in New York on the 18th inst.

The Emperor of the French narrowly escaped assassination on Saturday evening, April 28, when riding attended by only two members of his household through the streets. An Italian, Pianori by name, discharged two pistols at him at the distance of from five to ten yards, and had two other loaded pistols in his pocket ready to be discharged, when he was overpowered and taken prisoner. Pianori, it appears, served in the regiment of Garibaldi at the siege of Rome. The circumstances of the case were of course thought to indicate a conspiracy and the hiring of a paid murderer, though Pianori says he was actuated solely by feelings of personal revenge. The Emperor has been overwhelmed with congratulations on his escape.

The conduct of the war alone seems to interest the British public, and the mismanagement of affairs hitherto, both at home and at the seat of war, is exciting universal uneasiness and distrust, both in Parliament and out of doors.

With regard to the siege of Sevastopol, no advantage decisive enough to warrant an assault has been gained, and it is generally believed, that the siege operations must be abandoned for the present, and that while Kamiesch and Balaklava are left to the defense of a few corps of the allied forces, the main portion of the latter will try to penetrate into the interior of the Crimea, defeat if possible the various armies of the Russians, cut off the supplies received by the garrison of Sevastopol, and completely invest the town. No general attack has yet been made by the fleet on the sea forts, though each night a single steamer has been enabled to approach sufficiently near them to throw both shot and shell to advantage. The army before Sevastopol is in good condition; the troops are reported as healthy, well-fed, housed and clothed.

The following extracts will give some idea of the manner in which the fighting around Sevastopol has been carried on of late:—

The correspondence which has come to hand gives a description of the furious sortie from the Flagstaff Battery upon the French lines on the 13th. A long and desperate struggle took place. Twice the Russians succeeded in entering the parallel in advance of the battery, and twice they were repulsed—the second time with such loss as to compel an immediate retreat. The French made no attempt at pursuit, as the enemy were within a stone's throw of their own batteries. General Bizot was wounded in this affair, and, having been struck also with a chance bullet after the close of the fight, has since died. In this sortie the French lost between fifty and sixty killed and wounded, the Russians a far greater number.

On the 14th the French fired three mines under the Flagstaff Battery with partial success. The Russians fearing an assault opened a furious cannonade along the whole line. On the night of the 17th the French succeeded in making a lodgment in one portion of the Battery, but on the 19th they were compelled to yield their position.

On the same night the English succeeded in capturing the first of the enemy's rifle pits, from which much annoyance and loss to working parties have been caused. Col. Graham Egerton, the field-officer in command of the trenches, who led the attacking party, was killed in the desperate action which took place afterwards for the protection of the trenches. In this last affair 50 British soldiers secured the trenches against a column of Russians 1,000 strong. The total loss to the English was 2 officers and 21 men killed, and 5 officers and between 40 and 50 men wounded. The enemy lost about 50 killed and twice as many wounded.

The insurrection in the Ukraine (Russia) has extended to three other Governments. Twenty landed proprietors with their wives and families have been destroyed.

At St. Petersburg every article of consumption was at famine prices.

Idiot Asylums.

Dr. H. B. Wilbur, Superintendent of the New York State Asylum for Idiots, gave a private exhibition of his pupils before the Governors of the Alms-House and the Board of Education, in New York City, on the 11th inst. One design of the exhibition was to induce the Governors of the Alms House to make an appropriation for Educating at the Asylum the idiotic children now on Randall's Island. As the impression made by the pupils was very favorable, it is presumed that the appropriation will be made. In a notice of the exhibition in one of the daily papers, we find the following statements:—

The first efforts for the education of idiots in America were made in 1839. In that year the Institution for the Deaf and Dumb in New York received a mute boy, who was instructed for three years by Prof. Morris, with favorable results. The same year Dr. Howe of Boston treated and greatly improved a blind idiotic child, and afterward two others. Two or three children were also under instruction at the American Asylum at Hartford before 1848. In 1846 efforts were made in both the Legislatures of New York and Massachusetts for the establishment of Asylums for this class.

In July, 1848, Dr. Wilbur opened a private institution for this purpose at Barre, Mass., where he had 15 pupils before 1851. In that year, having been called to our State Asylum at Albany, he transferred that school to Dr. Geo. Brown, under whose management it is still in successful operation, having some 25 or 30 pupils

In October, 1848, the Massachusetts School was commenced, under the superintendence of Dr. Howe. It was conducted for three years as an experiment, and had 15 pupils at the close of that period—October, 1851. Then it entered on its career as a permanent State institution. From 1848 to January, 1855, it had 113 pupils, of whom 41 were then remaining. We are informed that the Legislature has lately granted it $25,000 for an edifice, etc.

The Asylum at Albany was opened in October, 1851. For the last two years it has had an average attendance of 50 pupils, and an equal number of applications for admission are now on file. The new edifice at Syracuse, costing $70,000, will be opened next August. Appropriation for current expenses for this year $13,000.

The Pennsylvania School in Germantown was commenced in July 1855 as a State Institution, having been founded on the private school begun in the winter of 1851-2 by Mr. J. B. Richards. His report of last January states the number of pupils then remaining at 20. We learn that over $10,000 have been subscribed by citizens of Philadelphia for the erection of buildings, etc. A private School for Idiots was commenced last fall near Boston by Mr. McDonald, formerly associated with Dr. Howe—which completes the list of institutions of this character.

Slavery in Maryland.

At a late session of the Anne Arundel County Court in Maryland, a lot of slaves manumitted by their owner, who died in 1846, when they numbered 70, were remanded into Slavery by decree of the Court. The case was briefly as follows:

John Townshend, an eccentric old farmer of Prince George's County in that State, who by his own exertions had become the possessor of seventy slaves, and property beside to the amount of thirty or forty thousand dollars, died in the year 1846, and in his will gave freedom to all his slaves, and bequeathed to them his property. For many years previous to his decease he had declared his intention of doing this to his friends and neighbors, some of whom tried hard to dissuade him from his purpose. In addition to his will, he executed before his death a deed of manumission, in order to make sure if possible of the freedom of his slaves in case his heirs should succeed in breaking his will, an attempt which he seemed to foresee. The will was contested, as in all such cases it is sure to be, and a trial took place, but the will was sustained. An appeal was taken to the Superior Court, when that judgment was reversed, the will broken, and the property given to the claimants. The late trial in Anne Arundel County was on the deed of manumission, which followed the fate of the will, and was declared invalid and void, thus consigning the whole body of negroes back to that Slavery which a humane or conscience-stricken master had endeavored to secure them from.

As is usual in all such cases, the plea was that the testator and manumittor was not in his right mind. If he had been, he would not have done so foolish a thing as free seventy slaves and furnish them the means to start on a life of Freedom under favorable circumstances. To be sure, his purpose had been disclosed for many years previous to his death, and his will and deed of manumission did nothing more than realize this long-favored intention. But all this went for nothing before the Court which had the ultimate adjudication of the case. Who will pretend to disbelieve that the Courts in the slave States are particularly careful of the legal rights of the negro? [N. Y. Tribune.

THE MURDERER CAGED.—Our readers are doubtless familiar with the facts connected with the murder of William Poole, in a Broadway drinking saloon, some two months ago. The whereabouts of the murderer, Lewis Baker, was for some days the subject of speculation. It was finally concluded, that he took passage for the Canary Islands in the brig Isabella Jewett, which sailed soon after the murder was committed. Accordingly, the famous clipper Grape Shot, with a posse of police officers, was despatched after her. The Grape Shot returned last week, with Baker on board, he having been arrested before landing on the Islands. It is probable that his life will be the forfeit of the game he has played.

"Baker first appeared prominently as a Primary Election broker in 1850, carrying the Eighth Ward for the Silver Greys in that year. In 1852 he was quite conspicuous at the Baltimore Whig National Convention, lobbying for the nomination of Fillmore, although at the time he (Baker) was a member of the Police force. Of late he had withdrawn entirely from the Whig party, and at the State election was a furious supporter of Ullman and the Hindoo nominees. He had quarreled with Poole about political matters last fall, and on other occasions, but the exact merits of those difficulties had never transpired. But it was well known that they had one or two collisions within a year or two, and that considerable bad blood existed between them."

JAPANESE DISTRUST OF AMERICANS.—The Paris *Univers* of April 25, says that its correspondent at Hong Kong has letters from the Loo Choo Islands and from Japan. The conduct of the Japanese Government with regard to Europeans is still the same as heretofore, that is to say, equally mistrustful and ill-disposed. The Americans themselves, with their phantom of a treaty, are in nowise protected from the ill-will of the officers of the Emperor. They have received very evident proof of this during the station there of the corvette Vincennes, dispatched to Japan to execute a survey of the coast. Every time the officers have wished to land in order to determine a point, they were met with opposition, and for the fulfillment of their mission compelled to resort to force. At Loo Choo they have not met with a more friendly reception. Too weak to prevent the landing of the men dispatched ashore, the Governor contented himself with the annoyance of appointing a guard of honor to accompany them for the purpose of keeping off the people. This duty had been so well performed that during nearly one month's sojourn on the Island the Americans have not found a single opportunity of speaking to a single individual. Disgusted with all this chicanery, the Commodore landed eighty men well armed and directed them upon the palace of the Governor. This frightened him so much that he promised all that was demanded.

We learn from the Deseret *News*, that the Indian Chief of the Utahs, who went by the name of Walker, had been poisoned. He requested his brother to kill, at his burial, one Pi-ede woman, to strangle two Pi-ede girls, bury alive one Pi ede boy, and kill sixty horses and six sheep, as a sacrifice, that he might pass in peace to the happy hunting-grounds of the Indian

The receipts of the Milwaukee and Mississippi Railroad for April were, in round numbers, $33,000, against $18,000 in the same month last year. The total receipts since the 1st of January amount to $123,611 84, against $88,508 05 in the corresponding period last year. Increase, $35,104 79, or about 40 per cent.

SUMMARY.

We learn from a late report of the Board of Regents of the Wisconsin University, that its total financial resources—including lands, buildings, &c.—are $389,000, from which liabilities to the amount of $45,000 are to be deducted. The total available funds for the present year are nearly $15,000, and it is expected that the income of the institution will be ultimately increased to $25,000 annually—a sum that will enable the Board to carry on successfully the Collegiate, Normal and Agricultural departments; to make yearly additions to the apparatus, library, cabinet, and other collections, and ultimately to establish schools of Law and Medicine.

The Brownstown (Ind.) *Democrat* records a singular accident which happened to Mr. W. F. Cunningham, of that vicinity, on Friday last. Mr. C. had cut off the joint of a green elder, and forced the pith tight together at one end, and filled the open end with molten lead, which condensed steam from the green elder at the bottom and exploded, making a report like the firing of a pistol, and forced the contents, about a pound of molten lead, in the face of Mr. C., injuring him seriously. Dr. Wort extracted several pieces of lead, buried in C.'s face, as large as rifle balls.

From rumors that have lately reached us, says the Missouri *Democrat*, we are led to infer that the Atchison mobocrats never lose sight of the spoils. They have laid out the town of Calhoun, K. T., to which place the legislature elected to do their bidding will adjourn and establish the seat of government, and expend the $25,000 appropriated by government to erect public buildings, when the nullifiers will sell out and make their fortunes before the people of Kansas can right themselves in the premises.

We have dates one week later from California. There is not much news. The United States Land Commissioners had confirmed the Weber claim to eleven square leagues of land in which the City of Stockton is located. Two more heavy failures had occurred in San Francisco. Sanders, the forger, had escaped in a vessel bound to China. Business continued very dull, and prices were much depressed. Another revolution broke out in Nicaragua on the 6th, occasioned by the accession to power of Gen. Narvose.

The Legislature of Massachusetts at its present session have voted an Address to the Governor to remove Judge Loring from office, for the sole reason that, as a Commissioner of the United States under the Fugitive Slave Act (so called) of 1850, he surrendered a man into slavery. By voting this Address the Legislature have stigmatized the Fugitive Slave Act as so unfit to be executed that a Massachusetts Judge who gives effect to it shows himself thoroughly unworthy to be continued in office.

After the first of July, persons having occasion to send money or other valuables through the mail may register the same at the Post Office by paying the sum of five cents for each letter. For this the Postmaster will give a receipt, and when the letter is taken out of the office by the person to whom it is addressed, a receipt is also given. Registered letters are to be made up in separate packages and addressed to the Postmaster.

We hear, says the Boston *Traveler*, that the system adopted April 1 of requiring postage on all letters to be prepaid before they can be sent is, to a considerable extent, reducing the number of letters sent, at least so far as the Post Office in this city is concerned. If the Boston Post Office is any indication of the general result, the loss of revenue throughout the country for the year will be several hundred thousand dollars.

Mr. Alex. H. Stephens of Georgia has written a letter on the Know Nothings. Mr. Stephens declines to join or represent the Order, and has withdrawn from the canvass as Representative to Congress. Mr. Stephens is opposed to the Know Nothings because they proscribe the Roman Catholics, who, he says, are better friends to Slavery than Northern Protestants.

The Personal Liberty bill passed the Massachusetts House of Representatives on the 17th inst. by a vote of 229 yeas to 43 nays. An amendment was voted in, prohibiting any State Officer from holding the office of United States Commissioner. The bill had already passed the Senate with only three dissenting voices.

Mr. Geoffrey Saint Hilaire, Professor at the French Museum of National History, has just delivered two lectures on the advantages of bringing horse flesh into use for food. There is no reason, he declares, why horse flesh should not be eaten; like the ox and sheep, the horse is herbivorous, and no deleterious element enters into its food or structure.

The Newburyport *Herald* says that the schooner Triumph sailed from there on Sunday, bound to the shores of Labrador for obtaining wild birds' eggs. The birds congregate there early in the season, in great numbers, and a profitable business is often made in collecting eggs and feathers.

E. J. Bay, formerly a colored barber of Terre Haute, Ind., but now of Liberia, Africa, has been Speaker of the House of Representatives of that Republic, was a candidate for the Presidency, and is now editing a paper in that country.

A new story by Fanny Fern is announced to be in preparation, and will shortly make its appearance in the New York *Ledger*. The publisher of that journal is said to have contracted with the authoress for the story at the liberal rate of $100 a column.

In consequence of the extreme high prices of hay, grain, &c., the principal stable-keepers in Boston have raised the price of horse keeping to $5 per week. It is said that oats are selling at higher prices than have been obtained for twelve years past.

Judge Conkling, late United States District Judge, has given an opinion with regard to the Prohibitory Law, with especial reference to the search and seizure clauses. He sustains the law most emphatically.

The largest room in the world, unbroken by pillars, is at St. Petersburg, and is 650 feet long by 150 broad. A battalion can conveniently manœuver in it, and 20,000 wax tapers are required to light it properly.

The ship canal around Saut St. Marie has been completed, thus making a navigable communication between the waters of Lake Superior and the ocean.

A dispatch dated Utica, Wednesday, May 16, 1855, says: The extensive tannery of Henry Sanford at Durhamville, Oneida Co., N. Y., was totally destroyed by fire this morning, together with an adjoining boarding-house and other out-buildings. The total loss is about $35,000—insurance $13,000. Part of the stock was saved in a damaged condition.

A dispatch dated Maysville, N. Y., Monday, May 14, 1855, says: Hall, the negro barber who was arrested in New Orleans for robbing a man of $1,400 by administering chloroform to him while shaving him at Dunkirk, was tried on Saturday, convicted and sentenced to fifteen years' imprisonment.

The British Postmaster General, in his last official report, says that out of thirty-two foreign nations, there are only two—viz: Sweden and Equador—in which no material internal postal improvement has been made since the introduction into Great Britain of the penny postage.

We are glad to hear, says the Portland *Argus*, that Father Cummings, who has been so long the able editor of the *Christian Mirror* in this city, has become the possessor, as heir or legatee of some relative, of from $50,000 to $100,000. It could not have fallen into better hands.

A stick of white oak timber, measuring fifty-one feet eleven inches in length, and squaring forty-one by forty inches, making nearly six hundred cubic feet, has been "manufactured" at Wallaceburg, C. W. This is said to be the largest stick of timber ever cut on the North American continent.

The Chicago *Times* says that every house in that city is full, and "rents are beyond precedent in any city on the globe. Landlords have raised their rates 25, 50, 75, and in many instances 100 per cent since the 1st of May last."

For the first time since it opened (now it is nearly empty) the Crystal Palace is making money—not for the stockholders, but really making more than the expense of keeping it open, and paying money into the hands of the receiver.

It is not true, as stated some weeks since, that the Death Penalty for Capital Offenses was restored by the Legislature of Wisconsin at its recent session. A bill for that purpose passed the House, but it was lost in the Senate.

We are receiving the most favorable intelligence from every section of the country in regard to the coming crops. From no point do we have a discouraging word.

The State of Iowa is about organizing a new University on the plan of the Polytechnic Schools of Europe, to be located in Iowa City.

George Thompson, the English Abolitionists, who was once mobbed, is now the editor of the *Empire*, a weekly paper published in London.

A female slave, a fugitive from Kentucky, passed through Buffalo for Canada on the 11th inst.

MARRIED,

In Rockville, R. I., by Eld. P. S. Crandall, Mr. WM. A. BOSS, of Hopkinton, R. I., to Miss JUDITH L. RATHBUN, of Exeter, R. I.

DIED,

JAMES HUBBARD died at his residence in Scott, N. Y., May 12th, 1855, in the 53d year of his age. Bro. Hubbard experienced religion in early life, and united with the Seventh-day Baptist Church in Berlin, Rensselaer Co., N. Y., where he remained a worthy member until 1827, when he removed to Scott, and united with the church, of which he continued a faithful member until called to join the church triumphant. In his death his friends and relatives mourn the loss of an affectionate husband, a kind father, and a loving brother. He was much esteemed for his benevolence, his virtues, and piety. He is gone—gone to pluck the flowers that grow in the fields of eternal bliss and glory. "Blessed are the dead that die in the Lord." A. W. C.

In Wirt, Allegany Co., N. Y., May 6th, 1855, of consumption, ANN SMITH, wife of Rodney T. Smith, and daughter of Samuel P. and Anna Crandall, in the thirty-fourth year of her age. The deceased was a worthy member of the Seventh-day Baptist Church in Friendship, Allegany Co., N. Y., with which she united in early life, and has ever since been a constant and devout disciple of Christ, whose presence she enjoyed during her sickness and death. Although her afflictions have been very great ever since her childhood, she bore them with Christian fortitude. As the time of her departure drew near, she was very calm, and entertained bright hopes of that blessedness which is in store for all true followers of our blessed Redeemer. She has left a husband and three children, besides numerous other relatives and friends, to lament their loss.

At Lime Rock, Smithfield, R. I., on the 28th of April, 1855, Eld. DAVID M. BURDICK, pastor of the Baptist churches at Lime Rock and Albion Villages, aged 49 years. He was a son of the late Eld. Henry Burdick, pastor of the Seventh-day Baptist church in Newport, R. I.

In Rockville, R. I., April 26th, JOSEPH CRANDALL, aged 70 years.

THE Twentieth Annual Meeting of the Seventh-day Baptist Central Association will be held at DeRuyter, Madison Co., N. Y., commencing on Fourth-day, June 6th, 1855, at 10 o'clock A. M. James Summerbell is appointed to preach the introductory discourse; Elias Burdick, alternate.

J. B. WELLS, Rec. Sec.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON.—Inland route. without change of cars or detention, carrying the Eastern Mail.

The new steamer PLYMOUTH ROCK, Capt. Joel Stone, and C. VANDERBILT, Capt. W. H. Frazee, in connection with the Stonington and Providence and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from pier No. 1 N. R., (first wharf above Battery-place,) at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the Mail Train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The C. VANDERBILT, from New York—Monday, Wednesday, and Friday From Stonington—Tuesday, Thursday, and Saturday.

The PLYMOUTH ROCK, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

N. B.—Passengers, on arrival of the steamers at Stonington, proceed immediately by Mail Train to Providence, Boston, Taunton, and New Bedford; or by Accommodation Train from Stonington at 7.30 A.M.

A Baggage Master accompanies the Steamer and Train through each way.

Through tickets on Mondays, Wednesdays, and Fridays, for Nantucket, Holmes' Hole, and Wood's Hole, via New Bedford, connecting with the new steamer Eagle Wing.

For passage, berths, state-rooms, or freight, application may be made at pier No. 2 North River, or at the office, No. 10 Battery-place.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M.

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and SUNDAY, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

Through tickets can be obtained on board the boats for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier.

A. A. DYKEMAN.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Everybody says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.
Or, NOYES SPICER, Indianapolis, Ind.

The very Book that every body has been Wanting.

The Book for the Parlor, the Book for the Fire-side, the Book for the Professor, and the Book for the Non-Professor.

THE RELIGIOUS DENOMINATIONS OF THE UNITED STATES: Their History, Doctrine, Government, and Statistics; with a Preliminary Sketch of Judaism, Paganism, and Mohammedanism. By Rev. JOSEPH BELCHER, D D., Honorary Member of the Historical Societies of Pennsylvania and Wisconsin, author of "William Carey, a Biography," etc., etc., and "Editor of the Complete Works of Andrew Fuller," "Works of Robert Hall," etc, etc. Large octavo, 1024 pages, handsomely embellished by nearly two hundred engravings.

This invaluable work is rapidly finding its way among all classes of the American people. The clear, comprehensive, and impartial manner in which the learned author treats each and every denomination, is winning for him golden opinions from the highest authorities in the land. The innumerable lively tales and anecdotes of ministers, churches, and laymen, which he introduces with the articles of faith and all important statistical information, give to the work a life, vigor, and spirit truly delightful. One cannot sit down to it without being convinced that his subject is in the hands of a master, nor rise but with kindlier and more liberal feelings towards the great brotherhood of Christians, under whatever name they bear. Ours is a great, growing, and glorious country, and every family, and every young man, throughout its length and breadth, should have a copy as a text book of all its denominations. Wherever known, it is read, and wherever read, admired. Look at the following from among the very many notices received:

It embodies a vast amount of information relative to the origin, history, and missionary operations of the different religious denominations in this country, presented in a remarkably interesting and attractive manner.—*Rev. John Dowling, D. D., Author of "The History of Romanism," "Judson Offering," etc.*

This is a large and beautiful volume, and will find a cordial welcome in every family.—*Philadelphia Christian Chronicle.*

So far as concerns independence of vision, there can be no question, as Dr. Belcher surveys each sect with the same dispassionate impartiality.—*Epis. Recorder.*

This massive volume embraces a vast fund of information.—*Presbyterian.*

The work is sold by agents, and will furnish a large amount of interesting and valuable information to the families into which it may be received.—*New York Recorder and Register.*

In the account given of the denominations, he is fair, and generally allows them to speak for themselves, as to their history and institutions.—*New York Christian Advocate and Journal.*

It contains a mass of interesting facts and statistics.—*Norton's Literary Gazette.*

Judging from the work, it would be difficult to say what are the religious views of the Editor, so fairly, so dispassionately, so charitably, has he treated each and every sect.—*Philadelphia City Item.*

We presume it will be a standard work in thousands of libraries.—*Littell's Living Age.*

Sold only by agents, to whom certain districts are allotted. For particulars address the publisher,

JOHN E. POTTER,
15 Sansom-st., Philadelphia.
Or, NOYES SPICER, Indianapolis, Ind.

Miscellaneous.

Memorial to Congress from Kansas.

The following Memorial was prepared for circulation among the citizens of Kansas, and gives, undoubtedly, a correct and faithful account of the outrages at the late election in that Territory. How any body can read it, and not feel his blood boil, is more than we can tell. Here is a field worthy, certainly, of the attention of the spare military forces of the United States—a field in which they would stand a much better chance of winning laurels than in aiding the rendition of fugitive slaves.

To the Senate and House of Representatives, in Congress assembled:

The memorial of the subscribers, citizens and residents of the Territory of Kansas, respectfully represents:

That a state of things exists in said Territory unparalleled, as we believe, in the history of our country, and which it becomes our solemn duty to lay before you, and through you before our fellow-citizens of the United States. Under the guaranties of your law for the organization of this Territory and in consideration of the privileges which that law held out to us we left our former homes, met the privations of an uninhabited country, and prepared for adding another republic to our Union.

The right of civil and religious liberty—the right of suffrage and self-government—were set up as the beacon lights which beckoned us on. As freemen we were united, as freemen we came, and as freemen we expected to live. But we address you now as an outraged and subjugated people, disfranchised and enslaved, stripped of our dearest rights, and governed by a set of masters foreign to our soil, and responsible only to their own lawless will.

One of the States of our Union, strong in wealth, population and resources, relying upon her accumulated strength of almost half a century, and taking advantage of our feeble infancy as a people, has invaded our soil, seized upon our rights, subjugated our territory and selected for us our rulers, intending also to dictate our laws and make us the slaves of their will. This may well seem an almost incredible thing, in the Nineteenth Century, and in this Republican Union—the peculiar and boasted land of liberty and self-government—but the evidence of it is as palpable and undeniable as the fact is bitter and mortifying to us and disgraceful to the public.

This invasion of our soil and usurpation of our rights commenced at the first moment of calling those rights into action. The first ballot-box that was opened upon our virgin soil was closed to us by overpowering numbers and impending force. It became, not what Americans have been proud to designate it, the exponent of the people's will, but was converted into the sword of the oppressor to strike at civil liberty. So bold and reckless were our invaders that they cared not to conceal their attack.

They came upon us, not in the guise of voters to steal away our franchise, but boldly and openly to snatch it with a strong hand. They came directly from their own homes, and in compact and organized bands, with arms in their hands and provisons for the expedition, marched to our polls, and when their work was done returned whence they came. It is unnecessary to enter into the details; it is enough to say that in three districts in which, by the most irrefragible evidence, there were not one hundred and fifty voters, most of whom refused to participate in this mockery of the elective franchise, these invaders polled over a thousand votes.

Loving our country and its institutions, we were willing, if this was to be only a solitary instance, to suffer it in silence rather than to proclaim to the world that even in this remote spot of our great country civil liberty was but a name. Bitter and mournful experience has taught us, however, that this was no isolated act—no temporary ebullition—but the commencement of a well-matured and settled plan by a large portion of the people of one of the States of our Union permanently to enslave us and constitute themselves our masters.

On the 30th day of March last we were again invited to the ballot-box, under the law which we, in common with our fellow-citizens of the States, had through your body enacted. Our vigilant and faithful Chief Magistrate had surrounded it with all the guards and precautions with which his authority invested him, and we were prepared to exercise the dearest and most cherished privileges of American citizens with a full sense of the vital and interesting importance of this peculiar occasion.

The occasion came, and with it came our invading and self-constituted masters in thousands, and with all the paraphernalia of war. They came, organized in bands, with officers, and arms, and tents, and provisions, and munitions of war, as though they were marching upon a foreign foe instead of their own unoffending fellow-citizens. Upon the principal road leading into our territory and passing several important polls, they numbered not less than twelve hundred men, and one camp alone contained not less than six hundred.

They arrived at their several destinations the night before the election, and having pitched their camps and placed their sentries waited for the coming day. Baggage-wagons were there with arms and ammunition enough for a protracted fight, and among them two brass field-pieces ready charged. They came with drums beating and flags flying, and their leaders were of the most prominent and conspicuous men of their respective States. In the morning they surrounded the polls armed with guns, bowie-knives and revolvers, and declared their determination to vote at all hazards and in spite of all consequences.

If the Judges could be made to subserve their purposes and receive their votes, and if no obstacle was cast in their way, the leaders exerted themselves to preserve peace and order in the conduct of the election, but at the same time did not hesitate to declare that if not allowed to vote they would proceed to any extremity in the destruction of property and life. If control of the polls could not be had otherwise the Judges were by intimidation, and if necessary by violence, prevented from performing their duty; or, if unyielding in this respect, were driven from their post and the vacancy filled, in form, by the persons on the ground; and whenever by any means they had obtained the control of the Board, the foreign vote was promiscuously poured in without discrimination or reserve, or the slightest care to conceal its nefarious illegality.

At one of these polls, two of the Judges having manfully stood up in the face of this armed mob, and declared they would do their duty, one portion of the mob commenced to tear down the house, another proceeded to break in the door of the Judges' room, while others, with drawn knives, posted themselves at the window, with the proclaimed purpose of killing any voter who would allow himself to be sworn. Voters were dragged from the window because they would not show their tickets or vote at the dictation of the mob, and the invaders declared openly at the polls that they would cut the throats of the Judges if they did not receive their votes without requiring an oath as to their residence.

The room was finally forced, and the Judges surrounded by an armed and excited crowd were offered the alternatives of resignation or death, and five minutes were allowed for their decision. The ballot-box was seized, and amid shouts of "Hurrah for Missouri," was carried into the mob. The two menaced Judges then left the ground, together with all the resident citizens except a few who acted in the outrage, because the result expected from it conformed to their views, and because it enabled the few to rule the many. When an excess of the foreign force was found to be had at one poll, detachments were sent to others where it was supposed they might be needed.

At the polls adjoining the one above alluded to, one of the Judges, a minister of the Gospel, who refused to accede to the demands of a similar mob of some four hundred armed and organized men, was driven by violence from his post, and the "vacancy" filled by themselves. Threats and violent demonstrations were rife, and another clergyman, for the expression of his opinion, was assaulted and beaten. The inhabitants of the district, powerless to resist the abundant supply of arms and ammunition, the organized preparation and the overwhelming numbers of these foreigners, left the polls without voting.

In the Lawrence District, where was the largest camp of these invaders, speeches were made to them, by leading residents of Missouri, in which it was said that they would carry their purpose if need be at the point of the bayonet and the bowie-knife, and one voter was fired at as he was driven from the election ground. Finding they had a greater force than was necessary for that poll, some two hundred men were drafted from their number and sent off under their proper officers to another district, after which they still polled from this camp over seven hundred votes.

In the Fourth and Seventh Districts along the Santa Fé road, similar scenes were enacted. The invaders came together in one armed and organized body, with trains of fifty wagons, besides horsemen, and the night before election pitched their camp in the vicinity of the polls, and having appointed their own Judges in place of those who from intimidation or otherwise, failed to attend, they voted without any proof of residence. In these two election districts, where the census show one hundred voters, there were polled three hundred and fourteen votes, and last fall seven hundred and sixty-five votes, although a large portion of the actual residents did not vote upon either occasion. In the Sixteenth Election District hundreds of men came together as in other cases, crossing the river from Missouri the day before election and encamping together, armed and provisioned, made the fiercest threats against the lives of the Judges, and during the night called several times at the house of one of them for the purpose of intimidating him, declaring in the presence of his wife that a rope had been prepared to hang him; and although we are not prepared to say that these threats would have been carried out, yet they served to produce his resignation, and give these invaders, in the substitution, control of the polls; and on the morning of the election a steamboat brought from the town of Weston, Missouri, to Leavenworth, an accession to their numbers of several hundred more who returned in the same boat after depositing their votes. There were over nine hundred and fifty votes polled, beside from one hundred to one hundred and fifty actual residents who were deterred or discouraged from voting, while the census returns show but three hundred and eighty five votes in the district a month later. Not less than six hundred votes were here given by the non residents of the Territory who voted without being sworn as to their qualifications, and immediately after the election returned to Missouri—some of them being the incumbents of important public offices there. Indeed, so well was the character of this foreign vote understood that the judges struck out of the prescribed form of return the words "by lawful resident voters."

We might continue the list of these sickening deeds until the blood of every freeman would boil with indignation, but it is useless. One more instance alone we will refer to. In the XVIIIth Election District, where the population was scarce and no great number of foreign votes was needed to overpower it, a detachment from Missouri from sixty to one hundred strong, passed in with a train of wagons, arms and ammunition, making their camp, the night before the election, near Moorestown, the place of the polls, without even a pretext of residence, and returning immediately to Missouri after their work was done, their leader and captain being a distinguished citizen of Missouri, but late the presiding officer of the Senate of the United States, and who had a bowie-knife and revolver belted around him, apparently ready to shed the blood of any man who refused to be enslaved. All these facts we are prepared to establish, if necessary, by proof that would be considered competent in a Court of justice.

From a careful examination of the returns we are satisfied that over three thousand votes were thus cast by the citizens and residents of the States, and that a very large portion of the residents were deterred or discouraged from going to the polls. If this condition of things is allowed to prevail we are reduced to the state of a vassal province, and are governed by the State of Missouri.

It would be mere affectation in us to attempt to disguise the fact that the question of making Kansas a free or slave State is at the bottom of this movement, and that the men who thus invade our soil and rob us of our liberties are from the Pro-Slavery men of Missouri, who are unwilling to submit the question to the people of the Territory and abide the compact between the North and South, which the Kansas Nebraska bill contains.

The compact we want carried out, and by that test we want the question settled if it can be; but there are few things that we would not prefer to the domination of irresponsible invaders from Missouri. That enactment is not only a law which States and individuals are bound to obey, but it is a compact between the North and the South—a solemn covenant between the sovereign States of our Union, which none can violate without becoming recreant to the principles of honor and justice—without the betrayal of confidence reposed—without such breaking of plighted faith as in an individual would load him to the earth with scorn and contempt and drive him from the society of honest men. The bill which Northern statesmen backed with Northern votes had obtained for Southern rights, is made by men who invade our soil, the very instrument for depriving us of our dearest privileges, and stabbing to the heart those who magnanimously gave it into their hands for other ends.

That bill is made to mean popular sovereignty for them—serfdom for us. The doctrine of self-government is to be trampled under foot here, of all other places in the world, on the very spot which had been hallowed and consecrated to its most signal vindication. The altars which had been reared to it on this chosen ground, and around which at least the democracy of the whole Union had sworn allegiance, and to which we had come as pilgrim worshipers in the wilderness, are to be ruthlessly demolished. The compact is to be basely broken and the ballot of the freeman (in effect) torn from our hands almost before the ink of the covenant is dry. Not only, too, is the principle of popular sovereignty to be blotted out, but more than this, even the object of the contest is to disappear. The question of negro Slavery is to sink into insignificance, and the great portentous issue is to loom up in its stead, whether or not we shall be the slaves, and fanatics who disgrace the honorable and chivalric men of the South shall be our masters to rule us at their pleasure.

With a feeble and scattered community, just struggling into existence, without organization and almost without shelter, we are powerless to resist an old, strong, and populous State, full of men and arms and resources, and we therefore appeal to you and through you to the people of the States. Remedy here we have none.

Our Executive has with manly determination and persistent fidelity stood by his people, and endeavored to carry out the principles of popular sovereignty and secure us the privilege of managing our own affairs and governing ourselves, until his reputation has been assailed and his life openly threatened with a bitterness almost unparalleled; and, although as Chief Magistrate he is all we could desire, and has fearlessly pursued the path of duty amid a storm of menace and detraction under which many men would have quailed, yet he is powerless like ourselves.

We make now this last appeal, not to the North, not to the South, not to any political party; but to the Representatives of the whole Union. We beg that no men will sport with our fearful condition by endeavoring to make political capital, or build up party at the expense of our civil and physical existence. We want the men of the North and the men of the South to protect us. Through yourselves, their Representatives, we appeal to their honor—to their justice—to their patriotism—to their sympathies, not for favors, but for rights—not for trivial rights, but for the dearest rights guaranteed to us by the Declaration of Independence—by the Constitution of the Union—by the law of our organization—by the solemn compact of the States and which you pledged to us as the condition of our coming here.

Communities are not to blame for the conduct of their fanatics unless they sanction them. We cannot believe that the States of the South will sanction the outrages that have been perpetrated upon us, or will allow them to be continued. And although we might reason the matter as a question of policy and show that it is contrary to the laws of nature and society and opposed to all human experience that good can come from such evil; although we might prove that it is "sowing the wind to reap the whirlwind" and that the reäction will be fearful, yet we feel that this is unnecessary; that it is enough to appeal to their honor and their sense of justice and to rely upon their plighted faith.

Inside our bounds we shall have no serious troubles. Northern and Southern men mingle together in harmony and good feeling, and in mutual dependence and assistance in the hardships and privations of a pioneer life. As we learn to understand each other, friendships are engendered and prejudices melt away, so that we shall be able to meet all questions that may arise in a spirit of justice and friendly feeling, which will secure the rights of all, and cheerful acquiesence in the decision of the majority. From foreign oppression, however, we ask for relief of that power which passed the Kansas bill, and pledged to us its benefits if we would come here. We have a right to ask and do ask its enforcement. It remains for your honorable bodies to decide whether you will keep the compact between you and us which exists by that bill, and on emigration whether you will vindicate the sacred doctrines of the Government, or whether you will leave us in a state of vassalage and oppression. We cannot and do not doubt that you will in some way give us justice and protection.

Jesuitism and Great Intellect.

Look at the Catholics of the United States in comparison with the Protestants. In the whole of America there is not a single man born and bred a Catholic distinguished for any thing but his devotion to the Catholic church. I mean to say, there is not a man in America, born and bred a Catholic, who has any distinction in science, literature, politics, benevolence, or philanthropy. I do not know one; I never heard of a great philosopher, naturalist, historian, orator, or poet, amongst them.

The Jesuits have been in existence three hundred years; they have had their pick of the choicest intellect of all Europe—they never take a common man when they know it; they subject every pupil to a severe ordeal, intellectual and physical, as well as moral, in order to ascertain whether he has the requisite stuff in him to make a strong Jesuit of. They have a scheme of education masterly in its way. But there has not been a single great original man produced in the company of the Jesuites from 1545 to 1854. They absorb talent enough, but they strangle it.

Clipped oaks never grow large. Prune the roots of a tree with a spade, prune the branches close to the pole, and what becomes of the tree? The pole remains thin, and scant, and slender. Can a man be a conventional dwarf and a natural giant at the same time? Case your little boy's limbs in metal, would they grow? Plant a chestnut in a teacup, do you get a tree? not a shrub, even. Put a priest or a priest's creed as the only soil for a man to grow in; he grows not. The great God provided the natural mode of operation—do you suppose He will turn aside and mend or mar the Universe at your or my request? I think God will do no such thing.

[Theodore Parker.

From the American Agriculturist.

Rotation of Crops in the Garden.

It is the custom of many, who have small vegetable gardens, to plant the same crops in the same spots year after year. This may be done and good crops may be obtained, if the land is deeply trenched and thoroughly manured every year. But without these precautions crops will almost certainly degenerate. The onions very likely will become maggoty and rot, and the peas fail to fill out well, and the cabbages show small heads. Though we manure abundantly and work the soil two spits deep, we find it of great advantage to change the locality of the crop every year, with few exceptions. Asparagus cannot very well be changed, and onions seem to do better upon the same spot year after year.

It is now time to make your plans for the garden for the next season, and it will be found an advantage to change the locality of every other crop. Manures should be adapted to the various crops you purpose to raise. Certain kinds of plants require a good deal of ammonia, such as onions, carrots, tomatoes, celery, &c. These should be treated to guano, night soil, or hog dung. Let a certain portion of the garden be allotted to them, and the manure trenched in, as soon as the season will allow. This may be called plot No. 1.

In No. 2 we would raise potatoes, peas, beans, beets, and corn. On this you should put an abundant supply of vegetable matter, if the soil is not already well furnished, and a mixture of guano, and superphosphate of lime. If you have not these, a compost of cow dung and old turf or muck will prove a good substitute. The pea is a lime plant, and a top dressing of slaked lime pays well.

On No. 3 put no guano, night soil, or hog manure. Here you will raise turnips, cabbages, and the brassica tribe of plants, which are sure to be club-footed with these nitrogenous manners. We have found home prepared superphosphate an excellent manure for these plants. For all the root crops in the garden, use the trenching spade, and make your soil at least 18 inches deep. It is a slow process, but pays better than any other. The quantity of roots that may be raised on a few square rods, thoroughly worked, is astonishing to one who has only plowed his garden six or eight inches deep. W. C.

From the American Agriculturist.

Dissolving Bones.

We have before treated this subject somewhat at length, but large editions of the numbers containing those articles have been exhausted by the calls for them, and every week brings inquiries from new subscribers. To answer these we will again briefly describe the process.

Where a good mill for grinding bones is near at hand, it is best to have them finely ground, and they may then be applied directly to the soil; though in most cases we should prefer dissolving even the bone dust in sulphuric acid (oil of vitriol.) To do this, dilute the acid with two or three times its bulk of water, and moisten the ground bones with it. This can be done best in a half barrel, tub, or trough. Shovel over the mass thoroughly, so that every particle may be brought into contact with the liquid. The mixing may be completed upon a floor, or on a hard ground surface—under a shed or other cover to keep off the rain. When the mixing is thoroughly accomplished, put the whole in a heap, and let it lie for a few days, and then treat it as described below.

Whole Bones.—In a majority of instances a bone-mill is not accessible. It is then necessary to resort to dissolving the whole bones. This is not a difficult process, if sufficient time is taken. The following method we have both practiced ourselves, and seen it repeatedly performed under our directions, with the best success:

Take any water-tight, wooden hooped barrel or cask, and fill it one third full or less with a mixture of sulphuric acid and water. The water should be put into the barrel first, or the acid undiluted would char and in a short time destroy the wood. The acid should be added in small quantities at a time, as a high degree of heat would be produced if it were all added at once. The water should constitute from two-thirds to three-fourths of the bulk of the liquid; that is, between two and three gallons of water for each gallon of acid to be used.

When the liquid is thus prepared the bones may be put in and punched down with a stick, until they rise some distance above the liquid. The closer the bones are packed down the greater the economy of time, as more of them will be at once exposed to the action of the liquid. It is better to break the bones into small pieces with a hammer or sledge, unless you have several months before you for completing the process.

Let the mass stand for a few weeks, frequently working it over with a stirring stick. As fast as the bones sink down in the liquid, more of them should be added. The liquid will often dissolve two or three times its bulk of bones. When the liquid ceases to act longer upon the bones to diminish their bulk, we may conclude that its strength is exhausted; and it may then be poured off for use, and more fresh liquid be added to the bones remaining, and the process be continued in the same vessel. As the dissolved bones will not deteriorate if kept for years, it is economica to use the same cask and add bones or acid as may be wanted. The barrel or cask should be examined occasionally, to see if there is danger of the hoops or bottom giving way, in which case the whole contents should be at once transferred to another vessel.

Using the Dissolved Bones.—To the liquid, or to the mass of ground bones, let there be added dry muck enough to render the whole so dry that it will readily crumble to powder. The more complete the mixing of these the better. The mixing can be done with a shovel, hoe or garden rake. In the absence of muck, dry manure, or even dry soil of any kind may be used. The mixture may be added to the manure or compost heap if desirable. It will be all the more valuable if no more than two gallons of the liquid, or a peck of the ground bones be mingled with a cart-load of muck or manure, though so large a proportion of the latter is not necessary.*

This compost may be spread over the land, and mixed with the surface soil by harrowing, and the whole then be plowed under; or it may be sown upon the surface, to be washed down by rain. In planted crops it may be put into the hill with the seed. If it has been well mixed with a large quantity of muck or other materials, there will be no danger of injury to the seed or plants from its direct application. If this has not been done, care should be taken to cover it with earth before dropping in the seed. This preparation is probably more valuable to the root crops—turnips, carrots, beets, &c., than to grains and grasses, though containing, as it does, large amounts of animal matter, derived from the unburned bones, it will be found valuable for any crop.

---

* If the liquid is poured off for use, before it has entirely ceased to act upon the bones, it contains some free acid and we have formerly recommended a small quantity of unleached ashes to be added to neutralize this excess of acid; but as this may be improperly done by the inexperienced, we have ceased to advise this course. The acid can be entirely freed from any injurious effects by free use of muck or other divisor.

The Three American Dishes.—A correspondent of the Boston *Journal* relates the following:—

Speaking of hotels, I was amused with an incident related by a gentleman connected with the Collins line of steamers. He brought home a card from Paris, which he obtained from a restaurant in that city. It announced that each day the citizens of Paris, and the Yankees in particular, could obtain at the said restaurant the three celebrated American dishes, viz.:—"Pumpkin pies—codfish balls—and baked beans." It seems that the keeper of this place of resort was in humble business. He showed some attention to an American lady; she introduced him into the mystery of "Pumkin pie," (as they spell it,) and the singularity of his advertisement attracted the attention of the Americans in Paris. His business increased, and now he is on the high road to fortune, under the potent renown of the "three great American dishes."

VARIETY.

The law of nature, fixing the numerical relation of the sexes, is an everlasting testimony against polygamy. The number of females born is slightly greater, about 4 per cent., than males; but at 20 years of age they are nearly equal; at 40 there are more males than females; and at 70 they are equal again. The mortality of females between 10 and 40 is very great, and is probably too much increased by the confined and unnatural lives they lead; after 40 their chances of long life are much better than men's, and the last census showed several hundred women in this country over 100 years old.

There seems to be a fashion in female names as well as dress. A few years ago, sentimental names, of languishing length, your Anna Matildas and Laura Marias, were all the rage. Now we have diminutive, pet names, the shorter the better. Here is a few of the latest—Eda, Eva, Ida, Ella, Cora, and Dora. The stately Elizabeth is shortened into Lizzie; the sober Ann is softened into Annie; Harriet becomes Hattie; and Martha becomes Mattie!

The prospects in regard to the wheat crop, never, at this season, were more promising. Our exchanges in all directions speak most encouragingly. It was feared at one time, that the extreme cold weather would winter-kill it, in some quarters, but no mention has been made of it in the newspapers, thus far. The large amount of snow which fell during the winter, it is believed, will materially help this as well as all other crops. At least one-third more seed has been sown.

The Post Office Department has framed a series of instructions for the guidance of postmasters upon the introduction of the new system for the registration of valuable letters. The plan is to go into operation on the 1st of July next, on and after which date any letter can be registered and receipted for upon payment of a fee of five cents, extraordinary care being taken to ensure its safe delivery at its destination.

Archdeacon Jeffreys, a missionary in the East Indies, states, that "for one really converted Christian, as the fruit of missionary labor—for one person 'born again of the Holy Spirit, and made a new creature in Jesus Christ'—for one such person, the drinking practices of the English had made one thousand drunkards."

The following result of the omission of a comma is rather ludicrous. In an interesting article about the inauguration of the new hospital building in New York, the writer is made to state that "an extensive view is presented from *the fourth story of the Hudson River!*"

Institutions that live are never founded; they grow spontaneously. Their origin is not in calculation; but in exigency. They crystalize around an existing need, and retain for ages, after that need has been forgotten, the shape that it gave them.

An English lady writer says:—"I was going towards the hills in Wales early one misty morning. I saw something moving on a mountain side so strange-looking that I took it for a monster. When I came nearer to it, I found it was a man. When I came up to him, I found he was my brother."

The annexed epitaph may be seen in a Rhode Island church-yard:—"Here lies the body of Margaret O'Brien—who died March 1849, aged seventeen years. Her bereaved parents have erected this stone in memory of her and *their posterity.*"

Saxe, the punster poet, gives an excellent portait of old Benj. Franklin, in a single line:

"A man of genius, ruled by common sense."

Be not affronted at a jest. If one throws salt at thee, thou wilt receive no harm, unless thou hast sore places.

Nothing is more diverting than to see men whom we have a well-grounded contempt for, affect contempt for us.

Men, contrary to iron, are worse to be wrought upon when they are hot; and are far more tractable in cold blood.

Fame is like doubloons of Spain—Popularity like Western bank-notes.

Actions are the only property of man, when he is valued as to his social worth in the world.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8¼ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12¼ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass. Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. Sands; retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

GEOLOGY AND THE BIBLE—NO. 2.

The great Age of the Earth shown by the Structure of the Rocks, the Changes they have undergone, and the Fossils which they contain.

Having shown, in a former article, that the Mosaic account does not fix the date of creation, and consequently affords no barrier to the truths which science develops, I shall now proceed to unfold some of the facts of science which have a bearing on the question of the world's age. I shall confine my observations to the sciences of Geology and Astronomy.

In relation to the subject now under consideration, there can but two questions arise. 1st. Are the *facts* well attested? 2d. Are the inductions correct? Within the limits of these two interrogations the whole discussion must be confined. Every one acquainted with the science of Geology must be aware, that only the briefest outline of its *facts* can be given in the contracted space of a newspaper article. This is all that will be attempted in the present article. For extended descriptions, the reader is referred to such standard works as Hitchcock's Elements of Geology, Comstock's Geology, St. John's Elements of Geology, Lyel's Elements of Geology, Lyel's Principles of Geology, and most especially is De La Beche's Geological Observer recommended. But it is obvious, that with all these able and comprehensive aids, the student's knowledge must be meagre, and his conceptions inadequate, until he shall open the book of nature itself, and there read in living characters the foot-prints of time.

No adequate idea of the teachings of geological science can be attained until we hold converse with nature in her wild and savage retreats, scale her mountain peaks, descend into her yawning caverns, explore her majestic water-courses, and traverse her arid deserts. All this has been done. For the last fifty years the study of the earth has been prosecuted with a zeal and perseverance unequaled in the history of any other science. The most eminent and learned men of both continents have devoted their lives to the work. Societies have been formed in almost every country on the earth, combining the wisdom and talent of the age, directing all their energies to the developing of the earth's phenomena. The Governments of England, France, Prussia, and all the minor states of Germany, have poured out their treasures like water in aid of the good work. The Government of the United States, and of all the States separately, have devoted millions of dollars to the study of the earth and its mineral products. Scarcely a square mile of earth on either continent remains unexplored. I hazard nothing in asserting, that none of the inductive sciences have more or better-attested facts on which to build their conclusions than Geology. Like all other sciences, it has been abused by hasty inductions, and consequently false conclusions. But it is nonsense to conclude that therefore *none* of its conclusions are true. Such a view would undermine all science, and throw the world back to the jargon of unsubstantiated theories.

When the Geologist affirms the great age of the earth, he affirms it on no hasty induction, from inadequate data; but, on the other hand, no affirmation of inductive science is founded on a more just induction, drawn from the most ample storehouse of facts. To a few of these facts I now invite attention.

I shall endeavor to prove the vast antiquity of the earth from three groups of evidence drawn from Geology:

1st. The character of the rocks.

2d. The changes they have undergone.

3d. The remains of plants and animals they contain.

The earth is an oblate spheroid, flattened at the extremities of its axis of rotation, so that its polar diameter is about thirty-two miles less than its equatorial diameter. Its surface, after passing through a few feet of loose soil and water, is composed of solid rock, to the depth of about fifty miles, where the solid, by insensible degrees, becomes fluid, and all the vast cavity beneath is filled with melted lava, such as is thrown from the craters of volcanoes during eruptions. This solid crust of the earth is constantly growing thicker by the radiation of the internal heat, which passes into the space around the earth. Now, evidence is abundant, that the solid crust was once fluid, and hence that it has become solid by this process of radiation, as the law of radiation is an universal law, and must have acted in all time.

I deem the above statements susceptible of the most ample demonstration. No fact of science rests on better evidence. The first great fact, then, is that the earth, at one period of its existence, was in a state of igneous fluidity, and has by the process of radiation become solid on its surface to the depth of about fifty miles. Now, what is our first inference from this fact? For the earth thus to have cooled to such a depth, a vast period of time must have been requisite. I have not introduced *this* evidence of the earth's great age because I deem it at all necessary to sustain my position—and few advocates of the geological theory ever use it—but because it seems to me to be conclusive, and of itself adequate to sustain the point at issue. If it shall not be conclusive to others, they may show, either that the facts cannot be sustained, or that, the facts being admitted, the inference is not correct.

The second fact which I shall state is as follows; The rocks which compose the solid crust of the earth exist in two forms, *unstratified and stratified*. The stratified rock covers the greater part of the earth's surface to an average depth of about ten miles, although the unstratified still protrudes in many localities. Now, no fact of Geology rests on more indubitable evidence than this, that the *stratified* rock is the product of the *unstratified*, having been disintegrated and worn off from the surface, by the action of air, rains, rivers, oceans, and other causes, and deposited in strata and lamina as we now find it. The proof of this proposition is most undeniable and conclusive to the student of Geology. Only three points of proof need here be stated. *First*—The stratified rock is composed of precisely the same material as the unstratified, and now exists in precisely those forms that such agencies would produce. *Second*—The remains of plants and animals are found imbedded in these rocks, through nearly their whole extent. *Third*—This process of disintegration and deposition is still actively going on, and burying the remains of *existing* plants and animals, as it has done those of former ages. The inference from *this* great fact is inevitable, that a vast period must have been required to produce this extensive change in the surface of the rocks.

It will not do to say that these agencies might have worked much more rapidly formerly than they now do, and consequently that the whole might have been accomplished since the creation of man, or within a period of six thousand years; for the perfect preservation of the minutest and most delicate parts of plants and animals, indicates that they were enveloped in the sediment of oceans and lakes, by the same quiet and slow process as that which is now in progress. Again, if this entire deposit had been made since man came on the earth, his remains would have been found as low down in the deposit as those of any animals, and these remains would have been promiscuously mixed in all the strata; but this is not the case, for the remains of man, and animals whose species are now on the earth, are not found more than a few hundred feet below the surface. This must be the true measure of the deposit which has been made since the *Adamic* creation. Only a few hundred feet at most has been deposited since man and his cotemporaneous animals were placed on the earth, and hence all that vast depth of stratified rocks below the alluvium must have been deposited prior to the creation of man. In examining the fossils in all the rocks below the alluvium, we find at least six or seven distinct groups of animals, comprising not less than thirty thousand distinct species. These groups are not commingled, but each occupies his own apartment in the great tomb of nature. As a general rule, those animals and plants of lowest organization lie lowest in the rocks, showing a gradual advancement in the successive races which peopled the earth prior to the advent of man. What is worthy of note in these fossil specimens of buried races, is the fact that each group differs from the others so essentially that no two groups could have lived on the earth at the same time. Vast ages must have been required for each one of these groups to have been developed, and deposited such mountain masses of remains as occur in some of the formations, especially in the carboniferous, where whole mountains of limestone were formed by the deposition of the shells of animalculæ too minute to be seen by the naked eye. But each one of these groups had its period of existence, and when, by the cooling of the crust of the earth, and other causes, the earth was no longer adapted to their organization, they died and were buried, and new races were created to take their place. Thus the earth has been the charnel house of myriads of animated beings, long anterior to the advent of man and the present races of animals. It will be the charnel house of existing races, for they too must live out their allotted time, and vacate the earth for what further displays God may be pleased to make of his power and goodness in connection with this earth. The study of Palæontology is one of deep and thrilling interest. No devout person can stand amid the gigantic tenants of the pre-Adamite earth, which modern science has disclosed, and not be awed by the power and majesty of the Creator's works.

The above facts, affecting the whole earth, I deem amply sufficient to warrant the inference of the earth's vast antiquity. They indeed seem to me to make the inference inevitable. Numerous other facts of a general nature might be mentioned, all of which lead to the same conclusion; but I shall omit them, and ask attention to a few facts of a local nature, which are equally conclusive.

The gorges which have been worn in rocks by rivers afford evidence that those rivers have been running there much more than six thousand years. Such examples are numerous in all parts of the world. Our own Niagara affords a good example. The water which runs from Lake Erie into Lake Ontario has already worn a chasm in the solid rock seven miles in length. The rate at which it has been deepening and lengthening that chasm for the last two hundred years has been accurately determined, and it appears that at its present rate of denudation, not less than forty thousand years has been necessary in excavating the whole chasm. Now, unless it can be shown that the action of the water has been vastly more effective formerly than at present, I do not see how the conclusion can be avoided. It is most manifest that the river has worn out the whole gorge from Queenstown to the present Falls, and there is no reason to suppose that it has ever done its work much more rapidly than it is now doing it. Not less than forty thousand years have been required, then, to perform this vast work. It is to be remembered, that all this has transpired since this continent emerged from the ocean, in the bottom of which the stratified rocks were deposited. That the region around Niagara was once under the ocean, is conclusively shown by the marine shells and sea weeds imbedded in the strata. The time, then, which has been employed in wearing out the deep gorge between the Falls and Queenstown, must be added to that occupied in the deposit of all the stratified rock, and its subsequent emergence from the bottom of the ocean. To deposit the rocks, myriads of ages must have been employed, and the emergence of those rocks from the ocean must have occupied vast periods more, as it is probable that the emergence was gradual, as is the case with those portions of earth which are now emerging from the ocean. Numerous examples of this kind might be referred to, where gorges have been worn out by rivers, requiring much more time than has elapsed since man lived on the earth. For such examples, the reader is referred to standard works on Geology.

Again—the formation of coral reefs affords proof of a greater age than is usually assigned to the earth. Coral reefs are ridges of calcareous or lime rock, whose basis is coral of different kinds, and whose interstices and surface are covered with broken fragments of the same, broken shells, and seaweed, all cemented together by calcareous matter. These reefs are built up by the polyparia, a microscopic animalculæ, which has existed in all ages, and which, by the deposit of its shell, built up such huge mountains of limestone during the carboniferous period. The shell of these little animals is principally of lime, and it is by the accumulation of these shells that the coral reefs are formed. The animals congregate and grow together while living, and the shells remain firmly cemented after the death of the animal. These reefs are usually built on the tops of submarine ridges, and frequently on the margins of ancient craters now beneath the ocean. They often originate at a depth of a hundred or more feet beneath the surface. The little artisans continue to add to the mass till it at length rises to the surface, and becomes the dread of mariners. A soil gradually accumulates on the surface, and the island becomes inhabitable.

The growth of these coral structures is so extremely slow, that centuries are required to produce any important progress, yet these structures of vast extent fill almost every ocean. They abound in the Pacific, Atlantic, and Indian Oceans, and also in the Arabian and Persian Gulfs. On the eastern coast of New Holland is a reef 350 miles long. Between Disappointment Islands and Duff's Group is a reef 500 miles, long, affording passage from one group to the other. Between New Holland and New Guinea is a reef 700 miles long. The Maldivas Islands consist entirely of coral reefs, 480 miles in extent. Some groups of coral islands in the Pacific are 1200 miles long and 400 broad, thus occupying an area of 480,000 square miles. The time necessary for these microscopic animals to have built this structure is vast almost beyond computation. Six thousand years would hardly have sufficed to lay the cornerstone. The Peninsula of Florida is made of coral reef, and the reef is still growing under the water at the south end of the Peninsula. Professor Agassiz, in a recent lecture on the Florida reefs, stated that he had ascertained, by observation and comparison, that the reefs grow one foot in a hundred years. And by estimating the extent of the reefs now formed, he finds that a hundred thousand years have been employed in building that little reef.

Finally—the delta at the mouths of rivers afford another evidence of the great age of the earth. That of the Mississippi may be taken for example. The area of earth which the Mississippi has deposited at its mouth is about 13,600 square miles, and its thickness about 600 feet. Now, according to Sir Charles Lyel's estimate, the river deposits about 3,702,758,400 cubic feet of earth per year; hence it must have taken about 67,000 years to form the whole delta. It is evident, that the mouth of the river has changed its place, and that the whole basin of the river was once delta-formed before the present delta was begun, and its formation must have occupied nearly an equal length of time. Numerous other local phenomena might be referred to, substantiating the position I have assumed; but the above are sufficient. The facts I deem indisputable, and the inferences inevitable. I shall be most happy to be shown any error I may have made, either in the statements of facts, or in the inferences which I have drawn.

But Geology is not alone in affirming the great age of the world. Indeed, if the earth had never been explored; if Geology were silent on this point; I deem that the science of Astronomy most conclusively affirms the truthfulness of the position I have assumed. The conclusion here has all the certainty of mathematical demonstration. I shall only adduce a single item of proof from this source.

This demonstration (for it is no *theory*) depends on the velocity with which light travels through space, and the distance of the stars whose light has reached us. If we know the distance of a luminous object from us, and the velocity of light in passing from it to us, we can then determine the time occupied in the passage, by dividing the distance by the velocity; (e. g.) the sun is 95,000,000 of miles from the earth, and his rays travel at the rate of 192,000 miles in a second; how long will they be in passing through the whole distance? The answer is obtained by dividing 95,000,000, the distance of the sun, by 192,000, the velocity of light, and it gives a little over eight minutes, for light to come from the sun to the earth. Now, with these data, the distance of the stars, and the velocity of light, (and both can be ascertained with great accuracy,) let us see if we can prove any thing in relation to the age of the *universe*. It is admitted on all hands, that the comprehensive statement at the beginning of the Bible includes the earth and all the stars, and whatever age we shall find for the stars, will belong also to the earth. As we go out into the starry heavens, and examine stars more remote, of course greater time is required for their light to reach us. Thus the light of a star in the constellation of the Swan, was thirty years in coming to the earth; so it is certain that the star had been shining just thirty years when its light first reached the earth. Farther out in the blue vault, stars are found whose light was one hundred years coming to the earth, and so on as far as the eye can reach. Now, by the use of Sir Wm. Herschel's telescope, stars can be seen so distant that their light could not have reached the earth in less than 2,000,000 years. These stars, then, must have been in existence two million of years, when their light first reached the earth. To this must be added the time which has elapsed since its light reached the earth, and you have all the time that star has been twinkling in the heavens. If any one will show any fallacy in this demonstration, he will confer a favor on the scientific world. It is believed to be *proof positive* of the vast age of the material universe.

In my next I shall examine the two principal theories commonly adduced to explain the phenomena of nature without admitting the earth to be more than six thousand years old.

LINES.

Not lost, but gone before;
A flower's brief life to thee, fair child, was given,
And now thy loveliness unfolds in heaven,
Where sin can blight no more.

Not lost, but gone before;
Gone, in thy infant purity and gladness,
Gone, ere thy young life's joy was dim'd by sadness;
Gone to the better shore.

Not lost, but gone before;
And now in heaven with angels thou art dwelling,
Where songs of holy joy are ever swelling,
And peace reigns evermore.

Gone, but thou still art mine;
Mine, by the deep, strong, holy love I bore thee;
Mine, by the earnest prayers I murmured o'er thee;
My angel-child divine.

And thou art with the Lord;
All blessed be his name, for he hath given
And taken away; and though my soul is riven,
I'll bow before his word.

Not lost, but gone before;
And when the ties which bind me here are riven,
And round me pours the glorious light of heaven,
I shall see thee once more.

Not lost, but gone before;
Mine eyes, now dim with weeping, shall behold thee;
I shall with rapturous joy again enfold thee,
Where death's dread reign is o'er.

O, thou art mighty, Death!
Thou canst destroy the body; but forever
Endures love's holy power; thou canst not sever
Its ties by thy chill breath.

SARAH.

SHILOH, N. J., 1855.

THE LEPER IN THE MIDDLE AGES.

There are but few of the passages in our Lord's ministry which present, in a more striking light, the compassionate spirit with which he labored for the alleviation of man's bodily and spiritual aliments, than his cure of the leper, as recorded in the eighth chapter of Matthew's Gospel. When he descended from the mount, on which he had been delivering the longest, and perhaps the most important of all the discourses addressed to his followers, a multitude, we are informed, followed him. Amidst the gathering throng, one form, of more than usual ghastliness, is seen approaching. His face is covered with scales, his body is wasted and decayed. As he advances, we may almost imagine that we see the crowding spectators retire, afraid of contagion. The Saviour, however, does not withdraw. Scarcely has the unhappy sufferer cast himself on the ground in supplication, and the words, "Lord, if thou wilt, thou can'st make me clean," escaped his lips, than the gracious reply goes forth, "I will; be thou clean," and immediately health blooms on the cheek and mantles in the veins of the leper.

In England, and indeed throughout Europe, the associations connected with the above and other displays of Christ's power in cleansing leprosy, are of a vague and general character, the disease being one with which we have now no familiar acquaintance. In the pages of a French periodical, however, which lies before us, we are reminded that this was not always the case. During the middle ages, and more particularly at the time of the Crusades, this fearful disorder was imported from the east, and proved in France a fertile source of terror to the inhabitants. Selecting its victims from all classes of the population, it spared neither peer nor peasant; monarchs themselves even fell victims to it. Establishments had to be opened for the reception of leprous members of royal families; and one existed in Dauphiny expressly for the use of persons of noble birth. An institution of somewhat the same kind was erected at one time in London, on the site, it is believed, or nearly so, of the modern palace of St. James.

According to Matthew Paris, a chronicler of the middle ages, there existed in Europe, during the thirteenth century, nearly twenty thousand leper houses and lazarettoes, for the reception of those who were afflicted with this dreadful disorder. In France alone, according to a statement in the will of King Louis the Young, the number of these receptacles reached at one time to two thousand. On the dominions of a feudal lord at Aisne, there were ten establishments of this nature, supported by the contributions of families, each of whom had some members immured within their walls. These calculations give us an affecting picture of the desolations which this dire malady must have inflicted on many a household.

The superstition of the period added, by its gloomy ceremonies, to the terror which the approach of this dreaded disorder inspired. When an individual had been pronounced in a state of contagion, he was led to a neighboring church, where the service for the dead was performed over him. He was then conducted to the leper-house, to be consigned to a living tomb. Arrived at the gates of this gloomy mansion, he was stripped of the dress which he had hitherto worn, and arrayed in a funeral garb. He was warned to bid farewell to the world, and exhorted to look beyond its chequered scenes, to the bliss which awaited the faithful in heaven, where no leprosy, no impurity, no tears, no pain, no separation could find access. The exhortation ended by a staff being placed in his hands, with which he was to ward off any from coming in contact with his person. The gates then received their inmate, and another victim was consigned to a living sepulcher.

Sometimes it happened that natural affection gained the mastery over the fear of contagion, and the sweets of social life. Dreadful as was the prospect of perpetual immurement within the precincts of a lazaretto, surrounded by all that was loathsome, such a fate was occasionally preferred by a fond wife to separation from a beloved husband. An instance of this kind is recorded as having once occurred at the town of Tours. In the month of May, 1329, a young man, afflicted by the leprosy, had had the ceremonies we have referred to performed over him. The priest had recited the accustomed formulary, prohibiting him from walking about, unless attired in the lazar's garment—forbidding him to place his naked foot on the ground, to mix in the assembly of men, to enter crowded streets or churches, or to wash himself in the waters of any fountain or river. In another moment the gates of the lazar-house were about to close upon an exile from the sweets of social life. At that instant, however, the wife of the leper stepped forward, and refused to leave her husband. "If I quit him," she said, "who will love him? Who will help to console him? Do you say I will myself become a leper? God, if it be his will, can preserve me. Did he not cure Job and Naaman?—and may he not, in answer to my prayers, restore my husband to health? Be the issue what it may, however, I will not abandon him, without whom the world would be to me a desert." Many such scenes, doubtless, occurred. They will bring, perhaps, to the reader's recollection the touching incident of the self denying Moravian missionaries, who, under circumstances of a somewhat analogous character, entered the lazar-houses in Africa, and devoted themselves, out of love to the souls of its unhappy inmates, to a perpetual estrangement from all the comforts of social existence.

INCIDENTS IN A PASTOR'S LIFE.

In the month of May, 1854, there stood on the deck of a packet ship, just ready to sail from this port for Europe, a Baptist pastor, exiled from his flock by broken health, the occasion of anxiety to his friends. By his side stood a member of his church, who, at the moment of parting, slipped into his hands a letter, to be opened after the vessel sailed. Adieus were exchanged, and the ship moved away. The pastor opened the letter, and found it to contain the information that the writer had bound himself and his executors, in case either of his own death, or the death of the pastor, within the then current year, to pay over for the benefit of the pastor's wife and children, a sum of money—concerning which we must only say that it was munificent. The letter then added the assurance, that should the pastor be removed at any time, and the writer be the survivor, the family left should have every provision necessary for their comfort, if it pleased God to continue the means in the writer's hands. It is not necessary to say that such a demonstration of more than fraternal love was overwhelming, nor that there ascended from his heart, in that sad hour, a tribute of fervent thanksgiving to God for a mercy so large and so unanticipated.

Time passed on; the pastor returned with improved but not reëstablished health. The present spring came, and the air had begun to be balmy and refreshing, inviting to outdoor and vigorous exercise. Last week, from the same hand, the same pastor received a brief note alluding to the advantages of exercise, and stating that he would find at a given place, a horse and carriage, harness, saddle, and bridle, martingales, halter, blanket, and whip, wolf skin robe, etc., which he was desired to accept, and an order on the stable-keeper for horse-keeping and shoeing for one year. The message was brief, briefer than our narrative, but in its few words, it told a large story of thoughtful and munificent kindness which was not lost upon the heart of the recipient.

[N. Y. Recorder.

THE HABITATIONS OF CRUELTY.

The present state of Feejee is deplorable in the extreme, notwithstanding the numerous triumphs of the Gospel there. A few incidents given in Wesleyan Missionary Notices, by an eye-witness, illustrate the actual condition of the islanders:—

Strangling of widows has engaged our frequent attention, and called forth our utmost energies. Six or eight women have been directly saved from this inhuman practice by our interposition, and several others indirectly and principally by the influence of what we have done. Some of these have subsequently *lotued*. These scenes require no ordinary promptitude and sacrifice. We have to adopt the Feejeean national custom of presenting property when requesting a favor; and hitherto each life has involved the expense of about £1.

But sometimes our interference is prevented, and sometimes it is spurned and ineffectual. A few months ago a man died in a heathen town within a mile of ours. Mr. Malvern and I at once hastened to the abode of death; but the people, fearing our arrival, and having heard of our success in other quarters, had already strangled the widow. We entered the house; there were the husband and wife both sleeping in death. We examined the woman's body; but the last spark of life was extinguished. Ah! and there stood the son of those now dead, who with fiendish expression lifted up his hands, and told us that by those hands that mother died!

"Ah!" was our language, "this is seen in heaven; this will not be forgotten in heaven; its punishment will follow."

A few weeks afterward I stood by an open grave in that town. I had gone in pursuit of the widow of a young man brought home a corpse from war. Her friends had consigned her to our care, and she had escaped from us. I stood by the open grave, that I might witness the ceremony of a heathen burial; the corpse was brought out shrouded in mats; a bullet had pierced the brain. I looked upon the dead, I recognized the features—it was the matricide!

"Ah!" I exclaimed, as the corpse was laid in its last resting place, "did we not speak the truth when we said, 'His sin was seen in heaven; it was written in heaven; its punishment would follow?'"

Several women have, in spite of our efforts, been strangled; and wherever there is a son, he is chosen to be the principal agent in the murder of his mother. Within my own knowledge, a father has, with his own hands, suffocated (by choking or gagging) his own daughter who was sick. One day, standing by the corpse of a warrior, painted and blackened as if for war, the club lying by his side, I turned round to his brother, and inquired the cause of his death. The reply from that brother was, "He was very ill, and so I suffocated him."

Infanticide is written on another page of Feejeean life. I wish to confine my illustrations as much as possible to cases that bear directly upon the point, and that have passed under the immediate notice of myself, or other missionaries, or credible informants. Nothing do I state on mere rumor. A woman brought me a child who, from want of proper treatment, was nearly dead. I undertook to prescribe for it, if the mother would reside for a time in the house of one of my servants, so that I might see that it met with proper attention. My treatment was successful; the disease was subdued, the child could again run about, talk, and eat; in a day or two the mother could have returned to her friends, but maternal patience was exhausted, and one night she suffocated it. A man was informed that his wife had given birth to a daughter. Hearing of its sex, he at once directed it to be strangled. Again, a female child was spared for several months; its death was then resolved upon by the parents. They dug a deep hole in the center of the earthen floor of their house—the father flung into this grave his helpless and innocent babe. He then cast some heavy stones with violence upon it, and filled up the grave with earth. These inhuman parents still occupy that house. They daily tread over the decaying remains of their murdered child. Such is Feejee in the present day.

YE ARE NOT YOUR OWN.

Rev. Wilbur Fisk, in Baltimore, in 1838, before the Preachers' Aid Society, rehearsed the folowing dialogue between a preacher and the Lord of the harvest, in which objections to entering into the ministry are plainly stated, and as plainly answered. It is understood he meant himself, as he had many struggles and inward conflicts before he entered into the work of the ministry:—

Christ. Go preach my Gospel.

Answer. But, Lord, I have other engagements.

C. You are not your own, you are bought with a price.

A. But, Lord, I have been preparing myself for another profession. I have been struggling for an education. I have high prospects before me, &c.

C. What have you that you have not received?

A. Lord, I have strong domestic feelings; I hope one day to have a family and home of my own.

C. He that loveth house or lands, wife or children, more than me, is not worthy of me.

A. Lord, I have aged parents, and I am an only son. Filial love and duty require that I should look after them.

C. He that loveth father or mother more than me is not worthy of me.

A. Lord, is there no excuse? May not another answer?

C. The gifts and calling of God are without repentance.

A. At least let me first stop and bury my father and mother.

C. Let the dead bury their dead.

A. At any rate I must wait awhile, and acquire some property, &c.

C. He that putteth his hand to the plough, and looketh back, is not fit for the kingdom of heaven.

A. Lord, I cannot go.

C. Woe unto you if you preach not the Gospel.

A. But, Lord, wilt thou not pity a poor helpless wretch who begs for an excuse as one would plead for his life?

C. Ye know the grace of our Lord Jesus Christ, that, though he was rich, for your sakes he became poor, that ye through his poverty might be made rich.

Here he said the dialogue ended. The young man covered his face with his hands, and bursting into tears, exclaimed—

"Nay, but I yield, I yield,
I can hold out no more."

The bond was signed and sealed, and the youth was consigned over, soul and body, to the church. The next thing I saw of him he was treading a pathless forest among the Green Mountains bordering upon the Canada line, driving his horse before him, because of the roughness of the wilderness, cheerful as an angel on an errand of mercy. And I heard his song, with which he made the rugged mountain tops that hung over his path reverberate. And what, sir, do you think it was?

"No foot of land do I possess,
Nor cottage in this wilderness,
A poor wayfaring man;
I lodge awhile in tents below,
Or gladly wander to and fro,
Till I my Canaan gain.

Nothing on earth I call my own,
A stranger, to the world unknown,
I all their goods despise;
I trample on their whole delight,
And seek a city out of sight,
A city in the skies."

BEGIN TO-DAY.

Lord, I do discover a fallacy, whereby I have long deceived myself; which is this: I have desired to begin my amendment from my birth-day, or from some eminent festival, that so my repentance might bear some remarkable date. But when those days were come, I have adjourned my amendment to some other time. Thus, whilst I could not agree with myself when to start, I have almost lost the running of the race. I am resolved thus to befool myself no longer. I see no day but to-day; the instant time is always the fittest time. In Nebuchadnezzar's image the lower the members, the coarser the metal. The farther off the time, the more unfit. To-day is the golden opportunity, to-morrow will be the silver season, next day, but the brazen one, and so on till at last I shall come to the toes of clay, and be turned to dust. Grant, therefore, that to-day I may hear Thy voice. And if this day be obscure in the calendar, and remarkable in itself for nothing else, give me to make it memorable in my soul, hereupon, by thy assistance beginning the reformation of my life.

Fuller.

LENGTH OF SERMONS.

We do not think any thing is gained, generally, by long sermons. It is true, no rule will apply universally, on this point, but on ordinary occasions, from thirty to fifty minutes will be about as long as an audience will give attention. He is a good preacher who can hold the attention of his hearers fifty minutes, and a *very* good one who can occupy an hour without wearying them. Speakers of only ordinary ability should never exceed forty-five minutes, and they would probably be much more effective if they confined themselves to still less time.

There is no rule of Scripture which is authoritative on this question. The sermons of our Saviour seem to have been brief; at least, as they stand recorded in the New Testament, they are of this character, the longest being that usually known as the sermon on the Mount. However, we cannot insist upon this example, nor upon any other contained in the Bible, as we may have only the outlines given to us. But it is clear, that the power of a discourse consists, not in its length, but in its adaptation to the occasion and its conformity to the Word of God.

There are some men, of great intellectual power joined with a pleasant delivery, who will sometimes hold the attention of an audience an hour and a half—two hours—and even three hours. But even they cannot do so always. An hour is as long as it is safe, even for them, to tax the patience of their hearers on ordinary occasions. A distinguished preacher from the West, some twenty years ago, when his fame was at its zenith, entertained an audience in Philadelphia, one evening, full three hours; and we were told, (for we did not hear him ourselves,) that delicate ladies *stood* during the whole time, the seats not being sufficient for their accommodation, and that such was the breathless silence that the fall of a pin could have been heard, between one sentence and another. He was, however, an extraordinary man, and the occasion was an extraordinary one. We have heard him, on other occasions, when *one* hour was too long for us.

Where the people get together but seldom, say once a month, or at oftenest once in two weeks, it may answer to talk to them an hour, or even sixty-five or seventy minutes, provided there be but one discourse. But where the people are assembled weekly, as in cities, villages, and in most country places in the Northern States, it is far better to dismiss the people a little before they are ready, than to exhaust their patience by protracted exercises. If one short discourse will not suffice for a full discussion of the text, let it be followed by another, at the next meeting, and so on, till the subject has been discussed sufficiently.

The preacher must not imagine that, because it does not weary him to *stand* and talk for an hour, or more, it cannot weary the people to *sit* and listen. For though he stands, he is nevertheless in motion, and gains relief for himself in constantly changing his position; whereas his hearers are constrained to sit, pretty much, in one posture, which, when long continued, becomes painful, especially to feeble persons and the aged. Besides, the exercise of speaking, as well as the constant change of position, helps to equalize the circulation, and prevents that undue pressure of blood upon the lower extremities, which is the cause of weariness to those who stand unemployed; so that the preacher's ability to maintain himself on his feet, for two or three hours, is after all no criterion by which to estimate the degree of weariness suffered by his hearers.

Again, let the preacher beware of thinking that, because he himself is deeply interested in the subject of his discourse, his hearers must be also. The natural partiality which one has to his own thoughts and modes of expression, is a sufficient reason for *his* interest in the subject, while his hearers are in quite a different position. Besides, he does not stand in the capacity of a *learner* before his hearers; he stands before them to teach them what he knows—what he is familiar with—what he has already learned. Being familiar with his subject, therefore, seeing the end from the beginning, and knowing when he has stated one idea what he means to advance next, and having already settled the connection of one thought or one proposition with another, it requires no effort, on his part, to give his attention to the subject to the end. The consciousness, too, that he is observed of all the congregation, and that it depends in a great measure upon himself whether the desires and expectations of the people will be answered, furnishes an excitement for him in which no one of his hearers can participate. They all stand upon entirely different footing. Is it to be wondered, therefore, that their attention often flags when his own is deeply interested?

It is vain to say, that the religion of the gospel *ought* to be a subject of such absorbing interest with every one as to render him indifferent to any discomfort of body under a long discourse. Perhaps it ought. But we must take men as we find them, and by accommodating ourselves to their actual condition, as far as we can without sin, endeavor to make them better. Man is not all soul—all spirit—all intellect. God has given him a body, as well; and this body will experience uneasiness, suffering, pain, in spite of all he can do. And when by sitting in one position, or in any other circumstances of disadvantage, the bodily uneasiness of the hearers takes off their attention from the discourse, we think it about time for the preacher to quit.

T. B. B.

THE STATE OF THE LIVING.

Much has been advanced on the state of the dead, and many trite and good observations thrown out by beloved and able brethren. Infidelity, too, of the worst kind, entertained by curious and half-crazed speculators on that subject, who would fain be considered Christians withal, has been well and faithfully battled with. If the annihilation of the wicked, and the unconscious state of the righteous until the judgment day, are not infidel doctrines, it is passing strange to us. But with regard to the dead we know very little, yet enough for us in the present state. True, we have glimpses of the future presented to us in divine revelation; the curtain is lifted a little, so as to admit as much light as our feeble vision can bear; and it would seem as if, in a dying moment, a greater and even mysterious disclosure was made, with regard to both the righteous and the wicked. The plain revelation made to us is, that there is a heaven and a hell—the one consisting of pure and undisturbed felicity, flowing from the presence of God, the enjoyment of his love to us and ours to him, and the occupancy of all of the faculties of the soul in untiring activity in his service in connection with all the sanctified forever; the other in the displeasure of the Almighty, in the entire destitution of every thing that is good, and the possession of every thing that is evil—in the vile passions unchecked, and nothing to gratify—in the bitterest reproaches of a guilty conscience, and the agonies of utter despair in company with the lost and the damned to all eternity.

If the plain statements of the Bible with regard to the dead are true—and we endorse them all without reserve—what a momentous subject is the state of the living! There is a beautiful order in all the works of God, in creation and in his moral government. In the seasons of the year, in the adaptation of things both for animal and vegetable life, in the alternation of day and night, and in the agency of man in producing the fruits of the earth, is order and propriety. In God's moral government, there is the same admirable order. Man is placed here as a probationer, and is here to be trained for a future life. He begins an immortal existence here, which stretches on to a vast and unlimited existence, into which he will be introduced at the dissolution of the body, and that too at the resurrection of the dead. The great moral principles and divine virtues to be developed forever in the future world are to be, and must necessarily be, acquired here, to constitute a qualification for eternal life. The friendship of the father of our spirits must be obtained here, and cultivated as preparatory to its more full manifestation in eternity. The employments which consist in serving God, in admiration and study of his works, and in songs of praise with all the redeemed, must be commenced here, and acquired as much as possible, or they will be strange to us in that spirit land. The noble and prevailing theme of the heavenly state is redemption by the death of Christ; and hence we must be believers in Him—must have a personal interest in his death, and have the spirit of the song kindled up in our souls.

But what is the state of the living? Oh, my soul, what a scene presents itself—a scene that may well call forth the most painful emotions in the Christian bosom. Who shall be able to describe the dark picture, or even give its outline? After all the labors of the Church of Christ during the lapse of ages, the great masses of mankind are under the dominion of sin and the wicked one. The world is still full of crime, living in open rebellion against the God of heaven, and trampling his laws under foot. Even where the gospel is known, and the heralds of mercy are proclaiming aloud, on every hand and in every place, the theme of redeeming love, infidelity in every shape, from the most refined to the lowest grade, is rife, and the grossest vices of the depraved heart are rampant. A glance at life in our large cities is enough to make the Christian heart sick, and call forth such rivers of tears as the prophet speaks of. Turning aside from these mighty marks of iniquity, the surrounding country presents a scene the most affecting and distressing. What ignorance of God and revelation! What marked indifference to the worship of the ever-blessed Creator and Saviour of mankind! What degradation of human nature and prostration of this noble work of God, even to the life of the brutes that perish! Men are truly living without God and hope in the world. In the little State of New Jersey, multitudes never hear the gospel—never read the Bible, and have none to read—one sad routine of labor, beastly rest, and low pleasure, constitute their existence; and they seldom cast a thought towards the eternal destiny that stretches out before them except by the occurrences of affliction and death, and this as evanescent as the early cloud and the morning dew. If we look at the Christian world, or professors of religion, or even members of churches, we have a painful subject before us. Business, fashion, pleasure, gains, company, eagerly pursued—family worship in many cases, religious instruction to children, prayer meetings and public worship, to a great extent neglected—constitute the state of this part of the living—hence spiritual death reigns in the churches, and the wicked world looks on and laughs at religion. It is a consolation to know that there are some Abrahams and Jobs—some such men as Moses and Daniel, and such holy and devoted souls, both men and women, as those whose lives are written in the New Testament. It gives some relief to the painful reflections called up by the sad scenes around us, to know that there is yet principle in the Church of God—that there is yet fidelity and purity and self-denial and Christian zeal in the general membership of the churches. What is our own personal state is a question of the greater importance to us. Let us look into the inner chamber of the soul with the candle of the Lord, and faithfully investigate. Let us bring our desires and motives, and the general tendencies of the mind and all our conduct, into the light, that there may be no deception on our part, and that the most earnest prayer may be sent up to the mercy seat for divine illumination, and to be led in the way everlasting.

GEORGE R. WHEELER.

SALEM, N. J.

THE EASTERN ASSOCIATION.

The Nineteenth Annual Meeting of the Seventh-day Baptist Eastern Association was held with the Church at Pawcatuck, R. I., commencing on Fifth-day, May 24th, and closing on the following First-day. The delegation from the New Jersey churches was not quite as large as usual, but the Connecticut and Rhode Island churches were fully represented. The attendance upon the meetings throughout was numerous and gratifying, and the deliberations were interesting and harmonious. The Central Association was represented by Eld. Joshua Clarke, and the Western Association by Eld. D. E. Maxson.

The Introductory Discourse was preached by Eld. Walter B. Gillett, from Numbers 13: 30—"And Caleb stilled the people before Moses, and said, Let us go up at once and possess the land, for we are well able to overcome it."

At the conclusion of the discourse, the Association was called to order, and the following officers for the session were chosen, viz: BENJAMIN F. LANGWORTHY, Moderator; HALSEY H. BAKER, Recording Secretary; E. G. CHAMPLIN, Assistant Recording Secretary.

Letters were then read from all of the churches connected with the Association, except those at Newport, R. I., and Westerly, R. I. They showed that the past year had been one of general prosperity. Several of the churches had enjoyed precious revivals, and a good degree of harmony prevailed in them all. Extracts from the letters will be found in connection with the Report on the State of Religion, printed herewith, and to them we refer the reader for fuller information.

The Missionary Operations of the Association during the past year appear to have been peculiarly blessed, as will be seen from the Report of the Executive Committee and the extract from the letter of the church at South Kingston. For the ensuing year, a plan was proposed and discussed, to secure the entire time of a missionary to labor in the vicinity of South Kingston, Phœnix, and Newport. But the whole subject was finally referred to the Executive Committee.

Considerable time, during the sessions of the Association, was taken up in hearing read and discussing three essays prepared by persons appointed for the purpose last year. An essay by H. H. Baker, on the Use of Tobacco, was read in the afternoon of Fifth-day; another by S. S. Griswold, on the Nature and Influence of Slavery, was read the following evening; and a third by Lucius Crandall, on the New Testament Organization and Discipline of a Church, was read in the forenoon of Sixth-day. Each of these essays were approved in general by the Association, and their publication in the *Sabbath Recorder* was recommended.

Several subjects were brought to the attention of the Association, and elicited much interest and discussion, in the form of resolutions, presented by the Business Committee. One was the subject of Education, and the desirableness of having a denominational College and Theological Seminary. In discussing the resolution on this subject, the reasons for and against a movement of the kind were pretty fully canvassed. We think the conclusion was, that such an institution is desirable, and that there is no good reason why we should not at once engage in efforts to secure it. Another subject which awakened much interest was the case of Pardon Davis, the facts of which, when brought before the Association, drew tears from many eyes not accustomed to weep. The other subjects are indicated by the resolutions adopted, which we print below, simply remarking, that upon each of them there was a full and free expression of views by members of the Association.

The question of sending delegates to sister Associations was considered somewhat at length, and resulted in the conclusion that it is best to keep up the old custom. Accordingly, Halsey H. Baker was appointed delegate to the next meeting of the Central Association, Geo. B. Utter to the Western Association, Charles M. Lewis to the North Western Association, and Walter B. Gillett to the Virginia and Ohio Associations.

In this connection we may as well give the other appointments for the ensuing year, viz: A. B. Burdick to preach a missionary sermon at the next anniversary; C. M. Lewis to preach on the necessity of personal holiness in order to the greatest efficiency of the Christian church; H. H. Baker on the importance of the Bible Sabbath to the evangelizing of the world. W. B. Gillett was appointed to read before the Association, at its next annual meeting, an essay on the prominent obstacles in the way of a more benevolent spirit in the churches, and the means by which those obstacles can be removed; Lucius Crandall an essay on the question, What constitutes a Call to the Gospel Ministry? and also an essay on Restricted Communion; James Bailey an essay on copartnerships in business between those who keep the seventh and first days; Geo. B. Utter an essay on the best method of securing an able and efficient ministry.

The Corresponding Secretary of the Association for the ensuing year is S. S. Griswold, Mystic Bridge, Ct. The Treasurer is Asher M. Babcock, Westerly, R. I.

In the way of Religious Exercises, this session of the Association was quite fruitful. On Sabbath evening a discourse was preached by Darwin E. Maxson. On Sabbath morning, Joshua Clarke preached in the body of the house, while David Clawson preached in the vestry; in the afternoon a discourse was listened to from Dr. J. Croffut of New York, which was followed by the Lord's Supper; in the evening, preaching by Lucius Crandall. On First-day, there was a discourse in the morning by James Bailey, in the afternoon by L. C. Rogers, and in the evening by H. H. Baker.

The Association adjourned near evening of First-day, to meet again on the Fifth-day before the fourth Sabbath in May, 1856, at Shiloh, Cumberland Co., N. J. S. S. Griswold was appointed to preach the introductory discourse at that meeting; P. S. Crandall, alternate.

Resolutions.

Resolved, That this Association feels a lively interest in all the movements of the denomination designed to elevate the standard of learning and piety, among both ministers and laymen; and that it hails with peculiar pleasure the steps already taken to secure the founding and endowment of a college and Theological Seminary, and pledges its hearty co-operation to bring this project to an early completion, believing it to be essential to the success of the cause which the denomination represents.

Resolved, That the present aspect of things in respect to the interests of this Association in the southeastern part of the State of Rhode Island—particularly at Greenhill, in view of their recent enlargement—at Newport, in view of the situation of their meeting house, and their lack of ministerial help—and for the encouragment of the brethren at Phoenix, and others scattered in those regions—a missionary should be stationed in that field.

Resolved, That this Association considers Slavery a sin against God and a crime against man; that it cannot, therefore, recognize as true Christian churches such as permit their members to buy, sell, or hold slaves; and that those publishing organizations, such as the American Tract Society, which expunge from the works they issue all passages expressive of hostility to Slavery, are unworthy of confidence and support.

Resolved, That this Association reiterates the regret expressed by it one year ago on account of a passage of the Fugitive Slave Bill of 1850, and the Kansas-Nebraska Bill of 1854; that it now deplores the consequences of repealing what is commonly called the Missouri Compromise, as seen in the acts of brutality and lawlessness lately perpetrated in the Territory of Kansas; and that it enjoins upon every Christian the duty of doing all in his power, by his voice and his vote, to restore the statute of prohibition to Slavery in new Territories, and to repeal the Fugitive Slave Law.

Resolved, That this Association has learned with the utmost grief, that Pardon Davis, a member of our denomination, has been apprehended and imprisoned in Louisiana for acts of mercy which the laws of nature and of God require, in feeding and clothing the oppressed and famishing in their escape from bondage.

Resolved, That a Committee of three (consisting of L. Crandall, D. E. Maxson, and Thomas S. Greenman,) be appointnd to ascertain and report what can be done for the relief of Pardon Davis.

Resolved, That we recommend to the several churches in this Association, that on the last Sabbath of June next they in their public congregations unite in earnest prayer to God for the liberation of our brother Pardon Davis, who we firmly believe is suffering wrongfully for Christ's sake.

Resolved, That we feel a deep and growing interest in the missionary operations of the Seventh-day Baptist denomination; that we contemplate with gratitude the favor which God has shown to our missionaries in China in the midst of dangers and revolutions; that we deeply sympathize with our missionaries in Palestine in the afflictions and trials incident to establishing that new mission; and that we urge upon the churches connected with the Association continued and increasing liberality in their contributions to the missionary treasury.

Resolved, That as an Association we feel deeply smitten in the afflictive providence of God that so suddenly removed from earth our beloved brother and friend Dr. Wm. M. Fahnestock, who for twenty years had taken a deep interest in our religious prosperity, and during that time had been a faithful contributor to our different periodicals; that in this bereavement, we would bow submissively to the mysterious dealings of Providence; and that we sympathize with his afflicted family, and commend them to Him who is "the widow's God, and a father to the fatherless."

Report on the State of Religion.

The Committee on the State of Religion respectfully report, that after a careful examination of the messages from the several churches, they are of the opinion, that we have reason to be encouraged, believing that there is a growing principle of piety, devotion, and zeal, that promises usefulness in the world. Many of the churches have been blessed during the past year with pleasing and precious revivals of religion; some of them are the fruits of protracted efforts, and others the fruitful blessings attending the ordinary means of grace. Some of them have reported a decrease of numbers, arising from removals, and from the great ravages of death. There is evidently a growing interest in the cause of missions. The churches have contributed willingly, and liberally, to sustain and hold up the hands of those who have gone from us to China and Palestine, and esteem it a privilege still to be found engaged in this Heaven-approved enterprise. Prayer meetings, and the monthly missionary concert, are sustained by many of the churches, while others are neglectful of those important means of grace. All of the churches are supplied with the preached word, and most of them have pastors to watch over them, and to break to them the bread of life. There is evidently an increased effort and interest in sustaining Sabbath Schools, as there is an additional number of schools, scholars, teachers, and libraries reported the present year. But we have reason to humble ourselves before God, in view of the apathy and lukewarmness that still exists in the churches composing our beloved Zion. It is evident that as a people we are not what we ought to be. Family prayer, social prayer, and the administering of proper discipline in the churches, is a work that is too much neglected for the health of God's people and the glory of his holy name. May we, during the coming year, "gird on the whole armor of God, fight the good fight of faith, and lay hold on eternal life."

We give a few extracts from the letters:

1st Hopkinton—"We rejoice to say, that a happy state of Christian unity and fellowship exists, that our Sabbath service is well attended, and that we have sustained a weekly prayer and conference meeting." "Some precious souls have been converted and gathered in, and sinners are inquiring the way to Zion."

Piscataway—"The past season has been one of deep interest to us; while the church has been in a measure revived, sinners have been pricked in their hearts, and made willing to bow to the mild scepter of King Jesus, and we rejoice that so many have been enabled to trust on Christ, by an open profession of faith in his name."

Shiloh—"During the past year we have passed through varied scenes—some of an afflictive character, and others of gladness and prosperity. Our Sabbath meetings are well attended, and the truths of God are received with attention. Our prayer meetings are well sustained, and it is in them we feel that God pours out his Spirit, and we are sensible that upon them depends the happiness and prosperity of the church."

Berlin—"It has been a year fraught with many pleasing incidents of growth in grace, and examples of piety, among the members of our church, though no seasons of special awakening have saluted us or added to our numbers."

Marlborough—"We have not the cheering intelligence to report that would be desirable. In looking over the past year, we are filled with mingled emotions. While we have abundant reason for gratitude to the Giver of all good for his preserving care, we have to mourn the loss of several of our number by the cold hand of death."

3d Hopkinton—"We are in a happy state of union among ourselves; an increased attention is given to the things that make for peace; Sabbath meetings are well attended; our watch-word is onward and upward amidst our trials. Brethren, pray for us, that God may sanctify our afflictions."

Rockville—"Our spiritual interest during the past year has been increasing, and of late we have had an interesting, though not an extensive revival of religion, in which souls have been converted, and the wandering reclaimed. We have a good attendance on the Sabbath, and with the most of our members a good degree of union and Christian fellowship prevails."

Westerly—"As a church we have not the satisfaction of recording the out-pouring of God's Holy Spirit upon us in the ingathering of souls, but we believe there are some that labor for that end."

Plainfield—"During the past year we have enjoyed the preaching of the gospel on the Sabbath without interruption; we have two discourses on the Sabbath, and there has been a good attendance, and a uniform good attention to the word spoken. There have been a few conversions only, but it is hoped there has been an intelligent progress on the part of many members of the church."

New York—"During the past year we have been without a pastor, but have maintained meeting regularly on the Sabbath. One member has been added, who is an ordained minister of the gospel, and at present supplies the pulpit."

Pawcatuck—"With feelings of gratitude to God, we would inform you, that as early as the beginning of autumn last, our people manifested an increased fervor in prayer for a revival of religion. About the first of January, the cloud of divine mercy began to pour its rich treasures on the church. Our evening meetings were continued until about the 20th of March, when they were interrupted by the ill health of our pastor. During this interesting season of revival sixty-six have been added to our number."

Greenmanville—"While we have nothing special to communicate, we feel it a privilege to acknowledge the goodness and mercy of God during the past year. Death has not been permitted to take even one victim from our little company. We have enjoyed peace and harmony in our body."

South Kingston—"While we mourn the loss of one of our number by death, we have reason to rejoice that many have been made alive by the blood of Christ, and added to the church." "During the past winter the Lord has been pleased to bless us with a revival of religion." "Our Sabbath meeting is well attended, and a good degree of religious interest is manifest in the church."

WOMAN'S RIGHTS.—The Legislature of Wisconsin has recently passed a law relative to the rights of married women. It is as follows:—

"Any married woman whose husband, either from drunkenness, profligacy or from any other cause, shall neglect or refuse to provide for her support or for the support and education of her children, shall have the right in her own name to transact business and to receive and collect her own earnings and the earnings of her minor children and apply the same for her own support and the support and education of such children, free from the control and interference of her husband or any person claiming the same or claiming to be released from the same by or through her husband; *Provided*, That if it is denied by plea that either of the causes enumerated in this act as entitling the married woman to sue in her own name exists in point of fact, then the issue upon this plea shall be tried and determined by the jury trying the case with the other issues submitted."

AFFAIRS AT SHANGHAE, CHINA.

The letter of Mr. Carpenter, which we published last week, gave the most complete account we had then seen of the the evacuation of Shanghae by the rebels. We have since received our files of the *North China Herald*, in which we find several articles on the subject, the principal of which we copy. They not only give the facts in the case, but furnish a glimpse of Chinese warfare.

From the North China Herald of Feb. 24, 1855.

Evacuation of Shanghae by the Triads and re-occupation of the City by the Imperialists.

The news of the evacuation of the city of Shanghae came almost as suddenly upon the foreign community as its memorable fall into the hands of the Triads, on the morning of the 7th September, 1853.

On Saturday night, the 17th instant, at the close of the China New Year, between ten and eleven P. M., volumes of flame and smoke were observed to rise eastward over the city and to increase with amazing rapidity, illuminating the horizon with the brilliant coruscations of its many colored light for some distance around. The spectacle is stated to have been gorgeous in the extreme—but the sensation that the dwellings of a large population had been given to the devouring element, must have sent a deep chill of horror and exquisite thrill of pain, to the hearts of the beholders. Nothing transpired that night that we hear of, to account for this extensive conflagration which progressed westward, northward, and southward, with fearful speed and violence. When next morning dawned, rumors were spread abroad that the Imperialists had captured the city, and that a dreadful slaughter of the Triads had ensued—as the day advanced, however, it was stated on the contrary, that the majority of the Fokien Triads having failed to persuade Chin-a-ling to give up the city, had spread over it and set fire to the principal street, running through from the great east gate, in many places, and other large thoroughfares—that Lew-le-chuen and Chin-a-ling, finding that all was lost, selected a small force from their followers of about 150 men, and fled out by the west gate, taking their course past Sze-kea-hwei to Hung keaou, whither a body of Imperialists pursued them, and Lew-le-chuen was reported to be killed with many of his followers, but Chin-a-ling and Seay-gnan-pang with part of their adherents escaped. It is however doubted that Lew has been taken.

The Imperialists from all the camps, next morning being assured that the coast was clear, and that the city was actually evacuated by the Triads, took courage and entered it by the west and south gates.

On Sunday afternoon the military began to remove their goods and chattels from the encampments on the race-course, and during the week the military officers have quartered themselves in various parts of the city. Order and confidence seem gradually returning, and crowds of people are continually on the move in and out of the city.

Present Aspect of the City of Shanghae and its Suburbs.

The only approach to the city for the first day or two after its capture, was across a dam made in the Yang-king-pang near Taylor's bridge, from the Imperial entrenchments along that creek opposite the London Mission establishment. By this way to the North gate, a constant stream of passengers was soon established from morning till night. On approaching that gate, the corpse of a young rebel lying on the ground was exposed to the gaze of every passer-by—numerous bodies in public thoroughfares have, in like manner, been allowed to disgust the sight and shame public decency for days together, while suspended from the walls are many bloody heads dangling, to the horror of every sensitive beholder. Once within the city, little can be seen at a first glance for the crowd of passengers, but, so soon as there is space to gaze around, a perfect scene of desolation presents itself, and the further you penetrate within the once bustling thoroughfares of a busy commercial city, the more wretched is the prospect—scarcely a house of business or a respectable dwelling has been left whole in the heart of the city. The fire has ravaged every thing on all sides, from the east gate to the cross street, by Bishop Boone's church, whence, without injuring it, it has spread northward for a considerable distance. The Temple of Confucius, where Lew-le-chuen had his quarters, is nearly destroyed. On inspecting it, a burly countryman expressed deep indignation at the impiety of the rebels in setting fire to so sacred a fane—looking upon it as the crowning act of all their evil deeds. Some of the buildings in the Ching-wang-miaou or public tea gardens, have also been destroyed. Rev. Mr. Shuck's church has been perforated in several places by shot and shell, chiefly, we believe, from the French men-of-war; several balls were shown us in the building. On inspecting the ground within the breach made by the French from their battery, it is found to be filled with pitfalls and tubs with spikes inside, fixed so as to hold any one by the leg accidentally stepping in. The white wall of the high building opposite the breach is perforated for musketry, and over the apertures are still hanging scraps of the paper by which the loop-holes were concealed, and whence so deadly a fire was opened upon the assailants in the late attack. All the ground adjoining is also well fortified, and every place bearing on the breach had its loop-holes and barricades—even the ditch that runs along inside the wall towards the north gate had been carefully covered over to conceal it, with sticks, straw and earth. Within the south-east gate, the stockades and inner walls occupied considerable space, and every point liable to attack in that vicinity was well guarded. The late mining beneath the wall at that angle, had shaken down the greater part of the wall for 150 paces; one space fully 70 paces in width is quite exposed and offers a fair approach for a body of brave assailants. The lines and batteries of the Imperialists were very high to this part of the wall, being between it and the French Cathedral. The rural districts of the city seem very little injured; indeed, the Western and South-western gardens and open fields look as little altered as possible.

Whilst walking through the streets, a poor rebel was driven along like a beast of prey before a guard of soldiers, and as he was held by his tormentors, they contrived to strip him of his garments, and before he had reached the gate, he was reduced to a state of nudity. On Wednesday an old Fokien man, said to be a rebel, was tied hands and feet together, and suspended by his girdle to a high pole over the north gate whilst an unfeeling soldier presented a spear against his naked body

—the indignation of some foreign spectators, however, that could not be stifled, induced him to throw his spear on the ground and laugh as if he were in sport—such sport as the frogs told the naughty boys might be play to them, but was death to the subjects of it.

Externally, the walls of the city seem to have suffered little from the bombardment by the Imperialists, except on the north by the French cannonade, and at the south as previously mentioned. Every where the suburbs have been destroyed, and the loss of property, both inside and outside, must be immense. It is, indeed, wonderful, looking at the extent of the walls, the many points of attack open to a vigilant enemy on all sides, and the numerous army brought against it by the Imperialists, that the city could have been so long held by a force so inadequate, according to European ideas, to maintain its defense—the lines of circumvallation formed by th Traids were incomplete and apparen tl e less, and do not seem to have been occupied for purposes of defense.

The following account has been furnished us by an able correspondent—we have, however, heard a different version of the recovery of the city; which is the correct one, a short time will probably determine:—

"The Chinese New Year's day was a fortunate time for the Imperialists. A little before midnight, while the rebel chiefs and their followers were carousing, says the story, over the wine bottle and as good a supper as their means allowed, and amusing their leisure with games of chance, they were unexpectedly called from these pleasures by the intelligence that their enemies were in the city, and its buildings already on fire. A body of Sungkeang militia men, belonging to the *fang tseaou keuh* or "office for preventing and destroying rebellion," have the credit of taking the lead in the capture of the city. They entered near the South gate encampment, surprised the men on guard before they had time to give the alarm, and proceeded to set the adjacent buildings on fire. Many bodies, burnt and beheaded were soon lying along the wall, and the way left open for the entrance of a large force. Soon after midnight many foreigners were gazing on the wide-spread conflagration, which by the total destruction of almost all the best streets in the city, and an enormous loss of property, made that night so memorable in the history of Shanghae. The great part of the rebels, according to the story, escaped by the West gate, headed by the two chiefs. They passed on in the darkness of night till at eight o'clock on Sunday morning, according to the proclamation of governor Keih, they met an Imperialist force at Hungk'eaou, a town a few miles beyond the Roman Catholic settlement at Seu-kea-hwei, and Lew-le-chuen the chief in command was here caught and killed with more than 500 of his followers. When his head was brought to the camp at the Soochow bridge, it was recognized by a rebel boy, who had been promised his life for such services. Another head had been previously brought, claiming to be that of Lew, but the boy pointed out that the teeth were not like, and the arrival of the true head solved the question. Meantime the morning light had shewn the Imperialists' flags on the city walls, and it was with a feeling of no common satisfaction that the long siege of this city was seen to be at an end. A crowd of country people and strangers pressed in to visit old haunts, seek for friends, or look on the mass of ruins to which all the richest and best part of the city is now reduced. A large party of Imperialists were busy all day searching for hidden rebels. The work of death went on rapidly in and out of the city. The governor's proclamation warned the people against harboring rebels, and threatened those who did so with instant death. The same fate was promised to those guilty of plundering the citizens of their property. Rewards of ten or twenty dollars with a white button, were given for information of the hiding places of concealed rebels or for their capture. Seay-ngan-pang, who had taught the rebels the art of military defense, and Le-sëen-yün a well-known leader of the Fuhkein population at Shanghae, whose influence used to be great with the Shanghae mandarins, and who was a strong opponent to the construction of the new race-course in times gone by, were both taken and cut in pieces. Beheading was considered too mild a punishment for such men. The wholesale slaughter of human beings, during the first days after the capture, is an example of cruelty and love of bloodshed which is a disgrace to a nation professing the least amount of civilization. Out of the thousand or more that have been refused quarter, and hurried out of life with the shortest possible shrift, how few are those to whom it would not have been perfectly safe to have granted their liberty with a sound whipping for the trouble they had given. More mercy and less killing would very much increase the moral power of the government, at present so extremely low. The Shanghae magistrate began on Monday, the second day of the re-opening of the gates, a free distribution of rice. Some foreigners however were beforehand with him in this act of benevolence. By these combined efforts, cash and rice were given away at several points to a crowd of hungry and eager applicants. At the Foo-yuen-t'ang, the chief charitable institution in the city, subscriptions were sent in by several mandarins to aid in cheapening the price of rice to the poor. During the time when the stoppage of supplies reduced the population to extremity, about 200 died of hunger."

Mormon Emigration and Missions.—A ship arrived at New York from Liverpool, a few days since, with 570 emigrants on board, a large part of whom were sent out at the expense of the "Perpetual Emigration Fund"—a fund contributed by wealthy men among the sect, and which is made perpetual by those who are sent out mortgaging a portion of the the proceeds of their labor after they arrive at Salt Lake. This season the Liverpool agency has sent out 3,600 emigrants, of whom above 1,100 came at the expense of this fund. A daily paper, in noticing the recent arrival, says:—

"In conversation with the Secretary of the expedition, Mr. William Willes, we learn that he was by profession a schoolmaster, and he had been a member of the Church of England. This is his first visit to America—his wife and family are already in Utah, where he will join them. In 1851 he went to India as a Mormon Missionary. From Calcutta he traveled from station to station to the Himalayas, 700 miles of the distance on foot, teaching and preaching the Mormon doctrines to Europeans. Up and down the Ganges he wandered preaching with variable success. Next he journeyed through Burmah, tarrying at Rangoon about six months, where he made the acquaintance of some of the American Missionaries, among them Messrs. Kincaid and Vinton. During his Missionary tour he visited Penang and Singapore, and was the pioneer Missionary of his faith on the Island of St. Helena. He said that about 200 Mormons are now waiting for an opportunity to embark from India for Utah, and the efforts of the Mormon Missionaries are very successful, more especially among the natives, whose language they have learned."

BAPTIST ANNIVERSARIES.

For some time past the Baptist denomination in this country has been distracted by controversies growing out of the organization of the society to secure a new translation of the Scriptures into English, called the American Bible Union. Not only the American and Foreign Bible Society, but other benevolent societies of the denomination, have been embarrassed, if not endangered, by these controversies. Hence great solicitude was felt as to the result of the recent meeting in New York of the two Societies which are most intimately connected with the affair—the Bible Society and the Home Mission Society. Our readers are already informed of the principal doings at those meetings, and they will doubtless be interested in the following general remarks relative thereto, which appeared in the *Watchman and Reflector*:—

The American and Foreign Bible Society has closed a year of great prosperity. In the face of a monetary crisis, and of an active and unrelenting warfare waged by a rival Society, which has estranged for a season some of its warmest friends and most liberal supporters, the receipts for ordinary purposes have fallen little behind those of former years, while the aggregate receipts have exceeded those of any year excepting the last. The new Bible House has been completed, and the large income from rented rooms will soon extinguish the debt occasioned by its erection, and remain a perpetual revenue for the Society, ample to defray the expenses of officers and agents, and leave the contributions of the churches to be devoted without reserve to the benevolent aims of the Society. The conception of this central home for Baptist organizations, was one of the most far-sighted and liberal movements of our day, and those who have defeated the purpose by appeals to popular prejudice against "centralization," and "monopolies," and "marble palaces," have inflicted a cruel wound on Christian concord, and may find at a future day their own devices returning to plague themselves.

The meeting of the Home Missionary Society was harmonious and Christ-like, and brethren seemed determined to remove all occasion of offense and alienation. It was hard for those who had looked upon Nassau street as a central home for denominational movements, to relinquish their cherished hopes for the sake of appeasing what seemed to them cruel and unreasonable prejudices, but they were prepared for large sacrifices of personal feeling to avert the threatened rupture. As the leaders of the Bible Union had announced officially that a new organization for Home Missions would be formed if the rooms in Nassau street were retained, the Board recommended the removal; a committee appointed to consider the matter united in the recommendation, and the Society voted to remove, with only a single vote in the negative.

In organizing the new Board, deference was also had to the complaints of Dr. Cone, that the old Board had cherished a partisan spirit, and had been composed largely of managers of the American and Foreign Bible Society. The committee of nomination reported, as their principle of action, that they had dropped the names of all of the old members of the Board who were connected with the Boards of either Bible Society, and had replaced them by names having no such connection. No other course seemed possible to obviate the charge of partisanship which had been so rudely and perseveringly made; it commended itself to the candor and Christian feeling of all present, and the list of nominees was elected by a vote nearly unanimous. We suppose Dr. Cone will approve the principle, though its rigid application cut off his own name from the new Board.

Abolition Convention.

To the Radical Political Abolitionists:

We are few—but we are not, therefore, to cease from our work. Work for a good cause, be that cause popular or unpopular, must be work to the end.

Our undertaking, as radical political abolitionists, is to remove slavery from the national territories by means of our national political power, and to remove it from the States also, by means of the same power, whenever the States shall themselves refuse to remove it. For the success of this undertaking, we must depend, under God, upon ourselves. Of all the political parties, there is but one to give us countenance—and that one is, in point of numbers, quite insignificant.

The Whig and Democrat and Know Nothing parties are each made up of slave-holders, as well as non slave-holders; and hence, the condition of their continued existence is, that they shall not attack slavery. Members there are of each of these parties, who are opposed to slavery. But for any of these parties to assail slavery would be to dissolve itself. The Free Soil or Independent Democratic party is, we cheerfully admit, an anti-slavery party. Nevertheless, it denies the right of the Federal Government to touch slavery in the States; and, sad to say, it admits the Constitutional authority of every slave-holder to claim every State Government for his slave catcher. The American Anti-Slavery Society, or Garrison Party, like ourselves, labors, within the limits of moral suasion, to abolish slavery; but unlike ourselves, it employs no political power to this end. What is still worse, it seeks to separate the free States from the slave States, and to leave the slave States, so far as concerns the political power of the free States, at perfect liberty to continue their oppression and torture of the black man. The Liberty party is the only political party in the land, that insists on the right and duty to wield the political power of the nation for the overthrow of every part and parcel of American Slavery. That little party not only claims that there is no law for slavery, and can be no law for that most sweeping of all piracies, but that the Federal Constitution demands the abolition of all American Slavery, State or national.

Circumstanced as we are, brethren, is it not our duty to come together, for the purpose of enlightening each other's minds, and cheering each other's hearts, and strengthening each other's hands? We believe, that it is, and hence we take the liberty to propose, that a Convention of the radical political Abolitionists of all parts of the country be held in Syracuse, N. Y., on Tuesday, Wednesday and Thursday, the 26th, 27th and 28th days of next June.

We think it especially important, that the Convention be attended by all who are accustomed to lecture in behalf of our principles, and by all who are disposed to embark in such lecturing. The occasion will be a very favorable one for rendering themselves more able and more useful in this department of labor. Nearly twenty years ago, a Convention of Anti-Slavery Lecturers was held in the City of New York, with very good effect.

It is to be hoped that measures will be at the proposed meeting adopted for obtaining means to sustain lecturers, and to extend the circulation of periodicals devoted to our cause.

April 4th, 1855.

European News.

The steamer America arrived at Halifax, May 24, with European dates to the 12th, of which the following is a summary.

M. Drouyn de l'Huys, the French Minister of War, had resigned, from an unwillingness to protract the war, and Count Walewski, the French Embassador at London, has been appointed his successor.

Pianori, who attempted to assassinate the Emperor Napoleon, had been condemned to death.

The English press admits that hopes of peace have fled, and that no assistance can be expected from Austria and but little from the rest of Europe; consequently, that France and England must fight it out.

The latest official advices from Sebastopol are to May 10. On that day, in the morning, the Russians made a sortie with a large body of troops on the Allies' right advance trench, but were driven back immediately, and a second and similar attempt shared the same fate. Gen. Mannora has arrived with 4,000 Sardinian troops.

The London *Standard* says: A very extraordinary circumstance, reported from a quarter which precludes any doubt as to the truth of the statement, reaches us by letters from St. Petersburgh. It appears that a fine American frigate-built ship recently arrived at a port in the Baltic. It was stated that the vessel had on board 800 bales cotton, but the correspondent of our informant visited the ship and found in additon to the above she had 50,000 rifles and 5,000 revolvers.

The London *Times*, in an editorial which has attracted some notice, says that the circumstance that America does not sympathize with the Allies is shocking and revolting.

An incendiary fire, set by a discharged workman, destroyed totally one of the floating batteries just ready to launch in the Thames.

California News.

The steamer George Law, with California news to May 1, arrived at New York on the 24th. The news is not important. The following is a summary.

The Sixth California Legislature has adjourned, after a session of 120 days, during which time numerous beneficial and highly popular laws have been enacted. Among these is one prohibiting gambling throughout the State under the most stringent principles.

The Know Nothings are to be represented by an organ in San Francisco entitled the *Citizen*. The prospectus has been published and the paper will shortly be issued.

Several fine clippers have arrived from the Eastern States, among them the Westward Ho, in 100 days from Boston; the Neptune's Car, also from Boston in 102 days, and the Boston Light, in 102 days from New York.

The new postage law gives general dissatisfaction in California. Its provisions are looked upon as oppressive and designedly so upon the citizens.

Accounts from the mines are more than ever flattering and encouraging. The recent rains have gladdened the heart of the miner and sent rejoicing throughout the State.

The Sacramento Valley Railroad is rapidly progressing. The ground has been broken along the entire line, and it would seem that this magnificent enterprise is fast approaching to a successful issue.

Very valuable coal mines have been discovered in Lower California, inside the Gulf, and nearly opposite Guaymas. Speculators are already turning their attention thither.

A Mexican was hung by Lynch law at Mokelumne Hill some ten days since for stabbing an American named Joice. After the death of the culprit it was discovered that the wounds of Joice were not mortal.

The new Presbyterian Church in Happy Valley, Oregon, was dedicated on Sunday, April 28.

The New York Liquor Law.—In regard to the liquor law recently passed by the Legislature of New York, the lawyers seem to have agreed to disagree. Scarcely any two of them see alike on some of its provisions; and the difference of opinion among them is having its effect in community. Among those who have made public their opinions is Judge J. W. Edmonds, of New York City, who did so in compliance with a request from some of the leading citizens. His conclusions are as follows:—

1. That it is competent for the State Legislature to regulate and prohibit the domestic traffic in intoxicating liquor among its citizens.

2. That the act in question in prohibiting the traffic in this State among the citizens is constitutional and valid, and is as applicable to imported liquors after leaving the importer's hands as to any other, the power of Congress and the reservation in the first and twenty-second sections of this act relating only to foreign liquors while yet in the hands of the importer, and before they mingle with the mass of other property in the country.

3. That the means provided by the statute for the enforcement of its enactments are lawful and valid.

4. And that the duty of enforcing the statute is not confined to the officers specially named in it, but is devolved upon all those whose general duty it is to enforce any of the laws of this State against crime.

Incomes of Benevolent Societies.—The receipts of fourteen Societies were as follows:

	1854.	1855.
Am. Tract Society	$415,159	$413,174
Am. Bible Society	394,340	346,811
*Am. B. C. For. Missions	213,200	213,683
Pres. Board For. Missions	174,453	184,074
Am. Home Mission Soc.	191,209	180,137
Am. For. and Ch. Union	75,701	63,867
Am. Bap Home Mis. Soc.	62,730	64,346
Am. and For. Bible Soc.	46,097	40,034
Am Seaman's Fund Soc.	26,173	22,845
Am. Anti-Slavery Society	11,000	†18,000
N. Y. State Colon. Soc.	17,609	17,571
‡Am. Female Guard. Soc.	17,870	10,869
Jews Society	14,000	10,000
Central Am. Education Soc.	9,711	§4,323
	$1,669,252	$1,589,554

* For the first nine months of the financial year.
† Including the receipts of the auxiliary Societies, $35,467.
‡ For eight months.
§ Exclusive of a balance of $4,000 from the previous year.

SUMMARY.

A dispatch dated Cincinnati, Monday, May 21, 1855, says:—Elijah Williams, a rich planter of Barnesville, South Carolina, arrived in this City to-day with eight negroes, one of whom was his wife, six his children, and the other his wife's mother. The object of his visit here was to manumit the whole and settle them in this State. Just, however, as he stepped from the steamboat into a carriage he fell dead. The negroes having been brought here, are of course free under our State laws. Mr. Williams had previously willed the whole of his estate to the negroes.

The steamer Illinois which left for Aspinwall last week, carried out two companies of United States troops under the command of Major Prince, to be stationed at Fort Steilacoomb, Washington Territory. Major Prince, who is appointed to the permanent command of that post, is a young man who served under Gen. Taylor during a great part of the Florida war, and afterward distinguished himself under Gen. Scott in Mexico. He was severely wounded in the battle of Molino del Rey, and for his gallant conduct in that action was breveted.

The Orange County papers announce the death of the Hon. Stephen W. Fullerton, which occurred at his residence near Slate Hill, in that County, on the 15th inst. Mr. Fullerton was one of the oldest citizens of Orange County, and was widely respected. He held the office of Justice of the Peace for consecutive 16 years in the town of Minisink, was a member of the Legislature in 1837, during the small bill excitement, and held the office of Associate County Judge for five years, being appointed in 1840. His age was 62.

As a striking instance of the rapid increase of the value of real estate at the West, we notice a sale a few days ago by the Trustees of the Illinois and Michigan Canal of a piece of land just within the city limits of Chicago for $162,000, which was offered seven years ago for $9,000. Another significant fact is that about a year since the lands of this trust were estimated to be worth half a million of dollars. The trustees have since sold lands to that amount, and the remainder are now valued at half a million.

We learn from the Cherokee *Georgian* that a brutal murder was committed upon the person of an old negro man, the property of Mrs. Frazier, in Marietta, one day last week. The perpetrator had shot him in the shoulder an evening or two previous, and not content with this injury to an inoffensive old man, is supposed to have crept to the window beneath which his victim was sleeping, and shot him through the head.

The contract for the construction of the new Custom-House at Providence, R. I., has been awarded to Albert Curry of Newburyport, Mass., at $151,000, that being the lowest bid. The structure is to be three stories high, thoroughly fire-proof and to be so constructed as to embrace ample accommodations for the Custom-House, Post Office, and United States Courts.

The Hon. John C. Spencer died at Albany on Thursday night, May 17th, of consumption, aged 68. His malady had long been regarded as dangerous, and as a last resort a sea voyage had been determined on; but before the time to start he suddenly became worse and gradually sank to the grave.

At a recent election in Chambersburg, Pa., one vote elected the three town Auditors. It was not generally known they were to be voted for. One single individual, familliar with the charter of the borough, voted for those officers. They were of course elected, and he selected them. The borough was surprised.

The Hon. D. F. Miller, as attorney, has commenced a suit in the District Court of Lee County, Iowa, for the sum of $500,000. The plaintiff, Dr. Isaac Galland, claims of the defendants, Marsh, Lee and Delavan, this amount under the original articles of association between himself and others in and concerning the lands on the Half-Breed Tract.

The entire edition of the Albany *Evening Journal* recently was printed on paper made of Basswood Shavings. The appearance of the paper is every thing that can be desired, and promises well for the success of the revolution in paper making which the fact intimates.

A conductor on the New London, Willimantic and Palmer Railroad, by the name of Smith, was killed on the evening of the 23d inst. about a quarter of a mile south of Stafford Springs. He was walking on the top of his train when his head came in contact with a bridge and the blow proved fatal.

It is said that the scurvy prevails to a considerable extext among the railroad laborers in Indiana and Kentucky, which is attributed to the scarcity of vegetable food among them for many months past.

On the 15th of April, the School House at Arcadia, in Missouri, was struck by lightning, and four of the pupils were instantly killed. Three of them were brothers, the sons of widow Maulsby, of New Madrid; the other boy was the son of Mr. Ridgely, of St. Louis.

At the late session of the Pennsylvania Legislature a Ten Hour law was enacted. Operatives under the age of twenty-one years cannot be kept at work for a longer average time than ten hours per diem, on any kind of contract whatever.

The Governor of Massachusetts has vetoed a bill granting $1,500,000 to the Western Railroad Company. The Senate of the same State, recently, rejected a bill, which had previously passed the House, to abolish capital punishment.

The Personal Liberty Bill of the Massachusetts Legislature was vetoed by Governor Gardner and then promptly passed over his head in the House by a vote of 230 to 76, and in the Senate by a vote of 32 to 3.

The Jury in the case of Dr. Brown against the New Haven Railroad Co., returned a verdict for the plaintiff, assessing the damages at $16,000. Dr. Brown was injured at Norwalk, and sued for $20,000.

Nearly two hundred thousand dollars have been secured, in subscriptions, to endow a University in Troy, N. Y. The *Budget* says the necessary buildings will be immediately commenced.

The different evangelical churches in Worcester, Mass., are enjoying at this time a refreshing from the presence of the Lord. Those thus far converted have been mostly young people.

In Dover, Delaware, on Thursday, May 24, a colored man named Parker, who broke out of jail some three months ago, murdered his two children in a most brutal manner.

Breadstuffs are so scarce in Montreal that Canadian Wheat and Flour which had arrived at Oswego on its way to New York has been ordered back.

The last rail of the Chicago and Milwaukee Railroad was laid on Thursday, May 17th. The latter city is now within a day's ride of St. Louis.

Four Mexicans who had committed an outrage on a family near El Paso were recently captured, tried by Lynch law, and hung.

The Hon. Lewis Cass has been invited to deliver the address at the New York State Agricultural Fair at Elmira in October next.

MARRIED,

In Bolivar, Allegany Co., N. Y., on the morning of the 2d inst., by Eld. H. Cornwell, Mr. Henry Ferris to Miss Rachel E. Burdick.

By the same, on the evening of the 5th inst., Mr. Charles B. Davy to Miss Clarissa A. Barnes, all of Bolivar.

By Eld. C. M. Lewis, at his residence in Hopkinton, R. I., on the 21st instant, Mr. William H. Cottrell to Miss R. Jane Larkin, both of the town of Westerly.

DIED,

In Centerville, R. I., April 29th, of congestion of the brain, Mrs. Lucy L. Brown, wife of Clark A. Brown, formerly of Little Genesee, N. Y., in the 25th year of her age. Funeral services at the 2d Seventh-day Baptist Church in Hopkinton, by Eld. Phineas S. Crandall. In early life she gave her heart to the Saviour, and united with the first Seventh-day Baptist Church at her native place. During her last illness, which was of but one weeks' duration, she confirmed in the minds of her friends, by the Christian resignation with which she bore the most excruciating pains, and by the calmness with which she looked upon her approaching dissolution, as well as by her own words of trust in God and of hope in his mercy through Christ, the consoling belief, that—for her—it was better far to depart, for she would be with Christ. She has left an affectionate husband, an infant son, a father, a mother, and several brothers and sisters, to mourn her early death, and their irreparable loss. I. G.

LETTERS.

Central Association.

THE Twentieth Annual Meeting of the Seventh-day Baptist Central Association will be held at DeRuyter, Madison Co., N. Y., commencing on Fourth-day, June 6th, 1855, at 10 o'clock A. M. James Summerbell is appointed to preach the introductory discourse; Elias Burdick, alternate.

J. B. WELLS, Rec. Sec.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON.—Inland route, without change of cars or detention, carrying the Eastern Mail.

The new steamer PLYMOUTH ROCK, Capt. Joel Stone, and C. VANDERBILT, Capt. W. H. Frazee, in connection with the Stonington and Providence and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from pier No. 1 N. R., (first wharf above Battery-place,) at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the Mail Train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The C. VANDERBILT, from New York—Monday, Wednesday, and Friday From Stonington—Tuesday, Thursday, and Saturday.

The PLYMOUTH ROCK, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

N. B.—Passengers, on arrival of the steamers at Stonington, proceed immediately by Mail Train to Providence, Boston, Taunton, and New Bedford; or by Accommodation Train from Stonington at 7.30 A.M.

A Baggage Master accompanies the Steamer and Train through each way.

Through tickets on Mondays, Wednesdays, and Fridays, for Nantucket, Holmes' Hole, and Wood's Hole, via New Bedford, connecting with the new steamer Eagle Wing.

For passage, berths, state-rooms, or freight, application may be made at pier No. 2 North River, or at the office, No. 10 Battery-place.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M.

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $3 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Steamers are of the first class for strength and speed—well known favorities of the public—having been thoroughly overhauled during the past winter, and offer every accommodation that can be desired by either freighter or traveler.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

Through tickets can be obtained on board the boats for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work—designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York. May 24—3m.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.
Or, Noyes Spicer, Indianapolis, Ind.

The very Book that every body has been Wanting.

The Book for the Parlor, the Book for the Fire-side, the Book for the Professor, and the Book for the Non-Professor.

THE RELIGIOUS DENOMINATIONS OF THE UNITED STATES: Their History, Doctrine, Government, and Statistics; with a Preliminary Sketch of Judaism, Paganism, and Mohammedanism. By Rev. Joseph Belcher, D. D., Honorary Member of the Historical Societies of Pennsylvania and Wisconsin, author of "William Carey, a Biography," etc., etc., and "Editor of the Complete Works of Andrew Fuller," "Works of Robert Hall," etc, etc. Large octavo, 1024 pages, handsomely embellished by nearly two hundred engravings.

This invaluable work is rapidly finding its way among all classes of the American people. The clear, comprehensive, and impartial manner in which the learned author treats each and every denomination, is winning for him golden opinions from the highest authorities in the land. The innumerable lively tales and anecdotes of ministers, churches, and laymen, which he introduces with the articles of faith and all important statistical information, give to the work a life, vigor, and spirit truly delightful. One cannot sit down to it without being convinced that his subject is in the hands of a master, nor rise but with kindlier and more liberal feelings towards the great brotherhood of Christians, under whatever name they bear. Ours is a great, growing, and glorious country, and every family, and every young man, throughout its length and breadth, should have a copy as a text book of all its denominations. Wherever known, it is read, and wherever read, admired. Look at the following from among the very many notices received:

It embodies a vast amount of information relative to the origin, history, and missionary operations of the different religious denominations in this country, presented in a remarkably interesting and attractive manner.—*Rev. John Dowling, D. D., Author of "The History of Romanism;" "Judson Offering," etc.*

This is a large and beautiful volume, and will find a cordial welcome in every family.—*Philadelphia Christian Chronicle.*

So far as concerns independence of vision, there can be no question, as Dr. Belcher surveys each sect with the same dispassionate impartiality.—*Epis. Recorder.*

This massive volume embraces a vast fund of information.—*Presbyterian.*

The work is sold by agents, and will furnish a large amount of interesting and valuable information to the families into which it may be received.—*New York Recorder and Register.*

In the account given of the denominations, he is fair, and generally allows them to speak for themselves, as to their history and institutions.—*New York Christian Advocate and Journal.*

It contains a mass of interesting facts and statistics.—*Norton's Literary Gazette.*

Judging from the work, it would be difficult to say what are the religious views of the Editor, so fairly, so dispassionately, so charitably, has he treated each and every sect.—*Philadelphia City Item.*

We presume it will be a standard work in thousands of libraries.—*Littell's Living Age.*

Sold only by agents, to whom certain districts are allotted. For particulars address the publisher,

JOHN E. POTTER,
15 Sansom-st., Philadelphia.
Or, Noyes Spicer, Indianapolis, Ind.

Miscellaneous.

Belting the Earth.

From the N. Y. Evangelist, May 17.

For a year past notices have occasionally appeared in the papers of a company formed in this city to carry a telegraph across the ocean. But the project seemed so wild and visionary that few believed it would be seriously attempted. The design was vast and grand, no doubt, but it was impracticable. Many even doubted the existence of such a company. They thought it all a hoax, and others when assured of the fact shook their heads and uttered wise remarks on the transparent folly of sinking money to the bottom of the ocean. It was literally throwing it into the sea. We are at length enabled to remove all mystery from the matter and to state on the best authority what plans have been formed and how far they are advanced toward accomplishment.

A little more than one year ago a few individuals formed the daring project of carrying into execution this dream of science—this scheme which sanguine spirits had hoped for, but few believed possible. Their first step was to obtain a charter from Newfoundland. For this purpose three of their number were dispatched immediately to St. Jonns, where, after weeks of negotiation with the Government, they succeeded in obtaining from that Province an exclusive charter for fifty years to build a telegraph to or across the island or the waters adjacent thereto or any of its dependencies. As Labrador is one of these, this charter virtually gives them the whole range of the Continent. Further to encourage the enterprise, the Government agreed to pay £5,000 sterling toward constructing a bridle-path across the island, which was necessary for the use of the telegraph and to guarantee the interest on £50,000 sterling for twenty years, and also to give fifty square miles of land, to be selected any where on the island—all this on its completion to St. Johns, to which were to be added fifty more square miles of land if it should be carried across the Atlantic.

They obtained also from Prince Edward's Island an exclusive charter for fifty years. This Province gave 1,000 acres of land. At the same time, to complete their right of way, they purchased a charter which had been previously obtained in New Brunswick, and have since obtained one from Canada, with full liberty to cross their territory at any point that should be necessary. They also made a valuable agreement with Prof. Morse for the use of his patents and all renewals. This gentleman, who is the highest authority on the subject in the world, was sanguine of the success of the enterprise, and soon became personally connected with it. The Company was formally organized in May, 1854, by the choice of Peter Cooper, Marshall O. Roberts, Cyrus W. Field and Chandler White, Esqrs., as Directors. Peter Cooper was chosen President; Moses Taylor, Treasurer, and Professor Morse, Electrician. From these names it will be seen that the business is in the hands of men who, to say the least, are not generally regarded as visionary, but as those who look far ahead and are apt to carry through what they have once begun.

The Company immediately commenced operations. They at once purchased the steamer Victoria, and sent her to Newfoundland with an engineer and assistants. A road was to be cut across the whole extent of the island, four hundred miles, through a wilderness seldom trodden by man. In this work about six hundred men were employed the whole of the season. It now appeared that the Government of Newfoundland, while granting a charter most liberal and honorable to themselves, had yet acted wisely for the interests of their own Province. A new spring was given to industry and treasures were found which before were not known to exist. Last summer the Company employed three miner[illegible]ts to explore the country, who discovered two mines of coal, one of copper, one of lead, and also quarries of slate and alabaster and very valuable tracts of ship-timber. This will develop rapidly the trade of the island, which before has been confined almost wholly to its fisheries.

So far all went well. The work was begun and advancing successfully. Less than a hundred miles of submarine cable were needed to stretch across to Cape Breton, and when this was laid and the line completed to St. Jonns there would be direct telegraphic communication East from New York, about twelve hundred miles. This certainly was a long stride toward Europe. But now came the great difficulty. They had reached the rocks of Newfoundland, but there before them was the mighty ocean, raging wildly around those cliffs, as untamed as when Columbus first crossed the sea. To advance into these deep waters was the next and the perilous step. Proposals had been received from a European Company to unite with them in the enterprise, and in January last one of the Directors sailed for England to complete the negotiations.

In this he was entirely successful. In London he formed a contract with the TRANS-ATLANTIC TELEGRAPH COMPANY, composed of English and French capitalists, whereby the latter engaged to construct and lay down at their own expense and risk a submarine cable extending from Ireland to St. Johns, Newfoundland, and to have it completed for operation on or before the 22d day of January, 1858. The two companies, European and American, each will own the line which it constructs, but their contract obliges them to operate in connection with each other, to the exclusion of all other lines, for the period of fifty years, which is the limit of the American company's charter. At the same time, a favorable contract was made for the submarine cable to connect Newfoundland with Cape Breton. This will be seventy-four miles long, and is to be ready on the last day of this month, when it will be shipped direct to Newfoundland. The steamer Victoria sailed a few days since for St. Johns, with Mr. Ellis, the Chief Engineer, and his assistants. The company confidently expect to have telegraphic communication established between New York and St. Johns in the course of this summer. All the necessary harbor and wharf accommodations have been secured at that port for the steamers which are expected to call there on their trips between America and Europe. St. Johns is about two days nearer to England than Halifax. We have therefore every reason to believe that in three months the old world and the new will be within a week's hail of each other—and that within three years the two hemispheres will be in instantaneous communication.

We are aware that some will read this with a smile of incredulity. All the contracts in the world will not convince them that such a work will ever be achieved. Though the bond be sealed, signed and delivered, yet neither Englishmen nor Americans can do what is beyond all human power. To these evil prophets we may add a word to show that the enterprise is not so impossible as they are wont to believe. The first thing to be noted is the bed of the ocean along the track of the proposed route. Says Lieut. Maury: "There is at the bottom of the sea between Cape Race in Newfoundland and Cape Clear in Ireland, a remarkable steppe, which is already known as the Telegraphic plateau. The great circle distance between these two shore line is 1,600 miles, and the sea along this route is probably nowhere more than 10,000 feet deep." That is not too deep to be reached by the cable sunk in the waters, and yet deep enough to be out of the way of anchors and icebergs. This seems like a special provision of nature to favor this great work. A chain of uplands lies under the sea, as if on purpose to bear up the chain of Intelligence across the deep. On that broad plateau is to be laid this mighty coil—this serpent winding around the earth, and pressing it together in its folds. The bottom of the sea is found to be not sharp rock nor precipice, but soft, shelly sand, into which the telegraphic line may sink and become imbedded for ages.

Next as to the material employed. To speak of a wire would convey a false idea. For though there are several small copper wires, these are encased in gutta-percha, and around them is wound a coil of heavy wire, forming altogether a huge iron cable, strong enough to hold fast any ship-of-war in the world. We have at our office specimens of that used under the British Channel and under the Mediterranean. The cable purchased for the line from Cape Breton to Newfoundland weighs over five tuns to the mile, and that to cross the Atlantic will be much stronger.

But the most triumphant proof that this thing is possible, is the fact that it has been done. A telegraph has been in operation four years from England to France. Others stretch to Belgium and Holland. The last steamer brought news that a line of 300 miles has just been laid under the Black Sea, by which the Crimea is brought into hourly communication with London. Another is now being laid from France to the island of Sardinia, and thence across to Algeria. The man who has achieved the greatest of these triumphs is Mr. John W. Brett, of London. This gentleman is now interested in the Transatlantic Telegraph Company, and undertakes to belt the ocean. With a full knowledge of the immense labor and cost and of all hazards, he still dares to promise to bind the Atlantic, as he has already bound the Mediterranean.

Nor is the difficulty greatly increased by the length of the line. Doubts have been expressed whether an electric current could be sent such a distance. It was said it would not go more than five or six hundred miles, and projects were devised for carrying a telegraph around by way of Greenland and Iceland. But these doubts are now set at rest by recent experiments of Prof. Faraday. He declares the thing perfectly practicable. The only drawback to his happiness in the discovery was that it would occupy an appreciable time in the passage. He seemed at this a little disappointed. When asked "how long it would take to pass from London to New York?" he answered, possibly one second." This is not quite as quick as we expected, but on the whole we think that will do!

The Tomb of Nicholas.

Correspondence of the Boston Transcript.

ST. PETERSBURG, 13th April, 1855.

The most interesting church in St. Petersburg is that dedicated to St. Peter and St. Paul, otherwise called the "Fortress Church," as it stands within the citadel of the City. Its slender spire, precisely resembling that of the Admiralty, rises far above all others to the height of 340 feet, and its gilded surface shines dazzlingly in the sun. It is said that 12,000 ducats have already been expended in the gilding of this spire. But within the Fortress Church rest the remains of all the Czars since Peter the Great. No European monarchs rest so unostentatiously, and no others are buried within the walls of a fortress. To each Emperor there is erected merely a sarcophagus, with frequently his initial letters engraved upon it. Each of these sarcophagi is covered with a pall of cloth of gold, embroidered with the double-headed eagle. Upon the Grand-Duke Constantine's tomb lie the keys of some Polish fortresses, while Alexander's bears a small military medal with his portrait. Each tomb is surrounded by a neat iron railing, and the part of the nave devoted to the tombs is again separated from the body of the church. As I visited the church during Lent, the cloth of gold was concealed in every case by a faded black covering. Beginning with Peter the Great, I passed by all the Czars in chronological order. Here lay the great Catharine, and sleeping quietly by her side her husband, Peter III., to whom she in her lifetime refused this place. Around one of the sarcophagi I saw a dense crowd, and approaching it found it that of Nicholas. The cloth was new and no dust had settled upon the ermine border. His initial letter was embroidered in amaranth and a candle burns night and day upon the tomb. The little relic that was placed upon his breast while he lay in state in the palace, lies upon the middle of the sarcophagus. It is surrounded by a wreath of immortals. Every one who approached the spot seemed touched with real sorrow, and all spoke in whispers around the grave of the great man. As I stood there watching the crowd the gates were suddenly thrown open and an old General in full uniform entered and approached the tomb. Taking off his helmet he held it before his face, and kneeling, seemed for a few moments to be engaged in earnest prayer. The helmet shook in his hands as with emotion. Finally rising, he kissed the relic that had lain upon his master's breast, and then crossing the aisle kissed Alexander's tomb in the same way. He had served under both Emperors, and this his daily tribute to their memories was most touching. He is the commander of the fortress of St. Petersburg, and one of the last acts in the public life of Nicholas was to thank him for his public services. The Czar sent him the Imperial portrait enriched with diamonds.

Upon the walls and around the pillars of the Fortress Church hang trophies taken from the Turks, Persians and French. In this way have the Russians decorated all their churches, and hardly a nation but is represented in St. Petersburg or Moscow. The English, I believe, are the only exception, but who can tell how long they may continue so? Above three hundred Persian suns and Turkish crescents here bow before the cross of the Christians.

From the church we went to the house of Peter the Great, just without the walls of the fortress, and upon the same island. This wa the nucleus of the present city, and could Peter rise from his grave to see the work of his successors, his ambition would be more than satisfied. The cottage is divided into three apartments. The inner one was his sleeping room; the one adjoining, his chapel, in which are still preserved the pictures he worshiped. The third room was his reception-room, and it is filled with rich offerings which are contained in show-cases ranged round the room. It consequently looks more like a jeweler's shop than anything else. On one side of the house is shown the boat made by Peter's own hands, also the sails prepared by himself. The whole cottage was rapidly going to decay, but Alexander caused it to be covered by a casing of brick, so that it is now no longer exposed to the weather. Amsterdam was evidently Peter's model of a commercial city, and his first care in commencing his capital was to intersect its proposed site by canals. His successors, however, not being so Dutch in their tastes, caused many of these canals to be filled up and gardens to be planted in their stead. The Basilius Island, therefore, has many delightful gardens instead of closely-ranged masses of brick walls. BOSTONIAN.

The Details of War.

The dispatches of commanders-in-chief deal in generalities and glories. It is well to get a true picture of the details of war from those who do the actual butchering. Here is a passage from a letter of a private soldier, which we find in the Liverpool *Chronicle*:—

So Ben wants to know more of the way we actually fight. I suppose he has half a wish to experience it, if not too dangerous. Our first experience of the enemy was any thing but pleasant, being round shot and shell, which quickly took the life of many a brave fellow, and consequently heated the blood of the living, who, after asking permission, flung away their great coats, and rushed on to the fight, ours being the only regiment that day that fought with the red fully exposed to view—an advantage, I think, for our grey great coats are too much like the Russians to be easily detected from them in foggy mornings. Now, Ben, came the work. When the hill up which we ascended was surmounted, a long line of skirmishers (Russians) were seen. One volley and cheer, and then the bayonet, which, for Ben's information, the Russians seldom wait for; if he does, our firelock is brought to that position most ready for use, called the "charge," and first parrying, if required, our enemy's thrust, is driven to the socket through any part of the body we can reach, the upper part the better. Does not that seem dreadful to you at home, and no doubt so it is, and cursed be he that causes it. But in battle our feelings are different. The passion to kill and destroy is raised within us; our blood boils for revenge for the comrade that a minute before you have seen ripped open by a shell, or perchance whose brains are bespattered on your person. It is then the demon of war is within you, and the work of death is but as sport; for fear goes from you, and but one idea fixes itself in your brain, and that is, there are enemies in front and your mission is to destroy; and how the British "missionaries" (no sneer intended) did their work at Inkermann, tell me not I boast if I confide it to history to tell. On returning to camp you first asked yourself, "Am I safe?" and then you wonder how you escaped. You next looked round your tent, and, as was the case in mine, saw three poor fellows with bandages on different parts of their persons, with merely, "I see, Jack, you are winged," or "Tom, the Russ has spoiled your countenance to day," and "How did it happen?" and nothing more is thought of the matter. Another glance round shows that our number is deficient of two. A little inquiry determines their fate. One was ripped open by a shell, and the other was stretched at full length, and with the exclamation, "Poor follows! they were good soldiers," the matter is dropped. Every one sets to work to boil a cup of coffee, drinks, rolls his blanket round his head, and sleeps without dreaming that but a mile or so from him lay ten thousand beings that he has assisted in destroying. Such is all a soldier thinks of a bloody fight. In quiet, hours after, they sit and talk of the event, but not as if it were the extraordinary thing that is ushered throughout the world.

The Post-Rider in New England.

The *North American Review* gives us the following humorous and life-like description, from the pen of the late Rev. Sylvester Judd, of that convenient and important personage, the post-rider, as we knew him twenty years ago:

"In the first place, Winkle knew everybody and everything; and everybody and everything knew Winkle. He knew all the girls, and the school children, and the old men, and the young men; and bowed to them all as he rode by, and they bowed to him. For forty miles he knew where everybody lived, and who everybody was that lived any where. He knew the tall white house on the hill, and the large house with pillars in front among the trees, and the little black house over in the field; and there was always somebody standing by all the houses to whom he bowed. Sometimes he bowed to the well-sweep that happened to swing in the wind; sometimes to a dog that sat on the doorsteps. How many smiling favors he got from the girls, who, after dinner, and after dressing for the afternoon, sat by the open front windows! how many from the children that swarmed about the school-houses! In fact, everybody smiled and bowed when he passed—black and hard-favored men; muggy and obstinate men; coarse and akward men. Every day he had a sort of President's tour. Then, he pointed out the tree where a man hung himself, and the woods where a bear was shot, and the barn that was struck by lightning, and the stream where a man was drowned.

"And this, in the second place, because of his unbounded good-nature. He did errands for all those people; he ran a sort of express to the city; an express, too, from one neighborhood to another. Then, he did his errands so correctly, so promptly, and so genially. If those for whom he acted were poor, he charged but little. He knew every place in Woodylin, and could execute any order, from getting iron castings to purchasing gimp, and matching paper-hangings, and delivering billet-doux. Furthermore—and herein the beauty of Winkle was seen—he ran express between hearts. Nothing pleased him better than to have a love-case in hand between two persons on different parts of his route; there was such a carrying of little notes, and little remember-me's, and little nods and signs; and then he could drop a big bundle of tenderness in a single look, as he passed the sweet-heart, hanging out the washing of a Monday morning. Then of the widow's son, whom he carried to the city some five years before, and who had been all this time at sea, he got the first intelligence; and as he walked his horses up a long hill, and the mother sat rocking and knitting by the roadside, he told her that her boy had been spoken off the Cape of Good Hope, or that his ship had been reported from Rio. When any body was sick along the road, he bore the daily intelligence to friends, who stood at their doors waiting for it; by what divination it was communicated nobody could tell, but the effect was instantaneous; so, by an invisible, and, as it were, omnipotent hand, he dropped joy and tears, smiles and sorrow, wherever he went; and his own heart was so much in it all, none could help loving him. In addition, and notwithstanding Mr. St. John, he gave little gratuitous rides; he let the boys hang on behind; and in the winter we heard of his taking up half a dozen school children with their mistress, and helping them through snow-drifts. Then he carried the mail, which is itself a small universe in a leather-bag;—here sweet spring to some bleak and ice-bound soul—at the next turn a black thunder storm on some tranquil household—now singing at one corner of its mouth, as if it was full of Jenny Linds—anon tromboning out its melancholy intelligence; and, like a Leyden jar on wheels, giving everybody a jar as it passes, making some laugh and others scream. Winkle carried this, and it was as if Winkle himself was it; and some people, notwithstanding they loved him so, hardly dare see him, or have him open his mouth; they didn't know, any more than Aunt Grint, what had happened, or what might happen. In addition, he brought people home; and as he drove on, *he* got the first sight of the old roof and chimneys; *he* got the first sight of the rose bushes and lilacs in the yard; *he* saw, too, by the quietness about the house, that a surprise was on hand; he knew perfectly well that the daughter whom he was bringing was not expected, and that she meant to surprise the old folks. He did not hurry his horses; he did not make any sign. He landed the young lady at the gate, and was taking off the baggage, when he heard a scream in the door. He had expected it all, and looked so sober, as he pulled at the strap, with one foot on the wheel, and his back bent to the ground. 'Naughty, naughty Winkle!' cried the mother, 'why didn't you tell us Susan was coming? You have almost killed me?' Winkle loved to kill people so."

Oyster-Shell Lime.

While spending a few hours on Staten Island lately, we saw a simple and efficient mode of making oyster-shell lime, which we record for the benefit of such of our readers as have the opportunity to put it in practice.

Mr. Dunning (for it is upon this gentlemen's place the thing is done) builds up with rough stone walls, a circular kiln about five feet in diameter—just as you would stone up a well. A spot is selected on a side hill, where the slope of ground is such that with a slight excavation the base of the kiln is exposed on the lower side. Here a small opening—a rude archway of 18 or 20 inches wide and a little more in height—is left as a sort of furnace—to be filled with fagots, brush and stumps of trees, and like rubbish, to be had on almost every country place. Over this furnace a few bars of iron are built into the wall, to hold up the first layer of oyster-shells. In filling the kiln, a layer of oyster shells and a thin layer or sprinkling of the screenings of anthracite coal are put alternately till the kiln is filled up to the top—making in all a depth of some four to six feet. The fire is lighted among the fagots and rough wood below, and gradually spreads through the whole kiln, burning the oyster shells into excellent lime. When we say that oyster shells make the purest and best lime for all horticultural purposes, and especially for fruit trees, and in most of our Atlantic towns they are wholly wasted, and though so easily burned in this way in these simple kilns, (which once made will last a dozen years) we think we offer a hint, which many subscribers will lose no time in profiting by.

[Horticulturist.

HUMAN TESTIMONY.—A few days ago a dead body was found near Milwaukee, and public opinion generally became satisfied that it was the sad remains of John Dwyer, a sailor accustomed to sail from that port, and well-known there for years. Three ladies with whom Dwyer had boarded in Milwaukee during the last four years, all identified the body as that of their late boarder. It appears that Dwyer left the city a few months since, for the exterior, on a job of wood-chopping, and the next day a man named Harrison came in, saying Dwyer had sent for his clothing, which was given him. Officers started off in pursuit of Harrison, that he might be forced to give an account of poor Dwyer, and he did, for he carried the police to where D. was at work. The latter gentleman assurred the officers that he was not dead, had not been murdered, and was in excellent health. The Coroner's jury, in the face of this evidence, had to reject that of the ladies who so conscientiously and honestly, yet mistakenly, had testified to the identity of the body.

[Chicago Times.

DRESS.—The honorable Miss Murray, sister of a Scotch Duke, and maid of honor to Queen Victoria, has been staying for some days in New York. Miss Murray is a lady of fine person, robust health, and uncommon energy of character—aged about 35 years. Her frank and cordial manners, her intelligence and her great kindness of heart, secured her many friends. She appears, however, to have been struck with amazement at the extravagant expenditure, the helplessness, and the ill health of that unfortunate class of beings, the fashionable women of our cities. Miss Murray, like the fashionable women of Europe, dresses so plainly that it probably costs her less to dress one year, than many a New York lady expends for half-a-dozen handkerchiefs. It is a settled thing in Europe, that extravagance in dress is the very extreme of vulgarity, and is never indulged in except by those whose only claim to distinction is the length of their purse.

AN INCIDENT OF WAR.—We extract the following passage from the letter of a private soldier, dated at Sebastopol, and published in the London *Times*:—

"Having seen Mr. Russell's glowing description of the battle of Inkermann, I need not attempt to say a word on the subject. From his description, all you wanted to give life to the word-painting was to hear the roaring of the cannons and listen to the clash of arms. One scene, however, I cannot withhold, as it affected me so much. In the heat of the battle a young Russian officer made himself very conspicuous, and appeared indifferent to danger. He was tall, handsome, and indeed beautiful. Twice I had my rifle raised to shoot him, but my heart smote me, and I turned it in another direction. In an hour I saw him again, but O, how changed? His cheeks which had been flushed with the heat of the strife, were now deadly pale. He lay, or half-reclined, on the edge of a hillock, and held the miniature likeness of a pretty young lady in his hand, which had been tied to his neck by a small gold chain. His eyes were fixed upon it, but they were fixed in death. I cannot tell you what my feelings were. Indeed, I cannot venture. It would unman me."

UNTUTORED ELOQUENCE.—A Catawba warrior in 1812, named Peter Harris, made known his wants to the Legislature of South Carolina in the following language:—

"I am one of the lingering survivors of an almost extinguished race. Our graves will soon be our only habitation. I am one of the few stalks that still remain in the field where the tempest of revolution passed. I have fought against the British for your sake. The British have disappeared and you are free; yet from me have the British taken nothing, nor have I gained any thing by their defeat. I pursued the deer for subsistence—the deer are disappearing, I must starve. God ordained me for the forest, and my ambition is the shade. But the strength of my arm decays, and my feet fail me in the chase. The hand which fought for your liberties is now open for your relief. In my youth I bled in battle that you might have independence—let not my heart in my old age bleed for want of your commiseration."

THE EMPEROR NICHOLAS AND HIS PHYSICIAN.—Dr. Mandt, the physcian who attended the Czar Nicholas in his last illness, has published a circumstantial account of the closing scenes of the Monarch's life.

"At ten minutes past three," says the Doctor, "he asked me, after I had mentioned the name of his father confessor, 'Must I then die?' I answered, 'Yes, sire.' Not a muscle of his face moved, not the least quickening of pulsation. 'How,' said he, 'can you find the courage thus to doom me to death—to tell me so to my face?' 'First,' said I, 'by so doing I fulfill a promise made to you a year and a half ago; the moment of which you then spoke to me, alas! has come; moreover, I thus fulfill a duty to the Emperor. You have several hours to live; you are in full possession of your faculties, and can direct them at your will—at least I believe so. Lastly, sire, I love you, and this is not the moment to conceal the truth, which I am sure you can bear to hear.' His countenance became serene, and he stretched out his hand saying, "I thank you!" Such was the Emperor.

AFFAIRS IN KANSAS.—The excitement in Kansas has already resulted in bloodshed. A leader of the Pro-Slavery party named Clark has been killed at a public meeting at Leavenworth. A dispute arose as to which party had the majority. Mr. Clark claimed it for the negro-drivers, and McRea, one of the other side, replied that this was a lie. Hereupon Clark struck McRea with a club, stunning him; but as soon as he came to himself he drew a revolver and shot his assailant dead. This done, he escaped, though shots were fired at him. Finally his friends gave him up to the United States officers at the fort, in whose custody he remained at our latest advices, though a desire to take him out and lynch him was manifested by the slave-drivers.

It is also reported, that the house of George V. Park, of Parkville, Mo., whose printing establishment was lately thrown into the Missouri River, has been burned down by his enemies, and he himself lynched in Kansas.

WHITEWASH.—Poor whitewash is a serious injury to a wall or ceiling, and when once on it is difficult to get it off or properly cover it and produce a clear white appearance. This is the season for cleaning up, and we will give the recipe for a first rate wash. Quick lime, slacked by boiling water, stirring it until so slacked. Then dissolve in water white vitriol, (sulphate of zinc,) which you get at the druggists, at the rate of two pounds of zinc to a half barrel of whitewash, making it the consistency of rich milk. This sulphate of zinc will cause the wash to harden; and to prevent the lime from rubbing off, a pound of fine salt should be thrown into it.

The British ship Bruiser has been converted into a complete flour mill, capable of grinding from 700 to 800 bushels of wheat per day—taking the raw material in at one end of the vessel, in the form of wheat, and turning it out at the other in well manufactured flour, without the intervention of manual labor. The machinery is both ingenious and compact, and in moderate weather may be worked without suspending the progress of the vessel, notwithstanding it is all driven by the marine engine. The Abundance has been fitted up as a large bakery, and is capable of turning out 20,000 lbs. of bread per day with the aid of some very simple machinery. These vessels will be dispatched to the Black Sea with all haste.

Three jails in Vermont are empty, two have but one inmate each, two others have four each, and one has six and another seven. The average is but three to each jail in the State.

There are now in the United States thirty-two insane hospitals in active operation, and nine others in course of construction. Twenty-eight are State institutions; and the number of the insane is nearly 20,000.

The Sing Sing *Herald* says they have a baby in that town, some four or five months old, that weighs four pounds. At its birth it weighed one pound fourteen ounces.

Mr. Noah Fowler, of Prince William's County, Va., has discovered, on his farm, an extensive and highly valuable bed of soap-stone.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12½ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass.
Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. SANDS, retail by RUSHTON, CLARK & CO., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

GEO. B. UTTER, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.

Rates of Advertising.

For a square of 16 lines or less—one insertion.......... $ 75

GEOLOGY AND THE BIBLE—NO. 3.

Theories adopted by some to account for the Phenomena presented by the Rocks.

I will now proceed to examine the theories most commonly adopted to explain the facts of Geology without assigning to the earth more than six thousand years of age. It will be sufficient, by way of introduction, to remark, that these theories are advanced by only a few individuals, and those not much noted for scientific erudition. While these *theorists* pretend to see much that is wild and incredible in the theories of Geologists, and even feign to look with holy horror on *all theories*, they at the same time advance theories more wild and fantastic, and more at variance with all the laws of nature and teachings of revelation, than the most enthusiastic Geologist has ever promulgated, even in the earliest infancy of the science, while the *facts* of the science were all but dimly seen and imperfectly developed.

The first of the two theories which I shall notice, may be stated in the words of Mr. E. Lord, in a work entitled "Epoch of Creation," page 239. This theory admits the facts in relation to the ten miles in thickness of stratified rocks, and the organic remains imbedded in them, and admits the agency of water in depositing the rock, but assigns the Noachian deluge as the sufficient cause. It assumes that "the whole mass of sedimentary matter was dissolved, intermixed with the existing plants and animals, and held in solution in the waters of the deluge; and under the influence of mechanical, chemical, galvanic, electric, and perhaps other forces, precipitated, distributed into beds of diverse mineral composition, and subsequently elevated above the sea level." This theory is involved in so many *absurdities* and *impossibilities*, that it refutes itself; yet Mr. L. announces it with a great flourish of trumpets.

This theory requires us first to believe, that in three hundred and eighty days the water, which gradually came upon the earth and gradually left it, so that they prevailed not more than half that time in full force, did, nevertheless, break up the solid crust of the whole earth to the depth of ten miles, and completely dissolve the whole mighty mass to the fineness of the minutest grains of sand, and then deposit it in beds and layers with the nicest regularity, each composed of material entirely different from the other in composition, and each entombing plants and animals so carefully that the minutest veins of the leaf, and the beautiful structure of the most delicate parts of animals, remain in all their natural perfection. Such a belief must set at defiance all the laws of the physical universe, and more than rival all the wildest vagaries of the maniac. So far from this breaking up the solid crust of the earth, those most competent to judge can scarcely find a single mark that the deluge left on the earth's surface. Old Ararat at least reared his bold head above the waters, to show that the solid earth had not been dissolved; and indeed a delicate olive tree survived the mighty dissolution.

Arguments against such a monstrous hypothesis seem wasted. This most *palpable want of time* during which the waters prevailed on the earth, to accomplish so mighty a task, is amply sufficient to refute the strange theory; but other facts, equally conclusive, might be mentioned.

First—On this supposition, the organic remains ought to be mingled confusedly together, since they must have been brought over the land promiscuously by the rushing waters; but they are in fact arranged with as much regularity as the specimens of a well-arranged cabinet, and in a state of preservation totally incompatible with such a rapid dispersion and deposition, if *that* indeed had been possible.

Secondly—Comparative anatomy demonstrates, that the different groups of plants and animals imbedded in the rocks could not have lived at the same time on the earth, as they must have done if they were all buried by the Noachian deluge. Immense intervals of time must have elapsed for the earth to change its temperature and other features sufficiently for one of these groups of animals to have succeeded another.

Thirdly—If the Noachian deluge deposited the stratified rocks, and entombed in their solid bosoms the myriads of organic creatures which lie imbedded there, it would have buried *man* and his implements of art along with all the rest. But this is not true. His remains occur only on the very surface of the earth, not more than a few hundred feet deep. Why did not the flood bury in adamant some one of those hoary patriarchs of antedeluvian times? Why not have preserved a specimen of Jubal's organ, or some tool from the bench of Tubal Cain? But I need not multiply arguments on this most absurd hypothesis. No reasonable man will long maintain it, after carefully studying the subject.

The next theory which I shall notice is one more generally received than the last mentioned, although having little if any more sound reason to support it. One of its advocates states it thus: "Almighty God may, by the mere fiat of his power, have intentionally brought every rock and stratum, every fossil leaf, and shell, and bone, into its present form and condition."

This theory rests entirely on the assumption, that God *could have thus created* these fossils. If no one shall undertake to deny that God *could* thus have done, certainly he may not be wanting in respect for God to inquire, whether he *did* thus proceed. It is easy enough to affirm that God *could have created* the trees of our forests just as they now stand; He could have created our own bodies just as they now are; but it would not do great credit to our reasoning powers to affirm that, therefore, he *did thus create these objects.* Not less illogical is the reasoning on which this hypothesis is founded. It is a sufficient refutation of this theory, to affirm that it sets at defiance one of the fundamental principles on which all inductive reasoning depends. It denies the constancy of nature's laws, and makes God to have amused himself in creating abortions, and in making fantastic shapes, and indubitable evidences of life, when life never existed. It affirms, that because God *could* thus have played tricks to deceive the human understanding, therefore he *did* do it. The question, then, stated in its real import, is this: *Might not the God of infinite truth have enclosed in the earth at its creation evidences of its having existed ages before its actual production?* When the question comes thus to stand in its naked inconsistency, it annihilates itself. The logic of those who maintain this theory, when reduced to the logical formula, stands thus:

Major proposition—Whatever God could have done he has done.

Minor proposition—God could have created the stratified rock just as they now are, with all the fossil plants and animals which they now contain.

Conclusion—Therefore, God did thus create them.

Now, the only difficulty with this syllogism is, that it is untrue in both its propositions, and false in its conclusion. The first proposition is false, because it flatly denies God's omnipotence. The second is false, because it represents God as having given false testimony of the age of the world. The testimony of the rocks is most conclusive of the great antiquity of the world, but if it have not that antiquity, then the testimony is false, and God, in giving this testimony, has lied. But if both propositions be true, the conclusion by no means follows. Such logic is befitting such a proposition.

Having disposed of the reasons *for* this hypothesis, (and the above are all that I have ever seen in its favor,) let us examine the evidence for the opposite theory, and therefore against this. The proposition is, that God *did not create the rocks in their present form, and the fossils they contain*, but that the stratification of rocks, (for I need not go below the stratified,) is the result of second causes, which have been at work since the matter of which they are made was *created*, and that the organic remains found in them are the real remains of plants and animals which once lived on the earth. If this theory be true, the opposite must be false. First let us examine the *stratification* of the rocks. Is this *stratification* the result of the action of water and other agencies, or of original creation? The fundamental law of reasoning in all physical science, applied here, settles this question. It is this, *that the operation of physical law is constant, and the same in all time.* If this be denied, then all reasoning concerning the physical universe becomes *impossible.* But if it be admitted, then it must be admitted that the stratification of the rocks is the result of second causes.

Let the point be illustrated by a few examples. Suppose we enter a cave which man never before entered. On coming to a large apartment, we find the roof adorned by beautiful stalactites, some attached firmly to the roof, and some hanging by a very slight point of attachment. Presently one falls from its place and rests upon the floor. On going to examine it, you find hundreds of others just like it scattered about on the floor, and on looking up to the roof you perceive hundreds of places where they appear to have been formerly suspended. Now you are asked whether those which lay on the floor when you entered, were created in their present form and position at first, or whether they were formed on the roof, like those which are now forming there, and subsequently fell by the force of gravity, like the one you saw fall? No *rational* man will hesitate a moment. The *eye* is as likely to deceive the *perception*, as *these circumstances* are to deceive the *reason.* Reason affirms as unerringly, that all these stalactites once fell from the roof, as perception affirms that one of them did. The affirmation rests on a belief of the *constancy* of nature's laws. *Like causes produce like effects.*

Take another example, before applying the principle to the point at issue. Every person of common observation knows, that all trees of exoginous structure grow by the superaddition of annual layers upon the surface, which constitute the grain of the tree. Now suppose some naturalist finds a tree having a thousand layers, he at once affirms that it is a thousand years old. His affirmation is challenged, and proof demanded. Relying on the constancy of nature's laws, he affirms that trees, the world over, are now forming in the same way, adding one layer per year. But he is told that the tree has not been under human observation more than fifty years, and that all of the body inside of the fifty layers was created just as it now appears. This, of course, denies the constancy of the law of growth, and makes all further reasoning impossible.

Now, precisely of this character is the theory under consideration. Stratification is now going on almost all over the earth's surface. The loose materials worn from the channels of rivers, the shores of lakes and oceans, and the sides of mountains, are being deposited in the form of lamina and strata in the bottom of still waters, and this has been going on since man came on the earth, as no sane man will deny. So much of stratification, then, is known to have taken place by the operation of natural causes. But we soon come to the bottom of that which has been accomplished under human observation; beyond that, no human eye hath seen the sediment settle and consolidate in plates of different thicknesses; but still the stratification does not cease; still deeper and deeper the strata appear exactly analogous to that on the surface. The philosopher, relying on the constancy of nature's operations and laws, at once affirms, that all the stratified rocks were thus formed. But some would be sage arises and affirms, "that all the stratification below the observation of man is not the result of the laws which are now at work, but it was created so in the beginning." Those who thus affirm are welcome to all the credit that accrues to their reasoning powers from such an affirmation.

Now let us examine the question in the light of the fossils which the stratified rocks contain. These fossils consist of what appears to be the remains of some thirty thousand different species of animals, in all states of petrification, from the animal in which the process is but just begun, to the most perfect fossil buried seven miles deep in the solid rock. Now the question is, are these real animals turned to stone, or are they only abortions, which never breathed the breath of life? The theory under review affirms the latter. They were never real animals and plants, but were created just as they now are. Let us see how this theory will stand the test. In relation to these remains of plants and animals, it must be borne in mind, that they are no rough sketches, but that they contain all the minutest characteristics of the living beings they are supposed to have been. In the fossil plants we find all the delicate structure of the stem, both of exoginous and endoginous growth. The perfect leaf, to its minutest outline, with all the various forms which leaves can assume. The flower, in all its beauty of outline, enveloping the seed, with all its wonderful means of reproduction, are found in the rocks much more numerous than on the surface. As we descend to the older stratified rock, the luxuriance and quantity of the fossil flora increases, till it far surpasses that of the rankest growth in the present tropical climates of the earth. The flora of the ancient regions outside of the tropics far exceeded that of the present tropical regions, all according with the great fact, that the crust of the earth has been gradually cooling since the deposition of the stratified rocks commenced. All this is true of the supposed remains of animals. The lowest orders of animals are found in the earliest formations, before the climate had become well adapted to animals of higher organization. All the huge monsters of the sea and land which succeeded, were adapted to the changing condition of the climate, and the development of the vegetable kingdom to sustain them. These petrifactions contain all the beautiful and wonderful mechanism of respiration adapted to water-breathing, air-breathing, and amphibious animals. The circulating apparatus is also found in corresponding perfection in all these, exactly adapted to the demands of respiration, while the digestive apparatus is found in wonderful adaptation to the modes of life peculiar to the herbivorous, graminivorous, carnivorous, and omnivorous tribes of animals. Organs of locomotion, on land, through the air, and in the water, are found in perfection. Even the delicate organ of sight is preserved in all its magic beauty of adaptation, both simple and compound. More than this, the stomachs of herbivorous animals have been found filled with their vegetable contents, yet undigested, but perfectly petrified. Animals which constitute the food of the carnivora have also been found but partially digested in the stomach of its devourer, both devourer and devoured turned to stone. Such is an imperfect sketch of these inhabitants of the rocks. Are they *real petrifactions*, or only *simulara*, as the ancient heathen, and *some* modern Christians, affirm?

The evidence that they are what they seem to be, is founded on the constancy of nature's laws, as in the last case. Human observation also comes in to aid in the solution. It is a truth attested by all human experience, that wherever in nature phenomena *appeared* to be the result of natural causes, they *have been such.* And no principle of reasoning is better established than this, that where natural causes exist sufficient to explain natural phenomena, they must be thus explained. Now the process of petrification is a natural one, constantly going on in the great laboratory of nature, and it may be imitated with great exactness in that of the chemist. Animals and plants are now turning to stone, in the superfical strata where they have been buried. They exist in all states of preservation, from the specimen not changed at all, to the perfect fossil. Who shall say where, in the vast charnel house, nature ceased her work, and original creation began? We know that the fossils of the alluvial formation have been produced by the operation of natural laws; but those laws were just as competent to the task during the formation of the tertiary and secondary, and these remains are there in much greater abundance than in the alluvium, and have all the indications that they were formed precisely in the same manner. Now, who shall say that nature was dead, till the alluvium, with its fossils, was to begin its growth, and then that she sprang up like an armed man, to cover the earth with a new shield of rock, and change her inhabitants into eternal adamant?

Suppose we undertake to draw the line between *nature* and *miracle*—between those specimens which have already turned to stone, and those which have not yet lost their animal substance. We will then select specimens in which one half the body has turned to stone, while the other part, say the head and fore feet, are yet unchanged. Now the line must go through the middle of the body. *Miracle* made the posterior half, but getting weary of the task, nature came to her aid, and, by her laws, *just now enacted*, put on the head.

Let us apply this rule to the formation of coral islands. We must, then, estimate how fast nature, by means of the polyparia, has been building them, and we shall not get half way down through the upper story, before our six thousand years will be consumed, and there we must draw our line, and let *miracle* have the honor of building all the inferior stories. Now it must be confessed, that *nature*, in splicing her work on to the top of that built by *miracle*, made a first-rate joint, considering it was her *first effort* at coral building.

Let us see how this principle (or rather *absence* of principle) will work, when applied to the light of the distant stars. In another article we have stated, that Sir William Herschel's telescope reveals stars at such a distance that their light, traveling at the usual velocity of light passing through the air, must have been nearly two million years in reaching the earth, and hence, that at the moment that the light from that star reached the earth, that star must have been shining about two million years. Now suppose we affirm that light used to travel much faster than it now does, so much so that six thousand years has been ample time for the journey. The only difficulty in which such an hypothesis will involve us, is that of proving that the laws regulating the transmission of light through space have undergone an essential amendment since the days of Adam and Eve, so that they now travel at a *safer speed.* The difficulty of showing this is not greater than Archimides encountered in his anxiety to pay the earth off from its foundation, for he only lacked the fulcrum on which to rest his ponderous lever. But we have yet one alternative. We can affirm, that the star is only six thousand years old, but that its light started bravely from the hand of *miracle*, and traveled so far that *nature* could tug it the rest of the way at the rate of 192,000 miles in a second of time. This is good speed for a new-tried power. The difficulties of this theory are not much greater than those of the last supposition.

Suppose now we adopt this somewhat popular theory, that all the phenomena of the rocks and their contents are the result of miracle, and not of the operation of natural causes, such as are now producing exactly similar results. We shall then have an easy solution for many vexing questions. Who built those stupendous stone heaps of Egypt, and who buried those skeleton forms in those catecombs? History is silent. Tradition is dumb. They date beyond the memory of man. Our theory affords an easy solution, and at once triumphantly exclaims, God *could have created* them just as they are; therefore he *did thus create* them. Who shall say aught against our conclusion? It will not avail to say that they are the work of men, *because* men *are now*, and *always have been*, building similar structures; for what nation has ever built such structures as those at Cairo? And do you say that any nation, or race of men, has been able to reproduce those dried mummies? Certainly not. It must have been the result of a miracle. The buried cities of Asia were created under ground, for God could as easily have thus created them, as to have buried them after man had built them. The mysterious ruins and strange mounds of Western America, might have been created as they are, as easily as any way, and those apparent remains of human forms, so frequently dug from them, were never *human forms* in reality, but only images to foreshadow the living races that now walk above them, and show them that God tried once to get up the human race, but failed, and covered them all up in the earth, and then, taught by experience, produced a race which he called "*very good.*" This hypothesis is indeed valuable to him who would easily outstrip all his compeers in solving difficult problems, for it leads to conclusions by marvelous strides, over all the common rules of reasoning and established laws of nature. This is its chief recommendation. Now, if these results appear ridiculous, the fault is in the theory itself. I have no intention of discarding miracles. They have been employed but rather sparingly in the world's history. Where they have been needed they have been used, but where natural causes exist adequate to the explanation of phenomena, it is not philosophical, nor scriptural, to drag them in to avoid certain conclusions which we do not like. Wherever else in the progress of events they may have been employed, I am confident they were not employed in the deposition of the stratified rocks, nor in the burying of the organic remains in those rocks, but that they were deposited and buried by the same process of nature as is now so actively engaged in the same work. Believing this, the conclusion of the great age of the earth is inevitable. But I am not alarmed at such a conclusion, for I find nothing, either in nature or revelation, to forbid. I believe this view will be generally adopted, and that too without shutting its advocates up in prison, and compelling them to recant their "heresy" on their knees, as was the case when the true theories of Astronomy were first promulgated, and men were called upon to renounce their false interpretations of Scripture. I await the good time with no impatience whatever. Investigation, study, and discussion, will bring it soon enough. Let us search for the truth as for hidden treasures.

D. E. M.

HE SHALL NOT LOSE BY IT.

So said Mrs. B. in our presence the other day, in reference to an act of kindness shown her by a shop-keeper. She was in need of a very small quantity of a certain article, which, from special circumstances, was of much consequence to her, but must have seemed a trifle to the shopman. She was not a regular customer of his, and he did not even know her name. Yet he left his place of business, and went in person to a wholesale house at some distance, and succeeded, after much trouble, in providing the desideratum. His obliging disposition in the circumstances was considered remarkable, and in return Mrs. B. resolved that he should "not lose" by his kindness. She will purchase more largely than heretofore, and will recommend him to her friends. The shopman will find in the end that his trouble about a trifle was a good operation as a business transaction. It is possible that, as a far-seeing man, he may have had an eye to the future at the time; if so, his sagacity will not have been in vain.

The above is a good illustration of the principle that kindness brings its own reward. Not a few seem to act upon the idea that a friendly and obliging disposition is altogether unnecessary in business operations—that whatever is done out of the ordinary routine through mere kindness, is so much dead loss. This is a great mistake. The mass of people are won by even the smallest indications of a spirit of accommodation. A trifling favor wins the gratitude and confidence, and makes a lasting impression. As a mere matter of self interest, therefore, a generous and obliging policy commends itself to all business men as the best. Then, how much more pleasure is afforded to all parties. The shopman who took the trouble to oblige a transient customer in a small matter, was none the worse off in feelings, any more than he was in purse. He doubtless felt all the better, because he was doing what he knew would give pleasure. His success was rewarded at the time by a cheerful smile and hearty thanks. It was a ray of sunshine in two hearts. How much even the petty details of ordinary traffic would be transformed from mere hard toil to the means of cultivating the kindlier feelings, did this spirit generally prevail! How wise and benevolent that word of our blessed Lord, if carried into all the concerns of life, "As ye would that men should do to you, do ye also to them likewise." No one, in any sense, "would lose by it."

[Presbyterian.

For the Sabbath Recorder.

DEATH.

Why is it that we turn in grief and terror
  From the unwelcome thought that we must die?
To the pure spirit death is but a portal
  To an eternity of bliss on high.

When shall we waken, Saviour, in thy likeness?
  O! when shall death be lost in victory?
When shall we lay aside this mortal nature,
  And put on robes of immortality?

When we are walking through the darksome valley,
  Lead us, O Saviour, through its fearful gloom;
Sustain us, Thou who knew its keenest anguish,
  And smooth our passage to the silent tomb. SARAH.

SHILOH, N. J., 1855.

For the Sabbath Recorder.

THE OBLIGATIONS OF LAW.

To protect and secure equal rights, and to establish justice between man and man, law is instituted as a rule of conduct, deriving its real force, not from the policy or expediency of the circumstances attendant on any peculiar delegated body, but from a Supreme Power, that has established a certain order of sequents, as the results of the infraction of those immutable first principles that govern the moral universe. These principles, applied in law, are not only designed to connect in sympathy and feeling the purpose of the creature with the Creator, but also to protect the rights of our fellow beings or neighbors, and to teach us to exercise the same solicitude for them that we feel for ourselves; and upon these great principles, as set forth by Christ, he declares "hangs all the law and the prophets." Matt. 22:40.

This position is sustained by the most celebrated and time-honored writers of law. Says Cicero: "Whatever is JUST is also the true LAW, nor can this true law be abrogated by any written enactments." Justinian and Blackstone say: "The precepts of law are, to live honestly, to hurt no one, to give to every one his due." "The essence of all LAW," says Hampden, "is JUSTICE. What is not just is not law, and what is not law ought not to be obeyed."

Nor are we dependent alone on human testimony for the truth of our position, for God by inspiration has made known the obligations of man. "He hath showed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?" Micah 6:8. The obligations to all real enactments based on these principles, are the most solemn and imperative, because they are but the transcript of those natural rights which are founded in our very beings and relations, and designed to protect the inalienable rights of man, by securing the weak against the aggressions of the strong, creating restraints for the refractory and lawless, and by making peace, harmony and equity the real genius of all the legitimate organizations of human society; and he who wantonly violates these, not only entails upon himself the temporal consequences of the human law, but also the eternal consequences of the transgression of the divine law. But, on the other hand, every enactment of man that does not look beyond the selfish policy and interests of the body or power that framed it, up to the great principles of right and wrong, of justice and humanity, as its starting point, or that wrests from one or more of God's creatures those rights guaranteed to them by the immutable laws of Heaven, or that oppress and degrade man in the scale of his being, and thus pervert the design of God in his existence, are not binding or incumbent upon any of God's creatures, even though they may have attached to them fearful consequences, in the place of penalties, and be enforced by great physical powers; because such enactments are not only indirect rebellion against the laws of nature and of nature's God, but, when applied, thwart the very purpose they were designed to accomplish, by producing injustice where there should be justice, disunion where there should be union, and misery where there should be happiness; and as the ultimate result, the final overthrow of such government, as the history of the past most clearly demonstrates. Any enactment, therefore, of man, that forbids to give food to the hungry, shelter and rest to the weary, clothing to the naked, or to bind up the wounds of the bruised, of any of the creatures that God has created, regardless of the distinctions of birth or shade of complexion, are not, nor can they be ever binding, so long as the moral government of God remains unchanged; for this is our known and revealed duty, both to God and man, which no human enactments can abrogate or reverse, even though backed up by ever so great a preponderance of mere brute force; because the sequents of the laws that govern the moral universe, like those of the natural, admit of no change or reversion, at the will or desire of any man or any class of men. The earth will revolve on its axis, producing its day and night, its light and darkness; and again in its orbit, producing its seasons of cold and heat, of vegetation, and decay; for all that man may will or enact to the contrary. So, too, amid all the mazes of human expediency and motive, God carries forward the laws of his moral government with unchanging certainty and unerring righteousness, meting out awards to the right, and punishments to the wrong; for right is supreme, and wrong is odious, and must meet with the eternal consequences of the violation of divine law, though covered over with human enactments, and dignified by the name of law.

S. B.

LORD BACON.

Francis Bacon, the "father of experimental philosophy," was born in London, in 1561, and educated at Cambridge, where he made great progress in all the sciences. He subsequently traveled in France, and gave to the world the results of his observations, in a work entitled "Of the State of Europe." The sudden death of his father, in 1579, obliged him to return to England, and pursue the study of the law. In 1590 he obtained the post of counsel extraordinary to Queen Elizabeth, and a seat in Parliament. Shortly afterwards the Earl of Essex presented him with an estate at Twickenham, worth £2,000, a favor which Bacon returned with the basest ingratitude. On the accession of James he was knighted, and obtained successively the offices of King's Counsel, Solicitor General, Judge of the Marshalsea Court, and Attorney General. In 1619 he was created Lord High Chancellor of England and Baron Verulam; in the following year the latter title gave place to that of Viscount of St. Albans. He had now reached the summit of his ambition, but his arbitrary and unprincipled conduct exposed him to degradation and disgrace. He received bribes from suitors before the Court of Chancery, and allowed Villiers to interfere with his decisions as a judge. A parliamentary committee, appointed to inquire into his conduct, pronounced him guilty of the crimes and corruptions with which he was charged, and fined him £40,000, together with imprisonment in the Tower during the king's pleasure. They also declared him forever incapable of holding any office or emolument. Thus fell Bacon—"the brightest, meanest of mankind;" but the nature and importance of his works have done much to redeem his name and memory from merited infamy. At the period of his death his debts amounted to £22,000, although he possessed an annual income of £2,500.

THE CHURCH'S STRENGTH.

The converts of the day of Pentecost, if doubled once in ten years, would, at the end of two centuries, have equaled the whole population of the globe. Yes, if Christians had continued to labor so faithfully, so humbly, and so prayerfully, and God had so blessed their labors as to make each convert the instrument of the conversion of two persons every ten years, the morning which ushered in the third century from that memorable day, would have shone upon a world containing not one soul unreconciled to God. Why then did not Christianity go on "conquering and to conquer," until its triumph was co-extensive with the abodes of man? Alas, the fault was in her professed friends. Even before the grave had closed on the last of the apostles, pride and emulation and worldliness began to mar the beauty and paralyze the energies of the Christian church. And as years rolled on the scene became darker and darker still, until at length a night of gloom settled down upon the world, which continued unbroken for ten centuries.

How impressive the lesson thus taught us by history. How clearly does it show that the strength of the church is in proportion to her purity and spirituality. Let her once more cherish the pentecostal spirit, and would she not experience pentecostal success, and receive pentecostal blessing?

[American Messenger.

SCRIPTURE WELL APPLIED.

It is stated that Bishop Doane, of New Jersey, is strongly opposed to temperance. A short time since, Rev. Mr. Perkins, of the same denomination, and a member of the order of the "Sons," dined with the bishop, who, pouring out a glass of wine, desired the Rev. gentleman to drink with him, whereupon he replied:

"Can't do it, bishop; 'wine is a mocker.'"

"Take a glass of brandy, then," said the distinguished ecclesiastic.

"Can't do it, bishop; 'strong drink is raging.'"

By this time, the bishop becoming somewhat restive and excited, said to Mr. Perkins:

"You will pass the decanter to the gentleman next to you?"

"No, bishop, I can't do that—'woe unto him that putteth the bottle to his neighbor's lips.'"

What was the peculiar mental condition or moral state of the bishop at this stage of the proceeding, our informant did not state.

A CRUMB FOR COMFORT.—Here is not only a crumb for comfort, but a whole loaf, for clergymen who lament the slim attendance upon religious worship. Rev. Mr. B. of Huntingdon, tutor in Divinity to the Associate Synod, in a letter of paternal counsels and cautions to one of his pupils newly settled in a small congregation, wrote thus: "I know the vanity of your heart, and that you will feel mortified that your congregation is very small in comparison with those of your brethren around you; but assure yourself on the word of an old man, that when you come to give an account of them to the Lord Christ, at his judgment seat, you will think you have enough."

To the thoughtful observer, how much does the human countenance reveal! The faces that move by us in the crowded streets are each an open book, in which life-histories are traced by an unerring pen. Cares have their record, sin leaves its mark, and pure thoughts beam out in living characters.

A man's own good breeding is the best protection against other people's ill manners.

GLIMPSES OF DOMESTIC LIFE IN CHINA.

As affected by the Rebellion.

Oct. 21st.—Again visited the city. But little change seemed apparent, except that the streets were more deserted and silent, the grass had grown tall in the once crowded highways, and the weeds were rank and unheeded. Our street was in the same desolate state as that in which it was left by the devastating fire of February last; the rubbish lay in heaps, except that a foot-path had been cleared away. There was no man to rebuild these once elegant dwellings, and few to inhabit, had they been rebuilt. Of the former inhabitants, many had left the city before the fire; some had since been sheltered beneath our roof; and others might have been still in the city, concealed from the search of their oppressors. Our own gateway, which was destroyed by the fire, had been replaced by a rude dead wall, so that our only entrance to the house was by a narrow back lane. We at once went to the chapel, and I was much surprised to find the seats regularly arranged, as if for service, and several persons present, apparently awaiting the usual Sabbath exercises. Such proved to be the case, for our house had become the rendezvous of the oppressed, and in the momentary feeling of security, past trials and future forebodings seemed forgotten, and we were met by cheerful faces, glad voices, and the boisterous welcome of children. I had expected to meet old friends, but was not prepared for these most striking features in the scene, and they went to my heart like the reviving of old memories long buried with the past.

After a brief interval, we left this interesting group, and went to seek out the abodes of our suffering friends. Called first at the house of the Chung family; but no familiar face was there to greet us. She who alone had remained (the mother of Ne-May) sole tenant of the deserted mansion, and who had often welcomed Mr. Carpenter as the only messenger who might tell her of those she loved, now scattered abroad, without the city walls, was indeed there, but with no voice of greeting for us. More than a twelvemonth had she lived on, and borne her grief and sickness, in solitude and almost alone. But she had at last sunk beneath them, and all was forgotten in the quiet sleep of death. Her simple unstained coffin contrasted strangely with the elaborately carved one of her brother-in-law, which stood beside it. But his had been the offering of a proud and opulent family, and hers the humble tribute of a widowed sister's love. It was strange to see the coffin of a female thus left exposed in the family hall; but where were the friends to bury her out of their sight?—and had they been with her, how could permission be obtained to carry her forth to the burying? A beleaguered city is not the place in which one might choose to live or to die, yet we trusted that her afflictions had been blessed to her, and although, from the display of the mock lotus flower on the head of her coffin, and the position of the shoes beneath it, we knew that the shadows of heathenism still darkened that dwelling, yet we remembered her professions of penitence, and love to the Saviour, and reliance upon his merits, and we trusted that although at the eleventh hour, she had indeed accepted the long-slighted mercy of God. Her last Sabbath on earth had borne witness to her tears and expressions of confidence in God, and we trusted that her weary spirit had found rest with him.

It was a sad walk to the house of Nya-ee, through the desolate streets. Occasionally a shop would be open, and at the door of one we saw a well-dressed woman weeping bitterly. We learned it was want, or fear of it, that distressed her, and while Mr. C. was handing her some cash, a rebel officer with several attendants passed and inquired what was the matter? Mr. C. told him, when, with a pompous display of incredulity, he turned away, saying in English, "Oh, no!" and we saw at once the kind of sympathy these poor sufferers must expect from those who have usurped authority over them. Nya-ee and Annah welcomed us, with silent tears, and a new cause of grief was soon made known. The youngest son of Nya-ee had recently married, and his wife was kept secreted at this house. "We do not fear starvation," said Nya-ee, "but we fear for our lives. Should the rebels discover so young a woman here, they would seek to take her away, and if her husband opposed them, they would strike off his head." They hoped we could bring her out with us, for they knew Mr. C. had relieved many from their bondage, and why could he not rescue her? They little knew the repulses he had latterly met. They knew not how often their Pharaoh had been entreated to let the people go, nor how his heart seemed to grow harder at every petition, until it seemed an actual injury to the oppressed to solicit in their favor. The poor girl's hope had evidently centered in us, and it was cruel to disappoint her; but there was no alternative. A terrible foreboding had come over them all, and we wondered not, for terrible had been the infliction of misery upon the wretched families, detained against their will, prisoners in that doomed city. The heart revolts from the rehearsal of such inhumanities, of which volumes might be written. Let this "glimpse" suffice.

A week later Mr. Carpenter brought word that the husband was at liberty, having bought himself over the city wall; and another week, the still more joyful news, that the young wife was also free, rescued in like manner through the efforts of her husband, with whom she was safe beyond the power of their cruel oppressors. L. M. C.

LETTERS FROM PALESTINE—NO. 9.

Jaffa and Vicinity—Scenes of Domestic Life—The Arabs.

JAFFA, April 2, 1852.

This is one of the oldest towns mentioned in the Bible. It is called *Japho* in the Old Testament, and *Joppa* in the New Testament. It is now called *Jaffa* and *Yaffa*. The Scripture references to it are Josh. 19: 46; 2 Chron. 2: 16; Ezra 3: 7; Jonah 1: 3; Acts 9: 36; 10: 5, 32; 11: 5. From these citations it appears that Japho was near to or over against Rakkon, one of the border towns of Dan. On some maps it is included in the territory of Ephraim. There is a tradition that it existed before the flood! and that the rock to which Andromeda was chained was to be seen in the harbor in the time of Pliny!! Some suppose the city was built by Japhet, the eldest son of Noah. Certain it is, that it existed before the Israelites entered Canaan, if not previous to their settlement in Egypt. The cedars of Lebanon for the Temple were brought "by sea in floats" to this port, and carried hence to Jerusalem. Also the same for the second Temple. Here Jonah took ship in his flight from his mission to Nineveh; here Dorcas was raised from the dead, and here Peter had a vision on the house-top, and hither Cornelius sent messengers to him to come to Cæsarea, where the door of faith was first opened to the Gentiles, by preaching "that whosoever believeth in Him shall receive the remission of sins." Acts 10: 43.

The appearance of the town, as seen from the approach by sea or land, is bold and beautiful. But, like many paintings, it is seen to best advantage in the distance; the nearer the view, the less beauty to the beholder. It rises cone-like on a high point of land or sandy ridge close by the sea, and parallel with the coast, whose course is north and south. The highest point of the city may be one hundred and fifty or two hundred feet above the sea. The town itself is surrounded by a wall and fosses, except the latter by the sea-side. There are but two entrances; one from the harbor, opposite the Custom-House, and the other at the terminus of the Nablous, Jerusalem and Gaza roads; the latter is guarded by an outer and inner gate. Only the former, I believe, is used at present; it is closed an hour and a half after sun-set, and opened at daylight in the morning. It is also shut on the Mahommedan Sabbath, Sixth-day, between the hours of twelve and one P. M. This is done to favor the Muslems during prayer at the Mosque. Along or near the principal street, which winds its way to the sea, and thence south to the end of the city, are two fountains, the Mosque, the French and Austrian post offices, the bazaar or merchant stalls, and still further on the Armenian, Latin, and Greek convents, situated on the left, and overlooking the sea; also the French, English, Spanish, and American consulates.

Without the wall on the north are a few dwellings, one or more smith shops, and the Mahommedan cemetery. On the east and more immediately at the junction of the aforementioned roads, is quite a spacious market place, including orange men and fruit merchants, tinkers, cobblers, venders of bread, mats, home-made earthenware—a khan and café, and a few Egyptian smiths in low black tents, seated *a la Turque* at their small anvils, and keeping stroke as necessity and business require. The wife or one of the children blows the fire with a bag of skin under each hand. Shades of Vulcan, what a sight! A caricature upon Tubal-Cain and the smiths of the days of King Saul! There is no use in trying to describe them. Barnum might exhibit a sample and make money. Indeed, they look like the last dregs of human kind, and yet unite most strangely a little industry with a great deal of wretched squalidness and apparent misery.

South of the city are the quarantine buildings, and the cemeteries of the Greeks, Latins, and Armenians. The Protestant burying ground is near by, a little to the east of the town. Still further south, and down the coast, close by the sea, are several rude tanneries. The Catholics, who in regard to sacred places in the Holy Land are the know-every-things, point out Simon the tanner's house within the walls in the southern part of the city. Of late some pits have been discovered at the south-west corner of the wall without, at the water's edge, where they surmise the house of Simon to have stood. The Armenians show a walled cave two miles east of the town, near their convent garden, where Dorcas was raised from the dead!

The harbor of Jaffa is in fact nothing but the open sea, very unsafe in winter, but calm for the most part in spring, summer, and autumn. In time of storm, vessels put to sea, and steamers cannot land either mails or passengers. Though rocky and dangerous, it has always been the chief port of Palestine. The commerce of the place is considerable. I should think the trade would warrant a transient trip of some vessel from New York direct. It would be much to the convenience of our little colony for such a line to be established as would secure the arrival of a vessel from home in the spring and fall of the year, or in those months most favorable for trade and safe anchorage. It is the opinion of many, that it would pay.

The population of Jaffa is variously estimated from 5,000 to 7,000 inhabitants. Some say that fifteen hundred of these are Greeks, Latins, and Armenians. The Jews number seventy families. The Church Missionary Society has a mission here, with a membership of not more than twenty. The rest of the population are Mohammedans. "The mean geographical position of the city 32 deg. 3 min. 6 sec. N. E., and 34 deg. 44 min. 24 sec. E. longitude." Bergham's Memoir, p. 26. A most splendid view is presented on all sides of the town. To the west, the extended open sea; north, east, and south, the vale of Sharon, so celebrated in sacred song, and beyond the long unbroken range of mountains of Ephraim, extending south to the desert, and north to Ebal and Gerezim, and thence to Mount Carmel. Though the stranger has greatly marred the face of the country, the Christian traveler, on first entering the land, sees here a vast and varied outline of vale and mountain, goodly indeed to look upon, especially to the eye of faith, which beholds it as the glory of all lands.

The Arab, with all his wildness, appears social, kind, and hospitable. Yet the exercise of these virtues to strangers would seem prompted by the expectation of a liberal reward. Even this may in part be accounted for by his religion, which teaches him to regard the stranger as an infidel, as one forsaken of God, and having no claim upon the followers of the Prophet. Half the year the fellahs, or laboring class, (literally the plough men, live in the open air, where they cook, eat, and sleep, and enjoy life in real primitive style. As to personal cleanliness, they seem to think such a habit detrimental to health! Bathing is attended to rather as a religious ceremony than for any physical benefit. Sore eyes and blindness, one of the curses predicted, afflict great numbers of men, women, and children, much of which might perhaps be avoided by a free use of cold water.

The Bedouin loves his tent, leads a roving life, regards himself as superior to the Fellah, while the latter appears not conscious of inferiority, either in mind or body. Both have dealings with each other, though living in separate communities, and both are followers of the false prophet, but not so devoted to and irretrievably lost in the delusion, as to be beyond the reach of hope and mercy. Such at least is my hope. Many Christians whose acquaintance with the Arabs justify an opinion, have expressed themselves decidedly convinced that the day of their redemption draweth nigh. They affirm, that the Moslim faith is growing weaker. If so, and I have no reason to doubt it, our representatives should be ready to do their part in preaching unto them a more excellent way. The Lord of missions hasten the conversion of the Moslem in His time. WM. M. JONES.

BAPTIST MISSIONS.

At the 41st Annual Meeting of the American Baptist Missionary Union, held recently in Chicago, a printed abstract of the forthcoming Annual Report was circulated, from which we copy such paragraphs as will show our readers what fields this organization is occupying, and the extent to which those fields are being cultivated:—

During the last year five missionaries and two female assistants have been removed by death; Mrs. E. C. Judson, of the Maulmain Burman Mission; Rev. J. Benjamin, of the Tavoy; Rev. E. L. Abbott and Mrs. M. F. Beecher, of the Bassein; Rev. S. Van Husen, of the Teloogoo; Rev. J. Goddard, of the Ningpo; and Rev. J. Meeker, of the Shawanoe Mission. Three missionaries and two female assistants have, also, retired from their connection with the Union.

The receipts into the Treasury during the year, from all sources, were $114,907 58; the expenditures, $145,528 31. Of the receipts, $5,000 were from the American and Foreign Bible Society, $2,200 from the American Tract Society, and $4,000 from the U. S. Government. Compared with the preceding year, there was a falling off in expenditures of $860 05; in receipts, of $21,894 84; and in donations and legacies, $12,682 58.

Rev. H. B. Sherman, late of the African Mission, has been designated to Assam; Rev. C. Bennett embarked on his return to Burmah in February, and the Rev. E. B. Cross and Mrs. Cross in December. Rev. Messrs. A. B. Satterlee and G. P. Watrous, and their wives, appointed to Arracan, and the Rev. F. A. Douglass and wife, designated to the Teloogoos, sailed for their respective designations in October. Mr. Samson Talbot, a member of the Newton Theological Institution, and Mr. Robert B. Loomis, of Boston, a printer, have been appointed to Asiatic missions. Six applicants for appointment wait the consideration of the Committee—action in respect to them having been arrested by the state of the mission funds.

The Missionary Union has 5,281 life members, constituted by the payment of $100 each, of whom 476 were constituted the past year.

The Maulmain Burman Mission consists of one station, one outstation; 5 missionaries, one a printer, and 4 female assistants; 4 native assistants.

Maulmain Karen Mission—One station, 16 outstations; 4 preachers, one a printer, 4 female assistants; 16 native assistants.

Tavoy Mission—One station, 24 outstations; two missionaries and three female assistants; 23 Karen and 2 Burman assistants.

Arracan Mission—One station, 2 outstations; 3 missionaries and 5 female assistants; 8 native assistants.

Bassein Mission—One station, 50 outstations; 3 missionaries and 2 female assistants; 60 native assistants.

Rangoon Burman Station—One station, 4 outstations; 3 missionaries, one a physician, and 3 female assistants; 8 native assistants.

Rangoon Karen Department—One station, 28? outstations; 2 missionaries and 3 female assistants; 23? native assistants.

Henthada Mission—One station, 2 outstations; 2 missionaries and 2 female assistants; 6 native assistants.

Shwaygyeen Mission—One station, 5 outstations; one missionary and 3 ordained native assistants.

Toungoo Mission—One station, 5 outstations; one missionary and 1 female assistant; 4 native assistants.

Prome Mission—One station, 3 outstations; 2 missionaries and 2 female assistants; 2 native assistants.

Mission to Siam—One station, 4 outstations; 4 missionaries and 5 female assistants; 3 Chinese assistants.

Hongkong Mission—One station, 4 outstations; 2 missionaries; 4 native assistants.

Ningpo Mission—One station, 3 missionaries, one a physician, 4 female assistants; 4 native assistants.

Assam Mission—Three stations; 6 missionaries and 7 female assistants; 3 native assistants.

Mission to the Teloogoos—One station; 3 missionaries and 3 female assistants; 1 native assistant.

Mission to the Bassas—Two stations; 2 missionaries and 2 female assistants; 4 native assistants.

Mission to France—Eight stations and 9 outstations; 1 missionary and 1 female assistant; 7 ordained preachers and 9 other French assistants.

Mission to Germany—Forty-five stations, 406 outstations; 5 native missionaries and 31 other native preachers and assistants.

Mission to Greece—Two stations; 2 missionaries and 3 female assistants; 1 native assistant.

Indian Missions—Three missions; 10 stations, 11 outstations; 6 missionaries and 9 female assistants; 9 native assistants.

The number of missions under the direction of the Board is 22, of stations 84, and of outstations 574, including 406 in Germany. The number of missionaries is 57, of female assistants 63, and of native pastors and preachers 237; total 357. Three missionaries and 3 female assistants have joined the missions, 3 missionaries and 2 female assistants have retired from the service, and 5 missionaries and 2 female assistants have died. Two missionaries are under appointment, and there are six applicants. There are 218 churches, to which there have been added by baptism, so far as reported, 2,910; whole number of members is 17,548. The number of schools is 107, and of pupils 2,500.

From a notice of this meeting by one of our cotemporaries, we copy also the following statement:—

It is a day of trial for our Missionary Union; a debt of $30,000 having been incurred this year, which, added to a previous debt, makes $61,333. Worse than this, serious collisions have occurred between the Executive at Boston and several worthy missionaries, growing out of the work of a recent *deputation*. A difference of opinion obtains among the friends of missions generally as to the true theory of prosecuting missionary operations, especially as connected with schools and the teaching of English. Rev. Dr. Peck, Foreign Secretary, read a very elaborately-prepared paper on the mutual relations of the Union and its missionaries, a subject which has for some time past been the occasion of no little discussion. It was a principal point of debate at this session, under cover of resolutions touching the difficulties between the Executive and several of the tried and valuable laborers under their direction. No definitive action was had, the whole matter being substantially referred to a large committee for thorough and careful investigation.

SOUTHERN BAPTIST BENEVOLENT OPERATIONS.

The Southern Baptist Biennial Convention held its meeting at Montgomery, Alabama, commencing on the 11th of May. The *Watchman and Reflector* condenses from full reports the following items of general interest:—

The Board of Foreign Missions reported the receipt of $30,066 60 during the year, and an expenditure of $31,949 11, leaving a balance in the treasury of $4,325 35. Missions have been sustained at Canton, Shanghae, Liberia and Central Africa, embracing 20 stations, 44 missionaries and assistants, 17 schools, with 500 scholars, and 163 baptized during the year. The Home and Foreign Journal has a circulation of 14,000 copies, but its cost of publication exceeds its receipts by $900.

The Board of Home Missions reported receipts of $21,153 74, and expenditures of $22,132 06. The Board have nine agents, including the secretary, 90 missionaries, in connection with 250 churches and stations, number of baptisms during the year 1,096, membership of the churches sustained in whole or in part 9,019, meeting-houses begun or finished during the year 25.

The Publication Board reported a year of general prosperity, and alluded to the death of the late general agent, George Parks, with expressions of high esteem for his character, and of sorrow for their great loss.

The chief points of interest in the meeting were the transfer of the Indian Missions to the care of the Home Mission Board, which after much friendly discussion was finally adopted, thereby effecting a large saving both of men and money. A disposition to simplify the machinery of benevolent operations, and centralize instead of expanding the working force, would secure most beneficial results to the churches.

A rigid inquiry was also instituted into the reasons which actuated the Foreign Board in discharging Rev. I. J. Roberts from their service. He was allowed to speak at length in his own defense, but a judicious committee reported resolutions approving the course of the Board, and the convention adopted their report by a unanimous vote.

Important deliberations were also held upon the importance of establishing one Union Theological Seminary for the whole South and South-west, and the project seemed to meet with general favor.

BAPTIST MISSIONARY UNION.—The Board of Managers of the American Baptist Missionary Union held its forty-first annual session at Chicago, Ill., last month. The report of the Treasurer, presented on the occasion, showed rather a sad state of things. The total receipts for the year, from all sources, were $115,000; the expenditures were $132,994 83; making, with the balance of last year, a debt against the treasury of the Board of $61,333 25. The causes and cure for the existing state of things were much discussed in the meeting; some thinking that it was the result of internal dissension, and others that the blame rested on the plan of agencies to collect funds.

AGREEABLE SURPRISE.—Eld. James Bailey, pastor of the Seventh-day Baptist Church at Plainfield, N. J., has been building a house for himself, which was nearly completed when he was called away, week before last, to attend the meeting of the Eastern Association. On returning, last Sixth-day, and entering the apartments which he had left vacant, or in possession of the painters, he was surprised to find the parlor neatly and tastefully furnished, from carpet to curtains. On the center table lay a letter, which explained the mystery, and must have been as grateful as it was unexpected. Having obtained a copy of the letter, we print it, in hope of encouraging others to "go and do likewise."

MAY 30 1855

ELD. JAMES BAILEY—

Dear Brother,—We, the younger members of the Seventh-day Baptist church and congregation of Plainfield, N. J., have taken the liberty, during your absence, to furnish, in this simple manner, this apartment of your new dwelling, as a testimonial of our regard for our esteemed and beloved pastor. We trust we shall always repose that entire confidence in your Christian character, and shall ever cherish that deep respect for yourself and family, which your residence with us has already inspired. We hope that the commodious edifice you are about to enter will continue to be your habitation, until, after many years of parental guardianship over us, and of successful labor in the church we represent, the great Architect may call you to take up your abode in that *temple*, not made with hands, whose builder is God, eternal in the heavens.

One and all, we tender you the assurance of our Christian affection.

THE YOUNGER MEMBERS OF YOUR PASTORAL CHARGE.

THE BABY SHOW AT THE AMERICAN MUSEUM.—A great deal has been said, written and published in the papers against this exhibition. It has been pronounced to be immodest, unseemly, and materialistic, in its tendency. Mr. Barnum has been much censured for getting it up. We will on the present occasion say nothing upon this exhibition. But we are tempted to say a few words upon general principles involved. It has long been the custom to give testimonials, rewards, premiums, prizes, &c., for intellectual and moral achievements, for faithful obedience to discipline, for the successful prosecution of moral, literary, and scientific studies, as Grammar, History, Geography, &c. The world never seems to have had its moral sensibilities disturbed by those things. Now the body is susceptible of cultivation as well as the mind. If a mother shows us a specimen of health, symmetry, and beauty in her child, and we are fully satisfied that this physical excellence is in consequence of faithful obedience to the physical laws established by the Creator, even as moral excellence is from humble and constant obedience to God's moral and divine law, or that intellectual achievement is from faithful and persevering study, why should a testimonial be right and proper in the one case, and immoral and unseemly in the other? We ask for information. ENQUIRER.

THE CLERGY IN GERMANY.—The *Bibliotheca Sacra* has no exalted opinion of the literary attainments of the parish clergy of Germany. They seem to have little of the working spirit which prevails in this country. It says:—

"The almost entire neglect of study by the German clergymen, after they have left the University, is a very striking fact. An inquiry has been instituted by the well-known publisher, Perthes, of Hamburg, who publishes all the works of Neander, Tholuck, Ullman, and others of the most widely read authors, the result of which is, that on an average only one copy in fifty of Neander's works has been purchased by a clergyman. All literary activity is confined to the universities, and to professed scholars. The indolence and stupidity of many of the country pastors is without bounds."

RELIGIOUS INTEREST IN ALBION.—A business letter from Eld. Thomas E. Babcock, dated Albion, Wis., May 22d, contains the following cheering paragraph:—

"It may be pleasant for you to know, that we are enjoying the gracious presence of our Heavenly Father, here in Albion, under a measure of labor, which, with improved health, I hope may be permanently increased. A religious interest has been for some time gradually rising. About twenty-five, who have held connection with churches in other places, mostly in our own fellowship, have joined the church; some of them have come from a position of voluntary exile, where they have lingered many years. It is pleasant to see them bending their steps to the church, as a field of useful labor, and an asylum to shelter them from the sorrows of exile. The awakening influence has extended to sinners, and a number have found peace in believing, while others are seeking the same precious treasure. Eleven have united with the church in profession of faith. We have been to the water for baptism the last four Sabbaths in succession. May the work progress until all within the reach of its influence shall share in its blessing."

MILTON, WIS.—A letter from Bro. Albert Whitford, of Milton, Wis., orders a quantity of "Carols," and says: "We have organized a fine Sabbath-School of ten classes and about seventy students and teachers, and hope to add still more to our number.... Milton Academy was never in more encouraging circumstances. We have this term between fifty and sixty students—a goodly number for our humble conveniences. The new building will be finished in a few weeks."

AMERICAN EDUCATION SOCIETY.—The Anniversary of this Society was held in Boston last week. The following statement of the condition of affairs, including both the parent society and its various branches in different parts of the country, was submitted:—

Receipts into the treasury of the parent society at Boston, for the year ending April 30, $33,615 19; of the society at New York, $4,322 89; of the society at Auburn, N. Y., $1,106 36; of the Philadelphia society, $4,956 97. Total receipts into the treasury of the American Education Society, $34,001 41; balance in the whole treasury at the beginning of the year, $14,942 42; total available funds, $48,943 83.

Disbursements by the parent society, $20,627 43; disbursements by the Central Society, $7,566 60; disbursements by the Western Society, $1,092 36; disbursements by the Philadelphia Education Society, $5,614 95—total disbursements, $34,901 43; invested, $7,895; balance in treasury, April 30, 1855, $6,147 40.

Number of Young Men Assisted.—By the Parent Society, at Boston, 328; by the Central Society, at New York, 92; by the Western Society, at Auburn, 18; by the Philadelphia Education Society, 62; total, 500. This is an increase of fifty over the previous year. Ninety new applicants have been received by the Parent Society, and twenty from the Philadelphia Education Society. From the Central and Western Society the number of new men is not reported.

BRITISH AND FOREIGN BIBLE SOCIETY.—The anniversary of this Society was held in Exeter Hall, London, on May 2d, the Earl of Shaftesbury presiding, who congratulated the meeting on the fact that, notwithstanding the pressure occasioned by the war, the income of the Society exceeded that of any former year, except on the occasion of the Jubilee, and the total circulation of copies of the Scriptures was greater than during any previous year of the Society's existence.

The Secretary read the Annual Report, from which it appeared that the amount received during the year for the general purposes of the Society was £64,878, being £5,221 more than the preceding year. The amount received for Bibles and Testaments was £59,600, making the total receipts from the ordinary sources of income £124,478. There had been also received £3,694, further contributions to the jubilee fund, and £7,860 to the Chinese New Testament fund; making a grand total of £136,032. The issues for the year have been as follows: From the depot at home, 1,018,882 copies; from depots abroad, 431,994 copies; total, 1,450,876 copies; being an increase of 83,348 over the circulation of last year. The total issues of the Society now amount to 29,389,507 copies. The expenditure for the year was £149,040, being an increase on the payment of £29,782.

EXCLUSION OF THE CHINESE FROM CALIFORNIA.—There has been a very interesting discussion in the Legislature of California, on a bill to exclude the Chinese from the mines. The bill, if passed, would subject the Chinese to great sacrifices and suffering. A substitute was adopted, increasing the monthly tax for license from four to six dollars a month, and after a year to ten dollars. The Chinese question is very embarrassing, and our California neighbors discard the doctrine of equal rights in disposing of it. The Sacramento *Union* of April 19th says:—

"The Chinese cannot be admitted as citizens; the law and the constitution place them in an inferior position; they are not protected by the law against a white man, as they are not permitted to testify in court against him, occupying in this respect the position of the Southern slave; they are treated as an inferior race, and must continue to be so treated from the force of circumstances; and no other legislative line of policy is open to the just and humane legislator, but that which, as its ultimate object, looks to a restriction upon further immigration and to the final exclusion from the State of those already here."

SUNDAY IN NEW ORLEANS.—The following advertisement, clipped from the New Orleans *Picayune*, will give our readers some idea of the way they keep Sunday in that city:—

Second Popular Festival to be given on the Union Race Ground, Sunday, May 27, 1855, from the morning to the evening. The undersigned Committee invite all their fellow-citizens to that festival, which last year proved most attractive.

Target and Bird Shooting, Dancing, Pole Climbing, Foot, Horse and Carriage Races, Equestrian Exercises, Catching Pigs, Cock Striking, Candle Drawing, and other popular amusements, are arranged, and prizes will be given to the best performers.

Omnibuses will carry visitors from several stations to and from the Union Bridge.

At 7 o'clock A. M. a procession will be formed on the Congo square, and march to the place of the festival.

THE AMERICAN PEACE SOCIETY.—This Society held its annual meeting in Boston last week, at which Mr. Beckwith read the report of the directors, including a statement of the treasury account. From this it appeared that a slight advance in their receipts over last year had been realized. The receipts were $5,345 56, and the expenses $4,781 47, showing a balance in favor of the treasury, of $574 09. The report speaks encouragingly of the cause of peace, and of a great change in public sentiment with regard to war, tending towards the establishment of arbitration as the policy of the world in the adjustment of difficulties.

BAPTIST HOME MISSIONS.—The threatened rupture in the Baptist Home Mission Society has been averted, or at least postponed. The Convention called at Chicago, by the friends of the Bible Union, to consider the expediency of forming a new Home Mission Society, determined, in view of the appointment of a Committee by the old Society to obtain a location independent of the American and Foreign Bible Society, that it is not expedition at present to form such a new Society.

RELIGIOUS INTELLIGENCE.

Sir S M. Peto has recently purchased the Diorama, Regent's Park, London, and has refitted it for a Baptist Chapel. It will seat 1800 persons, and the cost has been $8,712. The Rev Mr. Landells, of Birmingham, has become the minister, and the design is to raise a new Baptist congregation and church in that part of London. A few years ago Mr. Peto built a handsome chapel, at great expense, in another part of London, and stated his intention to pay two-thirds of the cost himself, and as soon as the church and congregation had raised the remaining third, to give up all control over the property, and to place it in trust for the use of the church and denomination.

A serious discussion is now in progress in Savannah, similar to that which has existed among the Roman Catholics in Buffalo, Hartford, New Haven, and other places. A Catholic writer comes out in a bold and lengthy exposure of the late Bishop Gartland's tyranny, charging him with having taken from them their chartered rights, and of setting aside their vestry, constitution, and bylaws, and not a member of the Catholic church had a voice in the disbursement of the revenues accruing to the church for the maintenance of the bishop and his priests, or the salaried lay officers of the church.

Rev. Dr. Tyng, of New York, has re-entered the editorial ranks, and connected himself with Rev. Messrs. Anthon and Canfield, in conducting the *Protestant Churchman* of New York city. He announces this fact with characteristic independence, by saying that many articles that he will write will interest only his parishioners, and may be complained of by others; but the only way to do good is to do it in one's own way, without minding what other folks, or what the newspapers, say.

The Evangelical Society of Geneva, Switzerland, has sent Mr. William Rey, one of its members, as delegate to the United States, to implore aid in its Christian work of evangelization. For twenty-five years it has made noble and successful efforts for the evangelization of France and Belgium and Italy. The monetary difficulties incident to the war and to religious persecution have lessened its receipts, and it feels the need of aid from Christians in this country.

Prof. William Wagner has made a princely gift to the city of Philadelphia, in the bequest of a valuable lot of ground on Broad street, with a suitable building for an extensive cabinet, 500,000 specimens of Minerals and Geology, 200,000 of recent shells, 25,000 dried plants, and a large and well-selected Library, Philosophical Apparatus, extensive assortment of Diagrams, illustrating Geological phenomena, Maps, etc., and a large fund sufficient to endow the Free Institute of Science which he has established.

The Alexandria (Va.) *Gazette*, of a recent date, says: "We understand that one of our old and respected citizens, a retired merchant, received, a few days ago, in a letter from Boston, without signature, and with nothing to show its source, a thousand dollar note of the Globe Bank of Boston, with the remark, that the sender owed the money, and took that opportunity of returning it to the person to whom it belonged."

The late Abner McGhee, of Alabama, previous to his death, made the following donations:—American Bible Society, New York, $50,000; McGhee College, Alabama, $10,000; Samaritan Fund, Alabama Conference Methodist Protestant Church, $1,000; Alabama Bible Society, Montgomery, $10,000.

Rev. Dr. Baird, so long the Secretary of the American and Foreign Christian Union, has resigned that office, that he may devote his time to an important literary work, relative to the religious movements of the world. Dr. Alexander W. McClure, now of Jersey City, has been appointed to take Dr. Baird's place as Secretary.

The Circuit Court of Charles County, Md., has just declared null and void a posthumous bequest of Elizabeth Farr, by which she gave five negro slaves to the Rev. James Moore, a Catholic priest, it being contrary to the 35th article of the Maryland Bill of Rights, by which all gifts to ministers of the gospel, as such, are annulled.

A dispatch from Nashville, states that the Rev. Dr. Lindsley, of New Albany, Inda., Commissioner to the General Assembly in session in that city, died there, from an attack of apoplexy. Dr. Lindsley has long been known as one of the most learned, able and useful men in that Church.

The Presbyterian Board of Foreign Missions has dispensed wholly with the aid of collecting agents during the past year, and in spite of the hard times and the almost universal decrease in the receipts of other Societies, the income of the Board has actually advanced beyond that of any former year.

The number of candidates for the ministry in the Presbyterian church is rapidly increasing. As an evidence of this fact, it is stated that the Philadelphia Society has had 62 beneficiaries under its charge for the past year, and its annual receipts have risen from $3,000 to $10,000.

A powerful revival is in progress in the Congregational church of Muscatine, Iowa, which has gathered its fruits from professional and business men. Among the converts is numbered one of the State Supreme Court.

Recent London papers inform us of the death of W. B. Gurney, Esq., for many years one of the most liberal and active Baptists in England, and at the time of his death, Senior Treasurer of the Foreign Missionary Society.

The Rev. Dr. McLean, President of Lafayette College, Easton, recently stated, in a lecture at Trenton, that New Jersey, with a population of 500,000, has not over 200 young men in a course of college training, and Pennsylvania not over 700.

The Philadelphia *Banner* says that at the sacramental table of the Ninth Presbyterian church in that city, on the third Sunday of March, 624 persons participated, all but two of whom were members of the Society.

Bishop Hopkins, of Vermont, has espoused the doctrine that the world will wax worse and worse till Christ shall come to renovate it by miraculous interposition.

There are about 2,500,000 children in the United States in attendance upon Sunday schools, and of this number 550,000 are under the care of the Methodist Episcopal church.

Rev. R. H. Graves, of Baltimore, has received an appointment as missionary to Canton, China, from the Southern Baptist Board.

European News.

We have one week later news from Europe, the substance of which will be found below.

The siege of Sevastopol progresses very slowly indeed, and as the telegraph is now in the hands of Government exclusively, it is difficult to decide from the imperfect hints supplied whether the besiegers or besieged gain most advantage. Symptoms have transpired of extended operations being about to commence on the part of the Allies.

In England, many incidents tend to mark the Democratic change that is coming over the nation. The Queen has condescended publicly to bestow medals on private soldiers in the streets of London. In various parts of the country "administrative reform" meetings have been held.

The Paris Exposition has been opened; as a spectacle the opening was a failure. Pianori, the would-be assassin of the Emperor of France has been guillotined.

Scene at the Seat of Government.—The Washington correspondent of the New York *Chronicle*, under date of May 12th, relates the following discreditable occurrence, showing the spirit bred by slavery under the laws Congress:—

"A few weeks ago, a few blacks were found, in this city, holding a meeting unauthorized by law; they were seized and some of them whipped, and their books, etc., taken from them.

"Last evening some colored people hired a hall in Georgetown for a ball, for which a permit had been obtained from the proper authorities. A magnificent supper had been prepared, and the guests assembled in large numbers; but just as they were about to enter on the festivities of the occasion, several hundred whites, mostly youths and boys, entered the building, demolished the crockery, glass, etc., destroyed all the good things so abundantly provided, and caused the guests to flee in every direction To add to the disreputable character of the affair, the Fire Company have published a card, stating that in consequence of the hall having been disgraced by the admission of blacks, they will never hold any more balls there, and, moreover, they will not suffer their apparatus to protect the hall on any occasion, while in the possession of its present proprietor."

Another Arctic Expedition.—The United States expedition for the relief of Dr. Kane left the Brooklyn Navy Yard on the 31st May. It consists of the bark Release and the propeller Arctic. Two years ago the adventurous Kane, with a crew of sixteen men, set sail from New York in the little bark Advance, for the Arctic Seas, in search of Sir John Franklin. His vessel was provisioned for a three years cruise, which it was supposed might, by fishing and hunting, be made to last for one or two years longer. Since July, 1853, Dr. Kane and his party have not been heard from, and it is supposed that during the open Summer of that year he entered Smith's Sound, and pushed through to discover the supposed open sea beyond, where he imagined Franklin had gone. The following Winter was one of extreme severity, and the conclusion is, that the Advance was so firmly frozen up that the succeeding Summer did not release her from the ice. Dr. Kane intended before entering Smith's Sound to leave a supply of provisions at Cape Alexander, and it is probable that he has returned to and is now at that place.

Land Warrants.—*Thompson's Bank Note Reporter* gives us the following information:

"Applications have gone into the Department at Washington for 129,000 Warrants. These Warrants will average about 120 acres each, making an aggregate of over thirteen millions of acres. They are in active demand, and from present indications will continue so for some time, as there are valuable tracts of land open to entry; and we are now buying at $1 10 per acre. Revolutionary Bounty Scrip being exempt from Land Office charges, is worth 3 cents per acre more than Warrants."

SUMMARY.

On the 2d inst. there was quite a liquor riot at Portland, Me. It appears that Neil Dow, Mayor of Portland, and author of the Maine law, purchased a quantity of liquor, expecting to sell it at a profit to the town agency. The agency, however, did not purchase, and complaint was made against Dow for violation of the statute. While the complaint was pending, the Mayor induced the city authorities to purchase his stock. Incensed at these proceedings, a mob collected about the building where the liquor was stored, and threatened its destruction. The military was ordered out, and, as the rioters persisted in their application of the search and seizure principle, fired upon the mob, killing one man and wounding several others.

M. de Lamartine announces that, on the completion of his "History of Turkey," he intends to take a year of total repose, attending only to the cultivation of his property in Burgundy. The health of the illustrious poet and historian, who for some time has been in the habit of devoting fourteen hours a day to his literary labors, renders this retreat indispensable. It is calculated that, since the year 1848, M. de Lamartine has published, in the form of books and of articles of various periodicals, as many as forty-seven new volumes, besides a new edition of his former works; the whole producing a sum of about thirteen hundred thousand francs, ($260,000.)

Mr. Mortimer Thomson, better known to the public as "Doesticks," was accidentally killed on Wednesday morning, May 30th, at Ann Arbor, Michigan, where he was spending a few days. He was out shooting at a mark with some companions, when an accidental bullet put an end to his life. Mr. Thomson was a native of Michigan; his age was about 23 or 24; he was a man of a singularly modest, simple, and manly nature, and endowed with talents and aspirations which would have secured for him an honorable place in literature.

At Columbus, Ohio, on the 30th ult., a procession of German Turners, while peaceably passing through the streets, was attacked by a mob of rowdies, and several of the foreigners badly stoned and beaten. The Turners were dressed in white coats, and throughout the day and night every person who was so unfortunate as to wear a garment of that color was set upon and beaten by the rioters.

From Lisbon (Portugal,) April 29, we learn that the grape disease has again made its appearance in many parts, more especially in the provinces of Alemtejo, Estramadura, Beira and Minho. Near Lisbon all the young buds and branches were covered with fungus, and in the vicinity of Oporto the vines betrayed greater indications of disease than those which existed last year. The vines generally in the port wine districts of the Alto-Douro appeared to be in a healthy state. The orange and lemon trees, in addition to the black blight with which they have been attacked, were injured in the roots by a worm, which was destroying them. In the olive groves a new disease, caused by the settlement of myriads of flies, had presented itself.

Mr. Roessle, of the Delavan House, has a farm on the sand hills of Albany, which, by judicious cultivation, is made to equal those of more favored soils. Last season he planted fifty acres, mostly with potatoes. He raised potatoes, corn, and cabbages enough to supply the tables of the Delavan House, and has this spring 1,200 bushels of potatoes for sale. This season he has one hundred acres under cultivation. He has planted *one thousand* bushels of potatoes, which with an ordinary season must produce ten thousand bushels at least. Of corn, beans, peas, turnips, cabbages, squashes, radishes, &c., he expects to raise more than double the quantity of last year. He pays this year over $1,500 for manure. He gives the preference to "kiln dust" and guano.

A letter from the United States Marshal says that toward the last of March four men were hung in Dona Ana, New Mexico, by a party of citizens for robbery. The facts are as follows: Mr. Louis Geck, living in Dona Ana, has a store in the Mesilla, which was robbed, and the robbers also abused his wife. Four Mexicans were arrested upon suspicion and confined in the County Jail to answer at the term of the United States District Court then about to be held. The same night they were confined, however, they were taken from the jail by a party of men and hung upon a neighboring tree, where they were found the next morning.

We have accounts of three tornados of unparalleled violence which have passed over different sections of the country recently. The first occurred on the evening of the 15th May, in Lapeer county, Mich., and came from a westerly direction; the next at Cedar Town, Ga., on the 18th, the wind traveling from northwest to southeast; and the third in Cook county, Ill., which passed swiftly along near the ground, describing a semicircle towards the southeast. These whirlwinds were of incredible force, exceeding in destructiveness those peculiar to the tropics.

Mrs. Stephens, wife of Jacob Stephens, of Frankfort township, New Jersey, aged about 50 years, hung herself with a bed cord on the 21st ult. She left her bed during the night, and in the morning she was found suspended by the neck, a corpse. Her husband for a year or two past has been in considerable difficulty on account of illegally selling liquor, and was at the last Court sentenced to State prison. This circumstance, it is thought, worked upon the feelings of Mrs. Stephens, and to rid herself of the probable disgrace she committed suicide.

The Detroit *Inquirer* states, that W. H. Goodwin, a citizen of Richmond and a native of Virginia, has been stopping at the Michigan Exchange during the past week, and left there last evening for home. He brought with him four slaves, two of whom are children, their mother, who is married to a free colored man, and their grandmother, who was his own nurse in infancy. He gave them their liberty and bought a house and lot for $800 on Macomb-st., which he deeded to the old woman, and left $100 to their credit in bank.

Letters from the Land Department of the Illinois Central Railroad Co., state that sales of land are very large, and that the office is crowded with applicants, most of them actual settlers, who buy 80 to 160 acres. Among the buyers this month is Judge Douglas, who bought 4,600 acres at $10 per acre, in the neighborhood of 10,000 acres which he purchased some time since of Government. He proposes to make a great stock-farm on this property. The sales of May will be unprecedentedly large, having been over $220,000 in the first ten days of the month.

The Supreme Court of Massachusetts within the last two weeks have decreed eighteen divorces. Eleven of these were for criminality, four for desertion, and three for cruelty. Fourteen wives were divorced from their husbands, and four husbands from their wives. In one case both parties being of respectable standing in the community, the husband was proved guilty of the most brutal conduct towards his wife, often beating her with his fist and refusing to provide medical attendance while she was on a sick bed.

Not for ten years has there been so many signs of a general stampede for the West as this present spring. A gentleman from the Northern part of New Hampshire, who is on his way West with his family, informs us that not less than one hundred individuals have sold their farms in Coos and Essex counties within three months past, and gone or are going westward. Our Vermont exchanges make mention of an unusual movement there for the West.

The Boston *Traveler* of the 28th ult. says: "It is intimated that the manufacturers of liquor will refuse to sell to the State agent, and that he, the only legally constituted dealer, will find it difficult, if not impossible, to obtain the supply requisite to meet the demands of his customers; particularly as the law forbids the transportation of liquor, which he might purchase in other quarters, by railroad, steamboat, or other modes of conveyance."

George Parker, a free negro of Delaware, who resides near Dover, escaped from prison a short time since, and a party went to his house on the 24th ult., to re-arrest him. When they reached his residence, they found that he had cut the throats of two of his children and set his house on fire, and was prepared to defend himself with a shot gun. He was finally arrested, after having been shot and wounded three times.

A dispatch from Washington, dated May 31, says: To-morrow the Pension Office will issue two thousand land warrants under the new law, and two hundred per day thereafter. The brokers report the warrants worth $1 12 a $1 14 per acre, but are holding back for a new issue, in anticipation of a lower price.

The Boston *Transcript* announces the death of Jesse Chickering, M. D., the well-known statistical author, whose writings rank among the highest works of their class. He died at West Roxbury, on the 29th ult. Among the most important of his productions is his book on "Immigration into the United States," which appeared in 1848.

The New Jersey State Agricultural Society have fixed on Tuesday, Wednesday, Thursday, and Friday, the 18th, 19th, 20th, and 21st of September, for their Exhibition at Camden. The ground selected is the Diamond Cottage property. No permission to sell liquor within the grounds occupied by the Fair will be allowed.

The receipts of the Milwaukee and Mississippi Railroad for the first fifteen days of May amount to $28,871 72; for same period last year, $18,874 58; increase nearly $10,000. The receipts for the whole month are estimated at $60,000, which will be an increase of 60 per cent. over the same month of 1854.

The Hon. R M. Smith, State Treasurer of New Jersey, has declared a dividend of 90 cents on the Wheat Growers' Bank Notes of Newton, and 65 cents on the Merchant's Bank of Bridgeton; he gives certificates for the balance, which we are assured will be paid at an early day with interest.

The *National Intelligencer* publishes a summary of the appropriations which were made at the last session of Congress. The vast sum of $71,574 354 is only the amount of specified appropriations. Very possibly the great mass of contingent objects of expenditure will swell the grand total to seventy-five millions.

Measures are to be taken for an Editorial Convention of Publishers and Editors throughout New Jersey, to be held in Camden during the week in which the State Agricultural Exhibition is to be held, for the purpose of considering matters connected with their vocation and the duties of the Press of New Jersey generally.

One week later news from California was received in New York on the 1st inst. News of the second failure of Page, Bacon & Co. in this country had reached California, and occasioned a run upon the house there, which soon resulted in its suspension, and an extensive commercial excitement. Further than this, the news is quite unimportant.

Better accounts are beginning to be received from Kansas. Geo. H. Church, of Chicopee, Rev Mr. Nute, of the same place, and Mr. Porter of Westfield, all write encouraging letters. The Hampden Colony have established themselves at Neosho, and all agree in pronouncing it one of the pleasantest places in the world.

The Buffalo *Commercial* says that a freight train, consisting of one hundred and forty-four cars, sixty-one of which were loaded with cattle, the balance with miscellaneous freight, left that city over the Central road on Saturday. Seven locomotives were employed in the drawing process.

A letter from Kansas shows that the brutal ruffians who have invaded that territory from Missouri are not having it all their own way. When resisted by the people of Kansas, they prove by no means formidable. A reäction is taking place in Missouri against the disgraceful conduct of the Atchison mob.

The New Orleans papers of the 26th ult. record several very sudden deaths from cholera. Mons. Gadard, the celebrated æronaut, who was alive and well on the night of the 26th, was a corpse the next morning. Hugh Grant, a well known engineer, and late city surveyor, also died after a few hours illness.

The boiler of the steam-mill near Rome, Ind., belonging to John Weston, former Representative from Perry County, exploded a few days since, killing six men and tearing the mill to pieces. It even threw all the sills from their places the distance of several feet, making a total wreck of the whole mill.

Near Anson, Me., on the evening of May 22, Alexander Fassett was passing over Madison Bridge, with a wagon and four horses, when the bridge broke through; and the pole horses, loaded wagon and driver, fell sixty feet to the water of a rapid river, and were all destroyed.

Corn is selling in the Chickasaw Nation at $2 50 per bushel, while flour can only be had at one or two places in the Nation, at $20 per barrel. No groceries are to be had, nor can any be obtained, until there is a rise in the Arkansas or Red River.

At Ship Cove, near Trinity, Newfoundland, a sad accident recently occurred. During the absence of Mrs. Day from her house in the evening, it took fire, and six children, three boys and three girls, perished in the flames.

The town of Dorchester (Mass.) will celebrate the two hundred and twenty-fifth return of the date of its settlement, on the next Fourth of July, when Edward Everett, a native of the place, will deliver an address.

The citizens of New Haven, Connecticut, are rejoicing because the commerce of their port has nearly doubled within twenty-four years. Had Chicago just such an occasion for rejoicing, there would now be two warehouses, three sloops, and a canoe.

Mr. Hiram Harmon mounted his horse to hunt up his cattle in Erie, Iowa, and was the next morning found wandering about insane, his horse having been killed by a stroke of lightning.

The first steamer ever at the wharf at Lawrence, Kansas, arrived on the 19th May. She came from Cincinnati, and had fifty passengers and a large load of freight. The other steamers arrived on the 21st.

The Rochester *American* says a gentleman is engaged in breeding fish on the banks of the Canadaigua Lake, and expects to stock that beautiful sheet of water with speckled trout.

A correspondent of the New York *Express*, a day or two since, as to how many of the Bishops recently sitting in Provincial Council at Baltimore were foreigners, says there was *not one American among them.*

On the New York Central Railroad, May 31st, Nathan Laurens, brakeman, was crushed to death between two cars, and Nelson Gordon, switch-tender, was run over and killed.

The Post-Office and drug store in which it is kept, in the village of Pitcher, were destroyed by fire on the morning of the 27th of May. Loss, $3,000; insured for $1,000.

It has hitherto been asserted that Lake Huron was 860 feet deep, but it has lately been ascertained by U. S. Coast Survey, that it is only 420 feet deep. Lake Erie is from 60 to 70 feet deep; Lake Ontario 452 feet—as low as most parts of the Gulf of St. Lawrence. All the lakes cover an area of 43,040,000 acres.

Encourage the women and children to cultivate a few flowers, by preparing a suitable place and procuring the seeds and roots. Depend upon it, they will bring smiles upon your lips and radiate your own heart before the summer closes.

A young printer, named Spencer Davis, shot himself in the head with a pistol, at Logansport, Ind., on the 18th May, because a young lady in that place would not return his love for her.

There were seventeen deaths by cholera, in Memphis, Tenn., during the week ending the 12th ult. They occurred chiefly among the people living in the upper part of the city.

The Superior Court of Cincinnati have decided that when the wife of a man is killed by accident by or on a railroad, the husband cannot recover damages therefor.

In the case between Miss Mary Hadric and Henry Protzmanc in Cincinnati, for breach of promise and seduction, the jury have awarded the plaintiff $700 damages.

Governor Clarke has offered a reward of $250 for the arrest of James Rutledge, charged with the murder of James Cooper, at Lyon's Falls, Lewis county.

The Hagerstown (Md.) *Herald* says that the late Wm. B. Clarke, among his various charities, left $5,000 for the use of his negro boy Cato.

The cholera is raging as an epidemic in New Orleans, and the Board of Health of the city has made public declaration of the melancholy fact.

A proposition to extend the right of Suffrage to colored men was voted down, last week, in the Connecticut House of Representatives, by a majority of 20.

John F. Trow's printing office, in Ann-st., New York, was burned on the night of May 30th; loss about $50,000.

It has been ascertained that 1,574 foreigners have returned to Europe from New York alone since the first of April last.

Thursday, the 31st ult., was observed in Missouri as a day of thanksgiving.

New York Markets—June 4, 1855.

Ashes—Pots $5 75; Pearls 6 00.

Flour and Meal—Flour 10 31 a 10 44 for common to good State, 10 25 a 10 50 for Michigan, Indiana, and Ohio, 11 50 a 13 00 for extra Genesee. Rye Flour 7 25 a 8 81. Corn Meal 5 06 a 5 18.

Grain—Wheat 2 55 a 2 62 for Canadian, 2 60 for white Michigan, 2 80 for white Genesee. Rye 1 70. Barley 1 15 a 1 20. Oats 70 a 76c. for Jersey, 80 a 84c. for State and Western. Corn 1 07 a 1 10 for Western mixed, 1 15 for round yellow.

Provisions—Pork 4 75 for new prime, 16 87 for mess. Beef 8 75 a 9 50 for country prime, 10 00 a 12 50 for country mess. Lard 10 a 12½c. Butter 16 a 20c. for Ohio, 18 a 24c. for State. Cheese 7 a 10c.

Hay—1 12 per 100 lbs.

Potatoes—2 75 a 3 00 per bbl. for common red and white, 3 50 for Carters, 3 75 a 4 25 for Mercers, 5 75 a 6 00 for new Bermudas.

Seeds—Clover 10 a 10½c. Timothy 4 00 per bushel for reaped, Rough Flaxseed 1 90.

Tallow—11½ a 12c. for Butchers' Association.

Wool—26 a 28c. for native, 36 a 38c. for full-blood Merino, 40 a 43c. for American Saxony Fleece.

MARRIED.

In Hopkinton, R. I., May 14, by Eld. D. Coon, Mr. Gideon H. Noyes, of Westerly, to Miss Lois B. Dickens, of Stonington, Ct.

DIED,

In Lincklaen, N. Y., May 18, after a brief painful illness, John Dye, aged 57 years. Brother Dye had for about 30 years been a zealous professor of religion, and for some time previous to his last illness seemed to possess an unusual unction in his devotions.

In DeRuyter, May 26, of inflammation of the brain, Addison F., son of Addison S. and Mary L. Burdick, aged about 3½ months.

At Scott Center, on Sabbath day, May 19th, 1855, Emeline B., wife of Doct. George B. Maxson, in the 43d year of her age. Sister Maxson embraced religion some years ago. For many years she was afflicted with disease of the heart, yet enjoyed comfortable health most of the time till within a few weeks of her death, when she was attacked more violently, and death laid its iron grasp upon mortality, and her spirit winged its flight to the realms of glory, which none but the children of God can ever enjoy. She departed with the following words on her lips, "Peace, peace, all is peace—farewell." She leaves another evidence of the virtue of the religion of Christ. She died in the triumphs of faith. Her friends are left to mourn the loss of an affectionate companion, an indulgent mother, a kind sister, and a warm-hearted Christian. Death is no terror to such. A. W. C.

In Genesee, N. Y., on the 29th ult., Paul Ennis, in the 70th year of his age. The deceased was a member of the 1st Seventh-day Baptist Church of Genesee, and died trusting in the merits of his Redeemer.

In Genesee, N. Y., on the morning of the 1st inst, Amanda Jane Kenyon, daughter of Ethan and Ruth Kenyon, aged 19 years. The deceased was endeared to a large circle of friends by her amiable character.

At the residence of her daughter, in Caton, Steuben Co., N. Y., May 29th, Barbara P. Murphey, in the 72d year of her age. The deceased was a daughter of the late Thomas W. Bliss, and grand-daughter of Eld. William Bliss, of Newport, R. I. She experienced religion in early life, and united with the church in Newport, R. I., of which she remained a worthy member until her death. She was about to visit her son in Westerly, R. I., when she was attacked with paralysis, which terminated in death in about 36 hours. She was speechless, and strove in vain to communicate with her friends by writing. Her sufferings were very great, yet she retained her senses to the last. We think her death was peaceful and happy. She has left two children, and many friends and relatives, to mourn her loss.

LETTERS.

D Coon, M Johnson, M L Potter, E A Green, A S Davis, J R Irish, H W Randolph, E Burdick, M N Hamilton, A W Coon, H M Sheldon, Charles Potter, M A Fisher, H R Gates, Eli Forsythe, E F Lanphear, Jepthah F Randolph (right,) C T Rogers, C D Lewis, N Clarke, A Whitford, D Larkin.

RECEIPTS.

FOR THE SABBATH RECORDER:

P L Berry, New London, Ct	$2 00	to vol. 12	No. 52
David Rogers "	2 00	12	52

FOR THE CAROL:

Wm Dunn, Plainfield, N J	$10 00
Howell W Randolph, Walworth, Wis	5 00
Clarke T Rogers, Preston	4 20

WILLIAM M. ROGERS, Treasurer.

Savery's Temperance Hotel
AND
TELEGRAPH DINING SALOON,
No. 14 Beekman Street, N. Y.
KEPT ON THE EUROPEAN PLAN.
MEALS AT ALL HOURS OF THE DAY.
LODGING ROOMS,
From $2 to $3 per Week, or 50 Cts. per Night.
Bela Sawyer, Sup't. John S. Savery, Proprietor.

Western Association.

THE Twentieth Annual Meeting of the Seventh-day Baptist Western Association will be held at Richburg, Allegany Co., N. Y., commencing on Fifth-day, June 21st, 1855, at 10½ o'clock A. M. N. V. Hull is appointed to preach the introductory discourse; H. W. Babcock, alternate. E. A. GREEN, Rec. Sec.

Genesee, N. Y., May 26, 1855.

MARY F. HAMILTON left my bed and board May the twentieth, without just provocation. I hereby forbid any person harboring her or trusting her on my account. MARVIN N. HAMILTON.

Regular Mail Line via Stonington for Boston,

PROVIDENCE, NEW BEDFORD, and TAUNTON. —Inland route, without change of cars or detention, carrying the Eastern Mail.

The new steamer PLYMOUTH ROCK, Capt. Joel Stone, and C. VANDERBILT, Capt. W. H. Frazee, in connection with the Stonington and Providence and Boston and Providence Railroads, leaving New York daily (Sundays excepted) from pier No. 1 N. R., (first wharf above Battery-place,) at 5 o'clock P. M., and Stonington at 8 o'clock P. M., or on the arrival of the Mail Train which leaves Boston at 5.30 P. M.

These steamers are unsurpassed for strength, safety, speed, comfort, and elegance. The officers are experienced and attentive.

The C. VANDERBILT, from New York—Monday, Wednesday, and Friday From Stonington—Tuesday, Thursday, and Saturday.

The PLYMOUTH ROCK, from New York—Tuesday, Thursday, and Saturday. From Stonington—Monday, Wednesday, and Friday.

N. B.—Passengers, on arrival of the steamers at Stonington, proceed immediately by Mail Train to Providence, Boston, Taunton, and New Bedford; or by Accommodation Train from Stonington at 7.30 A.M.

A Baggage Master accompanies the Steamer and Train through each way.

Through tickets on Mondays, Wednesdays, and Fridays, for Nantucket, Holmes' Hole, and Wood's Hole, via New Bedford, connecting with the new steamer Eagle Wing.

For passage, berths, state-rooms, or freight, application may be made at pier No. 2 North River, or at the office, No. 10 Battery-place.

New Steamboat Line for Albany and Troy.

From Pier 15, foot of Liberty-st., at 6 P. M.

STEAMER RIP VAN WINKLE, C. W. Farnham, Commander, Monday, Wednesday and Friday, at 6 o'clock, P. M.; steamer COMMODORE, L. Smith, Commander, Tuesday and Thursday, at 6 o'clock, P. M., and Sunday, at 5 P. M.

Fares: Saratoga, $1 50; Moreau, $2 15; Fort Edward, $2 15; Whitehall, $2 75; Castleton, $2 10; Rutland, $3; Burlington, $4; Rouses Point, $5 50; Montreal, $7 50.

These Boats will arrive in Albany or Troy in ample time to form connections with all the Railroads, North, East or West, enabling passengers to reach Montreal and intermediate points the same day.

Through tickets can be obtained on board the boats for Saratoga, Moreau, Fort Edward, Whitehall, Castleton, Rutland, Burlington, Rouse's Point and Montreal.

The Northern Freight Express will give Bills of Lading to all points as above named. Shippers who desire it, can have time receipts, by applying at the office on the Pier. A. A. DYKEMAN.

Magnificent Floral Gift.

SUBSCRIBERS to the "CHRISTIAN DIADEM" for 1855, are entitled to a splendid steel engraving, the ☞ LILLY AND THE ROSE PERSONIFIED, being given *gratis* to all old and new subscribers who send us only ONE DOLLAR, by mail or otherwise.

Six Copies for Five Dollars.

The Diadem is a strictly moral and religious work —designed for the Christian family without regard to any particular denomination.

FIFTY ENERGETIC BUSINESS MEN are wanted immediately to circulate the "Diadem" throughout the Eastern and Western States. To such as can send good references the very best inducements will be given. Address Z. P. HATCH, Publisher, 9 Spruce street, New York.

May 24—3m.

The Good Time Come at Last.

Belcher's Religious Denominations in the United States

IS beyond all question the most popular subscription book now before the American people. Every body says so, and the united voice of the great public seldom errs. The northern farmer, the mechanic, the factory operative, the planter of the South, and the pioneer of the West, all want it, and when once properly introduced to their notice, are bound to have it. Let "Young America" arise in her might, and go into the work, and with the proper application of industry, energy, and enterprise, the result will prove beyond cavil, that Horace Greeley's comforting prediction of the "good time coming" is at last fully verified. For further information of this and other popular subscription works, book agents, and canvassers generally, will please address the publisher,

JOHN E. POTTER,
15 Sansom-st., above 6th, Philadelphia.
Or, Noyes Spicer, Indianapolis, Ind.

The very Book that every body has been Wanting.

The Book for the Parlor, the Book for the Fireside, the Book for the Professor, and the Book for the Non-Professor.

THE RELIGIOUS DENOMINATIONS OF THE UNITED STATES: Their History, Doctrine, Government, and Statistics; with a Preliminary Sketch of Judaism, Paganism, and Mohammedanism. By Rev. Joseph Belcher, D. D., Honorary Member of the Historical Societies of Pennsylvania and Wisconsin, author of "William Carey, a Biography," etc., etc., and "Editor of the Complete Works of Andrew Fuller," "Works of Robert Hall," etc, etc. Large octavo, 1024 pages, handsomely embellished by nearly two hundred engravings.

This invaluable work is rapidly finding its way among all classes of the American people. The clear, comprehensive, and impartial manner in which the learned author treats each and every denomination, is winning for him golden opinions from the highest authorities in the land. The innumerable lively tales and anecdotes of ministers, churches, and laymen, which he introduces with the articles of faith and all important statistical information, give to the work a life, vigor, and spirit truly delightful. One cannot sit down to it without being convinced that his subject is in the hands of a master, nor rise but with kindlier and more liberal feelings towards the great brotherhood of Christians, under whatever name they bear. Ours is a great, growing, and glorious country, and every family, and every young man, throughout its length and breadth, should have a copy as a text book of all its denominations. Wherever known, it is read, and wherever read, admired. Look at the following from among the very many notices received:

It embodies a vast amount of information relative to the origin, history, and missionary operations of the different religious denominations in this country, presented in a remarkably interesting and attractive manner.—*Rev. John Dowling, D. D., Author of "The History of Romanism," "Judson Offering," etc.*

This is a large and beautiful volume, and will find a cordial welcome in every family.—*Philadelphia Christian Chronicle.*

So far as concerns independence of vision, there can be no question, as Dr. Belcher surveys each sect with the same dispassionate impartiality.—*Epis. Recorder.*

This massive volume embraces a vast fund of information.—*Presbyterian.*

The work is sold by agents, and will furnish a large amount of interesting and valuable information to the families into which it may be received.—*New York Recorder and Register.*

In the account given of the denominations, he is fair, and generally allows them to speak for themselves, as to their history and institutions.—*New York Christian Advocate and Journal.*

It contains a mass of interesting facts and statistics. —*Norton's Literary Gazette.*

Judging from the work, it would be difficult to say what are the religious views of the Editor, so fairly, so dispassionately, so charitably, has he treated each and every sect.—*Philadelphia City Item.*

We presume it will be a standard work in thousands of libraries.—*Littell's Living Age.*

Sold only by agents, to whom certain districts are allotted. For particulars address the publisher,

JOHN E. POTTER,
15 Sansom-st., Philadelphia.
Or, Noyes Spicer, Indianapolis, Ind.

Miscellaneous.

Cultivate the Society of Birds.

The song of the robin under our window, that hails the approach of the sun at earliest dawn, and watches his receding rays at faintest twilight, reminds us of a promise long since made, to speak a good word for birds. They are man's natural companions, the guardians of his fruits, the graceful denizens of his trees, the minstrel choir whose tuneful notes wake him from slumber and whose vesper songs soothe him to repose. What can be sweeter than that first trill of the red-breast at dawn? The first note is scarcely audible, as if the poor bird were afraid of the lingering shadows, and were asking leave of his slumbering lord to sing. The dawn increases, and with it the boldness of his song. The sun himself at length comes forth like a bridegroom, and the robin pours forth his whole soul in tumultuous joy. We pity the poor souls that live in a wilderness of brick and mortar, and have no tree orchestra in the shadow of their dwellings on these bright May mornings.

But those who live in the country, often have no music in their souls, and have no eye to see what labor-saving machines the birds are—saying nothing of their capacities as artists. So the sportsman is suffered to prowl about the orchard and fruit-yard, and the red-breast, oriole, bluebird, sparrow and wren become food for powder. When the robin claims his tribute of currants and cherries for the insects he has devoured, he is mercilessly shot, as if he were a vagabond and a thief. Whether such a merciless, unmusical soul be "fit for treason, stratagems and spoils," or not, it is pretty certain that his trees will fall into that category, and will soon be despoiled of fruit and foliage.

A single bird's nest in your orchard is worth dollars. What a multitued of grubs and worms a single pair of robins and their young will destroy in a season! Watch their busy flight by day, every visit to their birdlings bringing destruction to a number of grubs. It has been estimated by a cautious observer of the habits of birds, that a single pair of jays with their young will devour two hundred insects in a day. This, in a season of two months, amounts to twenty thousand. It has been estimated that a single purple martin will destroy nearly five thousand moths and butterflies in a week. The moth, that does so much mischief in our wardrobes, is a small insect that might escape the sight of most other birds. A little hive of swallows close by one's dwelling-house, would probably be an effectual exterminator of these insects, which would be seized and devoured before they entered our windows. If we take into account the innumerable caterpillars and grubs that would spring from the eggs of all these different insects, we can but regard the martin as one of the most serviceable of all creatures. The lively twittering of these birds is one of the most agreeable accompaniments of the rural melodies of morn, and is associated with many delightful incidents in English poetry. Whoever has visited Burlington, Vt., has noticed in their fruit gardens a long substantial pole mounted with a martin-box. Their labors are highly appreciated by the fruit-growers there, and their example is worthy of imitation.

It is but little trouble to any one of common ingenuity to build a few bird-houses, and put them in various parts of the premises. Small boxes may be put in the cherry trees and upon the fence near the currants and raspberries, for the wrens. They will almost certainly be occupied, and this little bird lives upon the insects that crawl upon the fences, and lurk in the bark of trees, and in the crevices of buildings. On account of its fondness for spiders, the wren has in some places received the appellation of spider-bird. The immense number of insects which he removes from our gardens and dwellings, ought to endear him to every cultivator, even if he had nothing else to recommend him. He is the appropriate guardian of our small fruits, and no robin or fruit-eating bird will venture near the home of this pugnacious little bird. It is amusing to see the reckless desperation with which they will pitch into a bird many times their size, driving all before them.

Cultivate, then, the society of birds. The robin needs no box, but if you let him alone he will put up his dwelling in the apple tree, or in a corner of the fence, and be much obliged to you for the privilege of killing caterpillars for you all summer long. The boy that comes nigh with gun, warn off from your premises; and if he does not heed the warning, put the law in force; and if there be no law, call in the aid of Judge Lynch. The birds must be saved if you would save your fruit. Your tenderness and care for the birds will not be without its moral impressions upon the hearts of your children. It will teach them many a humane lesson as they grow up, and save them from habits of cruelty which often begin in destroying the eggs and young of birds. Smooth-barked trees, unscathed with the wounds of insects, and smooth-skined fruits, will keep company with children of fair characters, unspotted with vice. W. C.

[Am. Agriculturist.

The Care of the Eyes.

First, never use a writing-desk or table with your face towards a window. In such a case the rays of light come directly upon the pupil of the eyes, and causing an unnatural and forced contraction thereof, soon permanently injure the sight. Next, when your table or desk is near a window, sit so that your face turns *from, not towards*, the window while you are writing. If your face is towards the window, the oblique rays strike the eye and injure it nearly as much as the direct rays when you sit in front of the window. It is best always to sit or stand while reading or writing with the window behind you; and next to that with the light coming over your left side; then the light illumines the paper or book, and does not shine abruptly upon the eye-ball.

The same remarks are applicable to artificial light. We are often asked what is the best light—gas, candles, oil, or camphene? Our answer is, it is immaterial which, provided the light of either be strong enough and does not flicker. A gas fish-tail burner should never be used for reading or writing, because there is a constant oscillation or flickering of the flame. Candles, unless they have self-consuming wicks, which do not require snuffing, should not be used. We need scarcely say that oil wicks, which crust over and thus diminish the light, are good for nothing; and the same is true of compounds of the nature of camphene, unless the wicks are properly trimmed of all their gummy deposit after standing twenty-four hours.

But, whatever the artificial light used, let it strike the paper or book which you are using, whenever you can, from over the left shoulder. This can always be done with gas, for that light is strong enough, and so is the light from camphene, oil, etc., provided it comes through a circular burner, like the argand. But the light, whatever it be, should always be protected from the air in the room by a glass chimney, so that the light may be steady.

Black Knot on Plum Trees.

About ten years ago, I purchased from Messrs. Ellwanger & Barry, of Mount Hope, Rochester, N. Y., a lot of plum trees of the different leading varieties, planted, cultivated, and drove them right up into bearing, and for the last four years have had full crops of truly noble and luscious specimens of each, and, what is highly gratifying, the trees are entirely free from black gum, or black knot, and are kept so by freeing the branches from all diseased or rotten fruit as soon as it appears.

Strict and close observation for many years past, and the examination of branches upon which the Plum has undergone the process of decomposition, in the warm months of April and September, has served to settle the question with me beyond a doubt. I will here refer the reader to trees in his own grounds, say Washington, Huling's Superb, and White Magnum Bonum. Take your knife, go to any of these that may have dried plums on; take them off, examine and cut, and in many cases you will find a mortal wound, black, cankered, bark bursted, swollen, and perforated full of holes. These were made by the same worms and insects that were feeding on the decaying fruit, after which fails, they find nearly the same food in the well-saturated and decomposed bark, immediately under the rotten fruit, which they feed upon for a certain time, and then pass away. They were attracted hither for food only, and not to perpetuate their progeny. They are not the real first cause of the disease, as some have it, yet they hasten the complaint by eating holes in the bark, through which the deadly poisonous gases and juices enter, and so get into the circulation, are carried to the extremity of said branch, and if a scion is cut from such, the young tree will show it even in the nursery row. The worst cases will be found where the Plum rots on the top, or upper side, of a horizontal branch, about an inch or so in diameter, yet I have found even spurs and the smallest branches badly affected by the same, and many killed the first summer by the deadly juices of the affected fruit.

All who grow Plums well know that many varieties bear in clusters, and also know that when a cluster is attacked with the rot, if the diseased Plum is not timely removed, the whole cluster will be lost (particularly so in the finest sorts,) in a few days. Just so, on the other hand, if the same poisons enter the circulation, and get into the body and very heart of the tree, death is certain, though, unlike the fruit, it will take years, instead of days, to accomplish it.

I look upon the above as the true cause of black knot, and as destructive to the plum as the bite of a mad dog, or as the juices from the flesh of a human being in a state of decomposition, would be to ourselves, if applied in a similar manner.

The subject is worthy of consideration. Will some able pen take it up?

[Wm. H. Read, in Horticulturist.

Pruning.

I have lately noticed, says the New England *Farmer*, some of my neighbors, with jackknife, handsaw and hatchet in hand, attacking their fruit trees, as though they were enemies whom it was their purpose to wound and mutilate and disable by all means in their power. After the battle had been fought I have seen the ground covered with branches, and in some cases, with heads and trunks lying scattered in all directions around the scathed and bleeding trees, that remain like wounded and maimed soldiers, after a hard fought conflict. And the trophies of the victory thus obtained are carried off by whole cart loads, in the shape of sound, healthy sprouts and branches, covered with leaf and fruit-bud, and consigned to the wood-pile.

It seems to me, sir, that these good neighbors of mine are trying an experiment to see how much injury they can inflict upon their trees, without destroying their lives. When the Inquisitors stretch a heretic upon the rack, they place a surgeon by his side, with his fingers upon the pulse, to decide when the torture has been carried to the limits of human endurance. But not so with our tree-trimmers. They seem to think that there is no limit to the endurance of vegetable life. This subject has often been referred to in your paper, and the evil consequences of such a course have been frequently pointed out. But the fact that this practice still continues, shows that enough has not yet been said. "Line upon line, and precept upon precept," seems to be the only way in which truth can be fixed in the public mind. If those who pursue this course will watch their trees carefully, and observe the effects of their treatment for two or three years I think they will be satisfied, that it is not only useless, but highly injurious. When the trees are trimmed in March, April and May, as soon as the warm weather comes on, and the sap presses into and distends the sap-vessels, it bursts out of the recently wounded vessels, and runs down and blackens and poisons the bark, and causes it to crack and separate from the underlying alburnum, and thus effectually prevents the healing of the wound. Gangrene and death of a portion of the wood necessarily follow. Where several such wounds are made in a tree, its whole constitution will soon become impaired. It ceases to grow, and in a few years droops and dies.

Trees that are trimmed the least, will generally be found to be the most vigorous, and to develop the best formed and most beautiful heads. Now and then, a limb that is putting forth in an inconvenient direction, or in a direction which will injure the symmetry of the head, should be taken away. A limb that is shooting out more vigorously than the rest may be shortened, and when two limbs are chafing each other, one may be removed. Shoots that grow from the trunk, will generally die or cease to grow, when nature has no further service for them to perform. The idea of cutting out the whole central portion of an apple tree, to let in the sun, is wholly erroneous. The tree is thus deprived of a large portion of its lungs, as well as of many of its best bearing branches. In our climate the fruit, so far from requiring the direct rays of the scorching sun in midsummer, requires to be protected from its rays by the foliage which nature has provided. The directions given in English books for the cultivation of fruit, are adapted to the moist and cloudy atmosphere of England. The attempt to apply them to the cultivation of fruit in our climate, has led to the adoption of much erroneous practice.

The best time for general pruning is a mooted question among intelligent men. But my own belief is that the proper time, in this climate at least, is in June and July, when the leaves have attained their full size, and are in full health and vigor, and are elaborating an abundance of sap. In this state, a fresh wound will commence healing at once. New bark is rapidly formed to cover the wound. It is the descending sap from which the new bark, as well as all the other tissues of the tree, is formed. When this sap, properly elaborated in the leaves, is not furnished to the formative vessels, no new growth of any kind is effected. Hence it is only when the leaves are in a condition to perform their proper office, that the new growth necessary to effect the healing of a wound can be accomplished.

Pens.

Dr. Warner, some years ago, happened to be in the shop of an eminent stationer in the Strand, London, when a member of the House of Commons purchased a hundred quills for six shillings; when he was gone, the Doctor exclaimed, "O, the luxury of the age! Six shillings for a hundred quills! Why, it never cost me a sixpence for pens in my life." "That is very surprising, doctor," observed the stationer, "for your works are very voluminous." "I declare," replied the doctor, "I wrote my Ecclesiastical History, two volumes in folio, and my Dissertation on the Book of Common Prayer, a large folio, both the first and second copies, with one single pen. It was an old one when I began, and it is not worn out now that I am finished." This relation was spread abroad, and the merit of this pen was esteemed so highly that a celebrated countess begged the doctor to make her a present of it. He did so, and her ladyship had a gold case made, with a short history of the pen written upon it, and placed it in her cabinet of curiosities.

Byron wrote his celebrated poem of the Bride of Abydos in one night, and without mending his pen. This pen is yet preserved in the British Museum.

John Elliot translated the entire Bible into the Indian language, and wrote the whole of it with one pen.

Chinese in New York.

The number of Chinese at present in this City is about 1,000, or perhaps 1,500. The greatest part of those live in Gold-st. and Cherry, near Pearl-st. The house in Cherry-st. is kept by a speculating Hollander, who lived for some time as a sailor in the Chinese Seas, and thus acquired a smattering of the language and some knowledge of their customs. He conducts his Hotel de Chinois partly on the European, and partly on the American plan. A portion of his customers prefer boarding together, doubtless appreciat- the intellectual enjoyment of daily reunion at the table d'Hôte; while others merely hire lodgings, providing their own food, and attending to their own cookery. We could find but two Celestial females in the City, and these were regarded with the most jealous care by their countrymen. There was certainly nothing very prepossessing in their appearance; their faces wearing the same expressionless stolidity which characterizes their people generally, and cleanliness with them appearing to be a foreign element. Unlike any other class of our inhabitants, the Chinese herd together in what may be called their social life like so many cattle. It is no unusual thing to find twelve or fifteen occupying one small room, and using the same for all culinary and other purposes. Brutalized by condition in their own country, they become doubly so by vice and dissipation in their contact with the low and vile of our population. It is not to be wondered at that their countenances evince stupidity, and their very gait the lassitude of despair. The manner of their lives is indeed the most unenviable that it is possible to conceive.

The occupations of the Chinese settlers are not remarkably various, nor are they, as a general rule, extremely particular as to the respectability of the business in which they engage. A few have had the good fortune to find occupation in tea warehouses and in the service of some respectable citizens. These have improved both in a moral and physical sense, and constitute the better class of Chinese residents. But the majority have had to fall back on the lowest expedients of finding a subsistence in order to prevent their incarceration in the Alms-Houses, of which they stand in extreme dread. By far the greatest number peddle cigars through the streets and occupy our public places with little stalls on which they display a variety of cheap cigars and candies. Others depend entirely on public charity.

Starching.

To Make Starch.—I saw an inquiry in the "*Dollar Newspaper*," asking the best method of preparing starch. Clear starching we conceive to be of so much use in female economy as to deserve particular attention. Take of Poland starch a table-spoonful; add cold water enough to wet it; when it is thoroughly dissolved, pour on (stirring it gradually) a pint of boiling water; let it boil five minutes; take two ounces of fine white gum Arabic; powder fine; pour on a pint of boiling water; let it stand all night; in the morning pour off the liquor; a tablespoonful of this gum water into a pint of starch, made in the usual manner, gives a fine glossy appearance; wipe the linen with a dry cloth; roll up; in four or five hours iron.

To Make Starch for Muslins,—Take a pint of pump water to a quarter of a pound of starch; put the water in a clean skillet, and put over a clear fire till it is lukewarm; then pour in your starch, after wetting with a little cold water; keep stirring it one way till it boils a minute or two; if it boils too long it makes it look yellow; pour it into a clean pan, cover it until it is cold, then take some upon your hand, and some blue in your other hand, mix them together, but make it not too blue, (you must use your own judgment,) take your muslins, double one by one in your left hand, and spread the starch with your right.

Muslins should be Starched, left in the starch ten minutes, then wrung out and wiped with a dry cloth and clapped. You can hold it up to the light, and if clapped enough, you will observe it to fly asunder, and not stick to your hands as often as you perceive any wet or starch on them. Observe to clap very hard and quick, and when you see no shining it is enough; never clap by the fire but in frosty weather, for that spoils the color; let all muslins be ironed upon a clean soft woolen cloth, two or three times doubled; the thicker the ironing cloth for washed muslins, the richer the work will appear. You must always iron on the wrong side. For calico and lawns, you must make a very thin starch, and iron within a damp cloth, laid over and under them. Iron on the wrong side.

Care of Carpets.

Nothing is so soon observed on entering a room as the carpet. If that is nice and clean, there will be an air of comfort about the room, however plain the furniture may be. On the other hand, if there is a shabby and soiled carpet on the floor, if it is all askew, and half put down, the room will look uninviting and cheerless, even if the furniture is covered with damask. It is better to have no carpet, than one that is ragged and filthy.

With proper care carpets can be made to last a long time. In the first place, moths must be guarded against. Every crack in the floor ought to be filled with putty, and well dried. If there is not time to dry the putty, papers can be laid over it. Carpets should never be laid next the floor. The sand wears them out if they are. A little straw or soft hay scattered on the floor does very well, but old straw matting, or drugget, or an old wool carpet, does better. For very nice carpets, cotton batting, tacked between coarse, unbleached cotton, is the best thing that can be used. Experience has proved to me that carpets wear a third longer for being wadded. The dust goes through to the floor; and the carpet needs much less sweeping than it otherwise would. A little damp grass or brown paper, sprinkled on a carpet when it is swept, saves the wear of it. For a nice carpet, a broom should be kept which is not used for other purposes. Every spot should be washed off as soon as seen.

Wool carpets should be taken up and shaken once a year, and, if the room is a common one, twice or more. Whenever a carpet is taken up it should be carefully examined, and if any places are burned or worn, they should be carefully darned with the ravelings to match. A carpet can be saved very much by guarding the entrance doors with mats, etc., especially the door leading from the kitchen. Where there is a small entry between the kitchen and the carpeted room, it is a good way to cover the entry thickly with straw, and put over it a piece of carpet or drugget. Even cotton carpeting will wear a long time over straw. This is much better than mats to take the dust from the shoes. Get a large pattern, so as to have some left to repair with. Much can be done by turning and mending carpets, to keep them looking almost as well as new. [Am. Ag.

Remedy for Scalds and Burns.—In the *American Medical Gazette* for March, Dr. Reese thus earnestly reiterates his advice to apply flour to scalds and burns: "We still see reported, almost daily, an appalling number of deaths by burns and scalds, not one of which, we take upon ourselves to say, need prove fatal, or would do so if a few pounds of wheat flour could be promptly applied to the wounds made by fire, and repeated until the inflammatory stage has passed. We have never known a fatal case of scalding or burning in which this practice has been pursued, during more than thirty years' experience, and we have treated hundreds in both public and private practice. We have known the most extensive burns by falling into caldrons of boiling oil, and even molten copper, and yet the patients were rescued by this simple and cheap remedy, which, from its infallible success, should supplant all the fashionable nostrums, whether oil, cotton, lead water, ice, turpentine, or pain-extractors, every one of which has been tried a thousand times with fatal result, and the victims have died in excruciating agony, when a few handfuls of flour would have calmed them to sleep, and rescued them from pain and death. Humanity should prompt the profession to publish and republish the facts on this subject, which are established by the authority of standard medical works on both sides of the Atlantic. Flour is the remedy, and the only one, in severe cases of scalding and burning casualties, which else so often destroy life. Let us keep it before the people, while the explosion of steam boilers and burning fluid lamps are so rife all over our country."

Extraordinary Well.—In an interesting letter to the New York *Courier and Enquirer*, Mr. E. Meriam, the New York meteorologist, states that there is in Lockport, New York, an artesian well four hundred feet in depth, from the bottom of which rises a vein of salt water, holding in combination a large per centage of diliquescing chlorides, which, mingling with waters of other veins, produce instantaneous crystalizations of beautiful selenite in flattened eight-sided prisms of about an inch in length, an eighth of an inch in width, a sixteenth of an inch in thickness. The laminæ of these are so perfect that a single crystal may be divided, by means of heat, into two dozen distinct sheets. This well is peculiar in more respects than one. It is accustomed to spout salt water for but a few moments at a time, and then subsiding remains quiet for the space of an hour, at the conclusion of which it again begins to puff and roar, and shoots forth its saline jets. When the workmen were sinking this well, the auger, upon attaining a depth of two hundred and thirty-five feet, fell suddenly about fourteen feet, and reached the bottom of a subterranean river, flowing with so strong a current as to produce a perceptible motion in the upper part of the stem of the auger.

English Papers.—The number and circulation of English religious papers, bear no comparison with those of the United States. The Church of England has two papers: the *Record*, published twice a week, with a circulation of 3,379 each number; and the *Ecclesiastical Gazette*, weekly, with a circulation of 2,750. The Baptists have one paper. The Independent denomination has three. These are—the *Patriot*, issued twice a week, with 1,268 subscribers; the *British Banner*, with a weekly circulation of 3,888; and the *Nonconformist*, with a weekly circulation of 3,211 The Wesleyan Conference has only one paper, the *Watchman*, with a subscription list of between 3,000 and 4,000. The *Wesleyan Times*, the organ of the agitators, is rapidly declining, its circulation having diminished one-half since the year 1851.

[Nortons' Literary Gazette.

Flight of Riches.—The New York *Courier and Enquirer* mentions the following remarkable events befalling a single family in a year:—

"On the first of January, 1854, a gentleman doing business in the city was worth, with what he had invested in business, $110,000. At the same time he was blessed with a lovely and intelligent wife, beautiful and promising children. He was surrounded with friends who esteemed and respected him. His business was lucrative, and promised to continue so. Indeed, his position as well as his prospects were, seemingly, all that he could desire to render his happiness perfect. How complete the wreck that the year closed upon! The first misfortune was the transfer of merchandize, to the amount of $18,000, to a California dealer, for which not one cent was ever received. The next was two successive robberies, by means of which $25,000 were lost. Soon after this, the unfortunate man made an investment in real estate to a large amount. The next and crowning misfortune was a trip with his family to Europe. They embarked, on their return, with $38,000 in goods, on board the steamship Arctic, and all shared her luckless fate! In settling up his affairs, his real estate was sold under the hammer at a sacrifice of $40,000, making the aggregate loss of his property during the year $118,000, $8,000 more than his assets. His friends were obliged to make good the deficiency! Father, mother, children, and fortune, all gone—swept from the face of the earth—nothing left to show that they ever existed. We doubt whether, among the many wrecks which the past year has witnessed, there has been one more melancholy than this."

Pleasure of a Garden.—We are continually told by certain sapient economists that they find it cheaper to buy vegetables and fruit, than to keep a garden. The pleasure of gardening depends not upon economic considerations. Is there no pleasure in tending your flowers, and watching their opening blossoms—nursing the sickly, and rejoicing over the strong—in culling a boquet for the adornment of your boudoir? Is there no pleasure in being able to send well-ripened grapes or peaches to a sick neighbor who has them not—in bestowing a capful of rosy-cheeked apples upon a rosy-cheeked companion? Is there no pleasure in exchanging rare flowers, in getting and giving floral gifts? What woman but will answer in the affirmative?

Improved Way of Making Bread.—The Paris correspondent of the *Commercial Advertiser* speaks of a plan invented by a baker of that city to reduce the cost of bread. He puts in one part of rice to five of wheat flour, and the the economy effected reaches the very considerable figure of one sou in the two-pound loaf. The Government has had the bread examined by competent persons, and has authorized the sale of it at a less rate than fixed by the police. The demand is such that the baker cannot supply it. Neither the nutriment nor the taste of the bread would appear to be affected by the presence of the new ingredient.

VARIETY.

The British Government has introduced a new regulation in regard to ships, which appears a good one. According to the Merchant Shipping Act, after the 1st of May next, every British ship is to have a distinct number assigned to her, by which she may be known and recognized, irrespective of her name or other description. The series of numbers will begin with 1, and proceed in regular arithmetical progression; a number once appropriated will never be applied to any other British ship. The allocation of these numbers will be under the control of the Commissioners of Customs, who are to allot a certain series to every British Register throughout the Empire. Thus, to the port of London may be allotted the series of from 1 to 1000; to Liverpool, 1000 to 2000.

The force of a body of water like the Niagara river at the Falls, was shown in a remarkable manner, recently, in an attempt by Mr. Rœbling, the civil engineer, to sound the river. He let fall from a hight of two hundred and twenty-five feet, a forty pound weight of pointed iron. The weight sank for a second of time, then made its appearance again on the surface, about one hundred feet down the stream, and skipped along like a chip, until it was checked by the wire. The velocity of the weight, when striking, was equal to one hundred and twenty-four feet per second, and its momentum five thousand pounds.

The April number of the New York *Quarterly Review* has an article on Post Office Improvements, in which it is stated that the Boston people annually average about thirty-three letters each; those in New York about twenty-four; in Philadelphia fourteen; in New Orleans about sixteen; and in Baltimore ten. In the aggregate of the large cities of the United States there is an annual average of about twenty letters to each person. In the country districts there are only about three letters annually to each person, and in the whole United States about four to each person.

A local newspaper says:—"On Wednesday we shall issue a second edition, but no first edition." This reminds us of an honest Hibernian, who called at the *Weekly Times* office with an advertisement, the price of which, he was told, would be nine shillings for the first time, and seven and sixpence for the second. "Faith, then," said he, "I'll have it in the second time and not the first at all."

The latest folly enjoined by the goddess of fashion upon her abject devotees, the ladies of New York, is the wearing of bonnet ribbons four feet long. The bonnets, meanwhile, continue to recede from public observation. They have long been invisible to the naked eye—of the wearer; and they now threaten to run entirely to ribbon.

"Pray, Sir," said a Judge, angrily, to a blunt old Quaker, from whom no direct answer could be obtained, "do you know what we sit here for?" "Yea, verily, I do," said the Quaker, "three of you for four dollars each a day, and the fat one in the middle for four thousand a year."

There was not a little sound sense and business discrimination in the merchant, who, happening to see his son take from his till three cents to pay for a cigar, exclaimed authoritatively, "Book it, Joe; book it!"

No reproof or denunciation is so potent as the silent influence of a good example.

New York and Erie Railroad.

ON and after Monday, May 7, and until further notice, Trains will leave the pier foot of Duane-st., New York, as follows:

Dunkirk Express at 6 A. M. for Dunkirk.

Buffalo Express at 6 A. M. for Buffalo.

Mail at 8½ A. M. for Dunkirk and Buffalo, and all intermediate stations.

Accommodation at 12½ P. M. for Port Jervis and intermediate stations.

Rockland Passenger at 3 P. M. (from foot of Chambers-st.) via Piermont, for Suffern and intermediate stations.

Way Passenger at 4 P. M. for Newburgh and Otisville and intermediate stations.

Night Express at 5½ P. M. for Dunkirk and Buffalo.

Emigrant at 6 P. M. for Dunkirk and Buffalo and intermediate stations.

On Sundays only one express train, at 5½ P. M.

These Express Trains connect at Elmira with the Elmira and Niagara Falls Railroad, for Niagara Falls, at Buffalo and Dunkirk with the Lake Shore Railroad for Cleveland, Cincinnati, Toledo, Detroit, Chicago, &c., and with first-class splendid steamers for all ports on Lake Erie.

D. C. McCALLUM, General Sup't.

Ayer's Pills.

A NEW and singularly successful remedy for the cure of all Bilious diseases—Costiveness, Indigestion, Jaundice, Dropsy, Rheumatism, Fevers, Gout, Humors, Nervousness, Irritability, Inflammations, Headache, Pains in the Breast, Side, Back, and Limbs, Female Complaints, &c., &c. Indeed very few are the diseases in which a Purgative Medicine is not more or less required, and much sickness and suffering might be prevented, if a harmless but effectual Cathartic were more freely used. No person can feel well while a costive habit of body prevails; besides, it soon generates serious and often fatal diseases, which might have been avoided by the timely and judicious use of a good purgative. This is alike true of Colds, Feverish symptoms, and Bilious derangements. They all tend to become or produce the deep seated and formidable distempers which load the hearses all over the land. Hence a reliable family physic is of the first importance to the public health, and this Pill has been perfected with consummate skill to meet that demand. An extensive trial of its virtues by Physicians, Professors, and Patients, has shown results surpassing any thing hitherto known of any medicine. Cures have been effected beyond belief, were they not substantiated by persons of such exalted positions and character as to forbid the suspicion of untruth.

Among the eminent gentlemen who have testified in favor of these Pills, we may mention:

Doct. A. A. Hayes, Analytical Chemist of Boston, and State Assayer of Massachusetts, whose high professional character is endorsed by the—

Hon. Edward Everett, Senator of the United States.

Robert C. Winthrop, Ex-Speaker of the House of Representatives.

Abbott Lawrence, Minister Plen. to England.

†John B. Fitzpatrick, Catholic Bishop of Boston; also

Dr. J. R. Chilton, Practical Chemist of New-York City; endorsed by

Hon. W. L. Marcy, Secretary of State.

Wm. B. Astor, the richest man in America.

S. Leland & Co., Proprietors of the Metropolitan Hotel, and others.

These Pills, the result of long investigation and study, are offered to the public as the best and most complete which the present state of medical science can afford. They are compounded not of the drugs themselves, but of the medicinal virtues only of Vegetable remedies extracted by Chemical process in a state of purity, and combined together in such a manner as to insure the best results. This system of composition for medicines has been found in Cherry Pectoral and Pills both, to produce a more efficient remedy than had hitherto been obtained by any process. The reason is perfectly obvious. While by the old mode of composition, every medicine is burdened with more or less of acrimonious and injurious qualities, by this each individual virtue only that is desired for the curative effect is present. All the inert and obnoxious qualities of each substance employed are left behind, the curative virtues only being retained. Hence it is self-evident the effects should prove as they have proved, more purely remedial, and the Pills a more powerful antidote to disease than any other medicine known to the world.

As it is frequently expedient that many medicines should be taken under the counsel of an attending physician, and as he could not properly judge of a remedy without knowing its composition, I have supplied the accurate Formulæ by which both my Pectoral and Pills are made, to the whole body of Practitioners in the United States and British American Provinces. If however there should be any one who has not received them, they will be forwarded by mail to his request.

Of all the Patent Medicines that are offered, how few would be taken if their composition was known! Their life consists in their mystery. I have no mysteries.

The composition of my preparations is laid open to all men, and all who are competent to judge on the subject freely acknowledge their convictions of their intrinsic merits. The Cherry Pectoral was pronounced by scientific men to be a wonderful medicine before its effects were known. Many eminent Physicians have declared the same thing of my Pills, and even more confidently, and are willing to certify that their anticipations were more than realized by their effects upon trial.

They operate by their powerful influence on the internal viscera to purify the blood and stimulate it into healthy action—remove the obstructions of the stomach, bowels, liver, and other organs of the body, restoring their irregular action to health, and by correcting, wherever they exist, such derangements as are the first origin of disease.

Prepared by Dr. J. C. AYER, Chemist, Lowell, Mass. Price 25 Cents per Box. Five Boxes for $1 00.

Sold at wholesale in New York by A. B. & D. Sands, retail by Rushton, Clark & Co., and by all Druggists, everywhere.

The Sabbath Recorder,

PUBLISHED WEEKLY

By the Seventh-day Baptist Publishing Society,

AT

NO. 9 SPRUCE-STREET, NEW YORK.

Terms:

$2 00 per year, payable in advance. Subscriptions not paid till the close of the year, will be liable to an additional charge of 50 cents.

☞ Payments received will be acknowledged in the paper so as to indicate the time to which they reach.

☞ No paper discontinued until arrearages are paid, except at the discretion of the publisher.

☞ Communications, orders, and remittances, should be directed, post paid, to

Geo. B. Utter, No. 9 Spruce-st., New York.

Liabilities of those who take Periodicals.

The laws declare that any person to whom a Periodical is sent, is responsible for payment, if he receives the paper, or makes use of it, even if he has never subscribed for it, or has ordered it to be stopped. His duty in such a case is not to take the paper from the office or person with whom the paper is left, but to notify the publisher that he does not wish for it.

If papers are sent to a post-office, store or tavern, or other place of deposit, and are not taken by the person to whom they are sent, the postmaster, store or tavern-keeper, &c., is responsible for the payment until he returns the papers, or gives notice to the Publisher that they are lying dead in the office.
